A plain reading of the statute requires only a ministerial application of the mandated rate increase and does not require any substantive exercise of discretion on the part of the Secretary. As a result, there are no policy proposals associated with these legislative provisions. We have estimated the cost of these provisions to be $260 million over the 10-year period and the Congressional Budget Office (CBO)'s estimated cost of these provisions was $52 million in FY 2026, $111 million in FY 2027, and $34 million in FY 2028 with minimal costs for the remaining years of this 10- year period, resulting in a net effect of $197 million from FY 2026 to FY 2035 (*https://www.cbo.gov/system/files/2026-01/hr7148-CAA-2026.pdf,* page 4).

As discussed in section III.H.4., of this final rule, we are finalizing our proposal to make use of the revised OMB delineations as set forth in the July 21, 2023 OMB Bulletin No. 23–01 and the most recent modifications of the RUCA codes for purposes of payment under the AFS. By adopting OMB's revised delineations and the updated RUCA codes, ambulance providers and suppliers that pick up Medicare beneficiaries in areas that would be Micropolitan or otherwise outside of MSAs based on OMB's revised delineations or in a rural census tract of an MSA based on the updated RUCA codes (but are currently within urban areas) may experience increases in payment for such transports because they may become eligible for the rural adjustment factors discussed previously, while those ambulance providers and suppliers that pick up Medicare beneficiaries in areas that would be urban based on OMB's revised delineations and the updated RUCA codes (but are currently in Micropolitan Areas or otherwise outside of MSAs, or in a rural census tract of an MSA) may experience decreases in payment for such transports because they would no longer be eligible for the rural adjustment factors discussed previously.

The use of the revised OMB delineations and the updated RUCA codes would mean the recognition of new urban and rural boundaries based on the population migration that occurred over a 10-year period, between 2010 and 2020. As discussed previously in this section, we are finalizing our proposal to use the updated 2020 RUCA codes to identify rural census tracts within MSAs, such that the census tracts falling at or above RUCA level 4.0 would continue to be designated as rural areas.

Based on our analysis, the geographic designations for approximately 95.87 percent of ZIP codes would be unchanged by using OMB's revised delineations and the updated RUCA codes. There are more ZIP codes that would change from urban to rural (1,172, or 2.73 percent) than rural to urban (602, or 1.40 percent). In general, it is expected that ambulance providers and suppliers in 1,172 ZIP codes within 47 States and Puerto Rico may experience payment increases if we adopt the revised OMB delineations and the updated RUCA codes, as these areas would be redesignated from urban to rural. The State of Maryland would have the highest percentage oft ZIP codes changing from urban to rural with a total of 49, or 7.78 percent. Ambulance providers and suppliers in 602 ZIP codes within 43 States may experience payment decreases if we adopt the revised OMB delineations and the updated RUCA codes, as these areas would be redesignated from rural to urban. The State of South Carolina would have the highest percentage of ZIP codes changing from rural to urban (20, or 3.68 percent). Adoption of the revised OMB delineations and the updated RUCA codes would have no negative impact on ambulance transports in super rural areas, as none of the current super rural areas would lose their status due to the revised OMB delineations and the updated RUCA codes. We estimate that the adoption of the revised OMB delineations and the updated RUCA codes will have a minimal fiscal impact on the Medicare program.

We did not receive any public comments on the impact section for the Ambulance Fee Schedule. As stated previously, we are finalizing our proposals to revise dates at § 414.610(c)(1)(ii) and (c)(5)(ii) to conform the regulations to these self—implementing statutory requirements. We are also finalizing our proposal to make use of the revised OMB delineations as set forth in the July 21, 2023 OMB Bulletin (No. 23–01 and the most recent modifications of the RUCA codes to recognize levels of rurality in census tracts falling at or above RUCA code level 4.0 as rural areas for purposes of payment under the AFS.

10. Impacts Related to the Quality Payment Program

In this section of the final rule, we estimate the impacts of the Quality Payment Program policies. We estimate participation, final scores, and payment adjustments for eligible clinicians participating through MIPS, the Advanced APMs, and MVPs. For Advanced APMs, we estimate the impacts on the number of Qualified Participants (QPs) that are associated with our policies.

a. Overall Impact Modeling Approach and Data Assessment

(1) MIPS Impact Modeling Approach

For this final rule, we used a similar modeling approach as the CY 2026 PFS final rule (90 FR 49266 through 50481). We created two MIPS impact models: a baseline and a policies model. Our baseline model includes previously finalized policies that are still in effect for the CY 2027 performance period/ 2029 MIPS payment year and in the absence of any of the new policies in this rule. Examples of previously finalized policies included in the baseline model are revised administrative claims quality measure benchmarking methodology, modifications to the Total Per Capita Cost measure, and removal of the topped-out measure scoring cap and application of the defined topped out measure benchmarks to 19 quality measures identified for CY 2026 performance period/2028 MIPS payment year. Please refer to CY2026 PFS final rule for a comprehensive, detailed discussion of finalized policies (90 FR 49266).

The policies model builds on the baseline model and incorporates the new MIPS policies we proposed for the CY 2027 performance period/2029 MIPS payment year included in this final rule. By comparing the baseline model to the policies model, we are able to estimate the impact of the policies in this final rule.

Our modeling approach utilizes the same scoring engine that is used to determine MIPS payment adjustments. This approach enables our model to align as much as possible with actual MIPS scoring

(2) Data Used to Estimate Future MIPS Performance

In the CY 2026 PFS proposed and final rules, we used data from performance year 2023 to construct baseline and policies model simulations. For this proposed and final rule, we used data from performance year 2024. This is the most recent available data and reflects our most up-to-date information on program participation, final scores, and payment adjustments.

b. APM Incentive Payments to QPs in Advanced APMs and Other Payer Advanced APMs

Beginning with QP Performance Period 2017 (payment year 2019), through the Medicare Option, eligible clinicians who are determined to have

a sufficient percentage of their Medicare Part B payments for covered professional services or Medicare patients through Advanced APMs are QPs for the applicable QP performance period and the corresponding payment year. In payment years 2019 through 2024, these QPs received a lump-sum APM Incentive Payment equal to 5 percent of their estimated aggregate paid amounts for covered professional services furnished during the base year (the calendar year immediately preceding the payment year). In payment year 2025, eligible clinicians who attained QP status for QP Performance Period 2023 will receive a lump-sum APM Incentive Payment equal to 3.5 percent of their estimated aggregate paid amounts for covered professional services furnished during CY 2024. In payment year 2026, eligible clinicians who attained QP status in QP Performance Period 2024 will receive a lump-sum APM Incentive Payment equal to 1.88 percent of their estimated aggregate paid amounts for covered professional services furnished during CY 2025. In payment year 2028, eligible clinicians who attained QP status in QP Performance Period 2026 will receive a lump-sum APM Incentive Payment equal to 3.1 percent of their estimated aggregate paid amounts for covered professional services furnished during CY 2027.

Beginning with QP Performance Period 2019 (payment year 2021), in addition to the Medicare Option, the All-Payer Combination Option also affords eligible clinicians an opportunity at QP status. The All-Payer Combination Option allows eligible clinicians to become QPs by assessing a combination of both Medicare Part B covered professional services furnished or patients through Advanced APMs and services furnished or patients through Other Payer Advanced APMs. Eligible clinicians who become QPs for a given QP Performance Period are not subject to MIPS reporting requirements and payment adjustments for the contemporaneous MIPS performance period/payment year. Eligible clinicians who do not become QPs but meet a lower threshold requirement to become Partial QPs for the year may elect to (or not to) report to MIPS. If they elect to report, they are subject to MIPS scoring and payment adjustment. Partial QPs are not eligible to receive the APM Incentive Payment.

If an eligible clinician does not attain either QP or Partial QP status and is not excluded from MIPS on another basis, the eligible clinician will be subject to the MIPS reporting requirements and will receive the corresponding MIPS payment adjustment.

Separately from the APM Incentive Payment, beginning in payment year 2026, there are two separate PFS CFs—one for QPs for the year (the qualifying APM CF), and the other for all non-QP eligible clinicians and other suppliers paid under the PFS (the nonqualifying APM CF). The update to the qualifying APM CF for a year is 0.75 percent, whereas the update to the non-qualifying APM CF for a year is 0.25 percent. Such updates produce approximately a 0.5 percent difference in the two conversion factors each year.

The thresholds to achieve QP status in the 2027 QP Performance Period (2029 payment year) are set to 75 percent for the payment amount, and 50 percent for the patient count. Overall, we estimated that for the 2026 QP Performance Period, between 517,800 and 530,900 eligible clinicians will become QPs, and therefore will be excluded from MIPS reporting requirements and payment adjustments.

In the CY2026 PFS final rule, we finalized our proposal to use two new definitions, ''Covered professional service attribution-eligible beneficiary'' and ''E/M attribution-eligible beneficiary'' such that we conduct two determination calculations, one that includes any beneficiary who has received a covered professional service furnished by the eligible clinician (NPI) for whom we are making the QP determination and one that continues to use Evaluation and Management services furnished by the eligible clinician (NPI) for whom we are making the QP determination. We also finalized our proposal to add a QP determination at the individual level for all Advanced APM participants, beginning with the 2026 QP Performance Period.

We project the number of eligible clinicians who will be QPs, and thus excluded from MIPS, using several sources of information. First, the projections are anchored in the most recently available public information on Advanced APMs. The projections reflect Advanced APMs that will be operating during the 2027 QP Performance Period. The following APMs are expected to be Advanced APMs for the 2027 QP Performance Period:

- Enhancing Oncology Model (EOM);
- Kidney Care Choices Model (Comprehensive Kidney Care Contracting Options, Professional Option and Global Option);
- Long Term Enhanced ACO Design (LEAD) Model;
- Medicare Shared Savings Program (Level E of the BASIC Track and the ENHANCED Track);
- States Advancing All-Payer Health Equity Approaches and Development (AHEAD) Model; and
- Transforming Episode Accountability Model (TEAM).

We used the Participation Lists and Affiliated Practitioner Lists, as applicable (see § 414.1425(a) for information on the APM Participant Lists used for QP determinations) for the 2024 QP performance period third snapshot QP determination date to estimate the number of QPs for the 2027 QP Performance Period. For models starting in the 2027 QP Performance Period we estimated performance based on projected participation. We examined the extent to which Advanced APM participants will meet the QP Thresholds of having at least 75 percent of their Part B covered professional services or at least 50 percent of their Medicare beneficiaries were attribution eligible thresholds.

c. Estimated Number of MIPS Eligible Clinicians in the CY 2027 Performance Period/2029 MIPS Payment Year

(1) Initial Population of Clinicians Included in the RIA Baseline and Policies Models

For this final rule, we applied the same assumptions as in the CY 2026 PFS final rule (90 FR 49980) to estimate our initial population of clinicians using 2024 performance data. Specifically, we used the CY 2024 final reconciled eligibility determination file, same as the 2023 file described in the CY 2026 PFS final rule (90 FR 49980). This file reconciles eligibility from two determination periods and aligns with the CY 2024 performance period submissions data on which we based this model. Our analysis included 1,984,786 clinicians with PFS claims in this initial population. This initial population of clinicians was used to determine eligibility using the methodology described in the following sections.

(2) Estimated Number of MIPS Eligible Clinicians After Applying Eligibility Assumptions

(a) Methods and Assumptions Used To Estimate Eligibility

After identifying the clinician population with PFS claims, we applied the same eligibility assumptions and determination process described in the CY 2026 PFS final rule (90 FR 49980). We did not propose any modifications to MIPS eligibility requirements and the same eligibility assumptions apply to both the baseline and policies model.

For our impact analysis, we established the ''required eligibility''

category, which means the clinician exceeds the low-volume threshold in all three criteria (§§ 414.1305 and 414.1310 (b)(1)(iii)) and is subject to a MIPS payment adjustment. We based this estimate on the CY 2024 performance period data described in this section of the final rule, which includes the three low-volume criteria.

Our next two eligibility assumptions concern clinicians participating in MIPS through groups. They may voluntarily participate in MIPS but are not required to participate. First, our group eligibility, includes clinicians with a group submission, and their group exceeds all three low-volume threshold criteria. Second, we apply our opt-in eligibility assumptions. Individuals or groups who exceed the low-volume threshold in at least one criterion, but not all three, may elect to opt in. Based on the number of individuals who opted in to MIPS in performance year 2024, our model estimates that these clinicians will continue to opt in to MIPS in CY2027 performance period/ 2029 MIPS payment year.

Additionally, we estimate the number of ''Potentially MIPS Eligible'' clinicians. These clinicians are not included in our total number of MIPS eligible clinicians. These clinicians are potentially eligible because they are either opt-in eligible but did not opt-in or group eligible but did not report.

Finally, we estimate the number of clinicians who are neither MIPS eligible nor potentially MIPS eligible. They include clinicians who are below all three low-volume threshold criteria (both as an individual and as a group), QPs, and clinicians excluded from MIPS for other reasons, such as those with a non-MIPS-eligible clinician type or newly enrolled in Medicare

After applying these assumptions to our initial population, we estimate that there will be 586,925 MIPS eligible clinicians with ~$51.70 billion in allowed charges in the CY2027 performance period/2029 MIPS payment year.

(b) MIPS Eligibility Estimates

In our policies model, we estimate to have 586,925 MIPS eligible clinicians Table D–B13 summarizes our eligibility estimates for the policies model after applying our assumptions outlined in this section of the final rule.

BILLING CODE 4169–69–P

TABLE D-B13: ESTIMATION OF MIPS ELIGIBILITY STATUS FOR CY 2027 PERFORMANCE PERIOD/2029 MIPS PAYMENT YEAR USING THE CY 2027 PFS FINAL RULE ASSUMPTIONS

Eligibility Status	Predicted Participation Status in MIPS Among Clinicians	Number of Clinicians	PFS allowed charges ($ in mil)[1]
MIPS Eligible Clinicians			
MIPS eligible (always subject to a MIPS payment adjustment because individual clinicians exceed the low-volume threshold in all 3 criteria)	Reported to MIPS	94,895	$28,668
	Did not Report to MIPS	36,898	$11,100
Group eligibility (only subject to payment adjustment because clinicians' groups exceed low-volume threshold in all 3 criteria)	Had a group submission	451,654	$11,710[2]
Subgroup Eligible	MVP Subgroup reporting	286	$14
Opt-In eligibility assumptions (only subject to a positive, neutral, or negative adjustment because the individual or group exceeds the low-volume threshold in at least 1 criterion but not all 3, and they elect to opt-in to MIPS)	Opted-in To MIPS	3,192	$204
Total Number of MIPS Eligible Clinicians and the associated PFS allowed charges		**586,925**	**$51,695**
Potentially MIPS Eligible Clinicians			
Potentially MIPS Eligible (not subject to payment adjustment for non-participation; could be eligible for one of two reasons: (1) meet group eligibility; or (2) opt-in eligibility criteria)	Opt-in Eligible; Do not opt-in	176,361	$5,594
	Group Eligible; Did not Report	497,433	$11,590
Total Number of Clinicians Potentially MIPS Eligible		673,794	$17,184
Not MIPS Eligible Clinicians			
Below the low-volume threshold (never subject to payment adjustment; both individual and group is below all 3 low-volume threshold criteria)	Not applicable	130,199	$807
Excluded for other reasons (Non-eligible clinician type, newly enrolled)	Not applicable	91,962	$635
Qualified Participant (QP)	Not applicable	501,906	$23,259
Total Number of Clinicians Not MIPS Eligible		724,067	**$24,701**
Total Number of Clinicians Not MIPS Eligible or Potentially MIPS Eligible But Did Not Opt-in/Report		1,397,861	**$41,885**
Total Number of Clinicians (MIPS, Potentially, and Not MIPS Eligible)		**1,984,786**	**$93,580**

[1]Allowed charges estimated in 2024 dollars and projected to 2029 dollars (payment year. Low-volume threshold is calculated using allowed charges. MIPS payment adjustments are applied to the paid amount.

[2]Most clinicians are represented by Group submissions yet are below LVT and have low allowed charges.

BILLING CODE 4169–69–C

d. Modeling Approach and Methods for MIPS Value Pathways (MVPs) and Traditional MIPS

(1) Summary of Approach

In this final rule, we present several proposals that impact the measures and activities, the performance category scores, final scores, and MIPS payment adjustments for MIPS eligible clinicians. In section IV.A. of this final rule, we outline these changes in more detail and describe our methodology to estimate MIPS payment adjustments for the CY 2027 performance period/2029 MIPS payment year. We then present the impact of the policies in the CY 2027 performance period/2029 MIPS payment year by comparing select metrics to the baseline model. By comparing model outputs between the baseline model and the policies model, we are able to observe the impact of the

policies for the CY 2027 performance period/2029 MIPS payment year. MIPS eligible clinicians' final scores are calculated based on the clinicians' performance on measures and activities specified under the four MIPS performance categories: quality, cost, improvement activities, and Promoting Interoperability. MIPS eligible clinicians can participate in the four MIPS performance categories as an individual, group, virtual group, APM Entity, and via traditional MIPS, the APM Performance Pathway (APP), or MVP reporting options. MIPS APM participants who are ACOs participating in the shared saving program are required to report through the APP/APP Plus measure set. The APP or APP Plus reporting option only scored on three performance categories: quality, improvement activities, and Promoting Interoperability. Our simulation applies the finalized and baseline policies to the existing scoring engine.

(2) Methodology To Assess Impact for MIPS Value Pathways

At § 414.1365(b), we require MVP Participants (which can be a group, individual, subgroup, or APM entity) to register to report a particular MVP prior to submitting. We assessed whether to use 2024 MVP registration data to estimate MVP participation and policy impact but elected not to simulate the impact for MVP because we do not have sufficient MVP scoring data for modeling and simulation. Thus, modeling based on limited data is less reliable for impact assessment. As more MVP scoring data becomes available in the future, we will reassess our methodology for estimating MVP participation, final scores, and payment adjustments.

(3) Methodology To Assess Impact for Traditional MIPS

To estimate the impact of the policies on MIPS eligible clinicians, we use the data from performance year 2024, including data submitted for the quality, cost, improvement activities, and Promoting Interoperability performance categories and claims data for the cost performance category.

We supplemented this information with the most recent data available for CAHPS for MIPS and CAHPS for ACOs, administrative claims data for certain quality measures, and other data sets. For the CY 2027 performance period/2029 MIPS payment year, we calculate hypothetical final scores for the baseline and policies models for each MIPS eligible clinician by applying appropriate measure level, performance category, and final scoring policies.

(a) Methodology To Estimate the Quality Performance Category Score

We used the CY 2026 PFS final rules as the starting point of our baseline model (90 FR 49982). This includes our policies regarding the new benchmark for Administrative Claims measures and scoring topped out measures impacted by limited measure choice. Please refer to the CY 2026 PFS final rule for a comprehensive, detailed discussion of finalized policies (90 FR 49266).

Our policies model incorporates the following policies from this final rule:

- In section IV.B.1.b.(3) of this final rule, to facilitate fairer scoring, we proposed to remove the scoring cap and change the benchmarking approach for additional topped out measures applicable to clinicians facing both limited measure choice and limited scoring opportunities as well as MIPS Core Measures. We do not simulate the addition or removal of quality measures outlined in section IV.A.4.d.(1) of this final rule because current data from the CY 2024 performance period do not include new measures, and we cannot estimate the impact of removing measures since we are not able to predict clinician response in measure selections.

In section IV.B.1.b.(1) of this final rule, we proposed to remove the requirement to submit one outcome or high priority measures and instead require the submission of a MIPS Core Measure. We proposed that small practices with no more than 15 clinicians would be exempt from the MIPS Core Measure requirement. CMS internal analysis found 57 percent of the MVP submissions in performance year 2024 did not contain any of the MIPS Core measures. Modeling quality performance category score with insufficient historical submission data will introduce uncertainty and complexity to the modeling simulation. Working under this limitation, we believe the previous outcome/high-priority reporting requirement and scoring rules reflected in the performance year 2024 data can serve as a proxy for core measure reporting in the models. As a result, we do not simulate the MIPS Core Measure reporting policy. We did, however, model the impact of the core measure exemption for small practices.

(b) Methodology To Estimate the Cost Performance Category Score

We estimate the cost performance category score using the same methodology as described in the CY 2026 PFS final rule (90 FR 49982) for the baseline and the policies models.

We do not model the impact of the Acute Kidney Injury requiring New Inpatient Dialysis (AKI) measure because it was suppressed for the CY 2024 performance period/2026 MIPS payment year. Therefore, there was no performance data available in 2024 to model the impact of the Acute Kidney Injury requiring New Inpatient Dialysis (AKI) measure

(c) Methodology To Estimate the Promoting Interoperability Performance Category Score

We estimate the Promoting Interoperability performance category score using the same methodology as described in the CY 2026 PFS final rule (90 FR 49982) for the baseline model and the policies models.

For the policies model, we simulate the following changes:

In section IV.A.4.d.(4) of this final rule, we proposed the removal of three attestations in the Promoting Interoperability performance category: ONC Direct Review, ONC–ACB Surveillance, and Security Risk Analysis.

(d) Methodology To Estimate the Improvement Activities Performance Category Score

For the baseline model, we use the same method to estimate the improvement activities performance category score as described in the CY 2026 PFS final rule (90 FR 49983), including alignment with the clarification provided regarding IA automatic weighting for APM participants (89 FR 79366).

In section IV.A.4.d.(3) of this final rule, we proposed updates to the Improvement Activities inventory, such as removing activities. There is no historical data reflecting IA inventory updates, such as activity removal, for us to estimate potential impact. Our RIA models cannot predict how clinicians will alter their behavior once activities are removed.

(e) Methodology To Estimate the Complex Patient Bonus Points

This final rule does not include policies to modify the complex patient bonus. Therefore, for the baseline and policies RIA model, we used the previously established method to calculate the complex patient bonus as described in the CY 2022 PFS final rule (86 FR 64996).

(f) Methodology To Estimate the Final Score

We did not propose any changes to how we calculate the MIPS final score. Our baseline and policies models assign

a final score for each TIN/NPI by multiplying each estimated performance category score by the corresponding performance category weight, adding the products together, multiplying the sum by 100 points, adding the complex patient bonus, and capping at 100 points.

For both models, after adding any applicable complex patient bonus, we reset any final scores that exceeded 100 points to equal 100 points. For MIPS eligible clinicians who were assigned a weight of zero percent for any performance category, we redistributed the weights according to § 414.1380(c).

For the purposes of this model, if a MIPS eligible clinician was approved for reweighting of one or more performance categories in the baseline model according to the data from the CY 2024 performance period/2026 MIPS payment year, we continue to apply that reweighting in our policies model by assigning them a neutral score equal to the performance threshold if all categories were reweighted or assigning the applicable weights to the categories which were reweighted. Although it is unlikely (but possible) that the exact same clinicians will apply for and receive reweighting in both the CY 2024 performance period/2026 MIPS payment year (which our data is based on) and the CY 2027 performance period/2029 MIPS payment year (which we are simulating), we believe that this assumption appropriately reflects future clinician behavior for two reasons. First, while the exact same MIPS eligible clinicians may not receive reweighting in two different years, we believe that this assumption allows us to quantify the impact of the reweighting on a population level. In other words, even if the same clinicians do not apply for and receive reweighting in these two different years, the absolute number of reweighting and the characteristics of practices that receive reweighting are likely to remain similar. Secondly, if we were not to assign reweighting to those MIPS eligible clinicians, many of them would receive a very low final score because they did not submit data for one or more performance categories during the year in which they received reweighting. We do not believe that it is a realistic assumption that, in the absence of reweighting, those clinicians will continue not to submit data. For these reasons, we assume that clinicians who received reweighting in the CY 2024 performance period/2026 MIPS payment year are also approved for reweighting in the CY 2027 performance period/2029 MIPS payment year. These clinicians are assigned a score of the performance threshold (75) in our model because this corresponds with a neutral (0 percent) payment adjustment.

(g) Methodology To Estimate the MIPS Payment Adjustment

For the baseline and policies models, we applied the hierarchy as finalized in the CY 2024 PFS final rule (86 FR 65536 through 65537) to determine which final score should be used for the payment adjustment for each MIPS eligible clinician when more than one final score is available. We then calculate the parameters of an exchange function in accordance with the statutory requirements related to the linear sliding scale, budget neutrality, and minimum and maximum adjustment percentages.

For the baseline model, we apply the performance threshold of 75 points finalized in the CY 2026 PFS final rule. In this final rule, we do not make any changes to the performance threshold. Therefore, for both the baseline and policies models, we use a performance threshold of 75 to calculate the exchange function for MIPS payment adjustments. We note that the results of this exchange are not identical between the baseline and policies models. This is because the scaling factor used to determine positive adjustments is dependent on the total dollar amount of negative payment adjustments, and those adjustments differ as final scores are not identical between both models.

For both the baseline and policies models, we use these resulting parameters to estimate the positive or negative MIPS payment adjustment based on the estimated final score and the allowed charges for covered professional services furnished by the MIPS eligible clinician.

(4) Methodology To Assess Impact for APM Performance Pathways

Shared Savings Program Accountable Care Organizations, participating in MIPS through a MIPS APM are scored on performance in the quality, Promoting Interoperability, and Improvement Activities performance categories. We included the following previously finalized policies for SSP ACOs participating in a MIPS APM into the CY 2027 baseline model:

- In 2024, the CMS Web Interface continued to be a collection type available to Shared Savings Program Accountable Care Organizations (SSP ACOs) reporting under the Advanced Payment Pathway. Because our model simulation relies on data from performance year 2024, including CMS Web Interface submissions, we are unable to predict which collection type SSP ACOs will adopt in lieu of the web interface for CY 2027 performance period/2029 MIPS payment year, given that the Web Interface collection type was no longer available after the CY 2025 performance period/2027 MIPS payment year.

We do incorporate the following policies into the policies model:

- In section IV.B.1.c.(1) of this final rule, we proposed to score all Medicare CQMs using flat benchmarks retroactively beginning in CY 2026.

(5) Simulation Results and Projected Impact to MIPS Eligible Clinicians

Based on the methodology described in section VII.F.11.d(3) of this final rule, we create a baseline and policies simulation. Using this simulation, we estimate the impact of the policies of this final rule.

(a) Impact on Clinician Eligibility

In section VII.F.11.(c) of this final rule, we noted that we do not modify clinician eligibility and therefore there is no difference in the total number of MIPS eligible clinicians between our models.

(b) Impact on Clinician's Final Scores for Traditional MIPS

Table D–B14 shows the median final score by practice size and the percentage of MIPS eligible clinicians of each practice size with a positive, neutral, or negative adjustment.

BILLING CODE 4169–69–P

TABLE D-B14: CY 2027 FINAL SCORE ESTIMATES BY PRACTICE SIZE

Practice Size[1]	Total Number of MIPS Eligible Clinicians	Median Final Score Estimate[2]	Percent Eligible Clinicians with Positive Payment Adjustment	Percent Eligible Clinicians with Neutral Payment Adjustment	Percent Eligible Clinicians with Negative Payment Adjustment
Baseline					
(1) Solo	15,427	75.00	34.98	26.27	38.75
(a) Reporting	7,326	89.61	73.66	9.00	17.35
(b) Non-Reporting[3]	8,101	24.7	0.00	41.90	58.10
(2) Small (2 to 15)	60,634	87.98	67.60	14.84	17.36
(a) Reporting	47,596	91.35	86.37	4.02	9.62
(b) Non-Reporting[4]	13,040	75	0.04	54.33	45.64
(3) Medium (16 to 99)	115,077	88.63	89.91	7.17	11.92

(a) Reporting	47,596	91.84	86.17	4.01	9.82
(b) Non-Reporting	13,040	75	0.04	54.33	45.64
(3) Medium (16 to 99)	115,077	89.14	81.08	7.14	11.78
(4) Large (100+)	395,787	89.48	94.80	1.63	3.57
Overall	586,925	89.21	87.73	4.72	7.55

[1]Practice size refers to the number of NPIs in a TIN

[2]The median final score includes clinicians who receive reweighting for all MIPS performance categories our policies at § 414.1380(c)(2). These clinicians who have all performance categories reweighted are assigned a score of 75 (neutral payment adjustment) in our model.

[3]52.51% of the solo practitioners did not report by not submitting any data

[4]21.51% of the small practice providers did not report by not submitting any data

BILLING CODE 4169–69–C

MIPS performance and financial distribution remain stable with marginal improvements in the overall median final scores and slightly higher overall percentage of clinicians receiving a positive payment adjustment. The overall median final score is 88.83 in the baseline model and 89.21 in the policies model, a slight increase for all practice sizes. About 87.3 percent of eligible clinicians receive a positive payment adjustment in the baseline model and 87.73 percent in the policies model Overall, the percentage of eligible clinicians with negative payment adjustment will drop slightly, from 7.94 percent baseline to 7.55 percent policies.

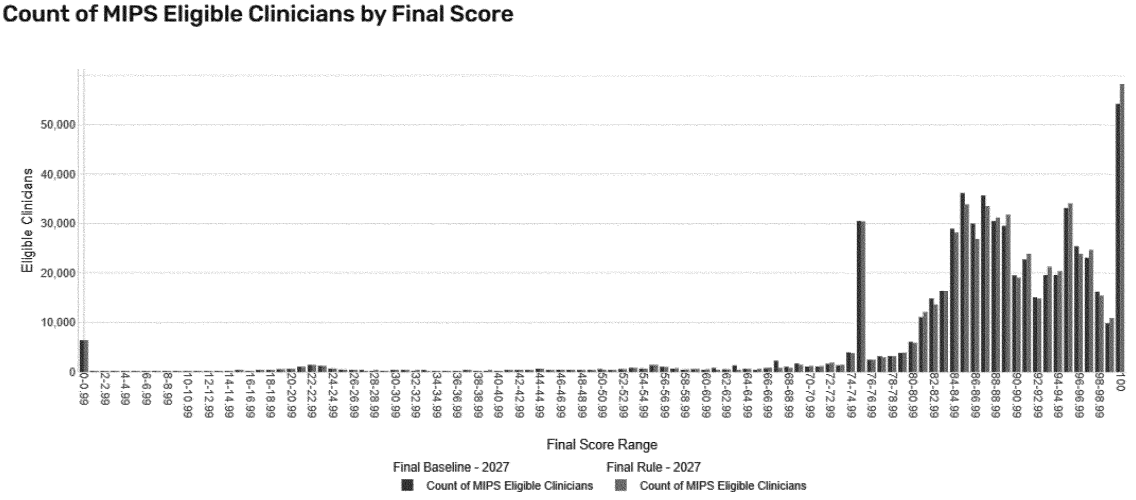

Table D–B15 shows the median quality category score for MIPS eligible clinicians who are scored on the quality performance category for the baseline and policies models. Overall, the median quality performance category score showed a marginal increase from 83.16 to 83.72. Solo practitioners, who actively report, experience the most noticeable increase (+2.25) in median quality performance category score compared to those of other practice sizes.

TABLE D-B15: CY 2027 QUALITY SCORE ESTIMATES BY PRACTICE SIZE

Practice Size	MIPS Eligible Clinicians Receiving Quality Score	Total Number of MIPS Eligible Clinicians	Percent of MIPS Eligible Clinicians Receiving Quality Score	Median Quality Score Estimate
Baseline

Medium (16-99)	97,926	115,077	85.10	83.13
Large (100+)	378,001	395,787	95.51	83.72
Overall	**537,214**	**586,925**	**91.53**	**83.72**

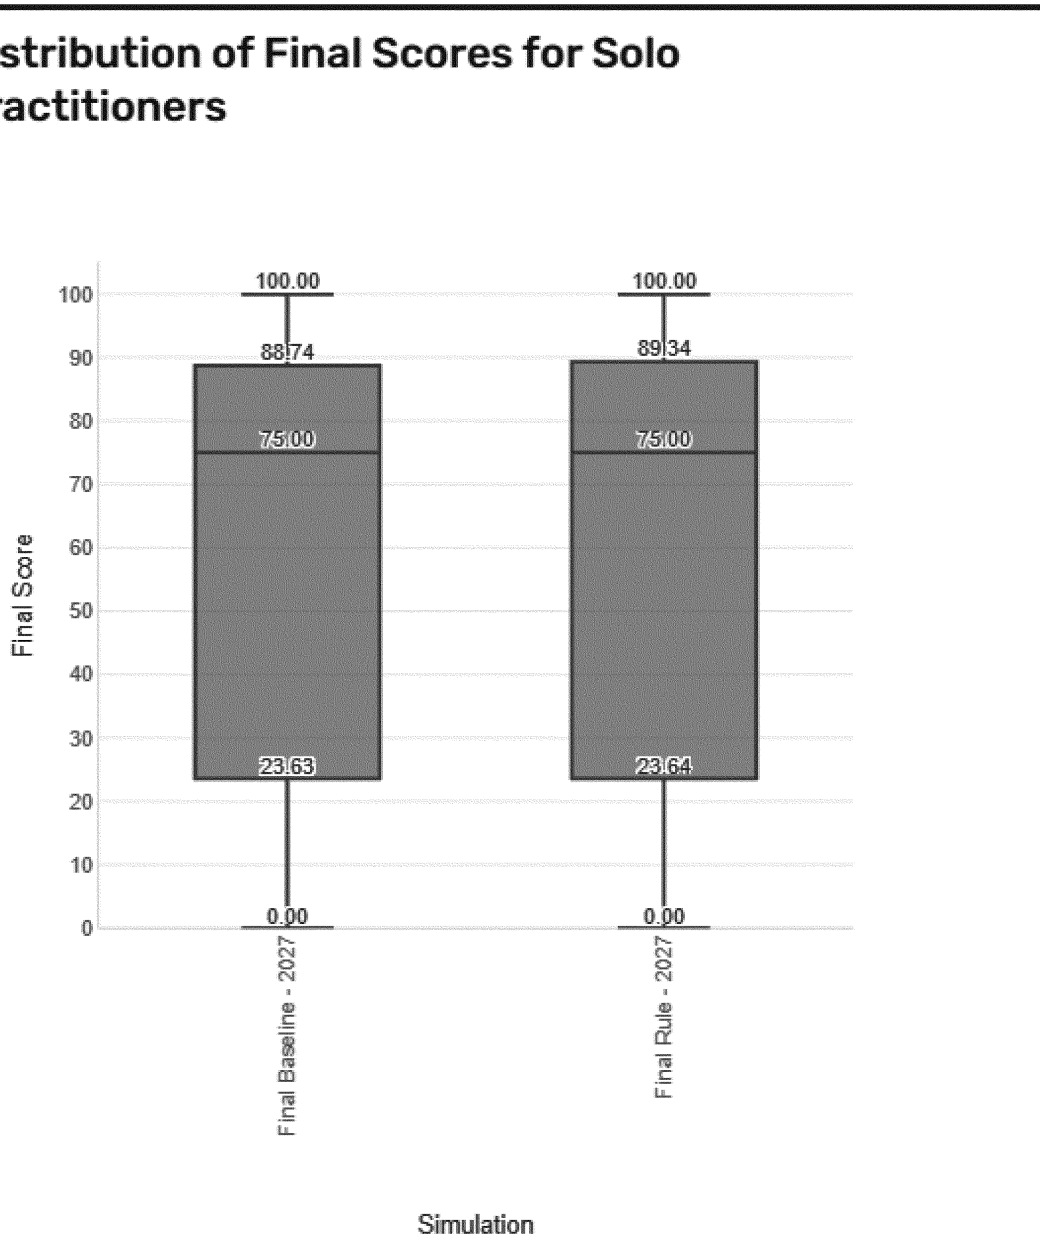
Figure D–B1 shows the distribution of final scores for all MIPS eligible clinicians. Note that there is a noticeable size of MIPS eligible clinicians with a final score of 75. MIPS eligible clinicians whom we approved for reweighting all MIPS performance categories in accordance with our reweighting policies at § 414.1380(c)(2) are assigned a final score of exactly the performance threshold (75). Overall, the distribution is left skewed, indicating that many more clinicians would receive final scores on the higher side.

FIGURE D-B1: Count of MIPS Eligible Clinicians by Final Score

(i) Impact to Small and Solo Practices

Across both the baseline and policies models, approximately 15,427 MIPS-eligible clinicians are solo practitioners, accounting for 2.63 percent of all MIPS-eligible clinicians.

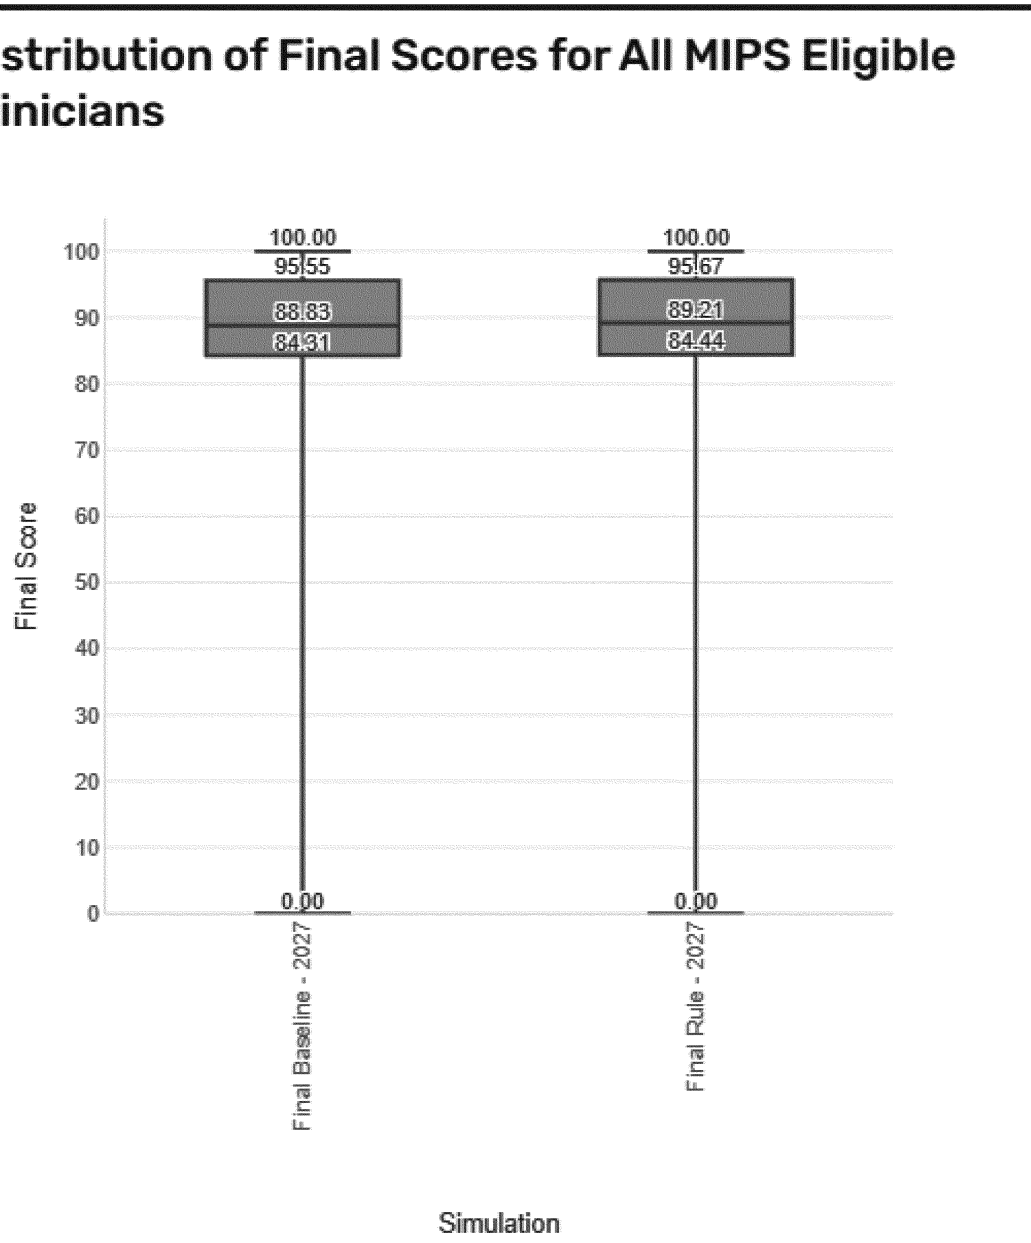
The median final score for solo practitioners who actively report data is 89.61 in the baseline model and 90.23



in the policies model. However, the median final scores for solo practitioners who do not report data are substantially lower: 24.7 in both baseline and policies models. The portion of all solo practitioners receiving a positive adjustment is starkly different between reporting and non-reporting solo practitioners. About 73.66 percent (baseline) and 73.23 percent (policies) reporting solo practitioners will receive a positive payment adjustment; whereas 0 percent (both baseline and policies) non-reporting solo practitioners will receive a positive payment adjustment.

Many solo practitioners do not actively submit data to MIPS despite being MIPS eligible clinicians. Based on the 2024 performance data, we estimate that about 52.51 percent of solo practitioners receiving a MIPS payment adjustment do not submit any data to MIPS.

Table D–B16 shows that, even among reporting solo practitioners, the percentage receiving a positive payment adjustment is lower than that of clinicians from small, medium, or large practices. Similarly, even for reporting solo practitioners, a higher proportion of them face negative payment adjustments compared to those in small, medium, and large practices Figure D–B2 shows the distribution of final scores for solo practitioners. Both baseline and policies box plots show identical final score distributions, and both baseline and policies models show a large distance between the lower and upper quartiles. Figure D–B3 shows the final score distribution for all MIPS eligible clinicians between the baseline and the policies models. These box plots also show identical final score distributions; however, the distance between lower and upper quartiles is substantially narrower for all MIPS eligible clinicians than it is for solo practitioners.



BILLING CODE 4169–69–P

FIGURE D-B2: Distribution of Final Scores for Solo Practitioners

BILLING CODE 4169–69–C

FIGURE D-B3: Distribution of Final Scores for All MIPS Eligible Clinicians

Small practices, defined at § 414.1305 as groups with 2 to 15 clinicians, have a median final score of 87.98 in the baseline and 88.61 in the policies model. However, as shown in Table D–B14, the median final score for the reporting small practice providers is 91.35 (baseline) and 91.84 (policies), substantially higher than the median final score of 75—in both baseline and policies models—for the non-reporting small practice providers. They are also higher than the median final scores for all MIPS eligible clinicians who submit data, which are 89.85 in the policies model and 89.66 in the baseline model. This indicates that small practice providers who submit MIPS data can perform better than it is for the medium-sized and large practice providers. Table D–B16 shows the percentage of clinicians, by practice size, either do or do not submit data to MIPS and their corresponding median final scores. Note that, in the policies model, the median final scores for small, medium, and large practice clinicians who do not submit data are 75. This indicates that many small, medium or large practice clinicians who do not submit data to MIPS have been approved for reweighting of all of their MIPS performance categories under our policies at § 414.1380(c)(2). In contrast, the median final scores for solo clinicians, who do not submit data are 24.70. This indicates that many of them are either not being eligible for or not applying for our reweighting policies for extreme uncontrollable circumstances or hardships. Over 90 percent of the medium-sized and large practice clinicians submit data to MIPS. It is possible that the remaining 10 percent or less MIPS eligible clinicians who do

not submit data to MIPS are primarily those who have received reweighting under our policies at § 414.1380(c)(2).

TABLE D-B16: PERCENTAGE OF MIPS ELIGIBLE CLINICIANS WHO SUBMIT DATA AND MEDIAN FINAL SCORE

	Percent of MIPS Eligible Clinicians who Submit Data (by practice size)	Median Final Score of MIPS Eligible Clinicians who Submit Data	Median Final Score of MIPS Eligible Clinicians who Do not submit data.
Baseline			
(1) Solo	47.49	89.61	24.70
(2) Small (2 to15)	78.49	91.35	75.00
(3) Medium (16 to 99)	90.67	89.74	75.00

Policies			
(1) Solo	47.48	90.23	24.70
(2) Small (2 to 15)	78.50	91.84	75.00
(3) Medium (16 to 99)	90.71	90.26	75.00
(4) Large (100+)	97.71	89.66	75.00
Overall	**93.03**	**89.85**	**75.00**

(ii) Impact to Rural Providers

In our data we assign rural practitioners a special status. Impact assessment of this group of clinicians indicates that their overall final scores are slightly lower than the overall MIPS eligible clinicians. Table D–B17 shows the median final score and the percentage of eligible clinicians with a positive, neutral, or negative adjustment by practice size for rural practitioners.

BILLING CODE 4169–69–P

TABLE D-B17: CY 2027 FINAL SCORE ESTIMATES BY PRACTICE SIZE FOR RURAL PRACTITIONERS ONLY

Large (100+)	35,684	87.22	96.09	1.42	2.49
Overall	**66,801**	**87.46**	**87.81**	**3.77**	**8.41**

[1]46.52% of the rural, solo practitioners did not report by not submitting any data[2]14.22% of the rural, small practice providers did not report by not submitting any data.

The overall median final score for rural practitioners is 87.37 in the baseline model and 87.46 in the policies model. This is slightly lower than the median final score for all MIPS eligible clinicians, which is 88.83 in the baseline model and 89.21 in the policies model. According to the results from the policies model, rural clinicians in large practices have a slightly lower median final score (87.22) than it is for reporting, rural, solo practitioners (88.9), reporting, rural, small practice providers (91.33), and rural medium-size practice providers (89.80).

(iii) Impact to Safety Net Providers

(A) Updated Definition of Safety Net Providers

In the CY 2022 PFS final rule (87 FR 70094), we finalized our complex patient bonus methodology. This bonus is composed of two distinct calculations which are added together: Medical Complexity and Social Risk. Medical Complexity is determined based on a MIPS eligible clinicians Hierarchical Conditions Categories risk score and social risk is determined based on the proportion of a MIPS eligible clinicians Medicare patient population who are dually eligible for both Medicare and Medicaid.

In the 2024 PFS final rule (88 FR 79513), we compared the performance of clinicians who received the complex patient bonus with our overall population. As we further developed our model, we decided to adopt a more precise definition of safety net providers. We believe that by narrowing our definition of safety net providers to clinicians fall in the top 20 percentile for their percentage of patients who are dually eligible for Medicare and Medicaid, we can identify providers who care for a large proportion of socially vulnerable individuals.

Table D–B18 shows the median final score estimates for safety net providers under this definition. In the policies model, safety net providers have a higher median final score (93.22) than the overall MIPS eligible clinicians (89.21). Safety net solo practitioners who actively report data have a substantially higher median final score (93.84 in the policies model) than that from the non-reporting, safety net, solo practitioners (29.41 in the policies model). Almost 57 percent of safety net solo practitioners and over 30 percent of safety net small practice providers did not report by not submitting any MIPS data, compared to ~53 percent and ~22 percent of the overall solo practitioners and small practice providers, respectively.

TABLE D-B18: CY 2027 FINAL SCORE ESTIMATES BY PRACTICE SIZE FOR SAFETY NET PRACTITIONERS ONLY

BILLING CODE 4169–69–C

(c) Impact to MIPS Eligible Clinicians' Payment Adjustments

We did not propose to increase the performance threshold in this final rule. Table D–B20 shows that the payment adjustments are very similar between the baseline and policies model. This is because our policies can maintain program stability. The maximum positive payment adjustment is 1.37 percent in the baseline model and 1.34 percent in the policies model. The baseline model estimates redistributing $332 million, and the policies model estimates redistributing $330 million. This slight decrease is due to slightly higher proportions of clinicians receiving positive payment adjustments in the policies model (87.73 percent) than it is in the baseline model (87.30 percent). As the proportion of MIPS eligible clinicians receiving a positive payment adjustment increases slightly, the portion of clinicians receiving a negative payment adjustment also slightly decreases accordingly (7.55 percent in the policies model vs. 7.94 percent in the baseline model). As the proportion of MIPS eligible clinicians receiving negative payment adjustments decreases slightly, the budget neutral funds available for redistribution also decrease somewhat.

FIGURE D-B5: Final Score Distribution and Payment Adjustment

We also report on the median positive and negative payment adjustments by practice size in Table D–B19.

TABLE D-B19: CY 2027 MEDIAN POSITIVE AND NEGATIVE PAYMENT ADJUSTMENT ESTIMATES BY PRACTICE SIZE

Practice Size	Median Positive Payment Adjustment[1]	Median Negative Payment Adjustment
Baseline		
Solo (1)	+1.01	-6.43
(a) Engaged	+1.01	-2.67
(b) Non-Reporting	N/A[2]	-9.00
Small (2-15)	+0.96	-6.08
(a) Reporting	+0.96	-1.50
(b) Non-Reporting	+0.08	-6.74
Medium (16-99)	+0.87	-1.92
Large (100+)	+0.81	-1.35
Overall	+0.83	-2.46
Policies		
Solo (1)	+1.03	-6.42
(a) Engaged	+1.03	-2.53
(b) Non-Reporting	N/A	-9.00
Small (2-15)	+0.97	-6.06
(a) Reporting	+0.97	-1.47
(b) Non-Reporting	+0.08	-6.74
Medium (16-99)	+0.88	-1.92
Large (100+)	+0.80	-2.08
Overall	+0.83	-2.62

[1]Final score above the performance threshold. The median negative adjustment is defined as the medium payment adjustment among clinicians with a final score below the performance threshold. Neither median includes clinicians with a final score equal to the performance threshold.

[2]There are no solo practitioners who did not report data and received a Positive payment adjustment. The maximum they could receive is from the Quality Admins Claims, and even if they received excellent scores, it would still be less than the performance threshold.

The overall median negative payment adjustment in the policies model is slightly lower than it is in the baseline model. That is because the policies model has a higher mean final score than the baseline model (89.21 policies vs. 88.83 baseline).

e. Additional Impacts From Outside Payment Adjustments

(1) Burden Overall

In addition to policies affecting payment adjustments, we are finalizing several policies that will impact burden. In section V.B.7. of this final rule, we estimate the burden impacts of finalized policy provisions.

(2) Additional Impacts to Clinicians

We provide additional burden discussions for policy provisions that we are unable to quantify.

(a) Modifications to the MIPS Improvement Activities Inventory

As discussed in section IV.A.4.d.(3) of this final rule, we are finalizing our proposed updates to the MIPS Improvement Activities Inventory beginning with the CY 2027 performance period/2029 MIPS payment year. We do not expect these changes to affect our burden estimates for the number of estimated respondents or response time, as most of the improvement activities in the MIPS Improvement Activities Inventory remain unchanged for the CY 2027 performance period/2029 MIPS payment year. We refer readers to section IV.A.4.d.(3) of this final rule for details on the changes to the MIPS Improvement Activities Inventory.

(b) Qualifying Alternative Payment Model (APM) Participant (QP) Determinations

In section IV.F.2. of this final rule, we are finalizing with modification, our proposal to apply QP and partial QP status at the TIN/NPI level. We note that year-over-year participation changes have historically had outsized impacts on our projections. For example, ACOs frequently add or remove participants as part of their operations. These changes in participation make it difficult to project how these proposals will impact clinicians who are determined to be QPs, Partial QPs, or previously reported MIPS (at the individual, group, subgroup, or APM Entity level), if at all. Accordingly, we have not adjusted our estimates related to performance category submissions due to these proposals. For details on these policies, see section IV.F.2. of this final rule.

(c) Third-Party Intermediaries

In section IV.C. of this final rule, we are finalizing our proposal to (1) add a requirement that CMS-approved third-party intermediaries may be terminated after failure to submit data for 1 year; and (2) clarify that if a third-party intermediary does not submit data for 1 year, they would be required to provide documentation and would be terminated if documentation cannot be provided and/or the documentation shows that they would not be submitting data for the given MIPS performance period. Due to the technical nature of these changes, there is no data available to quantify the burden for third-party intermediaries during the CY 2027 performance period/2029 MIPS payment year. We refer readers to section IV.C. of this final rule for additional information on the policy provisions related to third-party intermediaries.

G. Alternatives Considered Related to the Ambulatory Specialty Model

In section III.D. of this final rule, we discuss the mandatory ASM. We will test whether ASM leads to improved chronic condition management, higher quality care, and reduced costs by incentivizing ASM participants with the opportunity for positive payment adjustments to Medicare Part B covered professional services payments based on their performance on data reported on quality, cost, improvement activities, and CEHRT interoperability.

Throughout this final rule, we identified our proposed policies and alternatives that we considered and provided information as to the effects of these alternatives and summaries of public comments received on the proposed policies. This final rule provides descriptions of the requirements that we will mandate and presents rationales for our decisions and, where relevant, alternatives that we considered. For example, we considered whether we should waive the requirement for ASM participants in rural areas to attest to complete IA–2: Establishing Communication and Collaboration Expectations with Primary Care using Collaborative Care Arrangements (CCAs) instead of providing the proposed rural scoring adjustment to an ASM participant's final score. Although ASM participants in rural areas may face challenges forming partnerships with primary care providers due to limited primary care availability, we believe that a rural scoring adjustment more broadly accounts for challenges that could affect ASM participant performance across the four ASM performance categories compared to only waiving IA–2.

We solicited comments on our proposals and on the alternatives, which are addressed in this final rule.

H. Impact on Beneficiaries

As noted previously, we estimate that a combination of the finalized proposals for the Shared Savings Program, including introducing a growth adjustment, the increase to the sharing rate in BASIC track Level E, and the increase in the scaling factor for the prior savings adjustment, are expected to increase the number of ACOs in the program and correspondingly the size of the population of beneficiaries assigned to ACOs by up to one million beneficiaries per year, with roughly two-thirds of such increase attributable to the proposed growth adjustment. This growth in participation is likely to feature beneficiaries who might particularly benefit from care management because the growth adjustment is designed to attract new providers without experience in the program who are serving beneficiaries new to value-based care. Additionally, the increase to the scaling factor for the prior savings adjustment, together with risk-adjusting the 5 percent cap on benchmark adjustments, could moderate the rebasing ratcheting effect and thereby improve the business case for ACOs serving high needs populations to invest additional resources in care management.

In the CY 2027 PFS proposed rule (91 FR 44274), we noted that in PY 2024, ACOs performed better on certain patient-experience and performance measures than physician groups participating in MIPS (90 FR 50003 and 50004) and referred readers to our discussion in the CY 2026 PFS final rule for additional details on ACOs' measure performance (90 FR 50002). Since the publication of the CY 2027 PFS proposed rule, preliminary PY 2025 data on ACOs' measure performance and measure performance relative to physician groups participating in MIPS has become available.

ACOs have been found to perform better on certain patient experience and performance measures than physician groups participating in MIPS (as shown in Table D–B20). In PY 2025, ACOs scored better than comparable MIPS groups[427] on the three eCQMs in the APP Plus quality measure set that are available in traditional MIPS and the

[427] Quality Payment Program measurement data are for MIPS groups that have 16 or more clinicians. The mean number of beneficiaries for MIPS groups with 16 or more clinicians is 11,012.

difference was statistically significant for Quality ID: 134 Preventive Care and Screening: Screening for Depression and Follow-Up Plan ($p < .05$) and Quality ID: 236 Controlling High Blood Pressure ($p < .05$). ACOs also performed better than comparable MIPS groups on one of the three MIPS CQMs in the APP Plus quality measure set that are available in traditional MIPS and the difference was statistically significant for Quality ID: 236 Controlling High Blood Pressure ($p < .05$). Additionally, ACOs performed better than comparable MIPS groups on six of the ten patient experience summary survey measures that contribute to Quality ID: 321 Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS, and for one of these summary survey measures the difference was statistically significant: CAHPS–1 Getting Timely Care, Appointments and Information ($p <.05$).

We note there are key differences between the Shared Savings Program and MIPS that limit our analysis of ACOs' performance on the eCQMs/MIPS CQMs and the CAHPS for MIPS Summary Survey Measures compared to MIPS groups. Specifically, Shared Savings Program ACOs are required to report the eCQMs/MIPS CQMs included in the APP Plus quality measure set; whereas MIPS groups can choose which eCQMs and MIPS CQMs they report on and tend to choose those they will perform well on. Shared Savings Program ACOs are required to administer the CAHPS for MIPS Survey, while it is optional for MIPS groups. A large number of MIPS groups do not administer the CAHPS for MIPS Survey as they are less likely to meet the minimum sample size required to administer the survey, coupled with the tendency of MIPS groups to choose measures they will perform well on.

BILLING CODE 4169–69–P

TABLE D-B20: PY 2025 QUALITY MEASURES THAT SHARED SAVINGS PROGRAM ACOs PERFORMED BETTER ON THAN COMPARABLE MIPS GROUPS

Quality #	Measure Title	Difference in Mean ACO and MIPS Group Performance Rates for PY 2025 (%)[1]
	eCQMs

CAHPS-8	Care Coordination	0.57[3]
CAHPS-9	Courteous and Helpful Office Staff	0.18[3]

[1] The numbers in this column represent the mean ACO performance rate in PY 2025 minus the mean ACO performance rate in PY 2024 for each measure.

[2] This is an inverse measure, and a lower number indicates better quality performance.

[3] Indicates statistically significant differences between ACOs' mean performance rates between PY 2024 and PY 2025 ($p < 0.05$).

On average, ACOs have improved their performance on a variety of quality measures from PY 2024 to PY 2025. In PY 2025, ACOs improved their performance on three of the eCQMs in the APP Plus quality measure set and the difference in their performance was statistically significant for two of these eCQMs, Quality ID: 001 Diabetes: Hemoglobin A1c (HbA1c) Poor Control (≤9%) ($p < .05$)) and Quality ID: 236 Controlling High Blood Pressure ($p < .05$). ACOs also improved their performance on two of the Medicare CQMs in the APP Plus quality measure set in PY 2025 and the difference in their performance was statistically significant for one of these Medicare CQMs, Quality ID: 236 Controlling High Blood Pressure ($p < .05$). ACOs improved their performance on nine of the ten patient experience summary survey measures that contribute to Quality ID: 321 CAHPS for MIPS, and for all nine the difference in their performance was statistically significant ($p < .05$). We note that a comparison of ACOs' average performance on Quality ID: 112 Breast Cancer Screening between PY 2024 and PY 2025 is not available since PY 2025 was the first year this measure was available in the APP Plus quality measure set that Shared Savings Program ACOs are required to report.

Based on ACOs' quality performance results historically (as shown in Tables D–B20 and D–B21), we anticipate that the policies in this final rule will enable ACOs to continue to improve the quality of care for the beneficiaries they serve. Increased participation in the Shared Savings Program would extend ACO care coordination to additional beneficiaries which can help improve the quality of care they receive.

1. Quality Payment Program

There are several changes in this final rule that are expected to have a positive effect on beneficiaries. In general, we believe that many of these changes, including the MVP and subgroup provisions, will lead to meaningful feedback to beneficiaries on the type and scope of care provided by clinicians. Additionally, beneficiaries could use the publicly reported information on clinician performance in subgroups to identify and choose clinicians in multispecialty groups relevant to their care needs. Consequently, we believe the policies in this final rule will improve the quality and value of care provided to Medicare beneficiaries.

Several of the new quality measures include patient-reported outcome-based measures, which could be used to help patients make more informed decisions about treatment options. Patient-reported outcome-based measures provide information on a patient's health status from the patient's point of view and could also provide valuable insights on factors such as quality of life, functional status, and overall disease experience, which will not otherwise be available through routine clinical data collection. Patient-reported outcome-based measured are factors frequently of interest to patients when making decisions about treatment.

2. Ambulatory Specialty Model

We believe that the refinements to ASM's provisions finalized in this final rule will not change the potential effects of ASM on beneficiaries. We continue to believe that ASM will have no impact on cost to beneficiaries because ASM payment adjustments will not affect Medicare beneficiary coinsurance amounts. The coinsurance will be calculated based on the Medicare allowed amounts before any ASM payment adjustment multipliers are applied to Medicare Part B payments for covered professional services.

I. Estimating Regulatory Familiarization Costs

Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assume that the total number of unique commenters on this year's proposed rule will be the number of reviewers of this final rule. We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. It is

possible that not all commenters reviewed this year's rule in detail, and it is also possible that some reviewers choose not to comment on the proposed rule. We welcomed any public comments on the approach in estimating the number of entities that would review the proposed rule. We did not receive any public comments specific to our solicitation.

Using the wage information from the BLS for medical and health service managers (Code 11–9111), we estimated that the cost of reviewing this rulemaking is $119.10, including overhead and fringe benefits *https://www.bls.gov/oes/current/oes_nat.htm.* Assuming an average reading speed, we estimate that it would take approximately [8 hours for the staff to review half of this final rule. For each entity that reviews the rule, the estimated cost is $952.80 ($119.10 x 8). Therefore, we estimated that the total cost of reviewing this regulation is $410,475,77 ($952.80 x 43,081 reviewers on this year's proposed rule).

J. Accounting Statement

As required by OMB Circular A–4 (available at *https://www.whitehouse.gov/wp-content/uploads/2025/08/CircularA-4.pdf*), in Tables D–B20 and D–B21 (Accounting Statements), we have prepared an accounting statement. This estimate includes growth in incurred benefits from CY 2026 to CY 2027 based on the FY 2027 President's Budget baseline.

TABLE D-B20: ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES

CATEGORY	TRANSFERS
CY 2027 Annualized Monetized Transfers	Estimated decrease in expenditures of $2.1 billion for PFS CF update.
Bearers of Transfer Gain	Federal Government to physicians, other practitioners and providers and suppliers who receive payment under Medicare.

TABLE D-B21: ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED COSTS, TRANSFER, AND SAVINGS

CATEGORY	TRANSFER
CY 2027 Annualized Monetized Transfers of beneficiary cost coinsurance.	-$0.4 billion
Bearers of Transfer Gain	Beneficiaries to Federal Government.

TABLE D-B22: ACCOUNTING STATEMENT FOR PROVISIONS FOR MEDICARE SHARED SAVINGS PROGRAM (CYS 2027 to 2036) ($ MILLIONS)

Category	Primary Estimate	Minimum Estimate	Maximum Estimate	Source Citation
BENEFITS				
Annualized monetized: Discount rate: 3%	-$565 million	-$1,058 million	-$115 million	Tables D-B7 through D-B10; summarized in total in Table D-B11
Annualized monetized: Discount rate: 7%	-$579 million	-$1,063 million	$134 million	Tables D-B8 through D-B10; summarized in total in Table D-B11

Notes: Negative values reflect a reduction in Federal net cost resulting from care management by ACOs. Estimates may be a combination of benefits and transfers. To the extent that the incentives created by Medicare payments change the amount of resources society uses in providing medical care, the more accurate categorization of effects would be as costs (positive values) or benefits/cost savings (negative values), rather than as transfers.

K. Conclusion

The analysis in the previous sections, together with the remainder of this final rule, provided an initial Regulatory Flexibility Analysis. The previous analysis, together with the preceding portion of this rule, provides an RIA. In accordance with the provisions of Executive Order 12866, this rule was reviewed by the Office of Management and Budget.

VIII. Waiver of Delay in Effective Date

The Congressional Review Act (CRA) (Pub. L. 104–121, Title II) requires a 60-day delay in the effective date for major rules unless an agency finds good cause that notice and public procedure are impracticable, unnecessary, or contrary to the public interest, in which case the rule shall take effect at such time as the agency determines. 5 U.S.C. 801(a)(3) and 808(2).

We believe that further notice and public procedure are unnecessary, and that it would be impracticable and contrary to the public interest to delay the effective date of the PFS final rule for the following reasons.

If the effective date of this final rule is delayed by 60 days, the finalized policies addressed in the rule (including changes to the physician fee schedule (PFS); other changes to Medicare Part B payment policies; new policies for the

Medicare Prescription Drug Inflation Rebate Program; provisions limiting Medicare coverage of certain individuals; updates to the Ambulatory Specialty Model; updates to drugs and biological products paid under Part B; the Medicare Shared Savings Program requirements; updates to the Quality Payment Program; updates to policies for Rural Health Clinics and Federally Qualified Health Centers; updates to the Ambulance Fee Schedule regulations; codification of the Inflation Reduction Act and Consolidated Appropriations Act, 2026 provisions; updates to Clinical Laboratory Fee Schedule regulations; and updates to the Medicare Promoting Interoperability Program), will not be effective as of the beginning of the payment year, and CMS will be compelled to continue to use obsolete reimbursement rates which will disadvantage health care providers and suppliers.

In accordance with section 1848(b)(1) of the Act, the PFS is a calendar year payment system. We typically issue the PFS final rule by November 1 of each year to comply with the statutory requirement under section 1848(b)(1) of the Act to establish the fee schedules annually and to ensure 60-days' notice so that the payment policies for the system are effective on January 1, the first day of the calendar year to which the policies are intended to apply. The policies described previously are intended to align with the PFS payment system.

In this final rule, we review and revise values for specific services and adopt or revise other policies that relate to the PFS for CY 2027 or future years. Section 1848(b)(1) of the Act requires that no less often than annually, the Secretary shall establish fee schedules that establish payment amounts for all physicians' services furnished in all fee schedule areas. Section 1848(c)(2)(B)(ii)(II) of the Act also requires that adjustments to relative values under the PFS be made in a budget neutral manner. We find that, in order to comply with the statutory requirements to annually review and update this payment system, to preserve budget neutrality as required by statute, and to promote an orderly transition to a new payment year, it is in the public interest to ensure that the rule is effective no later than 1 full year after the effective date of the previous year's update (that is, January 1 of each year). Moreover, it is in the public interest to waive the 60-day delay of the effective date, so that providers, and suppliers are adequately reimbursed starting at the beginning of the calendar year, so that an adjusted conversion factor applies to services furnished on or after January 1, 2027, and so that budget neutrality can be maintained. Therefore, we find good cause to waive the 60-day delay in the effective date for this final rule.

Mehmet Oz, Administrator of the Centers for Medicare & Medicaid Services, approved this document on XXXX XX, 2026.

List of Subjects

42 CFR Part 400

Grant programs-health, Health facilities, Health maintenance organizations (HMO), Medicaid, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 405

Administrative practice and procedure, Diseases, Health facilities, Health professions, Medical devices, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 406

Health facilities, Diseases, and Medicare.

42 CFR Part 407

Medicare.

42 CFR Part 410

Diseases, Health facilities, Health professions, Laboratories, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 414

Administrative practice and procedure, Biologics, Diseases, Drugs, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR 415

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 417

Administrative practice and procedure, Grant programs-health, Health care, Health insurance, Health maintenance organizations (HMO), Loan programs-health, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 422

Administrative practice and procedure, Health facilities, Health maintenance organizations (HMO), Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

42 CFR Part 423

Administrative practice and procedure, Emergency medical services, Health facilities, Health maintenance organizations (HMO), Health professionals, Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

42 CFR Part 424

Emergency medical services, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 425

Administrative practice and procedure, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 427

Administrative practice and procedure, Biologics, Inflation rebates, Medicare, Prescription drugs.

42 CFR Part 428

Administrative practice and procedure, Biologics, Inflation rebates, Medicare, Prescription drugs.

42 CFR Part 512

Administrative practice and procedure, Health care, Health facilities, Health insurance, Intergovernmental relations, Medicare, Penalties, Privacy, and Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR chapter IV as set forth below:

PART 400—INTRODUCTION; DEFINITIONS

■ 1. The authority for part 400 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh, and 44 U.S.C. Chapter 35.

■ 2. Section 400.200 is amended by adding a definition for ''Eligible noncitizen'' in alphabetical order to read as follows:

§ 400.200 General definitions.

* * * * *

Eligible noncitizen means an individual who, effective July 4, 2025, is an—

(1) Alien lawfully admitted for permanent residence under the Immigration and Nationality Act;

(2) Alien who has been granted the status of Cuban and Haitian entrant, as defined in section 501(e) of the Refugee Education Assistance Act of 1980; or

(3) Individual who lawfully resides in the United States in accordance with a Compact of Free Association referred to in 8 U.S.C. 1612(b)(2)(G).

* * * * *

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

■ 3. The authority citation for part 405 continues to read as follows:

Authority: 42 U.S.C. 263a, 405(a), 1302, 1320b–12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k).

■ 4. Section 405.2463 is amended by—
■ a. Adding paragraph (a)(1)(iii);
■ b. In paragraph (b)(2) introductory text, removing the phrase ''a FQHC patient'' and adding in its place the phrase ''an FQHC patient or a RHC patient''; and
■ c. In paragraph (b)(3), removing the phrase ''Not before October 1, 2025'' and adding in its place the phrase ''Not before January 1, 2028'';

The addition reads as follows:

§ 405.2463 What constitutes a visit.

(a) * * *
(1) * * *
(iii) Furnished under the direct supervision of the RHC practitioner, a face-to-face encounter between a patient and either of the following:
(A) A qualified provider of medical nutrition therapy services as defined in part 410, subpart G, of this chapter.
(B) A qualified provider of outpatient diabetes self-management training services as defined in part 410, subpart H, of this chapter.
* * * * *

§ 405.2464 [Amended]

■ 5. Section 405.2464 is amended by—
■ a. In paragraph (b)(1), removing the phrase ''paragraphs (d) and (e) of this section'' and adding in its place the phrase ''paragraphs (c) through (h) of this section'';
■ b. In paragraph (b)(2)(i), removing the reference ''§ 405.2462(c)(1)'' and adding in its place the reference ''§ 405.2462(e)(1)'';
■ c. In paragraph (b)(2)(ii), removing the reference ''§ 405.2462(c)(2)'' and adding in its place the reference ''§ 405.2462(e)(2)''; and
■ d. In paragraph (g), removing the term ''an encounter'' wherever it appears and adding in its place the term ''services''.

■ 6. Section 405.2469 is amended by revising paragraph (d) to read as follows:

§ 405.2469 FQHC supplemental payments.

* * * * *

(d) *Per visit supplemental payment.* A supplemental payment required under this section is made to the FQHC when a covered face-to-face encounter, or an encounter furnished using interactive, real-time, audio and video telecommunications technology, or audio-only interactions in cases where the patient is not capable of, or does not consent to, the use of video technology, for the purposes of diagnosis, evaluation, or treatment of a mental health disorder, occurs between a Medicare Advantage enrollee and a practitioner as set forth in § 405.2463. A mental health encounter furnished using interactive, real-time, audio and video telecommunications technology, or audio-only interactions, is not payable unless the FQHC is in compliance with the in-person requirements set forth in § 405.2463(b)(3).

PART 406—HOSPITAL INSURANCE ELIGIBILITY AND ENTITLEMENT

■ 7. The authority for part 406 is revised to read as follows:

Authority: 42 U.S.C. 1302, 1395i–2, 1395i–2a, 1395p, 1395q, and 1395hh.

■ 8. Section 406.5 is amended by revising paragraph (a) to read as follows:

§ 406.5 Basis of eligibility and entitlement.

(a) *Hospital insurance without premiums.* Hospital insurance is available to most individuals without payment of a premium if they meet the following conditions:
(1) The individual—
(i) Is age 65 or over;
(ii) Has received social security or railroad retirement disability benefits for 25 months; or
(iii) Has end-stage renal disease. Subpart B of this part explains the requirements such individuals must meet to obtain hospital insurance without premiums.
(2) Effective July 4, 2025, the individual is a citizen or national of the United States or an eligible noncitizen as defined in 42 CFR 400.200.
* * * * *

■ 9. Section 406.6 is amended by revising paragraph (b) and adding paragraph (f) to read as follows:

§ 406.6 Application or enrollment for hospital insurance.

* * * * *

(b) *Individuals who need not file an application for hospital insurance.* An individual who meets the requirements of § 406.5(a)(2), and any of the following conditions need not file an application for hospital insurance:
* * * * *

(f) *Special rules for eligible noncitizens.* Individuals who only meet the requirements of § 406.5(a)(1), but do not also meet the requirements of § 406.5(a)(2), may subsequently meet both § 406.5(a)(1) and (2) due to a change in U.S. citizenship, U.S. nationality, or immigration status or category. For these individuals, the following requirements apply:
(1) An individual who meets the conditions of paragraph (b) of this section must contact SSA to initiate entitlement to hospital insurance. Entitlement may be retroactive for up to 6 months, but not earlier than the first month in which the individual met all of the requirements of § 406.5(a).
(i) If acceptable evidence establishes the month in which the individual first satisfied § 406.5(a)(2), SSA will use that month, subject to the applicable retroactivity limits noted in paragraph (f)(1) of this section.
(ii) If the earliest month of eligibility cannot be established based on acceptable documentary evidence, entitlement will begin on the first day of the month in which SSA verifies that the individual satisfies § 406.5(a)(2), based on applicable data made available by the Department of Homeland Security.
(2) An individual who meets the conditions of paragraph (c) of this section must contact SSA to file an application for hospital insurance. Entitlement may be retroactive for up to 6 months, but not earlier than the first month in which the individual met all of the requirements of § 406.5(a).
(i) If acceptable evidence establishes the month in which the individual first satisfied § 406.5(a)(2), SSA will use that month, subject to the applicable retroactivity limits noted in paragraph (f)(2) of this section.
(ii) If the earliest month of eligibility cannot be established based on acceptable documentary evidence, entitlement will begin on the first day of the month in which SSA verifies that the individual satisfies § 406.5(a)(2), based on applicable data made available by the Department of Homeland Security.

■ 10. Section 406.10 is amended by revising paragraph (a) and adding paragraph (b)(3) to read as follows:

§ 406.10 Individual age 65 or over who is entitled to social security or railroad retirement benefits, or who is eligible for social security benefits.

(a) *Requirements.* An individual is entitled to hospital insurance benefits under section 226 of the Act under the following conditions:
(1) The individual has attained age 65 and is—
(i) Entitled to monthly social security benefits under section 202 of the Act;
(ii) A qualified railroad retirement beneficiary who has been certified as

such to the Social Security Administration by the Railroad Retirement Board in accordance with section 7(d) of the Railroad Retirement Act of 1974; or

(iii) Effective January 1, 1981, eligible for monthly social security benefits under section 202 of the Act and has filed an application for hospital insurance.

(2) Effective July 4, 2025, the individual is a citizen or national of the United States or an eligible noncitizen as defined in 42 CFR 400.200.

(b) * * *

(3) Entitlement continues until the date entitlement is terminated in accordance with § 406.14(b) or (c).

■ 11. Section 406.11 is amended by revising paragraph (b)(2) to read as follows:

§ 406.11 Individual age 65 or over who is not eligible as a social security or railroad retirement benefits beneficiary, or on the basis of government employment.

* * * * *

(b) * * *

(2) *Residence and citizenship.* He or she is a resident of the United States and is

(i) A citizen or national of the United States;

(ii) An alien lawfully admitted for permanent residence under the Immigration and Nationality Act who has continuously resided in the United States for 5 years immediately preceding the first month in which he or she meets all other requirements for entitlement to hospital insurance;

(iii) An alien who has been granted the status of Cuban and Haitian entrant, as defined in section 501(e) of the Refugee Education Assistance Act of 1980; or

(iv) An individual who lawfully resides in the United States in accordance with a Compact of Free Association (COFA), as referred to in 8 U.S.C. 1612(b)(2)(G).

* * * * *

■ 12. Section 406.12 is amended by revising paragraph (a) and adding paragraph (d)(2)(v) to read as follows:

§ 406.12 Individual under age 65 who is entitled to social security or railroad retirement disability benefits.

(a) *Basic requirements.* An individual under age 65 is entitled to hospital insurance benefits under the following conditions:

(1) If, for 25 months, the individual has been—

(i) Entitled or deemed entitled to social security disability benefits as an insured individual, child, widow, or widower who is ''under a disability''; or

(ii) A disabled qualified beneficiary certified under section 7(d) of the Railroad Retirement Act.

(2) Effective July 4, 2025, the individual is a citizen or national of the United States or an eligible noncitizen as defined in 42 CFR 400.200.

* * * * *

(d) * * *

(2) * * *

(v) The date entitlement is terminated in accordance with § 406.14(b) or (c).

* * * * *

■ 13. Section 406.13 is amended by revising paragraphs (c) and (f) to read as follows:

§ 406.13 Individual who has end-stage renal disease.

* * * * *

(c) *Requirements.* An individual who has been medically determined to have ESRD is entitled to hospital insurance benefits under the following conditions:

(1) He or she is—

(i) Fully or currently insured under the social security program (title II of the Act) or would be fully or currently insured if his or her employment (after 1936) as defined under the Railroad Retirement Act were considered ''employment'' under the Act;

(ii) Entitled to monthly social security or railroad retirement benefits; or

(iii) The spouse or dependent child of a person who meets the requirements of paragraph (c)(1)(i) or (c)(1)(ii) of this section.

(2) He or she has filed an application for Medicare Part A.

(3) He or she has satisfied the waiting period explained in paragraph (e) of this section.

(4) Effective July 4, 2025, the individual is a citizen or national of the United States or an eligible noncitizen, as defined in 42 CFR 400.200.

* * * * *

(f) *End of entitlement.* Entitlement ends under any of the following conditions:

(1) With the end of the 12th month after the month in which a regular course of dialysis ends.

(2) With the end of the 36th month after the month in which the individual received a kidney transplant. Beginning January 1, 2023, an individual who is no longer entitled to Part A benefits due to this paragraph may be eligible to enroll in Part B solely for purposes of coverage of immunosuppressive drugs as described in § 407.55 of this subchapter.

(3) With the date entitlement is terminated in accordance with § 406.14(b) or (c).

* * * * *

■ 14. Section 406.14 is added to read as follows:

§ 406.14 End of entitlement due to change in U.S. citizenship, U.S. nationality, or immigration status or category.

(a) *Basis.* Individuals whose U.S. citizenship, U.S. nationality, or immigration status or category changes such that they no longer meet the requirements of § 406.5(a)(2) of this part will lose entitlement to hospital insurance benefits without premiums.

(b) For individuals who were entitled to, or enrolled for, hospital insurance benefits without premiums as of July 4, 2025, the SSA must, not later than 1 year after July 4, 2025, complete a review of individuals for purposes of identifying individuals not described by § 406.5(a)(2). SSA must notify each individual identified under such review that if SSA determines that an individual does not meet the requirements of § 406.5(a)(2), the individual's entitlement to, or enrollment for, hospital insurance benefits will be terminated in accordance with paragraph (d) of this section.

(c) Entitlement will end as provided under paragraph (d) of this section for individuals who were entitled to, or enrolled for, hospital insurance benefits without premiums who were not identified and notified by the SSA per § 406.14(b) and were subsequently determined by the SSA as not meeting the requirements of § 406.5(a)(2).

(d) *Termination notice.* The SSA will send notice to individuals if they no longer satisfy the requirements of § 406.5(a)(2). The notice contains the following information:

(1) Specifies the individual's appeal rights in accordance with 20 CFR part 404, subpart J.

(2) States the effective date of the hospital insurance benefits entitlement termination action, which will be the end of the month following the month in which the termination notice is dated.

(3) States that the individual should contact the SSA if their citizenship, nationality, or immigration status or category changes such that they may be entitled to, or enrolled for, hospital insurance benefits under this part.

(e) *Resumption of benefits.* An individual whose hospital insurance benefits were terminated under paragraph (d) of this section may request resumption of benefits if the individual's U.S. citizenship, U.S. nationality, or immigration status or category changes such that the individual meets the requirements of § 406.5(a)(2) of this part. To request resumption of entitlement, the individual must contact SSA and provide information sufficient to

establish that the requirements of § 406.5(a)(2) are met.

■ 15. Section 406.20 is amended by revising paragraph (b)(2) and adding paragraph (c)(5) to read as follows:

§ 406.20 Basic requirements.

* * * * *

(b) * * *

(2) Is a resident of the United States and, effective July 4, 2025, is—

(i) A citizen or national of the United States;

(ii) An alien lawfully admitted for permanent residence under the Immigration and Nationality Act who has continuously resided in the United States for 5 years immediately preceding the first month in which they meet all other requirements for entitlement to hospital insurance;

(iii) An alien who has been granted the status of Cuban and Haitian entrant, as defined in section 501(e) of the Refugee Education Assistance Act of 1980; or

(iv) An individual who lawfully resides in the United States in accordance with a Compact of Free Association referred to in 8 U.S.C. 1612(b)(2)(G).

* * * * *

(c) * * *

(5) Meets the eligibility requirements in paragraph (b)(2) of this section.

■ 16. Section 406.27 is amended by redesignating paragraph (f) as paragraph (g) and adding a new paragraph (f) to read as follows:

§ 406.27 Special enrollment periods for exceptional conditions.

* * * * *

(f) *Special enrollment period for verification of eligible noncitizen/citizenship status.* An SEP exists for individuals who have not been entitled to, or enrolled for, Medicare due to failure to meet the requirements of § 406.20(b)(2), but subsequently meet the requirements or whose Medicare entitlement or enrollment was terminated due to loss of U.S. citizenship, U.S. nationality, or eligible noncitizen status, who subsequently meet the citizenship, nationality, or immigration status or category requirements specified in § 406.20(b)(2).

(1) *SEP parameters.* (i) An individual is eligible for this SEP if the individual otherwise met the eligibility requirements for Medicare, except for § 406.20(b)(2), and the individual subsequently meets the applicable Medicare eligibility requirements, including § 406.20(b)(2).

(ii) An individual is eligible for this SEP if the individual's prior Medicare entitlement or enrollment was terminated because the individual did not meet the requirements of § 406.20(b)(2) and the individual subsequently meets the applicable Medicare eligibility requirements, including § 406.20(b)(2).

(iii) An individual does not need to miss an enrollment period to be eligible for this SEP.

(2) *SEP duration.* The SEP begins on the first day of the month in which the individual contacts the SSA and provides information sufficient to establish that the requirements of § 406.20(b)(2) are met and ends on the last day of the 12th month after the month in which the SEP began.

(3) *Entitlement.* (i) *General rule.* Entitlement begins the first day of the month following the month of enrollment.

(ii) *Special rule.* An individual who enrolls during the SEP in accordance with subparagraph (1) has the option of requesting entitlement for a coverage effective date that is the later of the first day of the sixth month before the month of enrollment or the first day of the month in which the individual first met all of the eligibility requirements, provided the coverage effective date does not precede the month in which the individual met the eligibility requirements and the individual pays the monthly premiums for the period of coverage (as required under § 406.32(f) of this subchapter).

* * * * *

■ 17. Section 406.28 is amended by adding new paragraph (g) to read as follows:

§ 406.28 End of entitlement due to change in citizenship, nationality, or immigration status or category.

* * * * *

(g) *Loss of eligibility due to lack of U.S. citizenship, U.S. nationality, or eligible noncitizen status.* Individuals whose U.S. citizenship, U.S. nationality, or immigration status or category changes such that they no longer meet the requirements of § 406.20(b) of this part will lose entitlement to premium hospital insurance benefits.

(1) For individuals who were entitled to, or enrolled for, premium hospital insurance benefits as of July 4, 2025, the SSA must, not later than 1 year after July 4, 2025, complete a review of individuals for purposes of identifying individuals not described by § 406.20(b)(2). SSA must notify each individual identified under such review that if SSA determines that an individual does not meet the requirements of § 406.20(b)(2), the individual's entitlement to, or enrollment for, premium hospital insurance benefits will be terminated in accordance with paragraph (g)(3) of this section.

(2) Entitlement will end as provided under paragraph (g)(3) of this section for individuals who were entitled to, or enrolled for, premium hospital insurance benefits who were not identified and notified by the SSA per § 406.28(g)(1) and were subsequently determined by the SSA as not meeting the requirements of § 406.20(b)(2).

(3) *Termination notice.* The SSA will send notice to individuals if they no longer satisfy the requirements of § 406.20(b)(2). The notice contains the following information:

(i) Specifies the individual's appeal rights in accordance with 20 CFR part 404, subpart J.

(ii) States the effective date of the hospital insurance benefits entitlement termination action, which will be the end of the month following the month in which the termination notice is dated.

(iii) States that the individual should contact the SSA if their eligibility status changes such that they may be entitled to, or enrolled for, hospital insurance benefits under this part.

■ 18. Section 406.50 is amended by revising the section heading and paragraph (a) to read as follows:

§ 406.50 Nonpayment of benefits on behalf of eligible noncitizens.

(a) Hospital insurance benefit payments may not be made for services furnished to any eligible noncitizen, as defined in 42 CFR 400.200, for any month in which his or her monthly social security benefits are suspended (or would be suspended if he or she were entitled to those benefits) because the eligible noncitizen remains outside the United States for more than 6 months.

(b) Benefits will be payable beginning with services furnished in the first full calendar month the eligible noncitizen is back in the United States.

* * * * *

PART 407—SUPPLEMENTARY MEDICAL INSURANCE (SMI) ENROLLMENT AND ENTITLEMENT

■ 19. The authority for part 407 is revised to read as follows:

Authority: 42 U.S.C. 1302, 1395p, 1395q, and 1395hh.

■ 20. Section 407.10 is amended by revising paragraph (a) to read as follows:

§ 407.10 Eligibility to enroll.

(a) *Basic rule.* Except as specified in paragraph (b) of this section, an

individual is eligible to enroll for SMI if he or she—

(1) Is entitled to hospital insurance under any of the rules set forth in §§ 406.10 through 406.15 of this chapter; or

(2) Meets the following requirements:

(i) Has attained age 65. (An individual is considered to have attained age 65 on the day before the 65th anniversary of his or her birth.)

(ii) Is a resident of the United States and, effective July 4, 2025, is—

(A) A citizen or national of the United States;

(B) An alien lawfully admitted for permanent residence under the Immigration and Nationality Act, who has resided continuously in the United States during the 5 years preceding the month in which he or she applies for enrollment;

(C) An alien who has been granted the status of Cuban and Haitian entrant, as defined in section 501(e) of the Refugee Education Assistance Act of 1980; or

(D) An individual who lawfully resides in the United States in accordance with a Compact of Free Association as referred to in 8 U.S.C. 1612(b)(2)(G).

* * * * *

■ 21. Section 407.23 is amended by redesignating paragraph (f) as paragraph (g) and adding a new paragraph (f) to read as follows:

§ 407.23 Special enrollment periods for exceptional conditions.

* * * * *

(f) *Special enrollment period for verification of eligible noncitizen/citizenship status.* An SEP exists for individuals who have not been entitled to, or enrolled for, Medicare due to failure to meet the requirements of § 407.10(a)(2), but subsequently meet the requirements or whose Medicare entitlement or enrollment was terminated due to loss of U.S. citizenship, loss of U.S. nationality, or eligible noncitizen status, who subsequently meet the citizenship, nationality, or immigration status or category requirements specified in § 407.10(a)(2).

(1) *SEP parameters.* (i) An individual is eligible for this SEP if the individual otherwise met the eligibility requirements for Medicare, except for § 407.10(a)(2), and the individual subsequently meets the applicable Medicare eligibility requirements, including § 407.10(a)(2).

(ii) An individual is eligible for this SEP if the individual's prior Medicare entitlement or enrollment was terminated because the individual did not meet the requirements of § 407.10(a)(2) and the individual subsequently meets the applicable Medicare eligibility requirements, including § 407.10(a)(2).

(iii) An individual does not need to miss an enrollment period to be eligible for this SEP.

(2) *SEP duration.* The SEP begins on the first day of the month in which the individual contacts the SSA and provides information sufficient to establish that the requirements of § 407.10(a)(2) are met and ends on the last day of the 12th month after the month in which the SEP began.

(3) *Entitlement.* (i) *General rule.* Entitlement begins the first day of the month following the month of enrollment.

(ii) *Special rule.* An individual who enrolls during the SEP in accordance with subparagraph (1) has the option of requesting entitlement for a coverage effective date that is the later of the first day of the sixth month before the month of enrollment or the first day of the month in which the individual first met all of the eligibility requirements, provided the coverage effective date does not precede the month in which the individual met the eligibility requirements and the individual pays the monthly premiums for the period of coverage (as required under § 408.4 of this subchapter).

* * * * *

■ 22. Section 407.27 is amended by adding paragraph (e) to read as follows:

§ 407.27 Termination of entitlement: Individual enrollment.

* * * * *

(e) *Loss of eligibility due to lack of U.S. citizenship, U.S. nationality, or eligible noncitizen status.* Individuals whose U.S. citizenship, U.S. nationality, or immigration status or category changes such that they do not meet the requirements of § 407.10(a)(2)(ii) of this part will lose entitlement to SMI.

(1) For individuals who were entitled to, or enrolled for, SMI as of July 4, 2025, the SSA must, not later than 1 year after July 4, 2025, complete a review of individuals for purposes of identifying individuals not described by § 407.10(a)(2). SSA must notify each individual identified under such review that if SSA determines that an individual does not meet the requirements of § 407.10(a)(2), the individual's entitlement to, or enrollment for, SMI will be terminated in accordance with paragraph (e)(3) of this section.

(2) Entitlement will end as provided under paragraph (e)(3) of this section for individuals who were entitled to, or enrolled for, SMI who were not identified and notified by the SSA per § 407.27(e)(1) and were subsequently determined by the SSA as not meeting the requirements of § 407.10(a)(2)(ii).

(3) *Termination notice.* The SSA will send notice to individuals if they no longer satisfy the requirements of § 407.10(a)(2). The notice contains the following information:

(i) Specifies the individual's appeal rights in accordance with 20 CFR part 404, subpart J.

(ii) States the effective date of the SMI entitlement termination action, which will be the end of the month following the month in which the termination notice is dated.

(iii) States that the individual should contact the SSA if their citizenship, nationality, or immigration status or category changes such that they may be entitled to, or enrolled for, SMI under this part.

■ 23. Section 407.55 is amended by revising paragraph (a) to read as follows:

§ 407.55 Eligibility to enroll.

(a) Basic rules.

(1) Except as specified in paragraph (b) of this section, an individual is eligible to enroll, be deemed enrolled, or reenroll in the Part B–ID benefit if their Part A entitlement ends as described in § 406.13(f)(2) of this subchapter.

(2) Effective July 4, 2025, the individual must meet the eligibility criteria set forth in § 407.10(a)(2)(ii).

* * * * *

■ 24. Section 407.62 is amended by redesignating paragraph (f) as paragraph (g) and adding a new paragraph (f) to read as follows:

§ 407.62 Termination of coverage.

* * * * *

(f) Enrollment in the Part B–ID benefit ends the date entitlement is terminated in accordance with § 407.27(e) due to the individual's failure to meet the citizenship, nationality, or eligible noncitizen requirements described in § 407.10(a)(2).

* * * * *

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

■ 25. The authority for part 410 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395m, 1395hh, 1395rr, and 1395ddd.

■ 25A. Section 410.26 is amended by revising paragraphs (a) and (b) to read as follows:

§ 410.26 Services and supplies incident to a physician's professional services: Conditions.

* * * * *

(b) * * *

(5) In general, services and supplies must be furnished under the direct supervision of the physician (or other practitioner).

(i) Designated care management services can be furnished under general supervision of the physician (or other practitioner) when these services or supplies are provided incident to the services of a physician (or other practitioner).

(ii) Behavioral health services can be furnished under general supervision of the physician (or other practitioner) when these services or supplies are provided by auxiliary personnel incident to the services of a physician (or other practitioner).

(iii) Health coaching services can be furnished under general supervision of the physician (or other practitioner) when these services or supplies are provided by auxiliary personnel incident to the services of a physician (or other practitioner).

(iv) The physician (or other practitioner) supervising the auxiliary personnel need not be the same physician (or other practitioner) who is treating the patient more broadly.

(v) Only the supervising physician (or other practitioner) may bill Medicare for incident to services.

* * * * *

■ 26. Section 410.78 is amended by—

■ a. Revising paragraph (a)(3);

■ b. Adding paragraphs (b)(2)(xiii), (b)(3)(xiv)(D), (b)(3)(xv), and (b)(6); and

■ c. Revising paragraph (f);

The revisions and additions read as follows:

§ 410.78 Telehealth services.

(a) * * *

(3) *Interactive telecommunications system* means, except as otherwise provided in this paragraph (a)(3), multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and distant site physician or practitioner.

(i) An interactive telecommunications system may also include two-way, real-time audio-only communication technology for any telehealth service furnished to a patient in their home on or before December 31, 2027.

(ii)(A) For telehealth services furnished after December 31, 2027 date, interactive telecommunications system may also include two-way, real-time audio-only communication technology for any telehealth service furnished to a patient in their home if the distant site physician or practitioner is technically capable of using an interactive telecommunications system as defined in this paragraph (a)(3), but the patient is not capable of, or does not consent to, the use of video technology.

(B) The following modifiers must be appended to a claim for telehealth services furnished using two-way, real-time audio-only communication technology to verify that the conditions set forth in paragraph (a)(3)(ii)(A) of this section have been met:

* * * * *

(b) * * *

(2) * * *

(xiii) Occupational therapists, physical therapists, speech-language pathologists, or audiologists, through December 31, 2027.

* * * * *

(3) * * *

(xiv) * * *

(D) Consistent with section 6209(d) of the CAA, 2026, in-person visit requirements for the purposes of diagnosis, evaluation, or treatment of a mental health disorder do not apply through December 31, 2027.

* * * * *

(6) Consistent with section 6209(a) of the CAA, 2026, the geographic requirements specified in paragraph (b)(4) of this section do not apply through December 31, 2027.

* * * * *

(f) *Process for adding or deleting services.* Except as otherwise provided in this paragraph (f), changes to the list of Medicare telehealth services are made through the annual physician fee schedule rulemaking process. CMS maintains the list of services that are Medicare telehealth services under this section, including the current HCPCS codes that describe the services on the CMS website.

§ 410.105 [Amended]

■ 27. Section 410.105 is amended in paragraph (b)(3)(ii) by removing the reference ''§ 410.100(m)'' and adding in its place the reference ''§ 410.100(1)''.

■ 28. Section 410.175 is amended by revising paragraphs (a) and (b) to read as follows:

§ 410.175 Alien absent from the United States.

(a) Medicare does not pay Part B benefits for services furnished to an eligible noncitizen, as defined in 42 CFR 400.200, if those services are furnished in any month for which the individual is not paid monthly social security cash benefits (or would not be paid if he or she were entitled to those benefits) because he or she has been outside the United States continuously for 6 full calendar months.

(b) Payment of benefits resumes with services furnished during the first full calendar month the eligible noncitizen, as defined in 42 CFR 400.200, is back in the United States.

* * * * *

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 29. The authority citation for part 414 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395hh, and 1395rr(b)(l).

■ 30. Section 414.502 is amended by revising the definitions of ''Data collection period'' and ''Data reporting period'' to read as follows:

§ 414.502 Definitions.

* * * * *

Data collection period is the 6 months from January 1 through June 30, during which applicable information is collected and that precedes the data reporting period.

Data reporting period for CDLTs that are not ADLTs is the 3-month period, May 1 through July 31, and for ADLTs is the 3-month period, January 1 through March 31, during which a reporting entity reports applicable information to CMS and that follows the preceding data collection period.

* * * * *

§ 414.504 [Amended]

■ 31. Section 414.504 is amended in paragraph (a)(1) by removing the date ''January 1, 2026'' and adding in its place the date ''May 1, 2026''.

■ 32. Section 414.507 is amended by—

■ a. Revising paragraph (d) introductory text and paragraph (d)(9); and

■ b. Adding paragraph (d)(12).

The revisions and addition read as follows:

§ 414.507 Payment for clinical diagnostic laboratory tests.

* * * * *

(d) *Phase-in of payment reductions.* For years 2018 through 2029, the payment rates established under this section for each CDLT that is not a new ADLT or new CDLT, may not be reduced by more than the following amounts for—

* * * * *

(9) 2026—0.0 percent of the payment rate established in 2025.

* * * * *

(12) 2029—15 percent of the payment rate established in 2028.

* * * * *

■ 33. Section 414.523 is amended by revising paragraph (a)(1)(v) to read as follows:

§ 414.523 Payment for laboratory specimen collection fee and travel allowance.

(a) * * *

(1) * * *

(v) For a specimen collected from a Medicare beneficiary in a skilled nursing facility or on behalf of a home health agency, the specimen collection fee otherwise payable under paragraph (a)(1) of this section is increased by $2.00.

■ 34. Section 414.610 is amended by—

■ a. Revising paragraph (c)(1)(ii) introductory text; and

■ b. In paragraph (c)(5)(ii) removing the date ''September 30, 2025'' and adding in its place the date ''December 31, 2027''.

The revision reads as follows:

§ 414.610 Basis of payment.

* * * * *

(c) * * *

(1) * * *

(ii) For services furnished during the period July 1, 2008 through December 31, 2027, ambulance services originating in either of the following:

* * * * *

■ 35. Section 414.1105 is amended by revising paragraph (c) introductory text to read as follows:

§ 414.1105 Payment for Comprehensive Outpatient Rehabilitation Facility (CORF) services.

* * * * *

(c) *Payment for supplies and durable medical equipment, prosthetic and orthotic devices.* Supplies and durable medical equipment that are CORF services under § 410.100(k), prosthetic device services that are CORF services under § 410.100(f), and orthotic devices that are CORF services under § 410.100(g) are paid the lesser of 80 percent of the following:

* * * * *

■ 36. Section 414.1305 is amended by revising the definitions of ''APM Incentive Payment'', ''Certified Electronic Health Record Technology (CEHRT)'' paragraph (2), ''Collection type'', ''MVP participant'' and ''Participant List'' to read as follows:

§ 414.1305 Definitions.

* * * * *

APM Incentive Payment means the lump sum incentive payment for a year as described in § 414.1450(b)(1) and that is paid for an eligible clinician who is a QP for the applicable year.

* * * * *

Certified Electronic Health Record Technology (CEHRT) * * *

(2) * * *

(i) For CY 2019 through CY 2026, at 45 CFR 170.315(a)(12) (family health history) and 45 CFR 170.315(e)(3) (patient health information capture); and

(ii) * * *

(A) For CY 2019 through CY 2026, the applicable measure calculation certification criterion at 45 CFR 170.315(g)(1) or (2) for all certification criteria that support a meaningful use objective with a percentage-based measure.

(B) Clinical quality measure certification criteria that support the calculation and reporting of clinical quality measures at 45 CFR 170.315(c)(2) and (c)(3), and for CY 2019 through CY 2026, optionally (c)(4), and can be electronically accepted by CMS.

* * * * *

Collection type means a set of quality measures with comparable specifications and data completeness criteria, as applicable, including, but not limited to: Electronic clinical quality measures (eCQMs); MIPS clinical quality measures (MIPS CQMs); QCDR measures; Medicare Part B claims measures; CMS Web Interface measures (except as provided in paragraph (1) of this definition, for the CY 2017 through CY 2022 performance periods/2019 through 2024 MIPS payment years); the CAHPS for MIPS survey measure; administrative claims measures; Medicare Clinical Quality Measures for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQMs); and Medicare Electronic Clinical Quality Measures for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare eCQMs).

* * * * *

MVP participant means an individual MIPS eligible clinician, multispecialty group, single-specialty group, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories. For the CY 2026 performance period/2028 MIPS payment year and future years, MVP participant means an individual MIPS eligible clinician, single-specialty group, multispecialty group that meets the requirements of a small practice, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories. Beginning in the CY 2029 performance period/2031 MIPS payment year, MVP participant means an individual MIPS eligible clinician, single specialty group, multispecialty group that meets the requirements of a small practice, virtual group, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories.

* * * * *

Participation List means the list of participants in an APM Entity that is compiled from a CMS-maintained list where practicable.

* * * * *

■ 37. Section 414.1330 is amended by revising paragraph (c)(2)(iv) to read as follows.

§ 414.1330 Quality performance category.

(c) * * *

(2) * * *

(iv) Whether the quality measure is designated as high priority or not, through the CY 2026 performance period/2028 MIPS payment year.

* * * * *

■ 38. Section 414.1335 is amended by—

■ a. Revising paragraphs (a)(1)(i) introductory text, (a)(1)(ii), and (a)(4)(i);

■ b. Adding paragraph (a)(1)(iii);

■ c. Revising paragraph (a)(4)(i); and

■ d. Adding paragraph (a)(5).

The revisions and additions read as follows:

§ 414.1335 Data submission criteria for the quality performance category.

(a) * * *

(1) * * *

(i) For the CY 2017 through 2026 performance periods/2019 through 2028 MIPS payment years, except as provided in paragraph (a)(1)(ii) of this section, submits data on at least six measures, including at least one outcome measure. If an applicable outcome measure is not available, reports one other high priority measure. If fewer than six measures apply to the MIPS eligible clinician, group, virtual group, or APM Entity, reports on each measure that is applicable. Beginning in the CY 2027 performance period/2029 MIPS payment year, MIPS eligible clinicians, except as provided in paragraphs (a)(1)(ii) and (a)(1)(iii) of this section, submits data on at least six measures, including at least one MIPS core measure. If there is not an available and applicable MIPS core measure, a MIPS eligible clinician must attest to not having an available and applicable MIPS core measure and submit data on a separate MIPS quality measure. If fewer than six measures apply then the MIPS eligible clinician, group, virtual

group, or APM Entity must report on each measure that is applicable.

* * * * *

(ii) For the CY 2017 through 2026 performance periods/2019 through 2028 MIPS payment years, a MIPS eligible clinician, group, virtual group, and APM Entity that report on a specialty or subspecialty measure set, as designated in the MIPS final list of quality measures established by CMS through rulemaking, must submit data on at least six measures within that set, including at least one outcome measure. If an applicable outcome measure is not available, report one other high priority measure. If the set contains fewer than six measures or if fewer than six measures within the set apply to the MIPS eligible clinician, group, virtual group, or APM Entity, report on each measure that is applicable. Beginning in the CY 2027 performance period/2029 MIPS payment year, except as provided in paragraph (a)(1)(iii) of this section, a MIPS eligible clinician that reports on a specialty or subspecialty measure set, as designated in the MIPS final list of quality measures established by CMS through rulemaking, must submit data on at least six measures within that set, including at least one MIPS core measure. If there is not an available and applicable MIPS core measure, a MIPS eligible clinician must attest to not having an available and applicable MIPS core measure and submit data on a separate MIPS quality measure within that set. If the set contains fewer than six measures or if fewer than six measures within the set apply to the MIPS eligible clinician, report on each measure that is applicable.

* * * * *

(iii) *Small practices.* Beginning with the CY 2027 performance period/2029 MIPS payment year, MIPS eligible clinicians in small practices are not required to submit at least one MIPS core measure or attest to not having an applicable and available MIPS core measure. MIPS eligible clinicians in small practices must submit data on at least six measures, if applicable.

* * * * *

(4) *For Medicare CQMs.* (i) A MIPS eligible clinician, group, and APM Entity reportingquality data on beneficiaries eligible for Medicare CQMs as defined at § 425.20) within the APP measure set or APP Plus measure set (as applicable) and administering the CAHPS for MIPS Survey as required under the APP.

(ii) [Reserved]

(5) *For Medicare eCQMs.* (i) A MIPS eligible clinician, group, and APM Entity reporting on the Medicare eCQMs (reporting quality data on beneficiaries eligible for Medicare eCQMs as defined at § 425.20) within the APP Plus measure set and administering the CAHPS for MIPS Survey as required under the APP.

(ii) [Reserved]

* * * * *

■ 39. Section 414.1340 is amended by—
■ a. Revising paragraphs (d) and (e); and
■ b. Adding paragraph (f).

The revisions and additions read as follows:

§ 414.1340 Data completeness criteria for the quality performance category.

* * * * *

(d) APM Entities, specifically Medicare Shared Savings Program Accountable Care Organizations meeting reporting requirements under the APP, submitting quality measure data on Medicare CQMs must submit data on the following:

(1) At least 75 percent of the applicable beneficiaries eligible for the Medicare CQM, as defined at § 425.20, who meet the measure's denominator criteria for MIPS payment year 2026 and future MIPS payment years.

(e) APM Entities, specifically Medicare Shared Savings Program Accountable Care Organizations meeting reporting requirements under the APP, submitting quality measure data on Medicare eCQMs must submit data on the following:

(1) At least 75 percent of the applicable beneficiaries eligible for the Medicare eCQM, as defined at § 425.20, who meet the measure's denominator criteria for MIPS payment years 2029 and future MIPS payment years.

(2) [Reserved]

(f) If quality data are submitted selectively such that the submitted data are unrepresentative of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity's performance, any such data would not be true, accurate, or complete for purposes of § 414.1390(b) or § 414.1400(a)(5).

■ 40. Section 414.1365 is amended by—
■ a. Adding paragraph (a)(2); and
■ b. Revising paragraphs (c)(1) introductory text and (c)(1)(ii).

The revisions and additions read as follows:

§ 414.1365 MIPS Value Pathways.

(a) * * *

(2) Beginning in the CY 2031 performance period/2033 MIPS payment year, except for MIPS eligible clinicians reporting through the APM Performance Pathway in accordance with § 414.1367, all MIPS eligible clinicians must report through an MVP.

* * * * *

(c) * * *

(1) *Quality.* Through the CY 2026 performance period/2028 MIPS payment year, except as provided in paragraph (c)(1)(i) of this section, an MVP participant must select and report, if applicable, four quality measures, including one outcome measure (or, if an outcome measure is not available, one high priority measure), included in the MVP, excluding the population health measure required under paragraph (c)(4)(ii) of this section. Beginning in the CY 2027 performance period/2029 MIPS payment year, except as provided in paragraphs (c)(1)(i) and (c)(1)(ii) of this section, an MVP participant must select and report, if applicable, four quality measures, including one MIPS core measure available in the MVP, excluding the population health measure required under paragraph § 414.1365(c)(4)(ii). If there is not an available and applicable MIPS core measure, an MVP participant must attest to not having an available and applicable MIPS core measure and submit a separate MIPS quality measure within the MVP.

* * * * *

(ii) *Small practices.* Beginning with the CY 2027 performance period/2029 MIPS payment year, an MVP participant that meets the requirements of a small practice is not required to submit at least one MIPS core measure or attest to not having an available and applicable MIPS core measure. Except as provided in paragraph (c)(1)(i) of this section, an MVP participant that meets the requirements of a small practice must select and report, if applicable, at least four quality measures included in the MVP, excluding the population health measure required under paragraph (c)(4)(ii) of this section.

* * * * *

■ 41. Section 414.1375 is amended is amended by revising paragraphs (b)(2)(ii)(A) and (b)(3)(i) introductory text to read as follows:

§ 414.1375 Promoting Interoperability (PI) performance category.

* * * * *

(b) * * *

(2) * * *

(ii) * * *

(A) Through the 2028 MIPS payment year, report that the MIPS eligible clinician completed the actions included in the Security Risk Analysis measure during the year in which the performance period occurs;

* * * * *

(3) * * *

(i) *Supporting providers with the performance of CEHRT (SPPC).*

From the 2019 MIPS payment year through the 2027 MIPS payment year, to engage in activities related to supporting providers with the performance of CEHRT, the MIPS eligible clinician—

* * * * *

■ 42. Section 414.1380 is amended by—
■ a. Revising paragraphs (b)(1)(ii)(E) and (b)(1)(ii)(F);
■ b. Adding paragraphs (b)(1)(ii)(G) and (H), and (b)(1)(iv)(D);
■ c. Revising paragraphs (b)(3)(i) and (b)(4)(ii)(C)(*3*);
■ d. Adding paragraph (b)(4)(ii)(C)(*4*); and
■ e. Revising paragraphs (c)(2)(i)(A)(*10*) and (c)(2)(i)(C)(*12*).

The revisions and additions read as follows:

§ 414.1380 Scoring.

* * * * *

(b) * * *

(1) * * *

(ii) * * *

(E) For the CY 2025 and 2026 performance periods/2027 and 2028 MIPS payment years, CMS will publish a list of topped out measures determined to be impacted by limited measure choice in the **Federal Register** on a yearly basis. Beginning with the CY 2027 performance period/2029 MIPS payment year, CMS will publish a list of topped out measures determined to be impacted by limited measure choice on the QPP website. Measures included on the list are scored from 1 to 10 measure achievement points according to defined topped out measure benchmarks calculated from performance data in the baseline period in which a performance rate of 97 percent corresponds to 10 percent of the performance threshold for the corresponding performance year.

(F) *Medicare CQMs collection type benchmarks.*

(*1*) Beginning in the CY 2025 performance period/2027 MIPS payment year, measures of the Medicare CQMs collection type use flat benchmarks for their first two performance periods in MIPS.

(*2*) Beginning with the CY 2026 performance period/2028 MIPS payment year, measures of the Medicare CQMs collection type use flat benchmarks.

(G) *Medicare eCQMs collection type benchmarks.*

(*1*) Beginning with the CY 2027 performance period/2029 MIPS payment year, measures of the Medicare eCQMs collection type use flat benchmarks.

(*2*) [Reserved]

(H) Beginning in the CY 2027 performance period/2029 MIPS payment year, MIPS core measures, which are required under § 414.1335(a)(1)(i) and (ii), for which the benchmark for the applicable collection type is identified as topped out for 2 or more consecutive years, are scored from 1 to 10 measure achievement points according to defined topped out measure benchmarks calculated from performance data in the baseline period in which a performance rate of 97 percent corresponds to 10 percent of the performance threshold for the corresponding performance year.

* * * * *

(iv) * * *

(D) Beginning with the CY 2027 performance period/2029 MIPS payment year, MIPS core measures, which are required under § 414.1335(a)(1)(i) and (ii), are not subject to the 7 measure achievement point cap specified in paragraph (b)(1)(iv)(B) of this section.

* * * * *

(3) * * *

(i) For MIPS eligible clinicians participating in APMs, the improvement activities performance category score is at least 50 percent.

* * * * *

(4) * * *

(i) * * *

(C) * * *

(ii) * * *

(C) * * *

(3) Beginning with the CY 2026 performance period/2028 MIPS payment year, the total number of bonus points available to be earned when reporting one optional measure, more than one optional measure, or all optional measures under the Public Health and Clinical Data Exchange objective is a total of 5 bonus points.

(4) For the CY 2027 performance period/2029 MIPS payment year, the total number of bonus points available to be earned when reporting the Electronic Prior Authorization optional measure is a total of 10 bonus points.

* * * * *

(c) * * *

(2) * * *

(i) * * *

(A) * * *

(10) Beginning with the 2026 MIPS payment year, for the quality and improvement activities performance categories, CMS determines based on documentation provided to the agency that data for a MIPS eligible clinician are inaccessible or unable to be submitted due to circumstances outside of the control of the clinician because the MIPS eligible clinician delegated submission of the data to their third-party intermediary, evidenced by a written agreement between the MIPS eligible clinician and third-party intermediary, and the third-party intermediary did not submit the data for the performance category(ies) on behalf of the MIPS eligible clinician in accordance with applicable deadlines. To determine whether to apply reweighting to the affected performance category(ies), CMS will consider: whether the MIPS eligible clinician knew or had reason to know of the issue with its third-party intermediary's submission of the clinician's data for the performance category(ies); whether the MIPS eligible clinician took reasonable efforts to correct the issue; and whether the issue between the MIPS eligible clinician and their third-party intermediary caused no data to be submitted for the performance category(ies) in accordance with applicable deadlines.

(i) For the 2026 MIPS payment year, requests must be submitted by November 1st of the year preceding the relevant MIPS payment year.

(ii) Beginning with the 2027 MIPS payment year, requests must be submitted by December 31st of the year preceding the relevant MIPS payment year.

* * * * *

(C) * * *

(12) Beginning with the 2026 MIPS payment year, CMS determines based on documentation provided to the agency that data for a MIPS eligible clinician are inaccessible or unable to be submitted due to circumstances outside of the control of the clinician because the MIPS eligible clinician delegated submission of the data to their third-party intermediary, evidenced by a written agreement between the MIPS eligible clinician and third-party intermediary, and the third-party intermediary did not submit the data for the performance category on behalf of the MIPS eligible clinician in accordance with applicable deadlines. To determine whether to apply reweighting to the Promoting Interoperability performance category, CMS will consider: whether the MIPS eligible clinician knew or had reason to know of the issue with its third-party intermediary's submission of the clinician's data for the performance category; whether the MIPS eligible clinician took reasonable efforts to correct the issue; and whether the issue between the MIPS eligible clinician and their third-party intermediary caused no data to be submitted for the performance category in accordance with applicable deadlines.

(i) For the 2026 MIPS payment year, requests must be submitted by

November 1st of the year preceding the relevant MIPS payment year.

(ii) Beginning with the 2027 MIPS payment year, requests must be submitted by December 31st of the year preceding the relevant MIPS payment year.

* * * * *

§ 414.1395 [Amended]

■ 43. Section 414.1395 is amended by removing paragraph (c)(2) and redesignating paragraph (c)(1) as paragraph (c).

■ 44. Section 414.1400 is amended by—

■ a. Revising paragraphs (b)(3)(iii), (b)(3)(v)(E)(*1*),

■ b. Redesignating paragraph (b)(3)(vi) and (viii) as (b)(3)(vii)(A) and (B), respectively;

■ c. Adding paragraph (b)(3)(vii)(C);

■ d. Reserving paragraphs (b)(3)(vi) and (viii);

■ e. Revising paragraphs (b)(3)(x), (b)(3)(xiv), and (c)(1) introductory text;

■ b. Adding paragraphs (c)(2); and

■ c. Revising paragraph (e)(5);

The revisions and additions read as follows:

§ 414.1400 Third-party intermediaries.

* * * * *

(b) * * *

(3) * * *

(iii) Beginning with the CY 2021 performance period/2023 MIPS payment year, the QCDR or qualified registry must provide performance feedback at least 4 times a year and provide specific feedback on how they compare to other clinicians who have submitted data on a given measure within the QCDR or qualified registry. Feedback must be provided at the level at which data is submitted. Exceptions to this requirement may occur if the QCDR or qualified registry submits notification to CMS within the performance period promptly within the month of realization of the impending deficiency and provides sufficient rationale as to why they do not believe they would be able to meet this requirement (for example, if the QCDR does not receive the data from their clinician until the end of the performance period).

* * * * *

(v) * * *

(E) * * *

(*1*) If the intermediary submits MIPS data to CMS for fewer than 10 Quality Payment Program participants, the data validation audit sample must include all Quality Payment Program participants. If the intermediary submits data for 10 or more Quality Payment Program participants, it must use a sample size of at least 3 percent of a combination of the individual MIPS eligible clinicians, groups, virtual groups, subgroups and APM entities for which the QCDR or qualified registry will submit data to CMS, except that the sample size may be no fewer than a combination of 10 individual clinicians, groups, virtual groups, subgroups or APM entities, and no more than a combination of 50 individual clinicians, groups, virtual groups, subgroups and APM entities.

(*2*) If there are fewer than 5 patient records, the patient record audit sample must include all patient records. If there are 5 or more patient records, the intermediary must use a sample that includes at least 25 percent of the patients of each individual clinician, group, virtual group, subgroup or APM entity in the sample, except that the sample for each individual clinician, group, virtual group, subgroup or APM entity must include a minimum of 5 patients and need not include more than 50 patients.

* * * * *

(vi) [Reserved].

(vii) Participation plan for third-party intermediary not submitting data.

(A) For the CY 2023 performance period/2025 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for any of the 2019 through 2023 MIPS payment years must submit a participation plan for CMS' approval. The participation plan must include the QCDR and/or qualified registry's detailed plans about how the QCDR or qualified registry intends to encourage clinicians to submit MIPS data to CMS through the QCDR or qualified registry.

(B) For the CY 2024 performance period/2026 MIPS payment year through CY 2026 performance period/2028 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS' approval. This participation plan must include the QCDR's and/or qualified registry's detailed plans about how the QCDR or qualified registry intends to encourage clinicians to submit MIPS data to CMS through the QCDR or qualified registry.

(C) Beginning with the CY 2027 performance period/2029 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for the year preceding the applicable self-nomination period must submit a participation plan for CMS' approval. This participation plan must include the QCDR's and/or qualified registry's detailed plans about how the QCDR or qualified registry intends to encourage clinicians to submit MIPS data to CMS through the QCDR or qualified registry.

(viii) [Reserved].

* * * * *

(x) For the CY 2017 performance period/2019 MIPS payment year through CY 2026 performance period/CY 2028 MIPS payment year, a QCDR or a qualified registry must be able to submit to CMS data for at least six quality measures including at least one outcome measure.

(A) For the CY 2017 performance period/2019 MIPS payment year through CY 2026 performance period/CY 2028 MIPS payment year, if no outcome measure is available, a QCDR or qualified registry must be able to submit to CMS results for at least one other high priority measure.

(B) Beginning with CY 2027 performance period/2029 MIPS payment year, a QCDR or a qualified registry must be able to submit to CMS data for at least six quality measures including at least one MIPS core measure.

* * * * *

(xiv) A QCDR or a qualified registry must attest that the information listed on the qualified posting is accurate. Changes to information (for example, cost, services included) on the qualified posting must be included and finalized during the qualified posting review period. Third-party intermediaries will not be permitted to make changes after the qualified posting is publicly posted on the Quality Payment Program website.

* * * * *

(c) * * *

(1) For the CY 2021 performance period/2023 MIPS payment year through the CY 2024 performance period/2026 MIPS payment year, health IT vendors must be able to submit data for the MIPS performance categories as follows:

* * * * *

(2) Beginning with the CY 2025 performance period/2027 MIPS payment year, health IT vendors cannot submit MIPS data.

* * * * *

(5) *Termination for third-party intermediary not submitting data.*

(i) Beginning with the CY 2024 performance period/2026 MIPS payment year, a QCDR or qualified registry that submits a participation plan as required under paragraph (b)(3)(viii) of this section, but does not submit MIPS data for the applicable performance period for which they self-

nominated under paragraph (b)(3)(viii) of this section, will be terminated.

(ii) Beginning with the CY 2027 performance period/2029 MIPS payment year, a QCDR or qualified registry that submits a participation plan as required under paragraph (b)(3)(viii) of this section, but does not submit MIPS data for the applicable performance period for which they self-nominated under paragraph (b)(3)(viii) of this section, will be queried by CMS before the end of the calendar year for the given MIPS performance period requesting documentation that they have contracted with Quality Payment Program participants who will submit data for the given MIPS performance period. If appropriate documentation cannot be provided or the third-party intermediary will not be submitting MIPS data or both for the given MIPS performance period, the third-party intermediary will be terminated.

■ 45. Section § 414.1425 is amended by—

■ a. Revising paragraph (c)(5); and

■ b. Adding paragraphs (c)(8) and (d)(5).

The revision and additions read as follows:

§ 414.1425 Qualifying APM participant determination: In general.

* * * * *

(c) * * *

(5) * * *

(ii) The APM Entity voluntarily or involuntarily terminates from an Advanced APM at a date on which the APM Entity would not bear financial risk for that QP performance period under the terms of the Advanced APM, even if such termination date occurs within such QP Performance Period.

* * * * *

(8) Beginning in the 2027 QP Performance Period, application of QP determination is limited strictly to eligible clinicians as defined at § 414.1305 and that meet the definition of Qualifying APM participant (QP) as defined at § 414.1305 by participating in an Advanced APM during the QP performance period. Partial QP status is also applied to all eligible clinicians receiving QP status for an individual QP determination as codified at § 414.1425(d).

* * * * *

(d) * * *

(5) Beginning in the 2027 QP Performance Period, application of Partial QP determination as part of an APM entity group as defined at § 414.1305 is limited strictly to eligible clinicians as defined at § 414.1305 that meet the definition of Partial Qualifying APM Participant (Partial QP) as defined at § 414.1305 by participating in an Advanced APM during the QP performance period. Partial QP status is also applied to all eligible clinicians receiving partial QP status for an individual determination as codified at § 414.1425(d)

* * * * *

■ 46. Section § 414.1430 is amended by revising paragraphs (a), (b)(1)(i), (2)(i), (3)(i), and (4)(i) to read as follows:

§ 414.1430 Qualifying APM participant determination: QP and partial QP thresholds.

(a) * * *

(1) *QP payment amount threshold.* The QP payment amount thresholds are the following values for the indicated payment years: (i) 2019 and 2020: 25 percent.

(ii) 2021 through 2026: 50 percent.

(iii) 2027: 75 percent.

(iv) 2028: 50 percent.

(v) 2029 and thereafter: 75 percent.

(2) *Partial QP payment amount threshold.* The Partial QP payment amount thresholds are the following values for the indicated payment years:

(i) 2019 and 2020: 20 percent.

(ii) 2021 through 2026: 40 percent.

(iii) 2027: 50 percent.

(iv) 2028: 40 percent.

(v) 2029 and thereafter: 50 percent.

(3) *QP patient count threshold.* The QP patient count thresholds are the following values for the indicated payment years: (i) 2019 and 2020: 20 percent.

(ii) 2021 through 2026: 35 percent.

(iii) 2027: 50 percent.

(iv) 2028: 35 percent.

(v) 2029 and thereafter: 50 percent.

(4) *Partial QP patient count threshold.* The Partial QP patient count thresholds are the following values for the indicated payment years: (i) 2019 and 2020: 10 percent.

(ii) 2021 through 2026: 25 percent.

(iii) 2027: 35 percent.

(iv) 2028: 25 percent.

(v) 2029 and thereafter: 35 percent.

(b) * * *

(1) * * *

(i) * * *

(A) 2021 through 2026: 50 percent

(B) 2027: 75 percent.

(C) 2028: 50 percent.

(D) 2029 and thereafter: 75 percent.

(2) * * *

(i) * * *

(A) 2021 through 2026: 40 percent

(B) 2027: 50 percent.

(C) 2028: 40 percent.

(D) 2029 and thereafter: 75 percent.

* * * * *

(3) * * *

(i) * * *

(A) 2021 through 2026: 35 percent.

(B) 2027: 50 percent.

(C) 2028: 35 percent.

(D) 2029 and thereafter: 50 percent.

* * * * *

(4) * * *

(i) * * *

(A) 2021 through 2026: 25 percent

(B) 2027: 35 percent.

(C) 2028: 25 percent.

(D) 2029 and thereafter: 35 percent.

* * * * *

■ 47. Section § 414.1450 is amended by revising paragraphs (a)(1)(i) and (b)(1) to read as follows:

§ 414.1450 APM Incentive Payment.

(a) * * *

(1) * * *

(i) For payment years in which an APM incentive payment is authorized under section 1833(z)(1)(A) of the Act, CMS makes a lump sum payment to QPs in the amount described in paragraph (b) of this section for the applicable payment year and in the manner described in paragraphs (d) and (e) of this section.

(b) * * *

(1) The amount of the APM incentive payment is the applicable percentage established for the payment year of the estimated aggregate payments for covered professional services as defined in section 1848(k)(3)(A) of the Act furnished during the calendar year immediately preceding the payment year. CMS uses the paid amounts on claims for covered professional services to calculate the estimated aggregate payments on which CMS will calculate the APM Incentive Payment. The applicable percentage is the following value for the indicated payment years:

(i) 2019 through 2024: 5 percent.

(ii) 2025: 3.5 percent.

(iii) 2026: 1.88 percent.

(iv) 2028: 3.1 percent.

* * * * *

PART 415—SERVICES FURNISHED BY PHYSICIANS IN PROVIDERS, SUPERVISING PHYSICIANS IN TEACHING SETTINGS, AND RESIDENTS IN CERTAIN SETTINGS

■ 48. The authority citation for part 415 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 49. Section 415.172 is amended by revising paragraphs (a) introductory text and (b)(2) to read as follows:

(a) *General rule.* If a resident participates in a service furnished in a teaching setting, physician fee schedule payment is made only if a teaching physician is present during the key portion of any service or procedure for

which payment is sought. This includes Medicare telehealth services, provided through audio/video real-time communications technology, when either the teaching physician or resident is in the same physical location as the beneficiary or in instances when the service is a 3-way telehealth visit, with the teaching physician, resident, and patient in different locations.

* * * * *

(b) * * *

(2) For all teaching settings, except for services furnished as set forth in §§ 415.174 (concerning an exception for services furnished in hospital outpatient and certain other ambulatory settings), 415.176 (concerning renal dialysis services), and 415.184 (concerning psychiatric services), the medical records must document whether the teaching physician was physically present or present through audio/video real-time communications technology at the time the service (including a Medicare telehealth service) is furnished. The medical records must contain a notation describing the specific portion(s) of the service for which the teaching physician was present through audio/video real-time communications technology. The presence of the teaching physician during procedures and evaluation and management services may be demonstrated by the notes in the medical records made by the physician or as provided in § 410.20(e) of this chapter.

■ 50. Section 415.174 is amended by revising paragraph (a) introductory text to read as follows:

§ 415.174 Exception: Evaluation and management services furnished in certain centers.

(a) In the case of certain evaluation and management codes (as specified by CMS in program instructions), MACs may make physician fee schedule payment for a service furnished by a resident without the presence of a teaching physician. For the exception to apply, all of the following conditions must be met:

* * * * *

PART 417—HEALTH MAINTENANCE ORGANIZATIONS, COMPETITIVE MEDICAL PLANS, AND HEALTH CARE PREPAYMENT PLANS

■ 51. The authority for part 417 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh, and 300e, 300e–5, and 300e–9, and 31 U.S.C. 9701.

■ 52. Section 417.2 is amended by revising paragraph (b) to read as follows:

§ 417.2 Basis and scope.

* * * * *

(b) Subparts G through R of this part set forth the rules for Medicare contracts with, and payment to, HMOs and competitive medical plans (CMPs) under sections 1876 and 1899C of the Act and 8 U.S.C. 1611.

* * * * *

■ 53. Section 417.422 is amended by revising paragraph (h) to read as follows:

§ 417.422 Eligibility to enroll in an HMO or CMP.

* * * * *

(h) Effective July 4, 2025, is a United States citizen or national, or an eligible noncitizen as defined in 42 CFR 400.200.

■ 54. Section 417.460 is amended by revising paragraphs (b)(2)(iv) and (j) to read as follows:

§ 417.460 Disenrollment of beneficiaries by an HMO or CMP.

* * * * *

(b) * * *

(2) * * *

(iv) No longer meets the requirements of § 417.422(h); or

* * * * *

(j) *Enrollee is not a United States citizen or national, or an eligible noncitizen.* Disenrollment is effective the first day of the month following the month in which the HMO or CMP receives a notice from CMS that the individual is ineligible in accordance with § 417.422(h).

PART 422—MEDICARE ADVANTAGE PROGRAM

■ 55. The authority for part 422 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395w–21 through 1395w–28, and 1395hh.

■ 56. Section 422.1 is amended by adding paragraph (a)(1)(xii) and removing and reserving paragraph (a)(2) to read as follows:

§ 422.1 Basis and scope.

(a) * * *

(1) * * *

(xii) 1899C—Limiting Medicare coverage of certain individuals.

(2) [Reserved]

* * * * *

■ 57. Section 422.50 is amended by revising paragraph (a)(7) to read as follows:

§ 422.50 Eligibility to elect an MA plan.

* * * * *

(a) * * *

(7) Effective July 4, 2025, is a United States citizen or national, or an eligible noncitizen as defined in 42 CFR 400.200.

* * * * *

■ 58. Section 422.62 is amended by revising paragraph (b)(16) to read as follows:

§ 422.62 Election of coverage under an MA plan.

* * * * *

(b) * * *

(16) Verification of eligible noncitizen/citizenship status.

(i) The SEP begins when the individual provides SSA with sufficient information to demonstrate that the requirements of § 406.20(b)(2) and § 407.10(a)(2)(ii) have been met and receives notice of their entitlement to Medicare Part A and enrollment in Medicare Part B. The SEP continues for 2 additional calendar months after the month the notice is received.

* * * * *

■ 59. Section 422.74 is amended by revising paragraphs (b)(2)(v) and (d)(9) to read as follows:

§ 422.74 Disenrollment by the MA organization.

* * * * *

(b) * * *

(2) * * *

(v) The individual no longer meets the requirements of § 422.50(a)(7).

* * * * *

(d) * * *

(9) *Enrollee loses U.S. citizenship, U.S. nationality, or eligible noncitizen status.* Disenrollment is effective the first day of the month following the month in which the MA organization receives a notice from CMS that the individual is ineligible in accordance with § 422.50(a)(7) of this chapter.

* * * * *

PART 423—VOLUNTARY MEDICARE PRESCRIPTION DRUG BENEFIT

■ 60. The authority for part 423 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395w–101 through 1395w–152, and 1395hh.

■ 61. Section 423.1 is amended by adding a section in numerical order in paragraph (a)(1) and removing and reserving paragraph (a)(3) to read as follows:

§ 423.1 Basis and scope.

(a) * * *

(1) * * *

1899C. Limiting Medicare coverage of certain individuals.

* * * * *

(3) [Reserved]

* * * * *

■ 62. Section 423.30 is amended by revising paragraph (a)(1)(iii) to read as follows:

§ 423.30 Eligibility and enrollment.

(a) * * *

(1) * * *

(iii) Effective July 4, 2025, is a United States citizen or national, or an eligible noncitizen as defined in 42 CFR 400.200.

* * * * *

■ 63. Section 423.38 is amended by revising paragraphs (c)(21)(i) and (ii) to read as follows:

§ 423.38 Enrollment periods.

* * * * *

(c) * * *

(21) * * *

(i) Verification of eligible noncitizen/citizenship status.

(ii) The SEP begins when the individual provides SSA with sufficient information to demonstrate that the requirements of § 406.20(b)(2) or § 407.10(a)(2)(ii) have been met and receives notice of their entitlement to, or enrollment for, either Medicare Part A or Part B. The SEP continues for 2 additional calendar months after the month the notice of the Part A entitlement or Part B enrollment is received, whichever is earlier.

* * * * *

■ 64. Section 423.44 is amended by revising paragraphs (b)(2)(vi) and (d)(8) to read as follows:

§ 423.44 Involuntary disenrollment from Part D coverage.

* * * * *

(b) * * *

(2) * * *

(vi) The individual no longer meets the requirements of § 423.30(a)(1)(iii).

* * * * *

(d) * * *

(8) *Individual loses U.S. citizenship, U.S. nationality, or eligible noncitizen status.* Disenrollment is effective the first day of the month following the month in which the PDP sponsor receives a notice from CMS that the individual is ineligible in accordance with § 423.30(a)(1)(iii) of this chapter.

PART 424—CONDITIONS FOR MEDICARE PAYMENT

■ 65. The authority for part 424 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 66. Section 424.516 is amended by adding paragraph (f)(4) to read as follows:

§ 424.516 Additional provider and supplier requirements for enrolling and maintaining active enrollment status in the Medicare program.

* * * * *

(f) * * *

(4) A provider or supplier that is a covered entity as defined at 42 CFR 10.3 is required to—

(i) Submit to CMS the documentation set forth at § 428.203(c)(1) and (2) relating to covered Part D drugs written or ordered by such provider or supplier.

(ii) Comply with the submission requirements set forth at § 428.203(c)(3) through (5).

* * * * *

PART 425—MEDICARE SHARED SAVINGS PROGRAM

■ 67. The authority citation for part 425 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395hh, and 1395jjj.

■ 68. Section 425.20 is amended by—

■ a. Revising and republishing the definition of ''Beneficiary eligible for Medicare CQMs'';

■ b. Adding the definition of ''Beneficiary eligible for Medicare eCQMs'' in alphabetical order;

■ c. Revising paragraph (2) in the definition of ''Experienced with performance-based risk Medicare ACO initiatives'';

■ d. Revising paragraph (2) in the definition of ''Inexperienced with performance-based risk Medicare ACO initiatives''; and

■ e. Adding the definition of ''Rural county status'' in alphabetical order.

The revisions, republication, and additions read as follows:

§ 425.20 Definitions.

* * * * *

Beneficiary eligible for Medicare CQMs means a beneficiary identified for purposes of reporting Medicare CQMs for ACOs participating in the Medicare Shared Savings Program (Medicare CQMs), who meets the following requirements (as applicable):

(1) For performance years 2024 through 2026, the beneficiary is either of the following:

(i) A Medicare fee-for-service beneficiary (as defined at § 425.20) who—

(A) Meets the criteria for a beneficiary to be assigned to an ACO described at § 425.401(a); and

(B)(*1*) For performance year 2024, had at least one claim with a date of service during the measurement period from an ACO professional who is a primary care physician or who has one of the specialty designations included in § 425.402(c), or who is a physician assistant, nurse practitioner, or clinical nurse specialist.

(*2*) For performance years 2025 and 2026, had at least one primary care service with a date of service during the applicable performance year from an ACO professional who is a primary care physician or who has one of the specialty designations included in § 425.402(c), or who is a physician assistant, nurse practitioner, or clinical nurse specialist.

(ii) A Medicare fee-for-service beneficiary who is assigned to an ACO in accordance with § 425.402(e) because the beneficiary designated an ACO professional participating in an ACO as responsible for coordinating their overall care.

(2) For performance years 2027 and subsequent performance years, a beneficiary that is assigned to the ACO under subpart E of this part.

Beneficiary eligible for Medicare eCQMs means a beneficiary identified for purposes of reporting Medicare eCQMs for ACOs participating in the Medicare Shared Savings Program (Medicare eCQMs), who is a beneficiary that is assigned to the ACO under subpart E of this part.

* * * * *

Experienced with performance-based risk Medicare ACO initiatives * * *

(2) Forty percent or more of the ACO's ACO participants participated in a performance-based risk Medicare ACO initiative, or in an ACO that deferred its entry into a second Shared Savings Program agreement period under a two-sided model under § 425.200(e), in any of the 5 most recent performance years. An ACO participant is considered to have participated in a performance-based risk Medicare ACO initiative if the ACO participant TIN was or will be included in financial reconciliation for one or more performance years under such initiative during any of the 5 most recent performance years, unless the ACO participant TIN did not have a written agreement to participate in the performance-based risk Medicare ACO initiative.

* * * * *

Inexperienced with performance-based risk Medicare ACO initiatives * * *

(2) Less than 40 percent of the ACO's ACO participants participated in a performance-based risk Medicare ACO initiative, or in an ACO that deferred its entry into a second Shared Savings Program agreement period under a two-sided model under § 425.200(e), in each of the 5 most recent performance years. An ACO participant is considered to

have participated in a performance-based risk Medicare ACO initiative if the ACO participant TIN was or will be included in financial reconciliation for one or more performance years under such initiative during any of the 5 most recent performance years, unless the ACO participant TIN did not have a written agreement to participate in the performance-based risk Medicare ACO initiative.

* * * * *

Rural county status means a county that has a status of Micropolitan (population of 10,000 to 50,000 individuals) or Noncore (population less than 10,000 individuals) per the Federal Office of Rural Health Policy (FORHP) county designation using the most recently available version of the United States Census Bureau Delineation File.

* * * * *

■ 69. Section 425.304 is amended by—

■ a. In paragraph (a)(2), removing the phrase ''paragraph (b) or (c) of this section'' and adding in its place the phrase ''paragraph (b), (c), or (e) of this section''; and

■ b. Adding paragraph (e).

The addition reads as follows:

§ 425.304 Beneficiary incentives.

* * * * *

(e) *Part B Cost Sharing Support*—(1) *General.* ACOs, subject to certain conditions and safeguards, may enter into Part B cost sharing support arrangements with ACO participants, pursuant to which the ACO participants reduce or eliminate cost sharing for those categories of eligible Part B items and services and eligible beneficiaries identified by the ACO. This cost sharing support could include both or either of Medicare FFS deductible and coinsurance amounts.

(2) *Application of the CMS-sponsored model safe harbor.* CMS has determined that the Federal anti-kickback statute safe harbor for CMS-sponsored model arrangements and CMS-sponsored model patient incentives (§ 1001.952(ii)(1) and (2) of this title) is available to protect remuneration exchanged under Part B cost sharing support arrangements between ACOs and ACO participants, and patient incentives in the form of Part B cost sharing support furnished to eligible beneficiaries under the Shared Savings Program that meet all of the requirements of this section and the anti-kickback statute safe harbor requirements set forth at § 1001.952(ii) of this title.

(3) *Application procedures*—(i) *General.* An ACO must submit a Part B cost sharing support implementation plan in the form and manner and by a deadline specified by CMS. The implementation plan must include the following:

(A) The categories of eligible beneficiaries for which the ACO plans to make Part B cost sharing support available.

(B) The categories of eligible Part B items and services for which the ACO plans to make Part B cost sharing support available.

(C) A description of how the ACO's planned Part B cost sharing support strategy meets at least one of the clinical goals in paragraph (e)(4)(iii) of this section.

(D) The procedures that the ACO will implement to ensure that ACO participants that have entered into a Part B cost sharing support arrangement with the ACO have access to the most current list of beneficiaries eligible to receive Part B cost sharing support.

(E) A requirement for the ACO to submit to CMS a complete and accurate list of ACO participants that have entered into a Part B cost sharing support arrangement with the ACO according to paragraph (e)(5)(i) of this section.

(F) An attestation that, in any marketing or communications regarding the availability of Part B cost-sharing support, the ACO and its ACO participants will not represent such support as a substitute for supplemental insurance coverage or encourage beneficiaries to reduce or terminate such coverage.

(G) Such other information as may be specified by CMS.

(ii) *CMS review.* CMS evaluates an ACO's implementation plan and approves or denies the application. An ACO may only offer Part B cost sharing support to beneficiaries if CMS approves its application. CMS may reject the ACO's application on the basis of one or more of the following:

(A) The ACO's and the ACO participant's history of noncompliance in the Shared Savings Program.

(B) The ACO's history of noncompliance in CMMI ACO models.

(C) Whether the implementation plan complies with the requirements of § 425.304.

(D) Such other factors as CMS deems reasonable to protect the integrity of the Shared Savings Program, including concerns that the use of Part B cost sharing support may contribute to fraud, waste or abuse.

(iii) *Changes to the implementation plan.* If an ACO wants to make a change to its implementation plan, the ACO must submit a description of the change to CMS in a form and manner and by a deadline or deadlines specified by CMS. CMS evaluates the proposed change and either approves or rejects it.

(4) *Part B cost sharing support requirements*—(i) *Beneficiary eligibility.* Beneficiaries are eligible to receive Part B cost sharing support if they meet the following criteria:

(A) The beneficiary is assigned to the applying ACO (as described at § 425.400(a)(1)(i)) if the ACO has selected prospective assignment or the beneficiary is an assignable beneficiary (as defined at § 425.20), if the applying ACO has selected preliminary prospective assignment with retrospective reconciliation.

(B) The beneficiary does not have secondary insurance that covers the associated Part B cost sharing obligation.

(C) The beneficiary's overall health is expected to be improved or maintained by receiving the associated Part B item or service.

(ii) *Eligible Part B items and services.* ACOs may reduce or eliminate beneficiary cost sharing for all Medicare FFS Part B items and services except durable medical equipment, prosthetics, orthotics, supplies, and prescription drugs.

(iii) *Clinical goals.* Cost sharing support must advance one or more of the following clinical goals:

(A) Adherence to a treatment regime.

(B) Adherence to a drug regime.

(C) Adherence to a follow-up care plan.

(D) Management of a chronic disease or condition.

(5) *Part B cost sharing support arrangements*—(i) *ACO participant agreements.* The ACO must have a written agreement with each ACO participant that has agreed to reduce or eliminate Part B cost sharing for eligible ACO beneficiaries under a Part B cost sharing support arrangement with the ACO. The terms of the Part B cost sharing support agreement must include all of the following:

(A) The categories of eligible beneficiaries and eligible Part B items and services for which the ACO participant may reduce or eliminate Part B cost sharing.

(B) A requirement that the ACO participant reduce or eliminate cost sharing in accordance with the ACO's approved implementation plan.

(C) The amount and frequency with which the ACO will reimburse the ACO participant for the cost sharing amounts not collected.

(D) A requirement for ACO participants to maintain copies of records that identify each beneficiary who received a reduction or elimination

of Part B cost sharing, the type and date of item or service for which cost sharing support was provided, and the dollar amount of the cost sharing support.

(E) The ability for the ACO or ACO participant to terminate the Part B cost sharing support agreement if the ACO or ACO participant fails to comply with the requirements of this section.

(F) A requirement that the ACO or ACO participants will not market to beneficiaries the availability of the Part B cost sharing support as a substitute for their supplemental insurance coverage.

(ii) *Other rules governing participation.* (A) An ACO participant must not be required by an ACO to participate in a Part B cost sharing support arrangement.

(B) An ACO may participate in Part B cost sharing support in accordance with an approved implementation plan even if not all of its ACO participants agree to participate.

(iii) *Source of funding.* The ACO must finance all payments made to ACO participants in accordance with the Part B cost sharing support agreement from its own funds.

(6) *Record retention.* (i) The ACO must maintain copies of the written Part B cost sharing support agreement with ACO participants, as well as the following records:

(A) Records that identify each beneficiary who received a reduction or elimination of Part B cost sharing.

(B) Records that document the type and date of the Part B item or service for which Part B cost sharing was reduced or eliminated.

(C) Records that document the dollar amount of Part B cost sharing that was reduced or eliminated.

(D) Records that document the ACO participant that furnished the item or service for which Part B cost sharing was reduced or eliminated.

(ii) The ACO must provide the records specified in paragraph (e)(6)(i) of this section to CMS upon request.

(7) *Addressing compliance problems.* At any time, CMS may suspend or prohibit the ACO or any ACO participant from participating in a Part B cost sharing support arrangement if CMS determines that the ACO or its ACO participants have failed to comply with any of the requirements of this part. This suspension or prohibition will be effective, in CMS' discretion, regardless of whether the ACO has corrected or otherwise resolved the noncompliance.

■ 70. Section 425.308 is amended by—

■ a. In paragraph (b)(9) introductory text, removing the phrase ''For performance year 2025 and subsequent performance years,'' and adding in its place the phrase ''For performance years 2025 and 2026,''; and

■ b. Adding paragraph (b)(11).

The addition reads as follows:

§ 425.308 Public reporting and transparency.

* * * * *

(b) * * *

(11) For performance year 2027 and subsequent performance years, the CEHRT use activity selected by the ACO for the purpose of meeting the ACO CEHRT use requirement at § 425.507(c).

* * * * *

■ 71. Section 425.312 is amended by—

■ a. Revising the last sentence in paragraph (a)(2)(iii);

■ b. Adding a new sentence at the end of paragraph (a)(2)(iv); and

■ c. Removing paragraph (a)(2)(v).

The revision and addition read as follows:

§ 425.312 Beneficiary notifications.

(a) * * *

(2) * * *

(iii) * * * The standardized written notice must be furnished to all of these beneficiaries by May 30, unless CMS specifies a later date during the performance year.

(iv) * * * The standardized written notice must be furnished to all of these beneficiaries by May 30, unless CMS specifies a later date during the performance year.

* * * * *

■ 72. Section 425.400 is amended by revising paragraph (c)(1)(x) introductory text and adding paragraph (c)(1)(xi) to read as follows:

§ 425.400 General.

* * * * *

(c) * * *

(1) * * *

(x) For the performance year starting on January 1, 2026, as follows:

* * * * *

(xi) For the performance year starting on January 1, 2027, and subsequent performance years as follows:

(A) CPT codes:

(*1*) 96160 and 96161 (codes for administration of health risk assessment).

(*2*) 96202 and 96203 (codes for caregiver behavior management training).

(*3*) 97550, 97551, and 97552 (codes for caregiver training services).

(*4*) 98016 (code for virtual check-in).

(*5*) 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient).

(*6*) 99304 through 99318 (codes for professional services furnished in a nursing facility; professional services or services reported on an FQHC or RHC claim identified by these codes are excluded when furnished in a skilled nursing facility (SNF)).

(*7*) 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit).

(*8*) 99341 through 99350 (codes for evaluation and management services furnished in a patient's home).

(*9*) 99354 and 99355 (add-on codes, for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code under this paragraph (c)(1)(xi)).

(*10*) 99406 and 99407 (codes for smoking and tobacco-use cessation counseling services).

(*11*) 99421, 99422, and 99423 (codes for online digital evaluation and management).

(*12*) 99424, 99425, 99426, and 99427 (codes for principal care management services).

(*13*) 99437, 99487, 99489, 99490 and 99491 (codes for chronic care management).

(*14*) 99439 (code for non-complex chronic care management).

(*15*) 99452 (code for interprofessional consultation service).

(*16*) 99483 (code for assessment of and care planning for patients with cognitive impairment).

(*17*) 99484, 99492, 99493 and 99494 (codes for behavioral health integration services).

(*18*) 99495 and 99496 (codes for transitional care management services).

(*19*) 99497 and 99498 (codes for advance care planning; services identified by these codes furnished in an inpatient setting are excluded).

(B) HCPCS codes:

(*1*) G0019 and G0022 (codes for community health integration services).

(*2*) G0023 and G0024 (codes for principal illness navigation services).

(*3*) G0101 (code for cervical or vaginal cancer screening).

(*4*) G0136 (code for physical activity and nutritional assessment services).

(*5*) G0317, G0318, and G2212 (codes for prolonged office or other outpatient visit for the evaluation and management of a patient).

(*6*) G0402 (code for the Welcome to Medicare visit).

(*7*) G0438 and G0439 (codes for the annual wellness visits).

(*8*) G0442 (code for alcohol misuse screening service).

(*9*) G0443 (code for alcohol misuse counseling service).

(*10*) G0444 (code for annual depression screening service).

(*11*) G0463 (code for services furnished in electing teaching amendment (ETA) hospitals).

(*12*) G0506 (code for chronic care management).

(*13*) G0537 and G0538 (codes for cardiovascular risk assessment and risk management services).

(*14*) G0539 and G0540 (codes for individual behavior management/modification caregiver training services).

(*15*) G0541, G0542, and G0543 (codes for direct care caregiver training services).

(*16*) G0544 (code for post-discharge telephonic follow-up contacts intervention).

(*17*) G0556, G0557, and G0558 (codes for advanced primary care management services).

(*18*) G0560 (code for safety planning interventions).

(*19*) G0568 and G0569 (codes for behavioral health integration add-on when furnished with advanced primary care management services).

(*20*) G0570 (code for psychiatric collaborative care model add-on when furnished with advanced primary care management services).

(*21*) G0572 and G0573 (codes for advance care planning).

(*22*) G0576 (code for assessment and treatment of vaccine adverse effects).

(*23*) G2010 (code for the remote evaluation of patient video/images).

(*24*) G2011, G0396, G0397 (codes for screening, brief intervention, and referral to treatment).

(*25)* G2012 and G2252 (codes for virtual check-in).

(*26*) G2058 (code for non-complex chronic care management).

(*27*) G2064 and G2065 (codes for principal care management services).

(*28*) G2086, G2087, and G2088 (codes for office-based opioid use disorder services).

(*29*) G2211 (code for visit complexity inherent to evaluation and management services add-on).

(*30*) G2214 (code for psychiatric collaborative care model).

(*31*) G3002 and G3003 (codes for chronic pain management).

(C) Primary care service codes include any CPT code identified by CMS that directly replaces a CPT code specified in paragraph (c)(1)(xi)(A) of this section or a HCPCS code specified in paragraph (c)(1)(xi)(B) of this section, when the assignment window or expanded window for assignment (as defined in § 425.20) for a benchmark or performance year includes any day on or after the effective date of the replacement code for payment purposes under FFS Medicare.

* * * * *

■ 73. Section 425.401 is revised and republished to read as follows:

§ 425.401 Criteria for a beneficiary to be assigned to an ACO.

(a) *Assignment eligibility criteria.* A beneficiary may be assigned to an ACO under the assignment methodology in §§ 425.402 and 425.404, for a performance or benchmark year, if the beneficiary meets all of the following criteria during the assignment window:

(1) For performance years starting prior to January 1, 2028 (as applicable):

(i)(A) Has at least 1 month of Part A and Part B enrollment; and

(B) Does not have any months of Part A only or Part B only enrollment.

(ii) Does not have any months of Medicare group (private) health plan enrollment.

(iii) Is not assigned to any other Medicare shared savings initiative.

(iv) Lives in the United States or U.S. territories and possessions, based on the most recent available data in our beneficiary records regarding the beneficiary's residence at the end of the assignment window.

(2) For the performance year starting on January 1, 2028, and subsequent performance years:

(i) Has at least 1 month of Part A and Part B enrollment and does not have Medicare group (private) health plan enrollment during that same month during the assignment window.

(ii) Is not assigned to any other Medicare shared savings initiative.

(iii) Lives in the United States or U.S. territories and possessions, based on the most recent available data in our beneficiary records regarding the beneficiary's residence at the end of the assignment window.

(b) *Prospective assignment exclusion criteria.* A beneficiary is excluded from the prospective assignment list of an ACO that is participating under prospective assignment under § 425.400(a)(3) at the end of a performance or benchmark year and quarterly during each performance year consistent with § 425.400(a)(3)(ii), or at the end of CY 2019 as specified in § 425.609(b)(1)(ii) and (c)(1)(ii) if the beneficiary meets any of the following criteria during the performance or benchmark year:

(1) For performance years starting prior to January 1, 2028 (as applicable):

(i)(A) Does not have at least 1 month of Part A and Part B enrollment; and

(B) Has any months of Part A only or Part B only enrollment.

(ii) Has any months of Medicare group (private) health plan enrollment.

(iii) Did not live in the United States or U.S. territories and possessions, based on the most recent available data in our beneficiary records regarding the beneficiary's residency at the end of the year.

(2) For the performance year starting on January 1, 2028, and subsequent performance years:

(i) Does not have at least 1 month of Part A and Part B enrollment without Medicare group (private) health plan enrollment during that same month during the assignment window.

(ii) Did not live in the United States or U.S. territories and possessions, based on the most recent available data in our beneficiary records regarding the beneficiary's residency at the end of the year.

■ 74. Section 425.402 is amended by revising and republishing paragraphs (b)(3), (b)(4) and (b)(5)(iv) to read as follows:

§ 425.402 Basic assignment methodology.

* * * * *

(b) * * *

(3)(i) Under the first step, a beneficiary identified in paragraph (b)(1) of this section is assigned to an ACO if the allowed charges for primary care services furnished to the beneficiary by primary care physicians who are ACO professionals and non-physician ACO professionals in the ACO are greater than the allowed charges for primary care services furnished by primary care physicians, nurse practitioners, physician assistants, and clinical nurse specialists who are—

(A) ACO professionals in any other ACO; or

(B) Not affiliated with any ACO and identified by a Medicare-enrolled billing TIN.

(ii) For performance year 2028 and subsequent performance years, if an ACO professional for which CMS identifies a primary care service under paragraph (b)(2) of this section also bills primary care services under a Medicare-enrolled billing TIN unaffiliated with any ACO, then CMS excludes from consideration in assignment under paragraph (b)(3)(i) of this section the allowed charges for primary care services billed by the ACO professional under the non-ACO TIN during the applicable assignment window.

(4)(i) The second step considers the remainder of the beneficiaries identified in paragraph (b)(1) of this section who have not had a primary care service rendered by any primary care physician, nurse practitioner, physician assistant, or clinical nurse specialist, either inside

the ACO or outside the ACO. The beneficiary will be assigned to an ACO if the allowed charges for primary care services furnished to the beneficiary by physicians who are ACO professionals with specialty designations as specified in paragraph (c) of this section are greater than the allowed charges for primary care services furnished by physicians with specialty designations as specified in paragraph (c) of this section—

(A) Who are ACO professionals in any other ACO; or

(B) Who are unaffiliated with an ACO and are identified by a Medicare-enrolled billing TIN.

(ii) For performance year 2028 and subsequent performance years, if an ACO professional for which CMS identifies a primary care service under paragraph (b)(2) of this section also bills primary care services under a Medicare-enrolled billing TIN unaffiliated with any ACO, then CMS excludes from consideration in assignment under paragraph (b)(4)(i) of this section the allowed charges for primary care services billed by the ACO professional under the non-ACO TIN during the applicable assignment window.

(5) * * *

(iv)(A) A beneficiary identified in paragraph (b)(5)(ii) of this section is assigned to the ACO if the allowed charges for primary care services furnished to the beneficiary by ACO professionals in the ACO who are primary care physicians, physicians with specialty designations included in paragraph (c) of this section, or non-physician ACO professionals during the applicable expanded window for assignment are greater than the allowed charges for primary care services furnished by primary care physicians, physicians with specialty designations as specified in paragraph (c) of this section, nurse practitioners, physician assistants, and clinical nurse specialists who are—

(*1*) ACO professionals in any other ACO; or

(*2*) Not affiliated with any ACO and identified by a Medicare-enrolled billing TIN.

(B) For performance year 2028 and subsequent performance years, if an ACO professional for which CMS identifies a primary care service under paragraph (b)(5)(iii) of this section also bills primary care services under a Medicare-enrolled billing TIN unaffiliated with any ACO, then CMS excludes from consideration in assignment under paragraph (b)(5)(iv)(A) of this section the allowed charges for primary care services billed by the ACO professional under the non-ACO TIN during the applicable expanded window for assignment.

* * * * *

■ 75. Section 425.507 is amended by—

■ a. In paragraph (a) introductory text, removing the phrase ''For performance years beginning on or after January 1, 2025,'' and adding in its place the phrase ''For performance years 2025 and 2026,'';

■ b. In paragraph (b) introductory text, by adding the words ''For performance years 2025 and 2026,'' to the beginning of the first sentence; and

■ c. Adding paragraph (c).

The addition reads as follows:

§ 425.507 Incorporating Promoting Interoperability requirements related to the Quality Payment Program for performance years beginning on or after January 1, 2025.

* * * * *

(c) For performance years beginning on or after January 1, 2027, an ACO must demonstrate the use of CEHRT (as defined in paragraph (3) of the CEHRT definition at § 414.1305 of this chapter) in one of the following manners:

(1) The ACO uses CEHRT (as defined in paragraph (3) of the CEHRT definition at § 414.1305 of this chapter) that also supports the calculation and reporting of clinical quality measures by being certified to the ONC health IT certification criteria at 45 CFR 170.315(c)(2) and (c)(3), to completely report at least one of the measures in the APP Plus quality measure set using the eCQMs or Medicare eCQMs collection types and meets the data completeness requirement at § 414.1340 of this chapter for the applicable performance year.

(2) The ACO completely reports at least one measure in the APP Plus quality measure set and meets the data completeness requirement at § 414.1340 of this chapter for the applicable performance year using EHR technology that meets paragraph (3) of the CEHRT definition at § 414.1305 of this chapter and attests that it used data collected from an HL7® Fast Healthcare Interoperable Resources (FHIR®)-based API to support quality measurement using a Health IT Module (as defined in 45 CFR 170.102) that has been certified to an unexpired criterion or criteria in 45 CFR 170.315 supporting standardized API access.

(3) The ACO attests to at least one of the Shared Savings Program CEHRT use metrics from the list of metrics established for the applicable performance year.

■ 76. Section 425.508 is amended by adding paragraphs (c)(1) through (4) to read as follows:

§ 425.508 Incorporating quality reporting requirements related to the Quality Payment Program.

* * * * *

(c) * * *

(1) For performance years beginning on or after January 1, 2026. ACOs may exclude one or more TINs of ACO participants from an ACO's submission of eCQM/MIPS CQM/Medicare CQM/Medicare eCQM data (as applicable) for each measure as required in this paragraph (c). Applicable exclusions may include:

(i) Unforeseen circumstance(s) that are outside of the control of the ACO, such as the unexpected closure of a group or individual's practice that bills under the ACO participant TIN.

(ii) An ACO participant TIN has a CEHRT that is intended for specialty use and does not support the measure(s) included in the APP Plus quality measure set.

(iii) Other circumstances as determined by CMS.

(2) ACOs may not exclude an ACO participant TIN from the ACO's quality data submission for each measure based on the following:

(i) The demographics of the beneficiaries who had an encounter during the performance year with an ACO participant TIN.

(ii) The health status of the beneficiaries who had an encounter during the performance year with an ACO participant TIN.

(iii) The estimated impact of the ACO participant TIN on the ACO's quality performance.

(3) The ACO's submission of eCQM/MIPS CQM/Medicare CQM/Medicare eCQM data (as applicable) for each measure must include ACO participant TINs that represent at least 95 percent of the beneficiaries assigned to the ACO under subpart E of this part prior to the application of the measure specifications.

(4) CMS retains the right to audit and validate eCQM/MIPS CQM/Medicare CQM/Medicare eCQM data reported by an ACO and may request documentation from the ACO related to the exclusion of ACO participant TINs under paragraph (c)(1) of this section. Failure to report quality measure data accurately, completely, and timely may result in compliance actions as described in §§ 425.216 and 425.218.

* * * * *

■ 77. Section 425.512 is amended by—

■ a. In paragraph (a)(2)(iv), removing the phrase ''eCQMs/Medicare CQMs'' and adding in its place the phrase ''eCQMs/MIPS CQMs/Medicare CQMs/Medicare eCQMs'';

■ b. In paragraph (a)(5)(i)(B) introductory text, removing the phrase ''For performance years 2025 and 2026,'' and adding in its place the phrase ''For performance year 2025 and subsequent performance years,'';
■ c. Removing paragraph (a)(5)(i)(C);
■ d. In paragraph (a)(5)(iii)(C), removing the phrase ''eCQMs/Medicare CQMs'' and adding in its place the phrase ''eCQMs/MIPS CQMs/Medicare CQMs/Medicare eCQMs'';
■ e. In paragraph (a)(7)(ii), removing the phrase ''For performance year 2025 and subsequent performance years,'' and adding in its place the phrase ''For performance years 2025 and 2026''; and
■ f. Adding paragraph (a)(7)(iii).

The addition reads as follows:

§ 425.512 Determining the ACO quality performance standard for performance years beginning on or after January 1, 2021.

(a) * * *

(*7*) * * *

(iii) For performance year 2027 and subsequent performance years, if an ACO reports all of the required measures in the APP Plus quality measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for each measure in the APP Plus quality measure set, and receiving a MIPS Quality performance category score as described at § 414.1380(b)(1) of this subchapter, for the relevant performance year, and the ACO meets the following—

(A) The ACO's MIPS Quality performance category score is calculated on less than five measures; and

(B) Any unscored measure(s) must meet all of the following:

(*1*) The ACO's total available measure achievement points used to calculate the ACO's MIPS Quality performance category score are reduced under § 414.1380(b)(1)(vii)(A) of this subchapter.

(*2*) The ACO's total measure achievement points used to calculate the ACO's MIPS Quality performance category score are not reduced under § 414.1380(b)(1)(iii) of this subchapter.

* * * * *

§ 425.600 [Amended]

■ 78. Section 425.600 is amended by—

in paragraph (f)(4)(ii) by removing the references ''§§ 425.601(f), and 425.656(e)'' and adding in their place the references ''§ 425.601(f), and § 425.656(e) and (f)''.

■ 79. Section 425.605 is amended by—
■ a. Revising paragraph (d)(1)(v)(A)(*3*)(*ii*), the first sentence of paragraph (d)(1)(v)(A)(*4*) introductory text, and paragraph (d)(1)(v)(A)(*4*)(*ii*);
■ b. Adding paragraph (d)(1)(v)(A)(*5*);
■ c. In paragraph (h)(2), removing the references ''paragraph (d)(1)(i)(A)(*4*), (d)(1)(ii)(A)(*4*), (d)(1)(iii)(A)(*4*), (d)(1)(iv)(A)(*4*), or (d)(1)(v)(A)(*4*) of this section'' and adding in their place the references ''paragraph (d)(1)(i)(A)(*4*), (d)(1)(ii)(A)(*4*), (d)(1)(iii)(A)(*4*), (d)(1)(iv)(A)(*4*), (d)(1)(v)(A)(*4*) or (d)(1)(v)(A)(*5*) of this section'';
■ d. In paragraph (i)(2)(i) introductory text, removing the phrase ''paragraph (i)(2)(ii) of this section'' and adding in its place the phrase ''paragraph (i)(2)(ii) or (i)(2)(iii) of this section, as applicable''; and
■ e. Adding new paragraph (i)(2)(iii).

The revisions and additions read as follows:

§ 425.605 Calculation of shared savings and losses under the BASIC track.

* * * * *

(d) * * *

(1) * * *

(v) * * *

(A) * * *

(*3*) * * *

(*ii*) 50 percent multiplied by the ACO's quality score calculated according to § 425.512 for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(4)(ii).

(*4*) *For ACOs in agreement periods beginning on July 1, 2019, through January 1, 2026, for performance years beginning on or after January 1, 2024.*

* * *

(*ii*) 50 percent multiplied by the ACO's quality score calculated according to § 425.512 for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(5)(ii).

(*5*) *For ACOs in agreement periods beginning on or after January 1, 2027, for performance years beginning on or after January 1, 2027.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level E, receives a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(v)(B) of this section). Except as provided in paragraph (h) of this section, the percentage is as follows:

(*i*) 60 percent for an ACO that that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(5)(i).

(*ii*) 60 percent multiplied by the ACO's quality score calculated according to § 425.512 for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(5)(ii).

* * * * *

(i) * * *

(2) * * *

(iii) For agreement periods beginning on or after January 1, 2024, and before January 1, 2027, for performance year 2025 and subsequent performance years of the ACO's agreement period. CMS calculates the benchmark-based loss recoupment limit as follows:

(A) Calculates the value for total benchmark expenditures as the product of an ACO's per capita updated benchmark expenditures for the performance year prior to the recomputation of the ACPT as specified in § 425.660(c)(1) and an ACO's assigned beneficiary person years for the performance year.

(B) Calculates the value for total benchmark expenditures as the product of an ACO's per capita updated benchmark expenditures for the performance year after the recomputation of the ACPT as specified in § 425.660(c)(1) and an ACO's assigned beneficiary person years for the performance year.

(C) Calculates the product of the percentage specified in paragraph (d)(1)(iii)(D)(*2*), (d)(1)(iv)(D)(*2*), and (d)(1)(v)(D)(*2*) of this section, as applicable, and the lesser of the ACO's total benchmark expenditures calculated according to paragraphs (i)(2)(iii)(A) and (i)(2)(iii)(B) of this section.

■ 80. Section 425.610 is amended by—
■ a. In paragraph (l)(2) introductory text, removing the phrase ''paragraph (l)(3) of this section'' and adding in its place the phrase ''paragraph (l)(3) or (l)(4) of this section, as applicable''; and
■ b. Adding paragraph (l)(4).

The addition reads as follows:

§ 425.610 Calculation of shared savings and losses under the ENHANCED track.

* * * * *

(l) * * *

(4) For agreement periods beginning on or after January 1, 2024, and before January 1, 2027, for performance year 2025 and subsequent performance years of the ACO's agreement period. The amount of shared losses for which an eligible ACO is liable may not exceed 15 percent of the lesser of the following:

(i) Total benchmark expenditures calculated as the product of an ACO's per capita updated benchmark expenditures for the performance year prior to the recomputation of the ACPT as specified in § 425.660(c)(1) and an ACO's assigned beneficiary person years for the performance year.

(ii) Total benchmark expenditures calculated as the product of an ACO's per capita updated benchmark expenditures for the performance year

after the recomputation of the ACPT as specified in § 425.660(c)(1) and an ACO's assigned beneficiary person years for the performance year.

§ 425.612 [Amended]

■ 81. Section 425.612 is amended in paragraph (a)(1)(iv)(A)(*2*) by removing the references ''§ 425.401(a)(1) and (2)'' and adding in its place the references ''§ 425.401(a)(1)(i) and (ii) and (a)(2)(i) (as applicable)''.

■ 82. Section 425.630 is amended by—

■ a. In paragraph (e)(1), removing the phrase ''social determinants of health'' and adding in its place the phrase ''upstream drivers of health'';

■ b. Revising paragraph (f)(2)(ii) introductory text to add a new first sentence; and

■ c. Revising and republishing paragraphs (f)(2)(iii) and (f)(2)(iv).

The revisions and republications read as follows:

§ 425.630 Option to receive advance investment payments.

* * * * *

(f) * * *

(2) * * *

(ii) For performance years 2023 through 2027.

* * * * *

(iii) Determines a beneficiary's payment amount.

(A) For performance years 2023 through 2027. For each beneficiary in the assigned population identified in paragraph (f)(2)(i) of this section, CMS determines the payment amount that corresponds to the beneficiary's risk factors-based score determined in paragraph (f)(2)(ii) of this section. The beneficiary payment amount is as follows:

TABLE 1 TO PARAGRAPH (f)(2)(iii)(A)

Risk factors-based score	1–24	25–34	35–44	45–54	55–64	65–74	75–84	85–100
Payment amount	$0	$20	$24	$28	$32	$36	$40	$45

(B) For performance year 2028 and subsequent performance years. For each beneficiary in the assigned population identified in paragraph (f)(2)(i) of this section, CMS determines the quarterly payment amount, as follows:

(*1*) An ACO will receive a quarterly payment of $45 for each beneficiary that meets any of the following criteria:

(*i*) Is enrolled in the LIS.

(*ii*) Is dually eligible for Medicare and Medicaid.

(*iii*) Is residing in a county with rural county status (as defined at § 425.20). CMS determines the county of residence for the beneficiary based on the beneficiary's mailing address.

(*2*) An ACO will receive a quarterly payment of $25 for each beneficiary that does not meet any of the criteria listed in paragraph (f)(2)(iii)(B)(*1*) of this section.

(iv) Calculates the ACO's quarterly payment amount.

(A) For performance years 2023 through 2027. The ACO's quarterly payment amount is the sum of the beneficiary payment amounts corresponding to each assigned beneficiary's risk factors-based score, specified in paragraph (f)(2)(iii)(A) of this section, capped at 10,000 beneficiaries. If the ACO has more than 10,000 assigned beneficiaries according to paragraph (f)(2)(i) of this section, CMS will calculate the quarterly payment amount based on the 10,000 assigned beneficiaries with the highest risk factors-based scores determined according to paragraph (f)(2)(ii) of this section.

(B) For performance year 2028 and subsequent performance years. The ACO's quarterly payment amount is the sum of the beneficiary payment amounts corresponding to the quarterly payments specified in paragraph (f)(2)(iii)(B) of this section. If the ACO has more than 10,000 assigned beneficiaries according to paragraph (f)(2)(i) of this section, CMS will calculate the quarterly payment amount based on the 10,000 assigned beneficiaries with the highest quarterly payment amount determined according to paragraph (f)(2)(iii)(B) of this section.

* * * * *

■ 83. Section 425.640 is amended by—

■ a. In paragraph (b)(1)(i), removing the phrase ''January 1, 2026, or in subsequent years'' and adding in its place the phrase ''January 1, 2026 or January 1, 2027'';

■ b. In paragraph (c)(1), removing the phrase ''January 1, 2026, or in subsequent years'' and adding in its place the phrase ''January 1, 2026 or January 1, 2027''; and

■ c. Revising paragraphs (f)(1)(i) and (ii).

The revisions read as follows:

§ 425.640 Option to receive prepaid shared savings.

* * * * *

(f) * * *

(1) * * *

(i) An eligible ACO entering an agreement period beginning on January 1, 2026 or January 1, 2027 will receive quarterly prepaid shared savings payments through December 31, 2027, unless the payment is withheld or terminated under paragraph (h) of this section.

(ii) An eligible ACO participating in an agreement period beginning on January 1, 2025, will receive quarterly prepaid shared savings payments starting with the performance year beginning on January 1, 2026 through December 31, 2027, unless the payment is withheld or terminated under paragraph (h) of this section. The ACO will not receive additional or catch-up payments for performance year 2025.

* * * * *

§ 425.650 [Amended]

■ 84. Section 425.650 is amended in paragraph (a) by removing the references ''§§ 425.652 through 425.662'' and adding in their place the references ''§§ 425.652 through 425.664''.

■ 85. Section 425.652 is amended by adding paragraph (a)(8)(iii) to read as follows:

§ 425.652 Establishing, adjusting, and updating the benchmark for agreement periods beginning on January 1, 2024, and in subsequent years.

(a) * * *

(8) * * *

(iii) For agreement periods beginning on January 1, 2027, and in subsequent years, in addition to any adjustment applied to the historical benchmark in accordance with paragraph (a)(8)(ii) of this section (either a regional adjustment, prior savings adjustment, or population adjustment, as applicable), the ACO will receive a growth adjustment (as calculated under § 425.664), if eligible. The sum of the adjustment amount (if any) applied in paragraph (a)(8)(ii) of this section and the growth adjustment (determined according to § 425.664(i)(1)) may not exceed an amount equal to the cap specified in § 425.664(i)(2).

* * * * *

■ 86. Section 425.656 is amended by—

■ a. Revising paragraph (a);

■ b. In paragraph (c)(2), removing the phrase ''paragraph (e) of this section'' and adding in its place the phrase

''paragraphs (e) or (f) of this section (as applicable)'';

■ c. Revising and republishing paragraph (c)(3);

■ d. Revising paragraph (e) introductory text;

■ e. Redesignating paragraph (f) as paragraph (g);

■ f. Adding new paragraph (f); and

■ g. In newly redesignated paragraph (g) introductory text, removing the phrase ''paragraphs (b) through (e) of this section'' and adding in its place the phrase ''paragraphs (b) through (f) of this section''.

The revisions, republications, and addition read as follows:

§ 425.656 Calculating the regional adjustment to the historical benchmark.

(a) *General.* This section describes the methodology for calculating the regional adjustment to the historical benchmark based on the ACO's regional service area expenditures, making separate calculations for the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries. This section applies to regional adjustment calculations for agreement periods beginning on January 1, 2024, and in subsequent years, except as specified otherwise.

* * * * *

(c) * * *

(3)(i) For agreement periods beginning on or after January 1, 2024 and before January 1, 2027. Caps the per capita dollar amount for each Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries) calculated under paragraph (c)(2) of this section at a dollar amount equal to a percentage of national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program in BY3 for assignable beneficiaries in that enrollment type identified for the 12-month calendar year corresponding to BY3 using data from the CMS Office of the Actuary. The cap is applied as follows:

(A) For positive adjustments, the per capita dollar amount for a Medicare enrollment type is capped at 5 percent of the national per capita expenditure amount for the enrollment type for BY3.

(B) For negative adjustments, the per capita dollar amount for a Medicare enrollment type is capped at negative 1.5 percent of the national per capita expenditure amount for the enrollment type for BY3.

(ii) For agreement periods beginning on January 1, 2027, and in subsequent years. Caps the per capita dollar amount for each Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries) calculated under paragraph (c)(2) of this section at a dollar amount, as follows:

(A) For positive adjustments, the per capita dollar amount for a Medicare enrollment type is capped at a dollar amount calculated as follows:

(*1*) Calculate the product of the following:

(*i*) The amount of national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program in BY3 for assignable beneficiaries in that enrollment type identified for the 12-month calendar year corresponding to BY3 using data from the CMS Office of the Actuary.

(*ii*) The ACO's weighted average CMS–HCC risk score for the enrollment type for BY3.

(*2*) Calculate 5 percent of the enrollment type-specific product determined in paragraph (c)(3)(ii)(A)(*1*) of this section.

(B) For negative adjustments, the per capita dollar amount for a Medicare enrollment type is capped at a dollar amount equal to negative 1.5 percent of national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program in BY3 for assignable beneficiaries in that enrollment type identified for the 12-month calendar year corresponding to BY3 using data from the CMS Office of the Actuary.

* * * * *

(e) *Phase-in of weights used in the regional adjustment calculation for agreement periods beginning on or after January 1, 2024 and before January 1, 2027.*

* * * * *

(f) *Phase-in weights used in the regional adjustment calculation for agreement periods beginning on January 1, 2027, and in subsequent years.* (1) The first time that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment as follows:

(i) Using 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's initial or rebased historical benchmark, if the ACO is determined to have lower spending than the ACO's regional service area.

(ii) Using 15 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's initial or rebased historical benchmark, if the ACO is determined to have higher spending than the ACO's regional service area.

(2) The second time that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment as follows:

(i) For an ACO participating under the BASIC track—

(A) Using 50 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have lower spending than the ACO's regional service area; or

(B) Using 25 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have higher spending than the ACO's regional service area.

(ii) For an ACO participating under the ENHANCED track—

(A) Using 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have lower spending than the ACO's regional service area; or

(B) Using 25 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have higher spending than the ACO's regional service area.

(3) The third time that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment as follows:

(i) For an ACO participating under the BASIC track—

(A) Using 50 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have lower spending than the ACO's regional service area; or

(B) Using 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to

have higher spending than the ACO's regional service area.

(ii) For an ACO participating under the ENHANCED track—

(A) Using 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have lower spending than the ACO's regional service area; or

(B) Using 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have higher spending than the ACO's regional service area.

(4) The fourth or subsequent time that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment as follows:

(i) For an ACO participating under the BASIC track, using 50 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark.

(ii) For an ACO participating under the ENHANCED track—

(A) Using 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have lower spending than the ACO's regional service area; or

(B) Using 50 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have higher spending than the ACO's regional service area.

(5) To determine if an ACO has lower or higher spending compared to the ACO's regional service area, CMS does the following:

(i) Multiplies the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's historical benchmark for each population of beneficiaries (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries) as calculated under paragraph (c)(1) of this section by the applicable proportion of the ACO's assigned beneficiary population (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries) for BY3 of the historical benchmark.

(ii) Sums the amounts determined in paragraph (f)(5)(i) of this section across the populations of beneficiaries (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries).

(iii) If the resulting sum is a net positive value, the ACO is considered to have lower spending compared to the ACO's regional service area. If the resulting sum is a net negative value, the ACO is considered to have higher spending compared to the ACO's regional service area.

(iv) If during the term of the agreement period CMS adjusts the ACO's benchmark, as specified in § 425.652(a)(9), CMS redetermines whether the ACO is considered to have lower spending or higher spending compared to the ACO's regional service area for purposes of determining the percentage in paragraphs (f)(1) through (4) of this section used in calculating the regional adjustment.

* * * * *

■ 87. Section 425.658 is amended by—

■ a. Revising paragraph (c)(1) introductory text and paragraph (c)(2); and

■ b. In paragraph (d), removing the phrase ''paragraph (c)(1) of this section'' and adding in its place the phrase ''paragraph (c) of this section''.

The revisions read as follows:

§ 425.658 Calculating the prior savings adjustment to the historical benchmark.

* * * * *

(c) * * *

(1) For agreement periods beginning on or after January 1, 2024 and before January 1, 2027. If an ACO is eligible for the prior savings adjustment as determined in paragraph (b)(3) of this section, the prior savings adjustment will equal the lesser of the following:

* * * * *

(2) For agreement periods beginning on January 1, 2027, and in subsequent years. If an ACO is eligible for the prior savings adjustment as determined in paragraph (b)(3) of this section, the prior savings adjustment will equal the lesser of the following:

(i) 75 percent of the pro-rated average per capita amount computed in paragraph (b)(3)(ii) of this section.

(ii) A single per capita value that is calculated as follows:

(A) Calculate the product of the following for each Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries)—

(*1*) The national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program in BY3 for assignable beneficiaries in that enrollment type identified for the 12-month calendar year corresponding to BY3 using data from the CMS Office of the Actuary; and

(*2*) The ACO's weighted average CMS–HCC risk score for that enrollment type for BY3.

(B) Calculate 5 percent of each enrollment type-specific product determined in paragraph (c)(2)(ii)(A) of this section.

(C) Calculate the single per capita value as a person-year weighted average by multiplying each of the enrollment type-specific values determined in accordance with paragraph (c)(2)(ii)(B) of this section by the proportion of the ACO's assigned beneficiaries within that particular enrollment type, and then summing the results.

* * * * *

■ 88. Section 425.660 is revised to read as follows:

§ 425.660 Accountable Care Prospective Trend (ACPT).

(a) *General.* The methodology by which CMS calculates and adjusts a projected growth rate called the Accountable Care Prospective Trend (ACPT) is described in this section. CMS incorporates the ACPT into the blended update factor described in § 425.652(b) when updating an ACO's benchmark for each performance year of the agreement period, for agreement periods beginning on January 1, 2024, and in subsequent years.

(b) *Determination of ACPT.* An ACPT is a flat dollar amount calculated using one or more annualized growth rates based on national fee-for-service Medicare expenditures projected by the CMS Office of the Actuary. In determining the ACPT for a Medicare enrollment type for each performance year, CMS does all of the following:

(1) *Calculate annualized projected growth rates.* The annualized projected growth rates are calculated as an annual rate of growth in projected expenditures relative to the prior year. CMS projects annualized per capita growth in Parts A and B fee-for-service expenditures for each performance year of the ACO's agreement period. In calculating the annualized projected growth rates, CMS does all of the following:

(i) Excludes IME and DSH payments, and the supplemental payment for IHS/Tribal hospitals and Puerto Rico hospitals.

(ii) Makes separate expenditure calculations for each of the following populations of beneficiaries:

(A) ESRD.

(B) Aged/Disabled.

(iii) Calculates one or more annualized projected growth rates for the ESRD population of beneficiaries described in paragraph (b)(1)(ii)(A) of this section, and one or more annualized growth rates for the Aged/Disabled population of beneficiaries described in paragraph (b)(1)(ii)(B) of this section, as follows:

(A) Using a uniform annualized projected rate of growth over each of the 5 performance years of the 5-year agreement period (for agreement periods beginning on or after January 1, 2024, and before January 1, 2027), or for each performance year (for agreement periods beginning on January 1, 2027, and in subsequent years), as applicable; or

(B) If annualization as specified in paragraph (b)(1)(iii)(A) of this section is determined not to reasonably fit the anticipated growth curve, CMS applies an alternative annualization technique using two or more annualized growth rates reflecting the projected rates of growth during the 5 performance years comprising the 5-year agreement period (for agreement periods beginning on or after January 1, 2024, and before January 1, 2027), or for each performance year (for agreement periods beginning on January 1, 2027, and in subsequent years), as applicable.

(2) *Calculate cumulative projected growth rate.* For each performance year, CMS calculates cumulative projected growth rates relative to the ACO's benchmark year (BY) 3, using the annualized projected growth rates, determined in accordance with paragraph (b)(1) of this section, for each population of beneficiaries: the ESRD population and the Aged/Disabled population.

(3) *Express cumulative projected growth rate as a flat dollar amount.* For each performance year, CMS multiplies the applicable cumulative projected growth rate described in paragraph (b)(2) of this section by BY3 truncated national per capita fee-for-service Medicare expenditures for assignable beneficiaries for each Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries) identified for the 12-month calendar year corresponding to BY3 to express the cumulative projected growth rate as a flat dollar amount as follows:

(i) The ESRD cumulative projected growth rate calculated in accordance with paragraph (b)(2) of this section is used for the ESRD population.

(ii) The Aged/Disabled cumulative projected growth rate calculated in accordance with paragraph (b)(2) of this section is used for the following populations: disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(4) *Risk adjust the flat dollar amount.* CMS adjusts the flat dollar amounts described in paragraph (b)(3) of this section for each performance year for differences in severity and case mix between the ACO's BY3 assigned beneficiary population and the national assignable FFS population for each Medicare enrollment type identified for the 12-month calendar year corresponding to BY3.

(5) *Calculate ACO-specific ACPT growth rates.* CMS divides the risk adjusted flat dollar amounts described in paragraph (b)(4) of this section by the ACO's historical benchmark expenditures described in § 425.652(a) for each Medicare enrollment type to calculate the percentage increase to be included in the blended update factor described in § 425.652(b)(4).

(6) *Timing of calculations.* (i) For agreement periods beginning on or after January 1, 2024, and before January 1, 2027.

(A) At the beginning of the ACO's agreement period, CMS calculates the annualized projected growth rates for all performance years of the ACO's agreement period in accordance with paragraph (b)(1) of this section. These annualized projected growth rates will remain fixed over the ACO's agreement period.

(B) For a given performance year, CMS calculates an ACO-specific ACPT value, in accordance with paragraphs (b)(2) through (b)(5) of this section, using the annualized projected growth rates calculated at the beginning of the ACO's agreement period, as described in paragraph (b)(6)(i)(A) of this section.

(ii) For agreement periods beginning on January 1, 2027, and in subsequent years.

(A) In the calendar year preceding a given performance year, CMS calculates the annualized projected growth rates in accordance with paragraph (b)(1) of this section for that performance year.

(B) For a given performance year, CMS calculates an ACO-specific ACPT value, in accordance with paragraphs (b)(2) through (b)(5) of this section, using the annualized projected growth rates calculated in the preceding calendar year, as described in paragraph (b)(6)(ii)(A) of this section.

(c) *Recomputation of ACPT.* At financial reconciliation for a given performance year, CMS may recompute the ACO-specific ACPT value for a Medicare enrollment type initially determined at paragraph (b)(5) of this section for that performance year, to address under-projection or over-projection of the ACPT (as applicable), as follows:

(1) For agreement periods beginning on or after January 1, 2024, and before January 1, 2027.

(i) For performance year 2025 and subsequent performance years of the ACO's agreement period, CMS separately calculates for the ESRD and Aged/Disabled populations the difference between the cumulative projected growth rates calculated in paragraph (b)(2) of this section and the cumulative observed growth in per capita expenditures for the national assignable FFS population.

(ii) For the ESRD and Aged/Disabled populations separately, if the difference calculated in paragraph (c)(1)(i) of this section is less (more negative) than −1.0 percentage point, CMS will recompute the ACO-specific ACPT value for the corresponding enrollment type(s) initially determined at paragraph (b)(5) of this section. CMS will calculate an ACO-specific ACPT value for the corresponding enrollment type(s), in accordance with paragraphs (b)(3) through (b)(5) of this section, using the cumulative observed growth in expenditures for the national assignable FFS population minus 1.0 percentage point.

(iii) For the ESRD and Aged/Disabled populations separately, if the difference calculated in paragraph (c)(1)(i) of this section is greater than (less negative) or equal to −1.0 percentage point, CMS will not recompute the ACO-specific ACPT value for the corresponding enrollment type(s) initially determined at paragraph (b)(5) of this section.

(2) For agreement periods beginning on January 1, 2027, and in subsequent years.

(i) CMS separately calculates for the ESRD and Aged/Disabled populations the difference between the cumulative projected growth rates calculated in paragraph (b)(2) of this section and the cumulative observed growth in per capita expenditures for the national assignable FFS population.

(ii) For the ESRD and Aged/Disabled populations separately, if the difference calculated in paragraph (c)(2)(i) of this section is less (more negative) than −1.0 percentage point, CMS will recompute the ACO-specific ACPT value for the corresponding enrollment type(s) initially determined at paragraph

(b)(5) of this section. CMS will calculate an ACO-specific ACPT value for the corresponding enrollment type(s), in accordance with paragraphs (b)(3) through (b)(5) of this section, using the cumulative observed growth in expenditures for the national assignable FFS population minus 1.0 percentage point.

(iii) For the ESRD and Aged/Disabled populations separately, if the difference calculated in paragraph (c)(2)(i) of this section is greater than +1.5 percentage points, CMS will recompute the ACO-specific ACPT value for the corresponding enrollment type(s) initially determined at paragraph (b)(5) of this section. CMS will calculate an ACO-specific ACPT value for the corresponding enrollment type(s), in accordance with paragraphs (b)(3) through (b)(5) of this section, using the cumulative observed growth in expenditures for the national assignable FFS population plus 1.5 percentage point.

(iv) For the ESRD and Aged/Disabled populations separately, if the difference calculated in paragraph (c)(2)(i) of this section is between −1.0 and +1.5 percentage points, inclusive, CMS will not recompute the ACO-specific ACPT value for the corresponding enrollment type(s) initially determined at paragraph (b)(5) of this section.

■ 89. Section 425.662 is amended by revising and republishing paragraph (b)(2) to read as follows:

§ 425.662 Calculating the population adjustment to the historical benchmark.

* * * * *

(b) * * *

(2)(i) For agreement periods beginning on January 1, 2025, or January 1, 2026. Calculates a scaler as the difference between 5 percent of the national per capita expenditure amount, expressed as single value as calculated in paragraph (b)(1) of this section, and the higher of: the regional adjustment, expressed as a single value as described in § 425.656(d); the per capita prior savings adjustment determined in § 425.658(c); or no adjustment, in the case where the regional adjustment is negative and the ACO is not eligible for the prior savings adjustment under § 425.658(b)(3)(i).

(ii) For agreement periods beginning on January 1, 2027, and in subsequent years. Calculates a scaler as the difference between the following:

(A) A single per capita value that is calculated as follows:

(*1*) Calculate the product of the following for each Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries):

(*i*) The national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program in BY3 for assignable beneficiaries in that enrollment type identified for the 12-month calendar year corresponding to BY3 using data from the CMS Office of the Actuary.

(*ii*) The ACO's weighted average CMS–HCC risk score for that enrollment type for BY3.

(*2*) Calculate 5 percent of each enrollment type-specific product determined in paragraph (b)(2)(ii)(A)(*1*) of this section.

(*3*) Calculate a single per capita value as a person-year weighted average by multiplying each of the enrollment type-specific values determined in accordance with paragraph (b)(2)(ii)(A)(*2*) of this section by the proportion of the ACO's assigned beneficiaries within that particular enrollment type, then summing the results.

(B) The highest among—

(*1*) The regional adjustment, expressed as a single value as described in § 425.656(d);

(*2*) The per capita prior savings adjustment determined in § 425.658(c); or

(*3*) No adjustment, in the case where the regional adjustment is negative and the ACO is not eligible for the prior savings adjustment under § 425.658(b)(3)(i).

* * * * *

■ 90. Section 425.664 is added to read as follows:

§ 425.664 Calculating the growth adjustment to the historical benchmark.

(a) *General.* This section describes the methodology for calculating the growth adjustment to the historical benchmark for agreement periods beginning on January 1, 2027, and in subsequent years.

(b) *Determine an ACO's new growth share of assigned beneficiary person years*—(1) *Identify shared savings initiatives for the growth adjustment.* CMS means, for purposes of this part, an initiative implemented by CMS, including the following options and initiatives—

(i) The Shared Savings Program;

(ii) The Innovation Center ACO models; or

(iii) Other initiatives that may be specified by CMS.

(2) *Identify ACO professionals who are inexperienced in shared savings initiatives.* CMS determines that an ACO professional is inexperienced in a shared savings initiative if the ACO professional has not billed primary care services through a participant in the Shared Savings Program, or participated in an Innovation Center ACO model, or other initiative specified by CMS in financial reconciliation for one or more performance years under such initiative during any of the 5 performance years directly preceding the start of the current agreement period.

(3) *Identify beneficiaries who are inexperienced with shared savings initiatives assigned to the ACO.* CMS determines that a beneficiary assigned to an ACO is inexperienced with shared savings initiatives if the beneficiary was not included in assignment in financial reconciliation to an ACO in the Shared Savings Program, Innovation Center ACO model, or other initiative specified by CMS in the performance year that corresponds to the ACO's BY3.

(4) *Calculate an ACO's new growth for the applicable performance year.* CMS calculates an ACO's new growth as follows:

(i) CMS determines the number of beneficiary person years for beneficiaries who are inexperienced with shared savings initiatives (as determined under paragraph (b)(3) of this section) with an ACO professional who is inexperienced with shared savings initiatives (as determined under paragraph (b)(2) of this section) as the ACO professional who provided the highest number of primary care services at the ACO within the assignment window, or to whom the beneficiary was voluntarily aligned, in the performance year as follows:

(A) Count the primary care services (as defined at § 425.20) each assigned beneficiary who is inexperienced with shared savings initiatives (as determined under paragraph (b)(3) of this section) has with each ACO professional participating in the ACO within the assignment window, or to whom the beneficiary was voluntarily aligned for the applicable performance year.

(B) For the purposes of this calculation, attribute the assigned beneficiary who is inexperienced with shared savings initiatives (as determined under paragraph (b)(3) of this section) to the ACO professional with whom the beneficiary had the highest number of primary care services (as defined at § 425.20) for the applicable performance year.

(C) CMS counts, as new growth for the performance year, the number of beneficiary person years for beneficiaries who are inexperienced with shared savings initiatives (as determined under paragraph (b)(3) of this section) and who received the

highest number of primary care services (as defined at § 425.20) for the applicable performance year from an ACO professional who is inexperienced with shared savings initiatives (as determined under paragraph (b)(2) of this section).

(ii) [Reserved]

(c) *Determine an ACO's overall growth assigned beneficiary person years.* CMS calculates an ACO's overall growth as the number of assigned beneficiary person years in the performance year minus the number of assigned beneficiary person years in the performance year that corresponds to the ACO's BY3. If the ACO is a new entrant or re-entering ACO, the overall growth is equal to the number of assigned beneficiary person years in the performance year.

(d) *Determine an ACO's capped new growth for the performance year.* An ACO's new growth is the lesser of an ACO's new growth (as determined in paragraph (b) of this section) and an ACO's overall growth (as determined in paragraph (c) of this section).

(e) *Apply the minimum new growth thresholds for the performance year.* CMS applies the minimum new growth threshold for each performance year, expressed in absolute terms and relative terms. CMS determines the minimum new growth threshold that applies as the lesser of the relative minimum new growth threshold multiplied by the number of total assigned beneficiary person years and the absolute minimum new growth threshold. The absolute minimum new growth threshold and the relative minimum new growth threshold are as follows:

TABLE 1 TO PARAGRAPH (e)

	PY 1	PY 2	PY 3	PY 4	PY 5
Absolute Minimum New Growth Threshold	100	300	600	900	1,200
Relative Minimum New Growth Threshold	0.5%	1.5%	3.5%	5.5%	7.5%

(f) *Calculate the new growth above the minimum and below the cap for the performance year.* CMS calculates the new growth above the minimum and below the cap for each performance year as the difference between an ACO's capped new growth for the applicable performance year (as determined under paragraph (d) of this section) and the minimum new growth threshold applied for the performance year (as determined under paragraph (e) of this section), or zero, if negative. The ACO is eligible for a growth adjustment for the applicable performance year if the new growth above the minimum and below the cap is greater than zero.

(g) *Calculate the new growth share for the performance year.* CMS calculates the new growth share for the performance year as the new growth above the minimum and below the cap in the performance year (as determined under paragraph (f) of this section) divided by the total assigned beneficiary person years in the performance year.

(h) *Determine ACO's incentive factor.* The ACO's incentive factor is an ACO-specific per capita dollar amount calculated as 5 percent of the per capita historical benchmark expressed as a single value before the application of the adjustments to the historical benchmark specified at § 425.652(a)(8)(ii) (as applicable).

(i) *Determine the ACO's growth adjustment to the historical benchmark.* (1) CMS calculates the growth adjustment to the historical benchmark as the product of the ACO's new growth share (as determined under paragraph (g) of this section) and the ACO's incentive factor (as determined under paragraph (h) of this section).

(2) The per capita dollar amount for a Medicare enrollment type is capped at 5 percent of the product of the following—

(i) The national per capita expenditure amount for the enrollment type for BY3; and

(ii) The ACO's weighted average CMS–HCC risk score for the enrollment type for BY3.

§ 425.672 [Amended]

■ 91. Section 425.672 is amended in paragraph (c)(2)(iv) by removing the reference ''§ 425.658(c)(1)(ii)'' and adding in its place the references ''§ 425.658(c)(1)(ii) and (c)(2)(ii)''.

§ 425.702 [Amended]

■ 92. Section 425.702 is amended in paragraph (c)(1)(iii) introductory text by removing the phrase ''For performance year 2024 and subsequent performance years,'' and adding in its place the phrase ''For performance years 2024 through 2026,''.

PART 427—MEDICARE PART B DRUG INFLATION REBATE PROGRAM

■ 93. The authority citation for part 427 continues to read as follows:

Authority: 42 U.S.C. 1395w–3a(i), 1302, and 1395hh.

■ 94. Section 427.20 is amended by revising the definition of ''First marketed date'' to read as follows:

§ 427.20 Definitions.

* * * * *

First marketed date means the earliest date of first sale of any NDC–11 within a billing and payment code among all products and package sizes under the same FDA application. The first marketed date will be identified using ASP data reported by NDC–11 to CMS by a manufacturer as required under sections 1927(b)(3)(A)(iii)(I) and 1847A(f)(2) of the Act, if available. If an ASP first marketed date is not available, the first marketed date will be identified using an alternative public source, such as the NDC Directory.

■ 95. Section 427.101 is amended by revising paragraph (b)(5) to read as follows.

§ 427.101 Identification of the Part B rebatable drugs.

(b) * * *

(5) *Skin substitutes.* A product included within the suite of cellular- and tissue-based products that aid wound healing, other than skin substitute products that are licensed as a drug or biological product under section 351 of the Public Health Service Act.

■ 96. Section 427.302 is amended by adding paragraph (e)(6) and revising paragraph (f) to read as follows.

§ 427.302 Calculation of the per unit Part B rebate.

* * * * *

(e) * * *

(6) For paragraphs (e)(2) through (e)(5) of this section, in the event CPI–U data are unavailable for the month described in such paragraph, CMS will use the first month for which CPI–U data are available following the month for which CPI–U data are unavailable.

(f) *Identification of the rebate period CPI–U.* For each Part B rebatable drug by billing and payment code, CMS will identify and use the greater of the benchmark period CPI–U index level or the CPI–U index level for the first month of the calendar quarter that is 2 calendar quarters before the applicable

calendar quarter in which the Part B rebatable drug is furnished.

(1) In the event CPI–U data are unavailable for the month described in such paragraph, CMS will use the first month for which CPI—U data are available following the month for which CPI–U data are unavailable.

(2) [Reserved]

PART 428—MEDICARE PART D DRUG INFLATION REBATE PROGRAM

■ 97. The authority citation for part 428 continues to read as follows:

Authority: 42 U.S.C. 1395w–114b, 1302, and 1395hh.

■ 98. Section 428.20 is amended by revising the definition of ''Applicable period Consumer Price Index for All Urban Consumers (CPI–U)'' to read as follows.

§ 428.20 Definitions.

* * * * *

Applicable period Consumer Price Index for All Urban Consumers (CPI–U) means, with respect to an applicable period, the CPI–U for the first month of such applicable period (that is, October). In the case where the first month's CPI–U data are unavailable, CMS will use the first month for which CPI–U data are available following the month for which CPI–U data are unavailable.

■ 99. Section 428.202(e) is amended by adding paragraph (e)(6) to read as follows.

§ 428.202 Calculation of the per unit Part D rebate amount.

* * * * *

(e) * * *

(6) For paragraphs (e)(2) through (e)(5) of this section, in the event CPI–U data are unavailable for the month described in such paragraph, CMS will use the first month for which CPI–U data are available following the month for which CPI–U data are unavailable.

■ 100. Section 428.203 is amended by adding paragraph (c) to read as follows:

§ 428.203 Determination of the total number of units dispensed under Part D.

* * * * *

(c) *Data reporting requirement.* (1) Beginning with claims with a date of service on or after January 1, 2027, a provider or supplier that is a covered entity as defined at § 10.3 must submit the data elements associated with each claim for a covered Part D drug billed to Medicare Part D for which such covered entity or its contractor(s) (such as contract pharmacies) dispensed units of a drug for which a manufacturer provides a discount under the 340B Program to such covered entity:

(i) Date of service.

(ii) Prescription or service reference number.

(iii) Fill number.

(iv) Dispensing pharmacy NPI.

(v) NDC–11.

(2) In addition to submitting the data elements set forth in paragraph (c)(1) of this section, such provider or supplier must submit its 340B ID and name as designated in the 340B Office of Pharmacy Affairs Information System (OPAIS) database.

(3) The data elements and information set forth in paragraphs (c)(1) and (2) of this section must be submitted on a quarterly basis and in a form and manner specified by CMS in accordance with the following timelines:

(i)(A) Except as specified in paragraph (c)(3)(i)(B) of this section, data elements and information associated with claims with dates of service during the first quarter of a calendar year must be submitted by the close of the second quarter of that calendar year.

(B) Claims with dates of service during the first quarter of CY 2027, must be submitted by the close of the third quarter of CY 2027.

(ii) Data elements and information associated with claims with dates of service during the second quarter of a calendar year must be submitted by the close of the third quarter of that calendar year.

(iii) Data elements and information associated with claims with dates of service during the third quarter of a calendar year must be submitted by the close of the fourth calendar quarter of that calendar year.

(iv) Data elements and information associated with claims with dates of service during the fourth quarter of that calendar year must be submitted by the close of the first calendar quarter of the immediately following calendar year.

(4) Data elements and information submitted in accordance with paragraph (c)(3) of this section that is either incomplete or contains invalid data must be resubmitted at a later time in a form and manner specified by CMS.

(5) Data elements and information submitted in accordance with paragraph (c)(3) of this section must be certified by one of the following:

(i) The chief executive officer (CEO) of the provider or supplier that is a covered entity;

(ii) The chief financial officer (CFO) of the provider or supplier that is a covered entity;

(iii) An individual other than a CEO or CFO, who has authority equivalent to a CEO or a CFO.

(iv) An individual or contractor with the delegated authority as an authorized representative of the provider or supplier that is a covered entity to perform the certification on behalf of one of the individuals specified in paragraphs (c)(5)(i) through (c)(5)(iii) of this section and is authorized to submit the data elements in this submission on behalf of such provider or supplier.

PART 512—STANDARD PROVISIONS FOR MANDATORY INNOVATION CENTER MODELS AND SPECIFIC PROVISIONS FOR CERTAIN MODELS

■ 101. The authority citation for part 512 continues to read as follows:

Authority: 42 U.S.C. 1302, 1315a, and 1395hh.

■ 102. Section 512.705 is amended by—

■ a. Revising the definition for ''ASM beneficiary'', ''Dual eligible proportion'', and ''Small practice''; and

■ b. Adding definitions for ''PECOS'' and ''Rural area'' in alphabetical order.

The revisions and additions read as follows:

§ 512.705 Definitions.

* * * * *

ASM beneficiary means a Medicare FFS beneficiary who is being treated by an ASM participant for an ASM targeted chronic condition.

* * * * *

Dual eligible proportion means the share of an ASM participant's beneficiaries who are dually eligible Medicare beneficiaries.

* * * * *

PECOS stands for the Provider Enrollment, Chain, and Ownership System.

* * * * *

Rural area has the same meaning as the term is defined at 42 CFR 414.1305 under MIPS.

* * * * *

Small practice means a TIN consisting of 15 or fewer clinicians at the time CMS selects ASM participants for an ASM performance year as described at *§ 512.710(g).*

* * * * *

■ 103. Section 512.710 is amended by—

■ a. Revising paragraph (a)(1) introductory text;

■ b. Revising paragraphs (a)(2) and (c);

■ c. Revising the introductory text of paragraphs (d)(1) and (d)(2); and

■ d. Adding paragraph (h).

The revisions and additions read as follows:

§ 512.710 Participant eligibility and selection.

(a) * * *

(1) A clinician selected by CMS as an ASM participant for any ASM

performance year and who furnishes covered services during any applicable ASM performance year remains an ASM participant for the duration of the ASM test period unless CMS either terminates ASM in accordance with § 512.165 or the ASM participant receives notice of termination as described in paragraph (h) of this section.

* * * * *

(2) *Effect of not meeting ASM participant eligibility criteria for an ASM performance year.* For any ASM performance year within the ASM test period that an ASM participant does not meet the eligibility criteria for mandatory participation set forth in this section, the ASM participant is—

(i) Not subject to §§ 512.715, 512.720, and 512.745 for the applicable ASM performance year;

(ii) Not subject to § 512.750 for the corresponding ASM payment year;

(iii) Not eligible for the waivers described in § 512.775 for the applicable ASM performance year; and

(iv) Not eligible for the CMS-sponsored model arrangements and patient incentives safe harbor described in § 512.765 with respect to remuneration attributable to the applicable ASM performance year.

* * * * *

(c) *Exceptions to specific ASM performance requirements*—(1) *Exceptions.* CMS may in its sole discretion determine that an ASM participant who meets the requirements described in paragraph (c)(1)(i) or (ii) of this section is excepted from model requirements as described in paragraph (c)(2) of this section for the duration specified in paragraph (c)(3) of this section. CMS will provide notice, in the form and manner specified by CMS, to an ASM participant that an exception applies and specify the effective date of such exception. An ASM participant who meets the requirements of paragraph (c)(1)(i) or (ii) of this section may voluntarily provide written notice of the change to CMS in a form and manner determined by CMS and CMS will evaluate that notice to determine if an exception applies.

(i) *Exception based on change in TIN.* An ASM participant stops reassigning billing rights to the TIN that CMS used to select the ASM participant for the applicable ASM performance year.

(ii) *Exception based on ASM heart failure participant specialty type redesignation.* An ASM heart failure participant redesignates their primary specialty type through the applicable paper CMS–855 form or Internet-based PECOS before or during the applicable ASM performance year to any of the following specialty type redesignations for ASM heart failure participants:

(A) Cardiac Electrophysiology.

(B) Cardiac Surgery.

(C) Interventional Cardiology.

(D) Advanced Heart Failure and Transplant Cardiology.

(E) Adult Congenital Heart Disease.

(2) *Effect of exception.* If CMS determines an ASM participant meets an exception under paragraph (c)(1) of this section, the ASM participant is—

(i) Not subject to §§ 512.715, 512.720, and 512.745 for the ASM performance year;

(ii) Not subject to § 512.750 for the ASM payment year that corresponds to the ASM performance year specified in paragraph (c)(2)(i) of this section;

(iii) Not eligible for the waivers described in § 512.775 as of the date CMS specifies in its notice to the ASM participant that an exception applies; and

(iv) Not eligible for CMS-sponsored model arrangements and patient incentives safe harbor described at § 512.765 with respect to remuneration attributable to the period as of the date CMS specifies in its notice to the ASM participant that an exception applies.

(3) *Duration of exception.* (i) An exception under paragraph (c)(1)(i) of this section must remain in effect for each ASM performance year in the remainder of the ASM test period, as applicable, unless the ASM participant does all of the following:

(A) Reassigns billing rights to the TIN under which they received an exception based on a change in TIN.

(B) Meets the ASM participant eligibility criteria under the TIN described in paragraph (c)(3)(i)(A) of this section for a future ASM performance year.

(ii) An exception under paragraph (c)(1)(ii) of this section must remain in effect for each ASM performance year in the remainder of the ASM test period.

(d) * * *

(1) Heart failure specialty type—

* * * * *

(2) Low back pain specialty type—

* * * * *

(h) *Termination.* (1) CMS may in its sole discretion terminate an ASM participant's participation in the model immediately or upon advance notice if CMS determines:

(i) One or more grounds for remedial action described in § 512.160(a) have occurred with respect to the ASM participant; or

(ii) The ASM participant's continued participation would be inconsistent with the purposes of ASM, the requirements of this part, or applicable law.

(2) CMS will provide notice to the ASM participant specifying the grounds for termination and the effective date of such termination.

■ 104. Section 512.720 is amended by—

■ a. Revising paragraphs (a)(1)(i), (a)(ii)(B), and (e); and

■ b. Removing paragraph (f).

The revisions read as follows:

§ 512.720 Data submission requirements.

(a) * * *

(1) * * *

(i) * * *

(A) Include numerator and denominator data for at least one applicable quality measure described in § 512.725(b) or (c) that is not an administrative claims-based collection type and that meets the data completeness requirement as specified at § 512.725(f); and

(B) Except as provided in paragraph (a)(1)(i)(C) of this section, be submitted at the TIN/NPI level.

(C) An ASM participant who is in a small practice may submit quality ASM performance category data at either the TIN/NPI or the TIN level.

(ii) * * *

(B) Be submitted at either the TIN/NPI or TIN level;

* * * * *

(e) * * *

(1) *Quality ASM performance category.* (i) If CMS receives multiple data submissions in the quality ASM performance category in accordance with paragraph (a)(1)(i) of this section from submitters in multiple organizations (for example, qualified registry, practice administrator, or EHR vendor) for an individual ASM participant, CMS scores each submission and assigns the highest score.

(ii) If CMS receives multiple data submissions for the quality ASM performance category in accordance with paragraph (a)(1)(i) of this section from one or more submitters in the same organization for an individual ASM participant, CMS scores the most recent submission and assigns that score.

(iii) If CMS receives a TIN-level data submission in the quality ASM performance category in accordance with paragraph (a)(1)(i) of this section for an ASM participant in a small practice, CMS scores the TIN-level submission and assigns that score to all individual ASM participants in the small practice, regardless of any TIN/NPI-level submission(s) received for one or more of those ASM participants.

(2) *Improvement activities ASM performance category.* (i) If CMS receives multiple data submissions in the improvement activities ASM

performance category in accordance with paragraph (a)(1)(ii) of this section from submitters in multiple organizations (for example, qualified registry, practice administrator, or EHR vendor) for an individual ASM participant, CMS scores each submission and assigns the highest score.

(ii) If CMS receives multiple data submissions in the improvement activities ASM performance category in accordance with paragraph (a)(1)(ii) of this section from one or more submitters in the same organization for an individual ASM participant, CMS scores the most recent submission and assigns that score.

(3) *Promoting Interoperability ASM performance category.* (i) For multiple data submissions received for the Promoting Interoperability ASM performance category in accordance with paragraph (a)(1)(iii) of this section, CMS calculates a score for each submission and assigns the highest of the scores.

* * * * *

■ 105. Section 512.725 is amended by—

■ a. Revising paragraph (c)(4);

■ b. Adding paragraphs (c)(5), (e)(3)(i), and adding and reserving paragraph (e)(3)(ii);

■ c. Revising paragraphs (f)(3), (h)(1)(i), (h)(2) introductory text, and (h)(2)(i) introductory text;

■ d. Removing paragraph (h)(2)(iii);

■ e. Redesignating paragraph (h)(2)(iv) as paragraph (h)(2)(iii); and

■ f. Adding new paragraphs (h)(2)(iv) and (i).

The revisions and additions read as follows:

§ 512.725 Quality ASM performance category.

* * * * *

(c) * * *

(4) Functional Outcome Assessment (MIPS Q182).

(5) Magnetic Resonance Imaging (MRI) Lumbar Spine for Low Back Pain (modified for ASM).

* * * * *

(e) * * *

(3) * * *

(i) For ASM participants in small practices, CMS scores all administrative claims-based quality measures at the TIN/NPI level according to the measure specifications for the applicable ASM performance year.

(ii) [Reserved]

* * * * *

(f) * * *

(3) CMS excludes from an ASM participant's total measure achievement points and total available measure achievement points any measure required under paragraph (b) or (c) of this section that meets the respective measure's data completeness requirement but does not have a benchmark.

* * * * *

(h) * * *

(1) * * *

(i) For each ASM performance year, an ASM participant receives between 1 and 10 measure achievement points (including partial points) for each measure specified in paragraph (b) or (c) of this section that satisfies the requirements described in paragraph (h)(1)(i)(A) or (h)(1)(i)(B) of this section, as applicable.

(A) For each measure other than an administrative claims-based quality measure under the quality ASM performance category on which data is submitted in accordance with paragraph (e) of this section, the measure must do all of the following:

(*1*) Have a benchmark specified in paragraph (h)(2) of this section.

(*2*) Meet the case minimum requirements specified in paragraph (g) of this section.

(*3*) Meet the data completeness criteria specified in paragraph (f) of this section.

(B) For each administrative claims-based quality measure calculated by CMS under the quality ASM performance category, the measure must have a benchmark as specified in paragraph (h)(2) of this section and meet the case minimum requirements specified in paragraph (g) of this section.

* * * * *

(2) *Benchmarks for quality ASM performance category.* (i) CMS bases benchmarks on an ASM participant's performance by collection type, from one of the following data sources:

* * * * *

(iv) CMS excludes from an ASM participant's total measure achievement points and total available measure achievement points any measure required under paragraphs (b) or (c) of this section that does not have a benchmark.

* * * * *

■ 106. Section 512.740 is amended by—

■ a. Revising paragraphs (b) introductory text (b)(2)(ii), (b)(2)(iv), and (b)(3)(i)(C);

■ b. Removing paragraph (b)(3)(ii);

■ c. Redesignating paragraph (b)(3)(iii) as paragraph (b)(3)(ii);

■ d. Removing paragraph (b)(4)(i);

■ e. Redesignating paragraph (b)(4)(ii) as paragraph (b)(4)(i) and reserving paragraph (b)(4)(ii);

■ f. Revising newly redesignated paragraph (b)(4)(i) and paragraph (c) introductory text;

■ g. Redesignating paragraph (c)(2) as paragraph (c)(3); and

■ h. Adding new paragraph (c)(2) and paragraph (d).

The revisions and additions read as follows:

§ 512.740 Promoting Interoperability ASM performance category.

* * * * *

(b) *Reporting for the Promoting Interoperability ASM performance category beginning in the 2028 ASM performance year.* Beginning in the 2028 ASM performance year, to earn an ASM performance category score greater than zero for the Promoting Interoperability ASM performance category for inclusion in the final score, an ASM participant must be a meaningful EHR user and meet the following criteria:

(2) * * *

(i) v

(ii) An ASM participant must fulfill the Health Information Exchange objective through the following:

(A) Report one of the following options:

(*1*) Support Electronic Referral Loops by Sending Health Information (Measure ID # PI_HIE_1) and Support Electronic Referral Loops by Receiving and Reconciling Health Information (Measure ID # PI_HIE_4).

(*2*) Health Information Exchange (HIE) Bi-Directional Exchange (Measure ID # PI_HIE_5).

(*3*) Enabling Exchange Under the Trusted Exchange Framework and Common Agreement (TEFCA) (Measure ID # PI_HIE_6).

(B) Report both measures described in paragraphs (b)(2)(ii)(B)(*1*) and (b)(2)(ii)(B)(*2*) of this section, report one measure and claim one exclusion, or claim exclusions to both measures:

(*1*) Electronic Prior Authorization (Measure ID # PI_HIE_7).

(*2*) Electronic Prior Authorization for Prescription Drugs (Measure ID # PI_HIE_8).

* * * * *

(iv) An ASM participant must fulfill the Public Health and Clinical Data Exchange objective by reporting both measures described in paragraphs (b)(2)(iv)(A) and (b)(2)(iv)(B) of this section, reporting one measure and claiming one exclusion, or claiming exclusions to both measures:

(A) Immunization Registry Reporting (Measure ID # PI_PHCDRR_1).

(B) Electronic Case Reporting (Measure ID # PI_PHCDRR_3).

* * * * *

(3) * * *

(i) * * *

(C) An exclusion for each measure that includes an option for an exclusion.

(ii) Submit an affirmative attestation regarding the ASM participant's completion of the annual self-assessment checklist under the MIPS Promoting Interoperability High Priority Practices Guide of the SAFER Guides measure (Measure ID# PI_PPHI_2) within the calendar year of the ASM performance year.

(4) * * *

(i) *Actions to limit or restrict the compatibility or interoperability of CEHRT.* To fulfill ASM requirements for activities related to limiting or restricting the compatibility or interoperability of CEHRT, an ASM participant must not knowingly and willfully take action, such as disabling functionality, to limit or restrict the compatibility or interoperability of CEHRT.

(ii) [Reserved]

* * * * *

(c) *Scoring the Promoting Interoperability ASM performance category beginning in the 2028 ASM performance year*

(2) *Promoting Interoperability measure suppression.* If certain circumstances occur that impact CMS' assessment of the performance of ASM participants on a measure specified for the Promoting Interoperability ASM performance category, CMS may in its sole discretion suppress the affected measure by excluding it from CMS' assessment of ASM participant performance while allocating the maximum points available or providing full credit for the affected measure as long as the affected measure is reported, resulting in a suppressed measure contributing to the Promoting Interoperability ASM performance category objective score under paragraph (c)(3) of this section; or excluding it from the determination of a meaningful EHR user if the affected measure is not scored. CMS determines whether certain circumstances exist that warrant suppression of a measure based on CMS' consideration of one or more of the following factors:

(i) The nature, breadth, and duration of the circumstances' effect on ASM participants' ability to fulfill the measure requirement.

(ii) The availability of certified health IT modules to fulfill the measure.

(iii) The circumstance affects the measure such that calculating the measure score would lead to misleading or inaccurate results, which may include performance or compliance.

(iv) Out-of-date or conflicting technical standards.

(v) Technical and operational capacity of required partners.

(vi) Other factors as determined by CMS.

(d) *Transition year policy for the 2027 ASM performance year.* (1) Notwithstanding paragraphs (b) and (c) of this section and § 512.720(a)(1)(iii)(A)(*1*) and (*2*), for the 2027 ASM performance year only, an ASM participant satisfies the performance requirements for the Promoting Interoperability ASM performance category by using CEHRT as defined at *§ 414.1305* and submitting, in accordance with § 512.720(a)(1)(iii)(A)(*3*) and (*4*), both of the following:

(i) The CEHRT ID from the CHPL for the CEHRT used by the ASM participant; and

(ii) The start date and end date of the applicable performance period used by the ASM participant as set forth in paragraph (a) of this section.

(2) CMS assigns a Promoting Interoperability ASM performance category score of 100 percent to an ASM participant that satisfies paragraph (d)(1) of this section. The Promoting Interoperability ASM performance category score cannot exceed 100 percent.

(3) An ASM participant may, but is not required to, report the measures and attestations described in paragraph (b) of this section.

* * * * *

■ 107. Section 512.745 is amended by—

■ a. Revising paragraph (a) introductory text and paragraph (a)(2)(iii)(B);

■ b. Redesignating paragraph (a)(5) as paragraph (a)(6);

■ c. Adding new paragraph (a)(5);

■ d. Revising newly redesignated paragraph (a)(6);

■ e. Revising paragraphs (b)(4) through (b)(6); and

■ f. Adding paragraphs (b)(7).

The revisions and additions read as follows:

§ 512.745 Final scoring.

(a) *Final score calculation.* CMS calculates a final score of zero to 100 points using the formula specified at paragraph (a)(6) of this section for each ASM participant that meets the requirements to receive a final score as specified in paragraph (a)(2) of this section.

* * * * *

(2) * * *

(iii) * * *

(B) Do not receive either a—

(*1*) Quality ASM performance category score under § 512.725(h)(4)(iii); or

(*2*) Cost ASM performance category score under § 512.730(e)(3)(i).

* * * * *

(5) *Rural scoring adjustment*—(i) *Scoring adjustment for an ASM participant in a rural area.* CMS adds 5 points to the final score of an ASM participant who is in a rural area as defined at § 512.705 and meets the requirements to receive a final score greater than zero as described in paragraph (a)(2)(i) of this section for an applicable ASM performance year.

(ii) [Reserved]

(6) *Final score formula.* Final score = [(quality ASM performance category score × quality ASM performance category weight) + (cost ASM performance category score × cost ASM performance category weight)] × 100 + improvement activities ASM performance category scoring adjustment + Promoting Interoperability ASM performance category scoring adjustment + complex patient scoring adjustment + small practice scoring adjustment + rural scoring adjustment. The final score cannot be below zero points or exceed 100 points.

(b) * * *

(2) The ASM participant's complex patient scoring adjustment under paragraph (a)(3) of this section, as applicable.

(3) The ASM participant's small practice or solo practitioner scoring adjustment under paragraph (a)(4) of this section, as applicable.

(4) The ASM participant's rural scoring adjustment under paragraph (a)(5) of this section, as applicable.

(5) The ASM participant's final score, as applicable.

(6) The ASM payment adjustment factor under § 512.750(c)(1).

(7) The ASM payment multiplier under § 512.750(c).

* * * * *

■ 108. Section 512.750 is amended by revising paragraphs (c)(1)(i), (f)(1), and (f)(2) to read as follows:

§ 512.750 Payment adjustment.

* * * * *

(c) * * *

(1) * * *

(i) *ASM risk level.* CMS sets an ASM risk level that is the magnitude of the maximum downside and upside risk to which an ASM participant is subject to during an ASM payment year.

(A) For the 2029 ASM payment year, the ASM risk level is 9 percent.

(B) For the 2030 ASM payment year, the ASM risk level is 9 percent.

(C) For the 2031 ASM payment year, the ASM risk level is 10 percent.

(D) For the 2032 ASM payment year, the ASM risk level is 11 percent.

(E) For the 2033 ASM payment year, the ASM risk level is 12 percent.

* * * * *

(f) * * *

(1) If an NPI submits Part B covered professional service claims during an ASM payment year under a different TIN than the TIN CMS selected them as an ASM participant for that same ASM performance year and to which the NPI began assigning billing rights after the applicable ASM performance year but before the end of the corresponding ASM payment year, CMS multiplies the amount otherwise paid under Part B for covered professional services to the different TIN by the ASM payment multiplier calculated for the ASM participant based on their performance in the corresponding ASM performance year.

(2) CMS multiplies the amount otherwise paid under Part B for covered professional services by the highest ASM payment multiplier calculated for an NPI who meets all the following:

(i) Is an ASM participant under multiple TINs for a given ASM performance year.

(ii) Submits Part B covered professional service claims during an ASM payment year under a TIN by which CMS did not select the NPI as an ASM participant and to which the ASM participant began reassigning billing rights after the applicable ASM performance year but before the end of the corresponding ASM payment year.

* * * * *

■ 109. Section 512.765 is amended by adding paragraph (c) to read as follows:

§ 512.765 Application of the CMS-sponsored model arrangements and patient incentives safe harbor.

* * * * *

(c) *Scope.* The CMS-sponsored model arrangements and patients incentives safe harbor described in paragraphs (a) and (b) of this section is available only with respect to remuneration exchanged or furnished in connection with an ASM participant's performance under the model and does not apply with respect to remuneration attributable to any ASM performance year for which CMS determines the ASM participant does not meet ASM participant eligibility criteria under § 512.710(a)(2) or with respect to an ASM participant to whom an exception under § 512.710(c)(1) applies, the period described in § 512.710(c)(2)(iv).

■ 110. Section 512.771 is amended by—

■ a. Revising paragraphs (a)(1), (a)(2), (a)(5), and (a)(6);

■ b. Redesignating paragraphs (a)(7) and (a)(8) as paragraphs (d)(2) and (d)(3), respectively.

■ c. Redesignating paragraphs (a)(9) through (13) as (a)(7) through (11), respectively.

■ d. Revising newly redesignated paragraphs (a)(7) and (a)(9); and

■ e. Adding paragraph (d).

The revisions and additions read as follows:

§ 512.771 Collaborative care arrangements.

(a) * * *

(1) The collaborative care arrangement must be in writing, signed by all parties, specify the effective date, and be exclusively between an ASM participant, or one or more ASM participants who reassign billing rights through the same TIN, and a primary care practice.

(2) The primary care practice party must share one or more patients who are ASM beneficiaries with at least one ASM participant party to the collaborative care arrangement.

* * * * *

(5) All parties to the collaborative care arrangement must comply with the provisions of this section and all other applicable statutes, regulations, and guidance.

(6) Neither the opportunity to enter into a collaborative care arrangement nor remuneration given or received under a collaborative care arrangement may be conditioned directly or indirectly on the volume or value of past or anticipated referrals or business generated by, between, or among the parties to the collaborative care arrangement or any other person. A selection criterion that considers whether an ASM participant and primary care practice share one or more ASM beneficiaries for the purpose of satisfying the requirement set forth in paragraph (a)(2) of this section will be deemed not to violate the volume or value standard of this section if the purpose of the criterion is to further the purpose of the collaborative care arrangement.

(7) All parties to the collaborative care arrangement must retain the ability to make decisions in the best interests of ASM beneficiaries, including the selection of clinicians, devices, supplies, and treatments.

* * * * *

(9) An ASM participant must maintain contemporaneous documentation, in accordance with § 512.135, regarding all collaborative care arrangements entered into, including the following:

(i) The relevant written agreements.

(ii) Records of all remuneration exchanged, if any, for each ASM participant party to a collaborative care arrangement, including, at a minimum, all of the following:

(A) A description of the remuneration.

(B) The value of remuneration.

(C) The methodology for determining the value of any in-kind remuneration in accordance with paragraph (d)(2)(ii) of this section, if applicable.

(D) The date on which the remuneration was exchanged.

(iii) The identity of each ASM participant who is a party to the collaborative care arrangement.

* * * * *

(d) *Remuneration under a collaborative care arrangement.* If the parties to a collaborative care arrangement elect to include terms allowing for the exchange of remuneration under the collaborative care arrangement, the parties must also comply with all of the following:

(1) The purpose of the exchange of remuneration under the collaborative care arrangement must be reasonably related to the purpose of the collaborative care arrangement, consistent with the requirements of paragraph (a)(3) of this section.

(2) The total amount of any remuneration exchanged under a collaborative care arrangement in a given ASM performance year must not exceed an amount equal to the ASM participant's ASM payment adjustment factor for the applicable ASM performance year multiplied by the amount otherwise paid to the ASM participant by CMS under Part B for covered professional services during the applicable ASM performance year.

(i) The collaborative care arrangement must specify a methodology for the parties to identify and calculate the total amount of remuneration exchanged under such arrangement in the ASM performance year for each ASM participant and determine within a reasonable amount of time after the information necessary to make the calculation in paragraph (d)(2) of this section becomes available whether the total amount of remuneration exceeds the limitation in paragraph (d)(2) of this section.

(ii) For in-kind remuneration, the value of remuneration exchanged for the purpose of this section is determined based on the offeror's cost for the remuneration, using any reasonable accounting methodology, or the fair market value of the in-kind remuneration.

(iii) The collaborative care arrangement must require the parties to reconcile any remuneration exchanged by each ASM participant under the arrangement in the ASM performance

year after the limitation in paragraph (d)(2) of this section is determined.

(iv) If the total amount of remuneration received by a party in the ASM performance year exceeds the limitation in paragraph (d)(2) of this section, the collaborative care arrangement must require the party that received the excess amount to repay the excess amount to the other party within a reasonable amount of time after the reconciliation.

(3) Any remuneration exchanged under a collaborative care arrangement must be solely between the parties to the arrangement. To the extent that remuneration exchanged is monetary, any payment between the parties must be made by check, electronic funds transfer, or another traceable cash transaction.

* * * * *

§ 512.775 [Amended]

■ 111. Section 512.775 is amended in paragraph (a) by removing the reference ''§ 512.710(a)(2)'' and adding in its place the phrase ''§ 512.710(a)(2) or (c)''.

Robert F. Kennedy, Jr.,

Secretary, Department of Health and Human Services.

The following Appendices will not appear in the **Code of Federal Regulations**.

APPENDIX 1: MIPS QUALITY MEASURES

NOTE: Except as otherwise noted in this final rule, previously finalized measures and specialty sets will continue to apply for the CY 2027 performance period/2029 MIPS payment year and future years. Previously finalized measures and specialty sets are in the CY 2017 through CY 2026 PFS final rules: 81 FR 77558 through 77816, 82 FR 53966 through 54174, 83 FR 60097 through 60285, 84 FR 63205 through 63513, 85 FR 85045 through 85369, 86 FR 65687 through 65968, 87 FR 70250 through 70633, 88 FR 79556 through 79964, 89 FR 98599 through 98957, and 90 FR 50036 through 50353. In addition, electronic clinical quality measures (eCQMs) that are endorsed by a Consensus-Based Entity (CBE) are shown in Table A of this Appendix as follows: CBE # / eCQM CBE #.

NOTE: In section IV.A.4.d.(1)(c)(i) of this final rule, we finalized to implement MIPS core measures for traditional MIPS and MVP reporting which are identified in the tables in this Appendix. In addition, in section IV.A.4.d.(1)(c)(ii) of this final rule, we finalized to remove the high priority designation from MIPS quality measures and therefore, we removed the high priority indicator across all tables in this Appendix.

Table Group A: New MIPS Quality Measures Finalized and Finalized with Modification for the CY 2027 Performance Period/2029 MIPS Payment Year and Future Years

Note: Proposed specialty sets for new measures are indicated under Table Group A of this Appendix within the last row of each A table. Commenters who requested additions of the new quality measures to specific specialty sets should use the Stakeholder Solicitation for Specialty Sets process as these updates must be proposed through rulemaking.

We requested comments on these new measures and the applicable specialty sets.

We received a few public comments asking for updates to the proposed new measures. We note that we would need to go through rulemaking in the future to make any substantive changes to the new measures. Section 1848(q)(2)(D)(i)(II)(cc) of the Act requires all substantive measure changes to be proposed and identified through notice-and-comment rulemaking. We have previously established criteria that apply when we consider making substantive changes to a quality measure (81 FR 77137 and 86 FR 65441 through 65442). On an annual basis, we review the established MIPS quality measure inventory to identify appropriate updates to the measures, based on, but not limited to, interested party feedback, known issues, and clinical guideline updates, for measure steward consideration. The measure steward is responsible for the maintenance of a measure and serves as the primary contact for any suggested revisions for possible implementation in future years. Measure steward contact information will be available in the 2027 MIPS Quality Measures List in the Measure Steward Contacts tab once posted on the QPP website (*https://qpp.cms.gov*) for CY 2027.

A.1. Low Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	517
Description:	Percentage of patients aged 18 years and older with clinical atherosclerotic cardiovascular disease (ASCVD) who received a low-density lipoprotein cholesterol (LDL-C) test via lipid panel and achieved an LDL-C of <70mg/dL on the most recent test during the performance period.
Measure Steward:	American Heart Association
Numerator:	Numerator 1: Patients with clinical atherosclerotic cardiovascular disease (ASCVD) who had a low-density lipoprotein cholesterol (LDL-C) tested via a lipid panel. Numerator 2: Patients aged 18 years and older with clinical ASCVD and a completed lipid panel during the performance period who achieved an LDL-C of <70 mg/dL on the most recent test.
Denominator:	Denominator 1: All patients aged 18 years and older diagnosed with clinical atherosclerotic cardiovascular disease (ASCVD). Denominator 2: All patients aged 18 years and older with clinical ASCVD who had a low-density lipoprotein cholesterol (LDL-C) tested via a lipid panel during the measurement period.

Category	Description
Exclusions:	Pregnancy, ESRD, hospice, over age 66+ with advanced illness, frailty, or dementia medications
Measure Type:	Intermediate Outcome
MIPS Core Measure:	Yes
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	N/A
Rationale:	We proposed this intermediate outcome measure because it addresses appropriate care for adult patients with clinical atherosclerotic cardiovascular disease (ASCVD), ensuring patients diagnosed with this condition are annually tested for LDL-C and achieve a desired level. Studies support that elevated LDL-C levels contribute to ASCVD and once identified can be addressed via lipid management. Lowering LDL-C produces a marked reduction in clinical ASCVD and evidence shows that lower LDL-C levels are associated with better outcomes.[428] This measure ensures that patients receiving cholesterol lowering treatment, such as statin therapy, achieve a reduction in LDL-C, which in turn reduces risk of ASCVD and other patient outcomes, such as hospitalizations and cardiovascular death.[429] This measure is based on peer-reviewed evidence demonstrating that, for adults 20 years of age or older and not on lipid-lowering therapy, measurement of either a fasting or non-fasting plasma lipid profile is effective in estimating ASCVD risk and documenting baseline LDL-C.[430] This measure will expand on current MIPS measure Q438: *Statin Therapy for the Prevention and Treatment of Cardiovascular Disease*, which focuses on appropriate statin treatment of patients at high risk for cardiovascular events. While measure Q438 assesses for the prescribing of statin therapy, this new measure will build on measure Q438 by assessing the outcome of LDL-C treatment, through achievement of reaching a desired LDL-C level. The Pre-Rulemaking Measure Review (PRMR) Clinician Recommendation Committee reached consensus agreement to recommend the measure. Testing indicated good reliability based on signal to noise ratio and adequate face validity. Testing of measure performance indicated a gap in care with a mean performance rate of 46.8 percent for the first criteria and 64.9 percent for the second criteria. This demonstrates that there is room for improvement among clinicians treating this patient population. This measure is not currently CBE endorsed. Although CBE endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure, satisfying the requirement set forth at section 1848(q)(2)(D)(v) of the Act, stating that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidence-based. This measure could be added to multiple MVPs in the future, including the proposed Hypertension MVP, Advancing Care for Heart Disease MVP, and Value in Primary Care MVP. We proposed adding this measure to applicable specialty sets based on available coding and because the clinical quality action is within the scope of care for clinicians in these specialties. Note: Refer to the PRMR Clinician Recommendation Committee Spreadsheet of Final Recommendations to CMS and HHS at *https://p4qm.org/sites/default/files/2026-02/Final-2025-2026-MUC-Recommendations-Report-508.pdf.*
Measure Proposed for Addition to the Following Specialty Sets:	Cardiology, Endocrinology, Family Medicine, Geriatrics, Internal Medicine, Nephrology, Neurology, Obstetrics/Gynecology, Preventive Medicine, Vascular Surgery

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposed addition of the *Low Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management* measure. Commenters said that using meaningful, guideline-based outcome measures is key to changing clinician and patient behavior and improving chronic disease outcomes. A few commenters highlighted the disconnect between the current MIPS measure Q438: *Statin Therapy for the Prevention and Treatment of Cardiovascular Disease* and LDL-C

[428] Grundy, S. M., Stone, N. J., Bailey, A. L., Beam, C., Birtcher, K. K., Blumenthal, R. S., Braun, L. T., de Ferranti, S., Faiella-Tommasino, J., Forman, D. E., Goldberg, R., Heidenreich, P. A., Hlatky, M. A., Jones, D. W., Lloyd-Jones, D., Lopez-Pajares, N., Ndumele, C. E., Orringer, C. E., Peralta, C. A., Saseen, J. J., … Yeboah, J. (2019). 2018 AHA/ACC/AACVPR/AAPA/ABC/ACPM/ADA/AGS/APhA/ASPC/NLA/PCNA Guideline on the Management of Blood Cholesterol: A Report of the American College of Cardiology/American Heart Association Task Force on Clinical Practice Guidelines. Circulation, 139(25), e1082–e1143. https://doi.org/10.1161/CIR.0000000000000625.

[429] See footnote Grundy et al., 2019.

[430] See footnote Grundy et al., 2019.

control, noting that the proposed new measure as an intermediate outcome measure addresses this gap and represents a significant step forward in care for patients with ASCVD, better reflects meaningful reductions in cardiac and stroke events, and is critical to improving cardiovascular health and reducing cardiovascular-related morbidity.

One commenter urged CMS to ensure the measure accounts for patients with familial hypercholesterolemia, noting the condition is often underdiagnosed and undertreated and requires combination lipid-lowering therapy beyond statins alone to reach recommended LDL-C levels. Another commenter supported this new measure and its inclusion across multiple specialty sets.

Response: We thank the commenters for supporting this new measure in MIPS. We encourage the commenters to reach out to the measure steward to discuss revisions for possible implementation in future years. Measure steward contact information will be available in the 2027 MIPS Quality Measures List in the Measure Steward Contacts tab once posted on the QPP website (*https://qpp.cms.gov*) for CY 2027. Any potential new substantive changes need to go through notice and comment rulemaking.

Comment: One commenter strongly supported finalizing the new *LDL-C Monitoring and Management* measure, stating that measure Q438 only rewards statin prescribing and cannot detect undertreatment. The commenter stated that a threshold-based LDL-C measure would better align with trial evidence and the 2026 ACC/AHA Guideline for the Management of Dyslipidemia,[431] which uses numeric LDL-C goals, and would incentivize appropriate retesting and treatment intensification. In addition to finalizing the measure, the commenter urged CMS to align LDL-C thresholds with the guideline's risk-based targets, allow a 4–12-week retesting window, include exceptions for statin intolerance and shared decision-making, and retain measure Q438 during a transition period. A second commenter recommended allowing denominator exceptions for documented intolerance, patient refusal, limited life expectancy, and pregnancy. They also suggested using non-HDL-C or apolipoprotein as alternative numerators when LDL-C is unreliable and stratifying the measure by social risk. A third commenter asked CMS to keep this measure aligned with current cholesterol guidelines and they emphasized the need for clear exclusions, exceptions, attribution rules, and practical implementation across settings.

Response: We thank the commenters for supporting this new measure in MIPS. We note that measure Q438 was not proposed for removal from MIPS. We encourage the commenters to reach out to the new proposed measure's steward to discuss revisions for possible implementation in future years. As we are finalizing CY2027 proposals, it is not possible to substantively change the measure nor to hold for testing as this was required at the time of submission for consideration for implementation in MIPS. However, as currently specified, the measure is still aligned with current guidelines in assessing for the most current health outcome. In addition to capturing and maintaining public comment, we review each measure annually to create recommendations for potential measure updates for future performance periods for measure steward consideration. The measure developer did not recommend risk adjustment or stratification at this time as the existing denominator exclusions, outlined in Table A.1 of this Appendix, are intended to address concerns regarding case-mix through appropriate patient exclusion criteria.

Comment: One commenter supported this new measure and noted that it must go beyond simply documenting that a lipid-lowering medication was prescribed and instead assess whether LDL-C is adequately controlled. Because lower LDL-C levels maintained over time reduce cardiovascular risk, quality measures should focus on LDL-C response to therapy, appropriate follow-up, and treatment intensification to reach evidence-based LDL-C goals. This approach would better align CMS quality reporting with contemporary cardiovascular prevention and the outcomes that matter most to patients, such as preventing heart attack and stroke. The commenter stated that CMS can improve the measure by shifting from "Was a medication prescribed?" to "Was the patient's LDL-C adequately treated to reduce cardiovascular risk?"

Another commenter stated that no disease status is as common and more dangerous than heart disease, and LDL cholesterol is a major driving factor for cardiovascular risk. The commenter indicated it is important that MIPS quality measures are clinically relevant and make sense. Targeting use of "statins" does not align with the lipid lowering therapy goals that are currently in the guidelines.

Response: We thank the commenters for supporting this new measure in MIPS. This new measure will go beyond ensuring medication prescription; it aims to assess whether patients aged 18 years and older with clinical ASCVD achieved an LDL-C of <70 mg/dL on their most recent test. This new measure builds upon the current MIPS measure Q438 by assessing the outcome of lipid management with the goal of reduction in LDL-C which in turn reduces risk of ASCVD. The proposed measure as currently specified is based on established clinical guidelines and while the new guidelines[432] released this spring have a lower recommended LDL-C value for high-risk patients, the current quality action would allow for assessing compliance across a broader range of patients without stratifying by risk factors. As with all MIPS quality measures, the measure steward will continue evaluating potential future updates to the measure.

---

J., Gradney, K. F., Isiadinso, I., Lloyd-Jones, D. M., Marrs, J. C., Martin, S. S., McLain, K. H., Mehta, L. S., Mora, S., … Wilkins, J. T. (2026). 2026 ACC/AHA/AACVPR/ABC/ACPM/ADA/AGS/APhA/ASPC/NLA/PCNA Guideline on the Management of Dyslipidemia: A Report of the American College of Cardiology/American Heart Association Joint Committee on Clinical Practice Guidelines. *Journal of the American College of Cardiology*, *87*(19), 2624–2757. https://doi.org/10.1016/j.jacc.2025.11.016.

[432] See footnote Blumenthal et al., 2026.

Comment: A few commenters supported the measure but recommended specific modifications to strengthen its impact and feasibility.

- One commenter noted that medication cost, access to specialty drugs, patient adherence, and social factors can limit patients' ability to reach LDL-C targets even with good care. The commenter recommended that CMS monitor how the measure performs and allow flexibility for patients who improve their LDL-C substantially but do not reach a strict threshold.
- One commenter requested that CMS consider adding LDL targets <70 achieved to help close the care gap and save lives. The commenter stated that measuring LDL-C is part of the solution, but CMS needs clear goals for health care clinicians to take action and to reduce cardiovascular events/mortality.
- One commenter asked that CMS add the following language to the measure specification in the final rule: A qualifying lipid panel may be performed using serum, plasma, capillary whole blood, or venous whole blood when the testing system is authorized or appropriately validated for the specimen type used, the system produces a valid and reportable LDL-C result, and testing is performed according to the manufacturer's instructions and applicable laboratory requirements.

Response: Thank you for the comments. We encourage the commenters to reach out to the measure steward to discuss revisions for possible implementation in future years. As currently specified, the measure is aligned with current guidelines in assessing for the most current health outcome for a broad patient population. In addition to capturing and maintaining public comment, CMS reviews each measure annually to develop recommendations for potential measure updates for future performance periods for measure steward consideration.

Comment: One commenter did not support this new measure. The commenter supported evidence-based lipid-lowering and prevention of recurrent events but cautioned that a uniform LDL-C target tied to quality or payment should preserve clinical discretion for patients who develop ASCVD despite untreated or presenting LDL-C ≤70 mg/dL.

The commenter requested that CMS:

1. Preserve pathways for documented shared decision-making and medically justified exceptions to LDL-C thresholds.
2. Do not financially penalize clinicians when patients miss LDL-C <70 mg/dL despite documented, appropriate care.
3. Promote prospective study of ASCVD in patients with untreated or presenting LDL-C ≤70 mg/dL, including Major Adverse Cardiovascular Events (MACE), mortality, and safety outcomes.
4. Distinguish, when appropriate, between low LDL-C from treatment and low LDL-C present before treatment or ASCVD onset.
5. Evaluate residual-risk mechanisms (e.g., lipoprotein (a), apolipoprotein B particles, insulin resistance, hypertension, inflammation) rather than relying on LDL-C alone.

The commenter expressed that the solution is not less lipid management but better evidence, better phenotyping, and preservation of individualized clinician–patient decision-making. The commenter asked CMS to build clinical flexibility into this measure and to promote prospective study of ASCVD in patients with already-low untreated LDL-C.

Response: We thank the commenter for their suggestions and encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. Currently all MIPS eligible clinicians have choice in what measures they choose to report; therefore, if this measure does not reflect the patient population for which they care for, they can choose a different measure. The current measure is based on established clinical guidelines and while the new guidelines[433] released this spring have a lower recommended LDL-C value for high-risk patients, the current quality action would allow for compliance with a broader range of patients without stratifying by risk factors. As with all MIPS quality measures, the measure steward will continue evaluating potential future updates to the measure. Regarding differentiation between low LDL-C values from treatment and at ASCVD onset, the measure looks at patients with ASCVD and an LDL-C test via lipid panel to ensure the most recent test was less than 70 mg/dL; therefore, patients without an ASCVD diagnosis would not qualify for the denominator and would not be included in the performance data.

Comment: As this new measure was one of 10 new proposed Clinical Quality Measures (CQMs), one commenter asked why CMS would consider new CQM measures that are not Fast Healthcare Interoperability Resources (FHIR)-based with a transition to FHIR-based reporting in the next 2-3 years. The commenter said that CMS should place a moratorium on consideration and approval of any non-FHIR-based measures. After a review of these proposed CQMs, it is also unclear why they are not being proposed and written in an electronic CQM (eCQM) format at a minimum.

Response: We thank the commenter for sharing their concerns. We are advancing quality measurement by transitioning existing quality measures and reporting processes to FHIR-based digital approaches. Subject to future notice and comment rulemaking, we are developing a phased 2-year transition period beginning with the CY 2028 performance period/2030 MIPS payment year. During this period, existing CQM and eCQM collection types, including eCQM reporting via Quality Reporting Data Architecture (QRDA) files, would continue to be available while FHIR-based digital quality measures (dQM) options are introduced for selected new and existing measures. Under this plan, we may still propose non-FHIR MIPS CQMs in the interim.

[433] See footnote Blumenthal et al., 2026.

We are encouraging measure stewards to begin reviewing their measures against current FHIR-based standards and assessing their measures for updates necessary to support the digital transition. Currently, it is at the discretion of the measure steward to determine which collection types are developed and available when submitting to the Annual Call for Quality Measures. See the Measures Under Consideration Entry/Review Information Tool (MERIT) login page for more information on timelines to submit measures for consideration by CMS (*https://cmsmerit.cms.gov/merit/#/login*).

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44305 through 44306), we are finalizing the *Low Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management* measure as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

A.2. Functional Improvement for Patients with Neck Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	518
Description:	Percentage of patients aged 18 years and older with a neck impairment that met the risk-adjusted Predicted Moderate Clinical Improvement (P-MCI) on the PROMIS Pain Interference (PPI) or the alternative (legacy) patient-reported outcome measure (PROM), the Neck Disability Index (NDI).
Measure Steward:	Limber Health, Inc. and Patient360, LLC
Numerator:	Patients with a completed episode of care whose most recent PPI score beyond the baseline score meets or exceeds the P-MCI at the time of the completed episode of care.
Denominator:	All patients aged 18 years or older at the start of the episode of care with a neck impairment who completed a baseline PPI.
Exclusions:	Pre-operative Care: Patients who are being seen for pre-operative care and/or have surgery for the neck impairment within 30 days after the initial assessment, documented in the medical record. Cognitive Deficit: A significant mental or cognitive impairment. Hospice or Palliative Care: Patient is in hospice care or receiving palliative care for terminal illness, as documented in the medical record. Active Cancer Treatment: Patient is in active treatment for cancer AND the goal of MSK care is primarily to avoid or minimize decline in function, documented in the medical record. Maintenance Therapy: Patient is receiving maintenance therapy.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
MIPS Core Measure:	No
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	N/A

Category	Description
Rationale:	We proposed this current QCDR patient-reported outcome-based performance measure to replace current MIPS quality measure Q478: *Functional Status Change for Patients with Neck Impairments*. This new measure will address the same clinical topic as measure Q478; however, it allows for broader implementation by including widely available, non-proprietary tools to assess physical function improvement. Additionally, this measure's analytic allows independent calculation of performance by the clinician, or easy and free collaboration with the steward, which supports clinicians reporting this important aspect of rehabilitative care. This measure utilizes the PROMIS® Pain Interference tool, which was developed using item response theory (IRT) methods. Evidence indicates that the PROMIS-PI items constitute a psychometrically sound item bank for assessing the negative effects of pain on functioning across the range commonly experienced by people who have pain.[434] It allows clinician flexibility in administration as it uses computer adaptive testing (CAT) or a fixed-length short form. This measure also allows utilization of the Neck Disability Index (NDI), which is a commonly used tool for neck pain with established reliability and validity.[435] [436] Under section 1848(q) of the Act, a QCDR measure may only become reportable as a MIPS quality measure if the Secretary formerly adopts it through rulemaking and includes it in the MIPS quality measure inventory. We have the authority to establish quality measures under MIPS. This authority is not dependent upon the pre-rulemaking process used to develop measures. Beginning with the CY 2024 performance period/2026 MIPS payment year, all QCDR measures are required to be fully developed and tested at the clinician level by their second year in MIPS, as finalized in the CY 2023 PFS final rule (87 FR 70104 through 70106) and codified at § 414.1400(b)(4)(iii)(A)(3). As a current QCDR measure, this measure has demonstrated feasibility, reliability, and validity in accordance with § 414.1400(b)(4)(iii)(A)(3). The measure is evidence-based and is fully developed and tested. This measure may be added to the Rehabilitative Support for Musculoskeletal Care MVP (proposed to be renamed as the Rehabilitative Support MVP under Appendix 3: MVP Inventory, Table B.24). We proposed adding this measure to the Chiropractic Medicine and Physical Therapy/Occupational Therapy specialty sets based on available coding and because the clinical quality action is within the scope of care for clinicians in these specialties.
Measure Proposed for Addition to the Following Specialty Sets:	Chiropractic Medicine, Physical Therapy/Occupational Therapy

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: Many commenters strongly supported adding the proposed new functional improvement quality measures for patients with neck, upper extremity, back, lower extremity, and knee impairments under Table A.2 through A.6 of this Appendix. These measures focus on patients' ability to function safely and independently. Because physical therapists routinely use standardized outcome measures to track progress, these metrics better capture the value rehabilitation professionals provide than process-based measures alone. A few other commenters supported this new measure and other new functional measures, because they better reflect current rehabilitative practice, let reporting clinicians calculate performance independently, and reduce administrative burden.

One commenter supported the new functional measures and urged CMS and stakeholders to pay close attention to the specific implementation guidance and operational details in the full measure specifications for these new measures.

Response: We thank the commenters for supporting this new measure in MIPS. We agree with the recommendation that we and the stakeholders review the full measure specifications for the functional improvement measures once posted for CY 2027.

Comment: Several commenters supported CMS' introduction of PROMIS measures. One of these commenters stated these changes are a positive step toward making quality reporting more relevant to clinical practice, but additional reforms are needed to ensure that physical therapists can participate meaningfully and efficiently. Another commenter supported the expanded use of the functional rehabilitation measures within MIPS and future MVP development and encouraged development of additional rehabilitation-focused outcome measures incorporating PROMIS methodologies and other validated functional outcome tools. The commenter urged CMS to recognize the operational and financial resources required to collect and report functional and

[436] MacDermid, J. C., Walton, D. M., Avery, S., Blanchard, A., Etruw, E., McAlpine, C., & Goldsmith, C. H. (2009). Measurement Properties of the Neck Disability Index: A Systematic Review. *The Journal of Orthopaedic and Sports Physical Therapy*, *39*(5), 400–417. https://doi.org/10.2519/jospt.2009.2930.

patient-reported outcome measures, emphasizing that many outpatient rehabilitation providers depend on third-party platforms with per-provider subscription models that create significant costs, particularly for small and mid-sized independent practices.

Response: We thank the commenters for supporting the new functional status measures in MIPS. The proposed functional measures allow use of PROMIS tools which are publicly available at no cost for non-electronic surveys. For additional flexibility, the measures also allow for the use of legacy tools specified within each measure which are publicly available at no cost. We recognize the effort required to collect and score the surveys for these measures; however, these patient-reported outcome (PROM) based measures are critical for assessing quality outcomes. Third party platforms are not a CMS requirement to report these functional improvement measures and clinicians are not currently required to report these measures and may select measures that best fit their clinical workflow and scope of practice. The current Physical Therapy Specialty Measure Set contains 23 measures, only 5 of which are the new PRO-PMs, allowing clinicians to submit those measures that are meaningful to their scope of care with sufficient choice to meet the quality reporting requirements.

Comment: One commenter expressed the following concerns on this new measure (with the same concerns for the other functional improvement measures under Tables A.3, A.4, A.5, and A.6 of this Appendix):

- The P-MCI methodology lacks sufficient public detail for independent implementation.
- Registries may need licensing agreements to calculate or validate the measures and proprietary platforms may be needed.
- Practices may face additional financial, technical, and administrative burdens to implement the measures.
- Missing public specifications prevent transparent auditing and reproducibility.
- Smaller practices may be unable to report the measures.
- Conversion of scores across multiple approved instruments remains unclear.

The commenter made the following recommendations to CMS:

- Require stewards to publish a validated, publicly available crosswalk for all approved assessments.
- Require full publication of the P-MCI methodology, including the risk-adjustment model, coefficients, required data elements, episode definitions, missing-data rules, and numerator/denominator logic.
- Offer a publicly accessible calculator or API as an alternative that any reporting entity could use without relying on Limber Health or Patient360.
- Not finalize the measures for broad reporting if the methodology and crosswalk cannot be made public and independently implementable.

A second commenter did not support the new functional measures in MIPS until detailed measure specification and testing information is made available on the feasibility, reliability, and validity of these measures.

Response: Thank you for the comments and recommendations. We appreciate the concerns raised and note that the complete measure specifications will be publicly posted after publication of the final rule. The eligible tools and calculations necessary for reporting the measures will be publicly available at no cost and are included in the measure specifications. We are aware of the concerns and acknowledge they may stem from the current functional outcome measures; however, the proposed measures are intended to mitigate those concerns and reduce reporting burden. These measures were fully developed and tested as QCDR measures in accordance with § 414.1400(b)(4)(iii)(A)(3), which follow the same requirements as those submitted through Call for Measures.

Comment: One commenter expressed concern about the addition of the new functional measures because PROMs can be difficult and resource-intensive to collect and report.

Response: We thank the commenter for their comment. The proposed functional measures allow use of PROMIS tools which are publicly available at no cost for non-electronic surveys, in addition to the use of legacy tools specified within each measure to allow for increased implementation flexibility. We recognize the effort that may be required to collect and submit data for these measures for some clinicians; however, these patient-reported outcome-based measures are critical for assessing quality outcomes. Reporting these functional measures are not required by MIPS, and clinicians have many alternative measures to select if they determine that the reporting burden is too high. We also note that these measures would be optional to report, as clinicians have choice of which MIPS quality measures they choose to report.

Comment: One commenter asked if the Limber Health platform will be required to report the functional improvement measures and asked if this would add financial and other burdens to the clinician and subsequently to the patient.

Response: Thank you for the comment. The eligible tools and calculations necessary for reporting the measure will be publicly available at no cost and are included in the measure specifications. Clinicians who choose to report these measures will not be required to utilize Limber Health and its platform.

Comment: One commenter questioned why the new functional measures in Tables A.2, A.3, A.4, A.5, and A.6 of this Appendix were not proposed for the Physical Medicine specialty set.

Response: We thank the commenter for this comment, and we will consider inclusion of the new functional measures in other relevant specialty sets in future years as we continue to evaluate measure performance, clinical workflows, and stakeholder

feedback.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44307 through 44308), we are finalizing the *Functional Improvement for Patients with Neck Impairments* measure as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

A.3. Functional Improvement for Patients with Upper Extremity Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	519
Description:	Percentage of patients aged 18 years and older with an upper extremity impairment that met the risk-adjusted Predicted Moderate Clinical Improvement (P-MCI) on the PROMIS Upper Extremity (PUE) or the alternative (legacy) patient-reported outcome measure (PROM), the Quick Disabilities of the Arm, Shoulder, & Hand (QDASH).
Measure Steward:	Limber Health, Inc. and Patient360, LLC
Numerator:	Patients with a completed episode of care whose most recent PUE score beyond the baseline score meets or exceeds the P-MCI at the time of the completed episode of care.
Denominator:	All patients aged 18 years or older at the start of the episode of care with an upper extremity impairment who completed a baseline PUE.
Exclusions:	Pre-operative Care: Patients who are being seen for pre-operative care and/or have surgery for upper extremity impairment within 30 days after the initial assessment, documented in the medical record. Cognitive Deficit: A significant mental or cognitive impairment. Hospice or Palliative Care: Patient is in hospice care or receiving palliative care for terminal illness, as documented in the medical record Active Cancer Treatment: Patient is in active treatment for cancer AND the goal of MSK care is primarily to avoid or minimize decline in function, documented in the medical record. Maintenance Therapy: Patient is receiving maintenance therapy.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
MIPS Core Measure:	No
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	N/A

Category	Description
Rationale:	We proposed this current QCDR patient-reported outcome-based performance measure to replace current MIPS quality measure Q221: *Functional Status Change for Patients with Shoulder Impairments* and Q222: *Functional Status Change for Patients with Elbow, Wrist or Hand Impairments*. This new measure will address the same clinical topics as measures Q221 and Q222; however, it allows for broader implementation by including widely available, non-proprietary tools to assess physical function improvement. Additionally, this measure's analytic allows independent calculation of performance by the clinician, or easy and free collaboration with the steward, which supports clinicians reporting this important aspect of rehabilitative care. This measure utilizes the PROMIS® Upper Extremity tool, which was developed using item response theory (IRT) methods and evidence supports high reliability and validity[437]. It allows clinician flexibility in administration as it uses computer adaptive testing (CAT) or a fixed-length short form. This measure also allows use of the Quick Disabilities of the Arm, Shoulder, and Hand (QuickDASH) tool, which has also shown to be highly reliable and valid for use in patients with upper extremity musculoskeletal disorders.[438] Under section 1848(q) of the Act, a QCDR measure may only become reportable as a MIPS quality measure if the Secretary formerly adopts it through rulemaking and includes it in the MIPS quality measure inventory. We have the authority to establish quality measures under MIPS. This authority is not dependent upon the pre-rulemaking process used to develop measures. Beginning with the CY 2024 performance period/2026 MIPS payment year, all QCDR measures are required to be fully developed and tested at the clinician level by their second year in MIPS, as finalized in the CY 2023 PFS final rule (87 FR 70104 through 70106) and codified at § 414.1400(b)(4)(iii)(A)(3). As a current QCDR measure, this measure has demonstrated feasibility, reliability, and validity in accordance with § 414.1400(b)(4)(iii)(A)(3). The measure is evidence-based and is fully developed and tested. This measure may be added to the Rehabilitative Support for Musculoskeletal Care MVP (proposed to be renamed as the Rehabilitative Support MVP under Appendix 3: MVP Inventory, Table B.24). We proposed adding this measure to the Chiropractic Medicine and Physical Therapy/Occupational Therapy specialty sets based on available coding and because the clinical quality action is within the scope of care for clinicians in these specialties.
Measure Proposed for Addition to the Following Specialty Sets:	Chiropractic Medicine, Physical Therapy/Occupational Therapy

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table A.2 of this Appendix, many commenters strongly supported adding the functional improvement quality measures for patients with neck, upper extremity, back, lower extremity, and knee impairments.

Response: We thank the commenters for supporting this new measure in MIPS.

Comment: One commenter supported the move toward validated functional-improvement measures and specifically supported addition of a measure addressing upper extremity impairment. The commenter recommended ensuring that the measure applied to neurologic rehabilitation as well as orthopedic diagnoses, rather than being limited to strictly orthopedic conditions or short outpatient therapy episodes.

Response: We thank the commenter for their suggestion and encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. Measure steward contact information will be available in the 2027 MIPS Quality Measures List in the Measure Steward Contacts tab once posted to the QPP website (*https://qpp.cms.gov*) for CY 2027. Any potential new substantive changes need to go through notice and comment rulemaking.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44309 through 44310), we are finalizing the *Functional Improvement for Patients with Upper Extremity Impairments* measure as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

A.4. Functional Improvement for Patients with Back Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	520
Description:	Percentage of patients aged 18 years and older with a back impairment that met the risk-adjusted Predicted Moderate Clinical Improvement (P-MCI) on the PROMIS Pain Interference (PPI) or the alternative (legacy) patient-reported outcome measure (PROM), the Modified Low Back Disability Questionnaire (MDQ).
Measure Steward:	Limber Health, Inc. and Patient360, LLC
Numerator:	Patients with a completed episode of care whose most recent PPI score beyond the baseline score meets or exceeds the P-MCI at the time of the completed episode of care.
Denominator:	All patients aged 18 years or older at the start of the episode of care with a back impairment who completed a baseline PPI.
Exclusions:	Pre-operative Care: Patients who are being seen for pre-operative care and/or have surgery for the back impairment within 30 days after the initial assessment, documented in the medical record. Cognitive Deficit: A significant mental or cognitive impairment. Hospice or Palliative Care: Patient is in hospice care or receiving palliative care for terminal illness, as documented in the medical record. Active Cancer Treatment: Patient is in active treatment for cancer AND the goal of MSK care is primarily to avoid or minimize decline in function, documented in the medical record. Maintenance Therapy: Patient is receiving maintenance therapy.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
MIPS Core Measure:	Yes
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	N/A
Rationale:	We proposed this current QCDR patient-reported outcome-based performance measure to replace current MIPS quality measure Q220: *Functional Status Change for Patients with Low Back Impairments*. This new measure will address the same clinical topic as measure Q220; however, it allows for broader implementation by including widely available, non-proprietary tools to assess physical function improvement. Additionally, this measure's analytic allows independent calculation of performance by the clinician, or easy and free collaboration with the steward, which supports clinicians reporting this important aspect of rehabilitative care. This measure utilizes the PROMIS® Pain Interference tool, which was developed using item response theory (IRT) methods. Evidence indicates that the PROMIS-PI items constitute a psychometrically sound item bank for assessing the negative effects of pain on functioning across the range commonly experienced by people who have pain.[439] It allows clinician flexibility in administration as it uses computer adaptive testing (CAT) or a fixed-length short form. This measure also allows utilization of the Modified Low Back Disability Questionnaire (MDQ), which has shown to be a valid, reliable, and responsive condition-specific assessment tool that is suited for use in clinical practice.[440] Under section 1848(q) of the Act, a QCDR measure may only become reportable as a MIPS quality measure if the Secretary formerly adopts it through rulemaking and includes it in the MIPS quality measure inventory. We have the authority to establish quality measures under MIPS. This authority is not dependent upon the pre-rulemaking process used to develop measures. Beginning with the CY 2024 performance period/2026 MIPS payment year, all QCDR measures are required to be fully developed and tested at the clinician level by their second year in MIPS, as finalized in the CY 2023 PFS final rule (87 FR 70104 through 70106) and codified at § 414.1400(b)(4)(iii)(A)(3). As a current QCDR measure, this measure has demonstrated feasibility, reliability, and validity in accordance with § 414.1400(b)(4)(iii)(A)(3). The measure is evidence-based and is fully developed and tested. This measure may be added to the Rehabilitative Support for Musculoskeletal Care MVP (proposed to be renamed as the Rehabilitative Support MVP under Appendix 3: MVP Inventory, Table B.24). We proposed adding this measure to the Chiropractic Medicine and Physical Therapy/Occupational Therapy specialty sets based on available coding and because the clinical quality action is within the scope of care for clinicians in these specialties.

Category	Description
Measure Proposed for Addition to the Following Specialty Sets:	Chiropractic Medicine, Physical Therapy/Occupational Therapy

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table A.2 of this Appendix, many commenters strongly supported adding the functional improvement quality measures for patients with neck, upper extremity, back, lower extremity, and knee impairments.

Response: We thank the commenters for supporting this new measure in MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44311 through 44312), we are finalizing the *Functional Improvement for Patients with Back Impairments* measure as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

A.5. Functional Improvement for Patients with Lower Extremity Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	521
Description:	Percentage of patients aged 18 years and older with a lower extremity impairment—not including knee impairments—that met the risk-adjusted Predicted Moderate Clinical Improvement (P-MCI) on the PROMIS Physical Function (PPF) or alternative (legacy) patient-reported outcome measure (PROM), the Lower Extremity Functional Scale (LEFS).
Measure Steward:	Limber Health, Inc. and Patient360, LLC
Numerator:	Patients with a completed episode of care whose most recent PPF score beyond the baseline score meets or exceeds the P-MCI at the time of the completed episode of care.
Denominator:	All patients aged 18 years or older at the start of the episode of care with a non-knee impairment who completed a baseline PPF.
Exclusions:	Pre-operative Care: Patients who are being seen for pre-operative care and/or have surgery for the non-knee lower extremity impairment within 30 days after the initial assessment, documented in the medical record. Cognitive Deficit: A significant mental or cognitive impairment. Hospice or Palliative Care: Patient is in hospice care or receiving palliative care for terminal illness, as documented in the medical record. Active Cancer Treatment: The patient is in active treatment for cancer AND the goal of MSK care is primarily to avoid or minimize decline in function, documented in the medical record. Maintenance Therapy: Patient is receiving maintenance therapy.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
MIPS Core Measure:	No
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	N/A

Category	Description
Rationale:	We proposed this current QCDR patient-reported outcome-based performance measure to replace current MIPS quality measures Q218: *Functional Status Change for Patients with Hip Impairments* and Q219: *Functional Status Change for Patients with Lower Leg, Foot or Ankle Impairments*. This new measure will address the same clinical topics as measures Q218 and Q219; however, it allows for broader implementation by including widely available, non-proprietary tools to assess physical function improvement. Additionally, this measure's analytic allows independent calculation of performance by the clinician, or easy and free collaboration with the steward, which supports clinicians reporting this important aspect of rehabilitative care. This measure utilizes the PROMIS® Physical Function (PPF) tool, which was developed using item response theory (IRT) methods and has demonstrated reliability, convergent and known-groups discriminant validity, and responsiveness in a sample of patients with a lower extremity orthopedic trauma injury.[441] This measure also allows utilization of the Lower Extremity Functional Scale (LEFS). Evidence supports the reliability, validity, and responsiveness of LEFS scores for assessing functional impairment in a wide array of patient groups with lower extremity musculoskeletal conditions.[442] Under section 1848(q) of the Act, a QCDR measure may only become reportable as a MIPS quality measure if the Secretary formerly adopts it through rulemaking and includes it in the MIPS quality measure inventory. We have the authority to establish quality measures under MIPS. This authority is not dependent upon the pre-rulemaking process used to develop measures. Beginning with the CY 2024 performance period/2026 MIPS payment year, all QCDR measures are required to be fully developed and tested at the clinician level by their second year in MIPS, as finalized in the CY 2023 PFS final rule (87 FR 70104 through 70106) and codified at § 414.1400(b)(4)(iii)(A)(3). As a current QCDR measure, this measure has demonstrated feasibility, reliability, and validity in accordance with § 414.1400(b)(4)(iii)(A)(3). The measure is evidence-based and is fully developed and tested. This measure may be added to the Rehabilitative Support for Musculoskeletal Care MVP (proposed to be renamed as the Rehabilitative Support MVP under Appendix 3: MVP Inventory, Table B.24). We proposed adding this measure to the Chiropractic Medicine and Physical Therapy/Occupational Therapy specialty sets based on available coding and because the clinical quality action is within the scope of care for clinicians in these specialties.
Measure Proposed for Addition to the Following Specialty Sets:	Chiropractic Medicine, Physical Therapy/Occupational Therapy

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table A.2 of this Appendix, many commenters strongly supported adding the functional improvement quality measures for patients with neck, upper extremity, back, lower extremity, and knee impairments.

Response: We thank the commenters for supporting this new measure in MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44313 through 44314), we are finalizing the *Functional Improvement for Patients with Lower Extremity Impairments* measure as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

A.6. Functional Improvement for Patients with Knee Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	522
Description:	Percentage of patients aged 18 years and older with a knee impairment that met the risk-adjusted Predicted Moderate Clinical Improvement (P-MCI) on the PROMIS Physical Function (PPF) or the alternative (legacy) patient-reported outcome measure (PROM), the Knee Outcome Survey (KOS).
Measure Steward:	Limber Health, Inc. and Patient360, LLC
Numerator:	Patients with a completed episode of care whose most recent PPF score beyond the baseline score meets or exceeds the P-MCI at the time of the completed episode of care.
Denominator:	All patients aged 18 years or older at the start of the episode of care with a knee impairment who completed a baseline PPF.
Exclusions:	Pre-operative Care: Patients who are being seen for pre-operative care and/or have surgery for the knee impairment within 30 days after the initial assessment, documented in the medical record. Cognitive Deficit: A significant mental or cognitive impairment. Hospice or Palliative Care: Patient is in hospice care or receiving palliative care for terminal illness, as documented in the medical record. Active Cancer Treatment: Patient is in active treatment for cancer AND the goal of MSK care is primarily to avoid or minimize decline in function, documented in the medical record. Maintenance Therapy: Patient is receiving maintenance therapy.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
MIPS Core Measure:	No
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	N/A
Rationale:	We proposed this current QCDR patient-reported outcome-based performance measure to replace current MIPS quality measure Q217: *Functional Status Change for Patients with Knee Impairments*. This new measure will address the same clinical topic as measure Q217; however, it allows for broader implementation by including widely available, non-proprietary tools to assess physical function improvement. Additionally, this measure's analytic allows independent calculation of performance by the clinician, or easy and free collaboration with the steward, which supports clinicians reporting this important aspect of rehabilitative care. This measure utilizes the PROMIS® Physical Function (PPF) tool, which was developed using item response theory (IRT) methods and has demonstrated reliability, convergent and known-groups discriminant validity, and responsiveness in a sample of patients with a lower extremity orthopedic trauma injury.[443] This measure also allows utilization of the Knee Outcome Survey (KOS). Evidence shows it is a reliable, valid, and responsive instrument for the assessment of functional limitations that result from a wide variety of pathological disorders and impairments of the knee.[444] Under section 1848(q) of the Act, a QCDR measure may only become reportable as a MIPS quality measure if the Secretary formerly adopts it through rulemaking and includes it in the MIPS quality measure inventory. We have the authority to establish quality measures under MIPS. This authority is not dependent upon the pre-rulemaking process used to develop measures. Beginning with the CY 2024 performance period/2026 MIPS payment year, all QCDR measures are required to be fully developed and tested at the clinician level by their second year in MIPS, as finalized in the CY 2023 PFS final rule (87 FR 70104 through 70106) and codified at § 414.1400(b)(4)(iii)(A)(3). As a current QCDR measure, this measure has demonstrated feasibility, reliability, and validity in accordance with § 414.1400(b)(4)(iii)(A)(3). The measure is evidence-based and is fully developed and tested. This measure may be added to the Rehabilitative Support for Musculoskeletal Care MVP (proposed to be renamed as the Rehabilitative Support MVP under Appendix 3: MVP Inventory, Table B.24). We proposed adding this measure to the Chiropractic Medicine and Physical Therapy/Occupational Therapy specialty sets based on available coding and because the clinical quality action is within the scope of care for clinicians in these specialties.

[443] See footnote Rothrock et al., 2019.

Category	Description
Measure Proposed for Addition to the Following Specialty Sets:	Chiropractic Medicine, Physical Therapy/Occupational Therapy

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table A.2 of this Appendix, many commenters strongly supported adding the functional improvement quality measures for patients with neck, upper extremity, back, lower extremity, and knee impairments.

Response: We thank the commenters for supporting this new measure in MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44315 through 44316), we are finalizing the *Functional Improvement for Patients with Knee Impairments* measure as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

A.7. Age-Related Hearing Loss: Comprehensive Audiometric Evaluation

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	523
Description:	Percentage of patients aged 50 years and older who failed a hearing screening and/or who report suspected hearing loss or tinnitus who were ordered or referred for a comprehensive audiometric evaluation on the day of diagnosis/office visit OR received a comprehensive audiometric evaluation within 4 weeks of the office visit.
Measure Steward:	American Academy of Otolaryngology - Head and Neck Surgery Foundation
Numerator:	Patients were ordered or referred for a comprehensive audiometric evaluation on the day of diagnosis/office visit OR received a comprehensive audiometric evaluation within 4 weeks of the office visit.
Denominator:	All patients aged 50 years and older who failed a hearing screening and/or who report suspected hearing loss or tinnitus.
Exclusions:	None
Measure Type:	Process
MIPS Core Measure:	Yes
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	N/A

Category	Description
Rationale:	We proposed this current QCDR measure as it fills a gap in the Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP. It is specific to audiology and ensures that patients suspected of having age-related hearing loss, either identified through a failed hearing screen or diagnosis, are referred for or receive a comprehensive audiometric evaluation. Implementation of this measure as a MIPS CQM will allow wider availability for reporting by MIPS eligible clinicians. The objective of auditory assessment is to diagnose the type and magnitude of hearing loss and the need for treatment, including candidacy for amplification. Age-related hearing loss (ARHL), despite being the most common sensory deficit seen in the older population, remains an underdiagnosed and undertreated condition among individuals aged 50 years and above.[445] Identifying ARHL in early stages could prevent its known adverse outcomes, such as lower quality of life and ability to function.[446] [447] Undertreatment may lead to associated health risks, including dementia, depression, cardiovascular disease, and falls.[448] This measure is based on clinical guidelines intended to inform the practice of hearing care professionals involved in the audiological management of adults with severe to profound hearing loss.[449] Additionally, the guidelines identify quality improvement opportunities and evidence-based recommendations regarding the identification and management of ARHL.[450] Under section 1848(q) of the Act, a QCDR measure may only become reportable as a MIPS quality measure if the Secretary formerly adopts it through rulemaking and includes it in the MIPS quality measure inventory. We have the authority to establish quality measures under MIPS. This authority is not dependent upon the pre-rulemaking process used to develop measures. Beginning with the CY 2024 performance period/2026 MIPS payment year, all QCDR measures are required to be fully developed and tested at the clinician level by their second year in MIPS, as finalized in the CY 2023 PFS final rule (87 FR 70104 through 70106) and codified at § 414.1400(b)(4)(iii)(A)(3). As a current QCDR measure, this measure has demonstrated feasibility, reliability, and validity in accordance with § 414.1400(b)(4)(iii)(A)(3). The measure is evidence-based and is fully developed and tested. We proposed adding this measure to the Audiology and Otolaryngology specialty sets based on available coding and because the clinical quality action is within the scope of care for clinicians in these specialties.
Measure Proposed for Addition to the Following Specialty Sets:	Audiology, Otolaryngology

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed addition of the *Age-Related Hearing Loss: Comprehensive Audiometric Evaluation* measure in MIPS. Another commenter recommended adding this measure to the Family Medicine, Internal Medicine, and Geriatrics specialty sets, explaining that these specialties typically perform the Initial Preventive Physical Examination, where hearing screening was expected, and that appropriate screenings should lead directly to the follow-up actions reflected in the measure numerator. The commenter noted that audiology and otolaryngology generally receive patients who have already been identified as needing a comprehensive audiometric evaluation.

Response: We thank the commenters for supporting this new measure in MIPS. We will consider inclusion of this measure in other relevant specialty sets, such as Family Medicine, Internal Medicine, and Geriatrics, in future years as we continue to evaluate measure performance, clinical workflows, and stakeholder feedback.

Comment: A few commenters stated that the proposed measure is not feasible for inclusion in the Audiology specialty set because it is limited to clinicians eligible to bill Evaluation and Management (E/M) codes. They noted that, although the measure

Guidelines for Best Practice in the Audiological Management of Adults with Severe and Profound Hearing Loss. *Seminars in Hearing*, *41*(3), 141–246. https://doi.org/10.1055/s-0040-1714744.

[450] See footnote Tsai et al., 2024.

may conceptually involve audiology, its structure does not support participation by audiologists who cannot bill E/M services. The commenters also indicated that while audiologists can identify when an audiologic evaluation is clinically necessary, they cannot independently issue the required order or referral, meaning they would not be able to meet the measure's 4-week timeframe. The commenters suggested that this measure could potentially be adapted for audiology in the future with modifications.

Response: We thank the commenters for their feedback regarding the new measure. Based on the concerns cited, and coding finalization, we are not finalizing this new measure for inclusion in the Audiology specialty set.

After consideration of public comments, we are finalizing the *Age-Related Hearing Loss: Comprehensive Audiometric Evaluation* measure with modification. We are finalizing the measure for MIPS and the Otolaryngology specialty set as proposed for the CY 2027 performance period/2029 MIPS payment year and future years. However, we are not finalizing the measure in the Audiology specialty set based on the considerations stated above and coding finalization.

A.8. Patient-Reported Experience with Anesthesia

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	524
Description:	Percentage of patients, aged 18 and older, who were surveyed on their patient experience and satisfaction with anesthesia care and who reported a positive experience.
Measure Steward:	American Society of Anesthesiologists Anesthesia Quality Institute
Numerator:	Numerator 1. Patients who received a valid survey within 30 days of the procedure to assess their experience and satisfaction with anesthesia. Numerator 2. Patients who reported a positive experience with anesthesia care within 60 days of receipt of the survey.
Denominator:	Denominator 1. Patients aged 18 and older, who undergo a procedure under anesthesia during the denominator identification period. Denominator 2. All patients from Submission Criteria 1 who complete a survey on their patient experience and satisfaction with anesthesia care within 60 days of receipt of the survey.
Exclusions:	Organ Donors as designated by American Society of Anesthesiologists (ASA) Physical Status 6[451] Patient died within 30 days of the procedure Patients who did not complete the mandatory anesthesia satisfaction question within 60 days of receipt of the survey
Measure Type:	Patient-Reported Outcome-Based Performance Measure
MIPS Core Measure:	No
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	A minimum of 20 completed surveys required to be eligible to report Denominator 2
Rationale:	We proposed this current QCDR patient-reported outcome-based performance measure as it fills a gap in the Anesthesiology specialty set. It will be the only patient experience of care measure for that specialty and is reported for each procedure. The measure assesses for patients that receive a valid survey and report a positive experience with their anesthesia care. The assessment of patient satisfaction with anesthesia care provides important feedback allowing clinicians to improve the quality-of-care delivery.[452] There are a variety of surveys available for practices and clinicians to implement based upon local patient populations, such as the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS): Patients' Perspectives of Care Survey[453] and Outpatient and Ambulatory Surgery CAHPS.[454] However, the measure will not require the use of a specific survey to collect patient feedback. Under section 1848(q) of the Act, a QCDR measure may only become reportable as a MIPS quality measure if the Secretary formerly adopts it through rulemaking and includes it in the MIPS quality measure inventory. We have the authority to establish quality measures under MIPS. This authority is not dependent upon the pre-rulemaking process used to develop measures. Beginning with the CY 2024 performance period/2026 MIPS payment year, all QCDR measures are required to be fully developed and tested at the clinician level by their second year in MIPS, as finalized in the CY 2023 PFS final rule (87 FR 70104 through 70106) and codified at § 414.1400(b)(4)(iii)(A)(3). As a current QCDR measure, this measure has demonstrated feasibility, reliability, and validity in accordance with § 414.1400(b)(4)(iii)(A)(3). The measure is evidence-based and is fully developed and tested. This measure may be added to the Patient Safety and Support of Positive Experiences with Anesthesia MVP. We proposed adding this measure to the Anesthesiology specialty set based on available coding and because the clinical quality action is within the scope of care for anesthesiologists.
Measure Proposed for Addition to the Following Specialty Sets:	Anesthesiology

[451] American Society of Anesthesiologists (ASA) Physical Status 6 is defined as a declared brain-dead patient whose organs are being removed for donor purposes.
ASA. (2026). American Society of Anesthesiologists Statement on ASA Physical Status Classification System. *Anesthesiology Open, 1*(1), e0002. https://doi.org/10.1097/ao9.0000000000000002.
[452] Agency for Healthcare Research and Quality. (2013). Guide to Patient and Family Engagement in Hospital Quality and Safety. https://psnet.ahrq.gov/issue/guide-patient-and-family-engagement-hospital-quality-and-safety.
[453] CMS. (2025). HCAHPS: Patients' Perspectives of Care Survey. https://www.cms.gov/data-research/research/consumer-assessment-healthcare-providers-systems/hospital-cahps-hcahps.
[454] CMS. (2026). Outpatient and Ambulatory Surgery CAHPS (OAS CAHPS). https://www.cms.gov/data-research/research/consumer-assessment-healthcare-providers-systems/outpatient-and-ambulatory-surgery-cahps.

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: Two commenters supported the proposed addition of the *Patient-Reported Experience with Anesthesia* measure for use in MIPS. One of the commenters noted that the measure, already used by QCDRs and included in the Anesthesia MVP, is an important way for anesthesiologists to understand patients' perceptions of their care. The commenter stated that anesthesiology groups use these survey results to improve patient-centered perioperative care.

Response: We thank the commenters for supporting this new measure in MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44319), we are finalizing the *Patient-Reported Experience with Anesthesia* measure as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

A.9. Intraoperative Hypotension (IOH) Among Non-Emergent Noncardiac Surgical Cases

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	525
Description:	Percentage of general, neuraxial, or regional anesthesia care cases performed during the performance period in which the mean arterial pressure (MAP) fell below 65 mmHg for a cumulative total of 15 minutes or more.
Measure Steward:	Anesthesia Quality Registry (AQR QCDR) in Collaboration with Anesthesia Quality Institute (AQI) and American Society of Anesthesiologists (ASA)
Numerator:	Patients who have a MAP below 65 mmHg that exceeds the cumulative length of 15 minutes during the performance period.
Denominator:	All cases in which adults (ages 18 and older) with non-cardiac, non-emergency surgery requires general, neuraxial, or regional anesthesia care during the performance period.
Exclusions:	Patients with a baseline MAP below 65 mmHg Patients with surgeries where anesthesia is complicated by utilization of controlled hypotension during the primary anesthesia procedure Patients with American Society of Anesthesiologists (ASA) Physical Status Classification of 1, 5 or 6[455] Emergency cases Patients who are undergoing cardiac, cataract, obstetric non-operative, or liver/lung transplant procedures
Measure Type:	Intermediate Outcome
MIPS Core Measure:	Yes
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	N/A
Rationale:	We proposed this current QCDR measure as it fills a gap in the Anesthesiology specialty set. This inverse, intermediate outcome measure ensures mean arterial pressure (MAP) does not fall below 65mmHg for greater than 15 minutes during a procedure as it could be associated with adverse outcomes, such as acute kidney injury (AKI) or myocardial injury.[456] Evidence indicates a MAP below absolute thresholds of 65 mmHg or relative thresholds of 20 percent was progressively related to both myocardial and kidney injury. Prolonged exposure below the threshold was also associated with increased risk. Noncardiac surgery patients are at increased risk of AKI when their cumulative time below a MAP of 65 mmHg reaches or exceeds 13 minutes. When patients fall further below 65 mmHg, even shorter durations are associated with increased risk of AKI.[457] Under section 1848(q) of the Act, a QCDR measure may only become reportable as a MIPS quality measure if the Secretary formerly adopts it through rulemaking and includes it in the MIPS quality measure inventory. We have the authority to establish quality measures under MIPS. This authority is not dependent upon the pre-rulemaking process used to develop measures. Beginning with the CY 2024 performance period/2026 MIPS payment year, all QCDR measures are required to be fully developed and tested at the clinician level by their second year in MIPS, as finalized in the CY 2023 PFS final rule (87 FR 70104 through 70106) and codified at § 414.1400(b)(4)(iii)(A)(3). As a current QCDR measure, this measure has demonstrated feasibility, reliability, and validity in accordance with § 414.1400(b)(4)(iii)(A)(3). The measure is evidence-based and is fully developed and tested. This measure may be added to the Patient Safety and Support of Positive Experiences with Anesthesia MVP. We proposed adding this measure to the Anesthesiology specialty set based on available coding and because the clinical quality action is within the scope of care for anesthesiologists.

[455] ASA Physical Status 1 is defined as a normal healthy patient. Physical Status 5 is defined as a moribund patient who is not expected to survive without the operation. Physical Status 6 is defined as a declared brain-dead patient whose organs are being removed for donor purposes.
See footnote ASA, 2026.

Category	Description
Measure Proposed for Addition to the Following Specialty Sets:	Anesthesiology

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed addition of the *Intraoperative Hypotension (IOH) Among Non-Emergent Noncardiac Surgical Cases* measure in MIPS. The commenter noted that the measure, already used by QCDRs, is an important intermediate outcome for anesthesiologists and the anesthesia care team. IOH has long been a clinical concern, and advances in monitoring technology now enable more proactive blood pressure management. This measure allows anesthesiologists to track IOH and understand its impact on patient outcomes, and the commenter stated that anesthesiologists use it intraoperatively to better predict and plan for potential postoperative complications.

Response: We thank the commenter for supporting this new measure in MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44320 through 44321), we are finalizing the *Intraoperative Hypotension (IOH) Among Non-Emergent Noncardiac Surgical Cases* measure as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

A.10. SGLT2 Inhibitors for Patients with Chronic Kidney Disease (CKD) With or Without Type 2 Diabetes Mellitus

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	526
Description:	The percentage of patients aged 18 years and older with chronic kidney disease (CKD) stages 2 and 3 who are prescribed an SGLT2 inhibitor during the performance period.
Measure Steward:	A Value-Based Care Registry
Numerator:	Patients who were prescribed or were currently taking an SGLT2 inhibitor during the performance period.
Denominator:	All patients aged 18 years and older diagnosed with chronic kidney disease (CKD) stages 2-3 during the performance period.
Exclusions:	Patients with Type 1 Diabetes Mellitus Diabetic Ketoacidosis
Measure Type:	Process
MIPS Core Measure:	No
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	N/A

Category	Description
Rationale:	We proposed this current QCDR measure as it fills a gap in the MIPS quality measure inventory, ensuring the appropriate, evidence-based treatment of patients diagnosed with CKD with SGLT2 inhibitors. Evidence demonstrates that SGLT2 inhibitors slow the progression of CKD and reduce cardiovascular events in this patient population.[458] [459] [460] As a result, SGLT2 inhibitors have become a key disease-modifying therapy to prevent CKD progression. These medications prevent decline in kidney function through reduction in glomerular hypertension, independent of their effect on glycemic control. This has expanded the approved clinical indications for these medications beyond patients with diabetes.[461] Current clinical and practice guidelines also recommend use of SGLT2 inhibitors to slow CKD progression in patients with or without type 2 diabetes.[462] [463] Under section 1848(q) of the Act, a QCDR measure may only become reportable as a MIPS quality measure if the Secretary formerly adopts it through rulemaking and includes it in the MIPS quality measure inventory. We have the authority to establish quality measures under MIPS. This authority is not dependent upon the pre-rulemaking process used to develop measures. Beginning with the CY 2024 performance period/2026 MIPS payment year, all QCDR measures are required to be fully developed and tested at the clinician level by their second year in MIPS, as finalized in the CY 2023 PFS final rule (87 FR 70104 through 70106) and codified at § 414.1400(b)(4)(iii)(A)(3). As a current QCDR measure, this measure has demonstrated feasibility, reliability, and validity in accordance with § 414.1400(b)(4)(iii)(A)(3). The measure is evidence-based and is fully developed and tested. We proposed adding this measure to multiple applicable specialty sets based on available coding and because the clinical quality action is within the scope of care for clinicians in these specialties.
Measure Proposed for Addition to the Following Specialty Sets:	Cardiology, Endocrinology, Family Medicine, Geriatrics, Internal Medicine, Nephrology

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposed addition of the *SGLT2 Inhibitors for Patients with Chronic Kidney Disease (CKD) With or Without Type 2 Diabetes Mellitus* measure in MIPS. One commenter supported the addition of this optional measure within Family Medicine, Cardiology, Endocrinology, Geriatrics, Internal Medicine and Nephrology specialty sets in MIPS. The commenter agreed with the goal of this new measure; however, they stressed that successful implementation depends on patients having affordable and reliable access to the medications needed to meet the measure. The commenter urged CMS to ensure these therapies are well covered under Medicare, included on affordable formularies, and available to beneficiaries without excessive cost-sharing or administrative hurdles. Another commenter requested that this measure reflect current guidelines and promote equitable medication access across diverse practice settings.

Response: We thank the commenters for supporting this new measure in MIPS. We will continue to monitor implementation of this measure for adherence to clinical guidelines and addition to appropriate specialty measure sets.

Comment: One commenter supported adding the measure to the Geriatrics specialty set but stated it would be strengthened by adding denominator exceptions for clinical contraindication or intolerance, documenting patient preference, and considering advanced illness, frailty, hospice, polypharmacy, and limited expected benefit. Another commenter supported the addition of this measure and recommended setting a uACR threshold of at least 200 mg/g for stage 2–3 CKD to ensure clinical appropriateness. With this change, the commenter supported adding the measure across multiple specialty sets and emphasized its alignment with guidelines and its kidney and cardiovascular benefits.

Response: We thank the commenters for supporting this new measure in MIPS. We encourage the commenters to reach out to the measure steward to discuss revisions for possible implementation in future years.

Comment: One commenter did not support including this new measure in MIPS until detailed measure specification and testing information is made available. The commenter was unable to find the detailed measure specifications or the results on the feasibility, reliability, and validity testing of this measure. It would also be important to know the process by which this measure was developed, including whether a technical expert panel was convened, which specialties and experts were included, and other important details relevant to the development and testing process.

Response: We appreciate the concerns raised and note that this measure was previously available for MIPS reporting as a QCDR measure. As a QCDR measure, the same requirements for being fully developed and tested would apply (§ 414.1400(b)(4)(iii)(A)(3)). The complete measure specification will be publicly posted after publication of the final rule.

Comment: One commenter asked who a Value-Based Care Registry is as the measure steward.

Response: The Value-Based Care Registry is a MIPS Qualified Clinical Data Registry (QCDR); as the author/owner of the measure, they are responsible for the ongoing development and maintenance of the measure specifications. Measure steward contact information will be available in the 2027 MIPS Quality Measures List in the Measure Steward Contact tab once posted on the QPP website (*https://qpp.cms.gov*) for CY 2027.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44321 through 44322), we are finalizing the *SGLT2 Inhibitors for Patients with Chronic Kidney Disease (CKD) With or Without Type 2 Diabetes Mellitus* measure as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

Table Group AA: New MIPS Quality Measures Finalized for the CY 2028 Performance Period/2030 MIPS Payment Year and Future Years

In addition to the new quality measures proposed in Table Group A of this Appendix, we proposed adding one eCQM for the 2028 performance period/2030 MIPS payment year and future years to allow clinicians sufficient time to adapt their workflows prior to implementation within MIPS. We requested comments on this new measure.

AA.1. Rate of Timely Follow-up on Abnormal Screening Mammograms for Breast Cancer Detection

Category	Description
CBE # / eCQM CBE #:	N/A / 4700e
Quality #:	527
Description:	This electronic clinical quality measure (eCQM) reports the percentage of female patients aged 40 to 75 years with at least one abnormal screening (BI-RADS 0) or screening-to-diagnostic (BI-RADS 4, 5) mammogram during the measurement period (i.e., calendar year) who received timely diagnostic resolution defined as either follow-up imaging with negative/benign/probably benign results or a breast biopsy within 60 days after their index (i.e., first) abnormal screening mammogram.
Measure Steward:	Brigham and Women's Hospital
Numerator:	Patients in the denominator population who received timely diagnostic resolution defined as negative/benign/probably benign follow-up imaging (BI-RADS 1, 2, 3) or breast biopsy within 60 days after the date of their index (i.e., first) abnormal screening (BI-RADS 0) or screening-to-diagnostic (BI-RADS 4, 5) mammogram.
Denominator:	Female patients aged 40 to 75 years with an abnormal screening (BI-RADS 0) or screening-to-diagnostic (BI-RADS 4, 5) mammogram during the measurement period (i.e., calendar year). Only the first abnormal screening or screening-to-diagnostic mammogram (i.e., index screening test) is included in the measure calculation.
Exclusions:	N/A
Measure Type:	Process
MIPS Core Measure	No
Collection Type:	eCQM
Measure-Specific Case Minimum/Performance Period:	N/A

Category	Description
Rationale:	We proposed this eCQM because it addresses timely follow up of diagnostic testing for patients with an abnormal mammogram. Additionally, it fills a gap in the Diagnostic Radiology specialty set with potential for inclusion in an MVP. Breast cancer is the second most common cause of cancer deaths among women in the United States[464] and survival is dependent upon cancer stage at diagnosis. Breast cancer mainly occurs in middle-aged and older women, with the median age at the time of diagnosis being 62 years.[465] Noninvasive mammographic screening is the primary screening modality used to detect breast cancer. Studies show that between 27 to 72 percent of women did not receive appropriate follow-up within 6 months of an abnormal mammogram.[466] Delays in diagnostic follow-up after abnormal mammographic screening results increase the risk of diagnosing cancer at a more advanced stage.[467] Timely follow-up is essential to facilitate early-stage detection and improve overall survival outcomes. The Pre-Rulemaking Measure Review (PRMR) Clinician Recommendation Committee did not reach consensus on this measure; however, the majority (71 percent) of the committee expressed support for use of the measure. The measure is CBE endorsed with conditions of continued monitoring of performance and additional data element validity testing of other electronic health records (EHRs). We proposed this measure with a one-year delay in implementation to allow time for clinicians to adapt their workflows and therefore ensure greater feasibility of reporting within MIPS. If finalized as proposed, this measure will be available for reporting for the CY 2028 performance period/2030 MIPS payment year. We proposed adding this measure to the Diagnostic Radiology specialty set for the CY 2028 performance period/2030 MIPS payment year based on available coding and because the clinical quality action is within the scope of care for clinicians in these specialties.
Measure Proposed for Addition to the Following Specialty Sets:	Diagnostic Radiology

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: One commenter was pleased this proposed measure is an eCQM. Another commenter supported the delay of this new measure until CY 2028. This additional lead time will allow organizations to address potential gaps and challenges before reporting becomes required, ultimately supporting a smoother transition and more successful adoption of the measure.

Response: We thank the commenters for supporting eCQM measures and this measure in MIPS. Accordingly, this measure is not required for reporting. Clinicians have the flexibility to choose which measures to report based upon the appropriateness of the measure to their scope of care.

Comment: One commenter opposed using this measure for clinician- or group-level MIPS reporting at this time, emphasizing that it was designed for facility and system accountability and has been tested only in limited settings. The commenter was concerned the measure would hold radiologists responsible for scheduling, patient delays, navigation barriers, workforce constraints, and care delivered by others, and noted that BI-RADS data are often stored in unstructured reports without consistent extraction tools across vendors—issues that could especially burden small or rural practices and distort performance and payment. The commenter urged CMS not to finalize the measure for clinician- or group-level MIPS reporting in 2028. The commenter recommended it remain at the facility level or be delayed until robust multi-TIN, varied practice-type testing confirms reliable performance and confirms accurate attribution when clinicians do not control the full care pathway. They also recommended CMS ensure that eCQM data are available in standardized, interoperable formats, provide clear extraction tools and vendor guidance, and establish safeguards for follow-up care outside the reporting entity's control.

If CMS proceeds with the measure, the commenter recommended using 2028 and later for voluntary, non-scored testing in varied practice and technology settings, releasing detailed specifications and standardized BI-RADS extraction tools early, and including exclusions for factors outside clinicians' control plus support for resource-limited sites. They also advised starting with

[467] McCarthy, A. M., Kim, J. J., Beaber, E. F., Zheng, Y., Burnett-Hartman, A., Chubak, J., Ghai, N. R., McLerran, D., Breen, N., Conant, E. F., Geller, B. M., Green, B. B., Klabunde, C. N., Inrig, S., Skinner, C. S., Quinn, V. P., Haas, J. S., Schnall, M., Rutter, C. M., Barlow, W. E., … PROSPR consortium (2016). Follow-Up of Abnormal Breast and Colorectal Cancer Screening by Race/Ethnicity. *American Journal of Preventive Medicine*, *51*(4), 507–512. https://doi.org/10.1016/j.amepre.2016.03.017.

confidential feedback only (no payment or public reporting impact) and moving to full implementation only after proving interoperability, data completeness, reliable attribution, and no harm to breast imaging access.

A few additional commenters expressed similar concerns to above. This measure, if finalized, would be the only breast imaging measure in MIPS. One of the commenters urged CMS not to finalize inclusion of this measure in MIPS until further testing is conducted. Another commenter recommended this measure should also be reportable as a MIPS CQM.

Response: Thank you for the comments, suggestions, and concerns raised. Testing for reliability and validity was completed at the individual clinician level, in accordance with requirements outlined in Pre-Rulemaking: The Measure Submission Period and the Measures Under Consideration (MUC) List - 2026 Frequently Asked Questions.[468] Reliability testing at the individual clinician level indicated a median Signal to Noise Ratio (SNR) was 0.962 for 99 clinicians. With regards to attribution, as an important measure concept we agree that radiologists and radiology practices retain meaningful influence over scheduling and operational prioritization (e.g., adding late-day slots, advocating within hospital operations), and therefore share responsibility for timely follow-up. Published literature shows that long wait times to diagnostic evaluation are associated with increased tumor size and lymph node metastases in patients with delays exceeding 12 weeks.[469] [470] [471] BI-RADS data is available in discrete fields within major electronic health records, such as Epic and Oracle Health (Cerner), and while it may not be available in some facilities, multi-site testing showed string-search/natural language processing (NLP) methods achieved accurate extraction where structured fields were not consistently used, as demonstrated within the measure steward's submitted material. We encourage the commenters to reach out to the measure steward to discuss collection type expansion for possible implementation in future years.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44323 through 44324), we are finalizing the *Rate of Timely Follow-up on Abnormal Screening Mammograms for Breast Cancer Detection* measure as proposed for the CY 2028 performance period/2030 MIPS payment year and future years.

Table Group B: Modifications to Previously Finalized Specialty Sets Finalized and Finalized with Modification for the CY 2027 Performance Period/2029 MIPS Payment Year and Future Years

In the CY 2027 PFS proposed rule (91 FR 44325), we proposed modifying the previously finalized specialty sets based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and feedback provided by specialty societies and other interested parties. There may be instances where the quality measures within a specialty set remain static, but the individual measures have proposed substantive changes in Table Group D of this Appendix.

We use the following symbols in the Indicator column in the Table Group B tables below:

- Existing quality measures with substantive changes described in Table Group D of this Appendix are identified with an asterisk (*).
- Quality measures designated as MIPS core measures are identified with an exclamation point (!). As discussed in section IV.A.4.d.(1)(c)(i) of this final rule, we finalized implementation of the MIPS core measure designation for traditional MIPS and MVP reporting.
- Quality measures finalized for addition to a specialty set are identified with a plus sign (+).

Additionally, measures that are endorsed by a CBE are shown in Table Group B of this Appendix as follows: CBE # / eCQM CBE #.

In the proposed rule (91 FR 44325), we updated the format of the specialty set tables to reflect what the specialty set will be for the CY 2027 performance period, if finalized as proposed. Measures proposed for addition to the specialty sets were added to applicable tables and are noted with a plus sign (+) in the Indicator column. See Table Group A of this Appendix for rationales for proposed new measures. Existing measures proposed for addition to a specific specialty set are also indicated with a plus sign (+) and were included in the introductory paragraphs of the specialty set, as applicable. If the measure was not finalized for addition in the CY 2027 PFS final rule, it would have been removed from the specialty set table. For proposed new measures, the reason for its removal from the specialty set would have been addressed under Table Group A of this Appendix.

Measures proposed for removal were removed from each specialty set, as applicable. See Table Group C of this Appendix for rationales for proposed measure removals from MIPS. Specialty-specific measure removals were also noted in the introductory paragraphs of the specialty set, as applicable. If a measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back to the specialty set table. For proposed measure removals from MIPS, the reason for its retention would have been addressed under Table Group C of this Appendix.

NOTE:

- Updates to measure titles and/or measure descriptions under Table Group B in this final rule may or may not be considered substantive in nature, therefore may not be proposed or updated under Table Group D. If the change was considered substantive in nature, it was finalized under Table Group D.
- Under Table Group B, we responded to comments related to existing measures that were proposed for addition to a specific specialty, and/or specialty-specific measure removals, as applicable. Comments and responses pertaining to new measures that were proposed for addition to the specialty set can be found in Table Group A of this Appendix. Comments and responses pertaining to measures that were proposed for removal from MIPS, and therefore from the specialty set, can be found in Table Group C of this Appendix. Comments and responses pertaining to previously finalized measures that have substantive changes can be found in Table Group D of this Appendix. Any comments received on previously finalized measures that have no substantive changes are out of scope and not included in this final rule. Commenters who requested additions or removals of quality measures to specific specialty sets should use the Stakeholder Solicitation for Specialty Sets process as these updates must be proposed through rulemaking.
- For each specialty set, measures in the Finalized tables will be available for reporting in CY 2027.

We requested comments on proposed measure additions of previously finalized measures in six specialty sets in this Appendix: B.5, B.13, B.19, B.25. B.26, and B.38. Previously finalized measures that had no substantive changes were not open for comment under the proposed rule.

The following specialty set had no proposed modifications and no proposed substantive changes to previously finalized measures for the CY 2027 performance period/2029 MIPS payment year: Diagnostic Radiology.

B.1. Allergy/Immunology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Allergy/Immunology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable. Below will be the specialty set for this specialty for the CY 2027 performance period as proposed.

B.3. Audiology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Audiology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable.

Below will be the specialty set for this specialty for the CY 2027 performance period with modification. The *Age-Related Hearing Loss: Comprehensive Audiometric Evaluation* measure is not being finalized for the Audiology set as discussed under Table A.7 of this Appendix and therefore has been removed from the table below.

B.4b. Electrophysiology Cardiac Specialist

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Electrophysiology Cardiac Specialist specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable. Below will be the specialty set for this specialty for the CY 2027 performance period as proposed.

B.5. Certified Nurse Midwife

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Certified Nurse Midwife specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable.

We also proposed adding one existing MIPS quality measure to this specialty set:

- **Q493:** *Adult Immunization Status*: This MIPS quality measure assesses whether adult patients are up-to-date with recommended routine immunizations. We agreed with interested parties' feedback that this measure is clinically relevant to this clinician type. Certified Nurse Midwives are advanced practice clinicians uniquely qualified to deliver comprehensive primary care, pregnancy care, and gynecological care. Their scope of practice often includes primary care services such as immunizations, especially in alignment with their focus on preventive care and wellness for women.[472] [473] Adding this measure will align the Certified Nurse Midwife specialty set with the Obstetrics and Gynecology specialty set, recognizing the similarities in care delivery between these specialties and ensuring consistency across specialty sets. Including this measure in the Certified Nursing Midwife specialty set acknowledges the important role they play in preventive care and primary health maintenance, as well as promoting consistent, high quality care delivery across patient populations. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2027 PFS final rule publication. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received no public comments on the measure proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (91 FR 44333), we are finalizing the *Certified Nurse Midwife Specialty Set* as proposed for the CY 2027 performance period/2029 MIPS payment year and future years. Below will be the specialty set for this specialty for the CY 2027 performance period as proposed.

B.13. Family Medicine

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Family Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable.

We also proposed adding two existing MIPS quality measures to this specialty set:

- **Q205**: *Sexually Transmitted Infection (STI) Testing for People with HIV*: This MIPS quality measure assesses appropriate screening of STIs for patients with HIV. We agreed with interested parties' feedback that this measure is clinically relevant to this clinician type and proposed adding this measure to the Family Medicine specialty set. Clinical guidelines, such as those from the Centers for Disease Control and Prevention (CDC), recommend regular screening for STIs in individuals with HIV.[474] Despite the high incidence of STIs among people with HIV, screening rates remain suboptimal.[475] Including this measure emphasizes adherence to established best practices in care provision within family medicine. This measure will allow clinicians and health systems to track and benchmark their performance in meeting preventive care goals for patients with HIV. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2027 PFS final rule publication. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.
- **Q340**: *HIV Annual Retention in Care*: This MIPS quality measure promotes routine monitoring to track patient progress and ensure treatment efficacy. We agreed with interested parties' feedback that this measure is clinically relevant to this clinician type and proposed adding this measure to the Family Medicine specialty set. Incorporating this measure aligns with national goals such as the Ending the HIV Epidemic initiative, led by the CDC, which highlights retention and viral suppression as cornerstones for reducing transmission and new infections.[476] A study from the Centers for AIDS Research Network of Integrated Clinical Systems revealed that patients who missed more than two clinic visits over a two-year period had significantly higher mortality risks, even if they otherwise met institutional retention metrics.[477] These findings underscore the life-saving importance of retention in improving survival rates. By measuring and promoting retention in HIV care, the addition of this measure could drive system-wide improvements, support better patient outcomes, reduce preventable mortality, and contribute to public health efforts to end the HIV epidemic. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2027 PFS final rule publication. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received public comments on the measures proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: Three commenters supported adding measures Q205: *Sexually Transmitted Infection (STI) Testing for People with HIV* and Q340: *HIV Annual Retention in Care* to this specialty set. Another commenter supported addition of measure Q205 specifically; however, they noted that because many patients receive HIV care from specialists or HIV clinics, CMS should ensure appropriate attribution and acknowledge that this measure has limited applicability across family medicine overall.

Response: We thank the commenters for supporting the addition of these measures to this specialty set and for recognizing the importance of routine STI screening for people with HIV. We will continue to consider issues of measure attribution and specialty-specific applicability as we evaluate the use and performance of this measure within the Family Medicine specialty set over time.

P., Raper, J. L., & Centers for AIDS Research Network of Integrated Clinical Systems (CNICS) (2014). Beyond Core Indicators of Retention in HIV Care: Missed Clinic Visits are Independently Associated with All-Cause Mortality. *Clinical Infectious Diseases: An Official Publication of the Infectious Diseases Society of America*, *59*(10), 1471–1479. https://doi.org/10.1093/cid/ciu603.

Comment: One commenter opposed adding measure Q340 to this specialty set. The commenter stated this measure is not broadly applicable to family medicine because many patients receive HIV-specific care from infectious disease specialists or dedicated HIV clinics, not family physicians. The commenter was concerned about attribution and said patients should be attributed to the clinician providing HIV care, so primary care physicians are not held accountable when they are not managing HIV treatment and follow-up. The commenter stated that specialty sets should focus on measures that are broadly relevant to family medicine and where physicians can meaningfully influence performance, rather than highly condition-specific measures with limited applicability.

Response: We thank the commenter for providing feedback on measure Q340. We acknowledge the commenter's concerns about the measure's applicability in the Family Medicine Specialty Set and the importance of attributing patients to clinicians responsible for managing HIV care. Clinicians have the flexibility to choose which measures to report based upon the appropriateness of the measure to their scope of care. Accordingly, this measure is not required for reporting; however, the addition of this measure enhances clinician choice on which measures to report. Currently, the Family Medicine Specialty Set contains 61 measures allowing clinicians to choose to submit those measures that are most meaningful to their scope of care.

For the reasons stated above and in the proposed rule (91 FR 44344), we are finalizing the *Family Medicine Specialty Set* as proposed for the CY 2027 performance period/2029 MIPS payment year and future years. Below will be the specialty set for this specialty for the CY 2027 performance period.

B.13. Family Medicine

FINALIZED MEASURES IN THE FAMILY MEDICINE SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title**	**Measure Steward**

B.14. Gastroenterology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Gastroenterology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable. Below will be the specialty set for this specialty for the CY 2027 performance period as proposed.

B.14. Gastroenterology

B.17. Hospitalists

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Hospitalists specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable. Below will be the specialty set for this specialty for the CY 2027 performance period as proposed.

B.17. Hospitalists

FINALIZED MEASURES IN THE HOSPITALISTS SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title**	**Measure Steward**
!	0081 / 0081e	005	CMS13 5v15	eCQM, MIPS CQM	Process	Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD)	American Heart Association
!	0083 / 0083e	008	CMS14 4v15	eCQM, MIPS CQM	Process	Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD)	American Heart Association
!	0326 / N/A	047	N/A	Medicare Part B Claims Measure, MIPS CQM	Process	Advance Care Plan	National Committee for Quality Assurance

B.19. Internal Medicine

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Internal Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable.

We also proposed adding two existing MIPS quality measures to this specialty set:

- **Q205**: *Sexually Transmitted Infection (STI) Testing for People with HIV*: This MIPS quality measure assesses appropriate screening of STIs for patients with HIV. We agreed with interested parties' feedback that this measure is clinically relevant to this clinician type and proposed adding this measure to the Internal Medicine specialty set. Clinical guidelines, such as those from the CDC, recommend regular screening for STIs in individuals with HIV.[478] Despite the high incidence of STIs among people with HIV, screening rates remain suboptimal.[479] Including this measure emphasizes adherence to established best practices in care provision within family medicine. This measure will allow clinicians and health systems to track and benchmark their performance in meeting preventive care goals for patients with HIV. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2027 PFS final rule publication. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.
- **Q340**: *HIV Annual Retention in Care*: This MIPS quality measure promotes routine monitoring to track patient progress and ensure treatment efficacy. We agreed with interested parties' feedback that this measure is clinically relevant to this clinician type and proposed adding this measure to the Internal Medicine specialty set. Incorporating this measure aligns with national goals such as the Ending the HIV Epidemic initiative, led by the CDC, which highlights retention and viral suppression as cornerstones for reducing transmission and new infections.[480] A study from the Centers for AIDS Research Network of Integrated Clinical Systems revealed that patients who missed more than two clinic visits over a two-year period had significantly higher mortality risks, even if they otherwise met institutional retention metrics.[481] These findings underscore the life-saving importance of retention in improving survival rates. By measuring and promoting retention in HIV care, the addition of this measure could drive system-wide improvements, support better patient outcomes, reduce preventable mortality, and contribute to public health efforts to end the HIV epidemic. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2027 PFS final rule publication. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received public comments on the measures proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: Three commenters supported adding measures Q205: *Sexually Transmitted Infection (STI) Testing for People with HIV* and Q340: *HIV Annual Retention in Care* to this specialty set.

Response: We thank the commenters for supporting the addition of these two measures to this specialty set.

For the reasons stated above and in the proposed rule (91 FR 44357), we are finalizing the *Internal Medicine Specialty Set* as proposed for the CY 2027 performance period/2029 MIPS payment year and future years. Below will be the specialty set for this specialty for the CY 2027 performance period.

B.22. Nephrology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Nephrology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable. Below will be the specialty set for this specialty for the CY 2027 performance period as proposed.

B.22. Nephrology

	N/A / N/A	471	N/A	MIPS CQM	Patient-Reported Outcome-Based Performance Measure	Functional Status After Lumbar Surgery	Minnesota Community Measurement

B.25. Nutrition/Dietician

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Nutrition/Dietician specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable.

We also proposed adding one existing MIPS quality measure to this specialty set:

- **Q317**: *Preventive Care and Screening*: Screening for High Blood Pressure and Follow-Up Documented: This MIPS quality measure supports screening for high blood pressure. We agreed with interested parties' feedback that adding this measure to this specialty set will help empower registered dietician nutritionists (RDNs) to meaningfully participate in quality programs and value-based care, ensuring patients receive high-value nutritional care. Hypertension (HTN) is among the leading global preventable risk factors for cardiovascular disease and premature mortality.[482] Early detection and effective management of HTN have demonstrated significant reductions in mortality, morbidity, and health care costs.[483] RDNs provide medical nutrition therapy, which has demonstrated effectiveness in improving outcomes such as blood pressure control and reducing cardiovascular risks.[484] Including this measure within the Nutrition/Dietician specialty set recognizes the critical role of RDNs in managing HTN and promotes team-based, whole-person care. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2027 PFS final rule publication. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received public comments on the measure proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: One commenter supported adding measure Q317: *Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented* to this specialty set.

Response: We thank the commenter for supporting the addition of measure Q317 to this specialty set.

For the reasons stated above and in the proposed rule (91 FR 44372), we are finalizing the *Nutrition/Dietician Specialty Set* as proposed for the CY 2027 performance period/2029 MIPS payment year and future years. Below will be the specialty set for this specialty for the CY 2027 performance period.

B.25. Nutrition/Dietician

FINALIZED MEASURES IN THE NUTRITION/DIETICIAN SPECIALTY SET

	2152 / N/A	431	N/A	MIPS CQM	Process	Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling	National Committee for Quality Assurance

B.26. Obstetrics/Gynecology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Obstetrics/Gynecology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable.

We also proposed adding two existing MIPS quality measures to this specialty set:

- **Q205**: *Sexually Transmitted Infection (STI) Testing for People with HIV*: This MIPS quality measure assesses appropriate screening of STIs for patients with HIV. We agreed with interested parties' feedback that this measure is clinically relevant to this clinician type and proposed adding this measure to the Obstetrics/Gynecology specialty set. Clinical guidelines, such as those from the CDC, recommend regular screening for STIs in individuals with HIV.[485] Despite the high incidence of STIs among people with HIV, screening rates remain suboptimal.[486] Adding measure Q205 to this specialty set will help address critical screening gaps, ensuring sexual health services are consistently delivered in settings managing patients' reproductive health. This measure will allow clinicians and health systems to track and benchmark their performance in meeting preventive care goals for patients with HIV. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2027 PFS final rule publication. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.
- **Q338**: *HIV Viral Suppression*: This MIPS quality measure promotes effective management of HIV viral load for patients diagnosed with HIV. We agreed with interested parties' feedback that this measure is clinically relevant to this clinician type and proposed adding this measure to the Obstetrics/Gynecology specialty set. This specialty plays an essential role in ensuring patients remain actively engaged in HIV care while accessing comprehensive prevention services that improve health outcomes. Viral suppression is widely recognized as the clinical goal of HIV treatment, reflecting successful management of the condition.[487] [488] Measuring viral suppression ensures clinicians are accountable for achieving this outcome across their patient population, which is directly linked to measurable preventive outcomes, such as reducing HIV transmission rates and decreasing HIV-related morbidity and mortality.[489] [490] The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2027 PFS final rule publication. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received public comments on the measures proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: Three commenters supported adding measures Q205: *Sexually Transmitted Infection (STI) Testing for People with HIV* and Q338: *HIV Viral Suppression* to this specialty set.

Response: We thank the commenters for supporting the addition of these two measures to this specialty set.

For the reasons stated above and in the proposed rule (91 FR 44374), we are finalizing the *Obstetrics/Gynecology Specialty Set* as proposed for the CY 2027 performance period/2029 MIPS payment year and future years. Below will be the specialty set for this specialty for the CY 2027 performance period.

B.27a. Oncology/Hematology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Oncology/Hematology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable. Below will be the specialty set for this specialty for the CY 2027 performance period as proposed.

B.27a. Oncology/Hematology

FINALIZED MEASURES IN THE ONCOLOGY/HEMATOLOGY SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title and Description**	**Measure Steward**
!	0326 / N/A	047	N/A	Medicare Part B Claims Measure, MIPS CQM	Process	Advance Care Plan	National Committee for Quality Assurance

B.34. Physical Medicine

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Physical Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable. Below will be the specialty set for this specialty for the CY 2027 performance period as proposed.

B.38. Preventive Medicine

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Preventive Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable.

We also proposed adding two existing MIPS quality measures to this specialty set:

- **Q205**: *Sexually Transmitted Infection (STI) Testing for People with HIV*: This MIPS quality measure assesses appropriate screening of STIs for patients with HIV. We agreed with interested parties' feedback that this measure is clinically relevant to this clinician type and proposed adding this measure to the Preventive Medicine specialty set. Clinical guidelines, such as those from the CDC, recommend regular screening for STIs in individuals with HIV.[491] Despite the high incidence of STIs among people with HIV, screening rates remain suboptimal.[492] Including this measure emphasizes adherence to established best practices in care provision within preventive medicine. This measure will allow clinicians and health systems to track and benchmark their performance in meeting preventive care goals for patients with HIV. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2027 PFS final rule publication. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.
- **Q338**: *HIV Viral Suppression*: This MIPS quality measure promotes effective management of HIV viral load for patients diagnosed with HIV. We agreed with interested parties' feedback that this measure is clinically relevant to this clinician type and proposed adding this measure to the Preventive Medicine specialty set. This specialty plays an essential role in ensuring patients remain actively engaged in HIV care while accessing comprehensive prevention services that improve health outcomes. Viral suppression is widely recognized as the clinical goal of HIV treatment, reflecting successful management of the condition.[493] [494] Measuring viral suppression ensures clinicians are accountable for achieving this outcome across their patient populations, which is directly linked to measurable preventive outcomes, such as reducing HIV transmission rates and decreasing HIV-related morbidity and mortality.[495] [496] The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2027 PFS final rule publication. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received public comments on the measures proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: Three commenters supported adding measures Q205: *Sexually Transmitted Infection (STI) Testing for People with HIV* and Q338: *HIV Viral Suppression* to this specialty set.

Response: We thank the commenters for supporting the addition of these two measures to this specialty set.

For the reasons stated above and in the proposed rule (91 FR 44396), we are finalizing the *Preventive Medicine Specialty Set* as proposed for the CY 2027 performance period/2029 MIPS payment year and future years. Below will be the specialty set for this specialty for the CY 2027 performance period.

B.41. Skilled Nursing Facility

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Skilled Nursing Facility specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable. Below will be the specialty set for this specialty for the CY 2027 performance period as proposed.

Table Group C: Previously Finalized Quality Measures Finalized for Removal for the CY 2027 Performance Period/2029 MIPS Payment Year and Future Years

In this final rule, we are removing 20 previously finalized MIPS quality measures for the CY 2027 performance period/2029 MIPS payment year and future years. These measures are discussed in detail in the removal tables below. Note: Specialty sets impacted by each measure removal are indicated under Table Group C of this Appendix within the last row of each C table.

The CY 2019 PFS final rule (83 FR 59763 through 59765) and CY 2020 PFS final rule (84 FR 62957 through 62959) discuss our incremental approach to removing process measures. Further considerations are given in the evaluation of a measure's performance data to determine whether there is or no longer is variation in performance. As discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763), an additional criterion we use for the removal of measures includes extremely topped-out measures, which refers to measures topped out with an average (mean) performance rate between 98-100 percent. For a measure proposed for removal due to criteria relating to the benchmark and performance data, further information regarding 2025 MIPS benchmarking data can be located at *https://qpp.cms.gov/reporting-requirements/measures-activities/benchmarks.*

As codified in the CY 2025 PFS final rule (89 FR 98561) at § 414.1330(c)(1), we list 12 criteria used to determine the removal of a quality measure.

(i) If the Secretary determines that the quality measure is no longer meaningful, such as measures that are topped out.
(ii) If a measure steward is no longer able to maintain the quality measure.
(iii) If the quality measure reached extremely topped out status.
(iv) If the quality measure does not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods.
(v) If the quality measure is duplicative.
(vi) If the quality measure is not updated to reflect current clinical guidelines, which are not reflective of a clinician's scope of practice.
(vii) If the quality measure is a process measure.
(viii) If the quality measure addresses a measurement gap.
(ix) If the quality measure is a patient-reported outcome.
(x) If the quality measure is not available for MIPS quality reporting by or on behalf of all MIPS eligible clinicians.
(xi) The robustness of the quality measure.
(xii) Consideration of the quality measure in developing MIPS Value Pathways (MVPs).

Additionally, we codified at § 414.1330(c)(2) 6 instances when a quality measure that otherwise meets the criteria for removal in § 414.1330(c)(1) may nonetheless be retained based on the following considerations:

(i) Whether the removal of the process measure impacts the number of measures available for a specific specialty.
(ii) Whether the quality measure addresses a priority area.
(iii) Whether the quality measure promotes positive outcomes in patients.
(iv) Whether the quality measure is designated as high priority or not.
(v) Whether the quality measure has reached extremely topped out status.
(vi) Evaluation of the quality measure's performance data.

However, we note that in section IV.A.4.d.(1)(c)(ii) of this final rule we are finalizing to update the existing quality measure retention consideration at § 414.1330(c)(1)(iv) to state that we will consider whether the quality measure is designated as high priority or not through the CY 2026 performance period/CY 2028 MIPS payment year.

We requested comments on these measure removals and the impacted specialty sets.

C.1 Coronary Artery Disease (CAD): Antiplatelet Therapy

Category	Description
CBE # / eCQM CBE #:	0067 / N/A
Quality#:	006
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease (CAD) seen within a 12-month period who were prescribed aspirin or clopidogrel.
Measure Steward:	American Heart Association
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), at the measure steward's request because it will no longer be maintained for inclusion.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Cardiology, Family Medicine, Internal Medicine, Skilled Nursing Facility

We received no public comments on the proposed removal of this measure. For reasons stated above and in the proposed rule (91 FR 44412), we are finalizing the removal of measure Q006 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.2 Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF ≤ 40%)

Category	Description
CBE # / eCQM CBE #:	0070 / 0070e
Quality#:	007
CMS eCQM ID:	CMS145v15
Collection Type:	eCQM / MIPS CQM
Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have a prior MI or a current or prior LVEF ≤ 40% who were prescribed beta-blocker therapy.
Measure Steward:	American Heart Association
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), at the measure steward's request because it will no longer be maintained for inclusion.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Cardiology, Family Medicine, Internal Medicine, Skilled Nursing Facility

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter requested that measure Q007: *Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF ≤ 40%)* be retained based on the measure's clinical relevance and inclusion in a number of specialty sets. The commenter requested the measure be retained for CY 2027 under topped-out status.

Response: We thank the commenter for their comment; however, as the measure steward is no longer supporting the measure, we are unable to continue implementation within MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44412), we are finalizing the removal of measure Q007 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.3 Oncology: Medical and Radiation – Pain Intensity Quantified

Category	Description
CBE # / eCQM CBE #:	0384 / 0384e
Quality#:	143
CMS eCQM ID:	CMS157v15
Collection Type:	eCQM / MIPS CQM
Measure Description:	Percentage of patient visits, regardless of patient age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy in which pain intensity is quantified.
Measure Steward:	American Society of Clinical Oncology
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure has reached the end of the topped-out lifecycle (82 FR 53640) and has a limited opportunity to improve clinical outcomes. Topped-out process measures are those with a median performance rate of 95 percent or higher (81 FR 77286). This measure's continued topped-out status is based on the current 2026 MIPS benchmarking data located at *https://qpp.cms.gov/reporting-requirements/measures-activities/benchmarks*, in addition to previous years MIPS benchmarking data. For more information on benchmarks, see the MIPS 2026 Quality Benchmarks User Guide at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3611/2026-Quality-Benchmarks-User-Guide.pdf*.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Oncology/Hematology, Radiation Oncology

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter urged CMS to implement a more thorough and thoughtful process based on specific criteria when identifying whether a measure is topped out and potentially considered for removal from MIPS. The commenter stated a recent review of reporting rates on MIPS topped out measures during the first 6 years of the program identified that, of the 137 topped out measures, the vast majority were not reported by a large percentage of clinicians and groups. In fact, the median reporting rate across those measures was not more than 5 percent.[497] Using data from the 2024 QPP Experience Public Use File (*https://data.cms.gov/quality-of-care/quality-payment-program-experience/data*), this measure was reported by just over 1,000 individuals and groups out of the more than 12,000 oncologists who reported at least one measure and over 40 percent were small practices and 30 percent served in a health professional shortage area.

Response: We thank the commenter for their feedback and acknowledge their concern regarding the removal of specialty measures. In developing this proposal, we sought to balance meaningful quality reporting with the resources and operational demands required to collect measures that may not meaningfully inform performance. Although topped-out measures may address important aspects of care, the underlying quality actions are generally considered standard practice and offer limited opportunity for further improvement in clinical outcomes. This measure has been topped out for 5 consecutive years, 9 total years, for the eCQM collection type and 9 consecutive years for the MIPS CQM collection type. While the measure was identified as being eligible for the defined topped-out benchmark and, therefore eligible to receive over 7 points, removing this process measure will better support the goal of prioritizing measures that improve patient outcomes and include robust quality actions that go beyond assessment of concerns.

Comment: A few commenters opposed the removal of measure Q143: *Oncology: Medical and Radiation – Pain Intensity Quantified* and noted that this measure operates as a paired measure with measure Q144: *Oncology: Medical and Radiation – Plan of Care for Pain.* Without the Pain Intensity Quantified measure, clinicians are unable to identify patients requiring a documented plan of care for pain. Pain management is paramount in oncology care, and existing metrics should not be dismantled without a sufficient replacement. One of the commenters recommended CMS work with the measure steward to combine measures Q143 and Q144, or alternatively adopt the existing QCDR measure PIMSH4 for broader use in MIPS prior to removing measure Q143.

Response: We acknowledge the commenters' concern regarding the removal of measure Q143; however, we determined that removal of this measure is necessary to promote meaningful and complete quality reporting, informing quality care for patients with pain receiving chemotherapy or radiation therapy. Measures Q143 and Q144 represent a single, unified quality action that requires both detection and an intervention; splitting this into two separate measures allows for reporting of one without the other and breaks up what should be a unified standard of care. We agree the measures should be combined; however, the measure steward has decided not to combine them. Measure Q143 is also topped out and while topped-out measures may still represent an important aspect of care, the associated quality actions are generally considered standard of practice and offer limited opportunity to further improve clinical outcomes.

[497] Chung, Y., Nicola, L. P., & Rula, E. Y. (2026). Reporting Rates of Topped-Out Merit-Based Incentive Payment System (MIPS) Quality Measures, 2017–2023. *Health Affairs Scholar*, *4*(4), qxag061. https://doi.org/10.1093/haschl/qxag061.

While we agree the concept is important to quality care, the removal of the measure does not preclude the quality action from continuing. Whether the clinician/group is being assessed for the quality action or not, it should still be completed as a matter of high-quality care. High measure performance suggests that assessment is happening already as standard of care.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44413), we are finalizing the removal of measure Q143 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.4 Functional Status Change for Patients with Knee Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	217
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	A patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients 14 years+ with knee impairments. The change in FS is assessed using the FOTO Lower Extremity Physical Function (LEPF) PROM. The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient, individual clinician, and clinic levels to assess quality.
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure is duplicative of the Functional Improvement for Patients with Knee Impairments measure being finalized in Table A.6 of this Appendix. Measure Q217 is specific to knee impairments and restricts clinicians to using the proprietary tool FOTO LEPF PROM or a manual crosswalk for numerator assessment. The new measure in Table A.6 of this Appendix is a more comprehensive patient-reported outcome-based performance measure. The new measure allows the use of various validated assessments tools, including the Knee Outcome Survey, Patient-Reported Outcomes Measurement Information System (PROMIS) Physical Function, or equivalent tools. The new measure focuses on clinically meaningful outcomes by assessing improvement against the Predicted Moderate Clinical Improvement (P-MCI), a patient-specific, risk-adjusted threshold. This measure incorporates a risk adjustment model that will improve feasibility of reporting as all information to calculate performance will be provided by the measure steward.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Chiropractic Medicine, Orthopedic Surgery, Physical Therapy/Occupational Therapy

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposal to replace the FOTO functional status measures with the new functional improvement measures in Table A of this Appendix. One of the commenters highlighted the new measure set's broad use across major health systems, its whole-person, patient-centered design, and its flexibility across practice types and EHR systems. They also pointed to low-cost administration options and strong alignment with CMS' patient-centered MVP goals, particularly the emphasis on patient-reported outcomes. The commenter appreciated that adopting PROMIS would expand meaningful reporting opportunities for physical therapists. Another commenter supported the removal of these measures, noting that they are duplicative of the newly proposed functional improvement measures.

Response: We thank the commenters for supporting the removal of this measure from MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44413), we are finalizing the removal of measure Q217 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.5 Functional Status Change for Patients with Hip Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	218
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	A patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients 14 years+ with hip impairments. The change in FS is assessed using the FOTO Lower Extremity Physical Function (LEPF) PROM. The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient, individual clinician, and clinic levels to assess quality.
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure is duplicative of the Functional Improvement for Patients with Lower Extremity Impairments measure being finalized in Table A.5 of this Appendix. Measure Q218 is specific to hip impairments and restricts clinicians to using the proprietary tool FOTO LEPF PROM or a manual crosswalk for numerator assessment. The new measure in Table A.5 of this Appendix is a more comprehensive patient-reported outcome-based performance measure that includes all lower extremity injuries. The new measure allows the use of various validated assessments tools, including the Lower Extremity Functional Scale (LEFS), PROMIS Physical Function, or equivalent tools. The new measure focuses on clinically meaningful outcomes by assessing improvement against the P-MCI, a patient-specific, risk-adjusted threshold. This measure incorporates a risk adjustment model that will improve feasibility of reporting as all information to calculate performance will be provided by the measure steward.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Chiropractic Medicine, Orthopedic Surgery, Physical Therapy/Occupational Therapy

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table C.4 of this Appendix, a few commenters supported the proposal to replace the FOTO functional status measures with the new functional improvement measures in Table A of this Appendix.

Response: We thank the commenters for supporting the removal of this measure from MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44414), we are finalizing the removal of measure Q218 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.6 Functional Status Change for Patients with Lower Leg, Foot or Ankle Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	219
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	A patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients 14 years+ with foot, ankle or lower leg impairments. The change in FS is assessed using the FOTO Lower Extremity Physical Function (LEPF) PROM. The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient, individual clinician, and clinic levels to assess quality.
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure is duplicative of the Functional Improvement for Patients with Lower Extremity Impairments measure being finalized in Table A.5 of this Appendix. Measure Q219 is specific to lower leg, foot and ankle impairments and restricts clinicians to the use of the proprietary tool FOTO LEPF PROM or a manual crosswalk for numerator assessment. The new measure in Table A.5 of this Appendix is a more comprehensive patient-reported outcome-based performance measure that includes all lower extremity injuries. The new measure allows the use of various validated assessments tools, including the LEFS, PROMIS Physical Function, or equivalent tools. The new measure focuses on clinically meaningful outcomes by assessing improvement against the P-MCI, a patient-specific, risk-adjusted threshold. This measure incorporates a risk adjustment model that will improve feasibility of reporting as all information to calculate performance will be provided by the measure steward.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Chiropractic Medicine, Orthopedic Surgery, Physical Therapy/Occupational Therapy, Podiatry

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table C.4 of this Appendix, a few commenters supported the proposal to replace the FOTO functional status measures with the new functional improvement measures in Table A of this Appendix.

Response: We thank the commenters for supporting the removal of this measure from MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44414), we are finalizing the removal of measure Q219 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.7 Functional Status Change for Patients with Low Back Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	220
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	A patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients 14 years+ with low back impairments. The change in FS is assessed using the FOTO Low Back FS PROM. The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient, individual clinician, and clinic levels to assess quality.
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure is duplicative of the Functional Improvement for Patients with Back Impairments measure being finalized in Table A.4 of this Appendix. Measure Q220 is specific to low back impairments and restricts clinicians to the use of the proprietary tool FOTO Low Back FS PROM or a manual crosswalk for numerator assessment. The new measure in Table A.4 of this Appendix is a more comprehensive patient-reported outcome-based performance measure that includes all back impairments. The new measure allows the use of various validated assessment tools, such as the Modified Low Back Disability Questionnaire, PROMIS Pain Interference, or equivalent tools. The new measure focuses on clinically meaningful outcomes by assessing improvement against the P-MCI, a patient-specific, risk-adjusted threshold. This measure incorporates a risk adjustment model that will improve feasibility of reporting as all information to calculate performance will be provided by the measure steward.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Chiropractic Medicine, Orthopedic Surgery, Physical Therapy/Occupational Therapy

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table C.4 of this Appendix, a few commenters supported the proposal to replace the FOTO functional status measures with the new functional improvement measures in Table A of this Appendix.

Response: We thank the commenters for supporting the removal of this measure from MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44415), we are finalizing the removal of measure Q220 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.8 Functional Status Change for Patients with Shoulder Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	221
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	A patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients 14 years+ with shoulder impairments. The change in FS is assessed using the FOTO Shoulder FS PROM. The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient, individual clinician, and clinic levels to assess quality.
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure is duplicative of the Functional Improvement for Patients with Upper Extremity Impairments measure being finalized in Table A.3 of this Appendix. Measure Q221 is specific to shoulder impairments and restricts clinicians to the use of the proprietary tool FOTO Shoulder FS PROM or a manual crosswalk for numerator assessment. The new measure in Table A.3 of this Appendix is a more comprehensive patient-reported outcome-based performance measure that includes all upper extremity injuries. The new measure allows the use of various validated assessment tools, such as the Quick Disabilities of the Arm, Shoulder, & Hand (QDASH) and PROMIS Upper Extremity, or equivalent tools. The new measure focuses on clinically meaningful outcomes by assessing improvement against the P-MCI, a patient-specific, risk-adjusted threshold. This measure incorporates a risk adjustment model that will improve feasibility of reporting as all information to calculate performance will be provided by the measure steward.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Chiropractic Medicine, Orthopedic Surgery, Physical Therapy/Occupational Therapy

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table C.4 of this Appendix, a few commenters supported the proposal to replace the FOTO functional status measures with the new functional improvement measures in Table A of this Appendix.

Response: We thank the commenters for supporting the removal of this measure from MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44415), we are finalizing the removal of measure Q221 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.9 Functional Status Change for Patients with Elbow, Wrist or Hand Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	222
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	A patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients 14 years+ with elbow, wrist, or hand impairments. The change in FS is assessed using the FOTO Elbow/Wrist/Hand FS PROM. The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient, individual clinician, and clinic levels to assess quality.
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure is duplicative of the Functional Improvement for Patients with Upper Extremity Impairments measure being finalized in Table A.3 of this Appendix. Measure Q222 is specific to elbow, wrist and hand impairments and restricts clinicians to the use of the proprietary tool FOTO Elbow/Wrist/Hand FS PROM or a manual crosswalk for numerator assessment. The new measure in Table A.3 of this Appendix is a more comprehensive patient-reported outcome-based performance measure that includes all upper extremity injuries. The new measure allows the use of various validated assessment tools, such as QDASH and PROMIS Upper Extremity, or equivalent tools. The new measure focuses on clinically meaningful outcomes by assessing improvement against the P-MCI, a patient-specific, risk-adjusted threshold. This measure incorporates a risk adjustment model that will improve feasibility of reporting as all information to calculate performance will be provided by the measure steward.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Chiropractic Medicine, Orthopedic Surgery, Physical Therapy/Occupational Therapy

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table C.4 of this Appendix, a few commenters supported the proposal to replace the FOTO functional status measures with the new functional improvement measures in Table A of this Appendix.

Response: We thank the commenters for supporting the removal of this measure from MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44416), we are finalizing the removal of measure Q222 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.10 Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients

Category	Description
CBE # / eCQM CBE #:	0658 / N/A
Quality#:	320
CMS eCQM ID:	N/A
Collection Type:	Medicare Part B Claims Measure / MIPS CQM
Measure Description:	Percentage of patients aged 45 to 75 years of age receiving a screening colonoscopy without biopsy or polypectomy who had a recommended follow-up interval of 10 years for repeat colonoscopy documented in their colonoscopy report.
Measure Steward	American Gastroenterological Association
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure has reached the end of the topped-out lifecycle (82 FR 53640) and has a limited opportunity to improve clinical outcomes. Topped-out process measures are those with a median performance rate of 95 percent or higher (81 FR 77286). This measure's continued topped-out status is based on the current 2026 MIPS benchmarking data located at *https://qpp.cms.gov/reporting-requirements/measures-activities/benchmarks*, in addition to previous years MIPS benchmarking data. For more information on benchmarks, see the MIPS 2026 Quality Benchmarks User Guide at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3611/2026-Quality-Benchmarks-User-Guide.pdf*.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Gastroenterology

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the removal of measure Q320: *Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients*, stating that there is no documented performance gap for screening patients over age 86, that peak colorectal cancer incidence occurs in patients aged 65–69, and that the measure lacks testing data at the individual or physician level to support its use.

Response: We thank the commenter for supporting the removal of this measure from MIPS.

Comment: As indicated under Table C.3 of this Appendix, one commenter urged CMS to implement a more thorough and thoughtful process based on specific criteria when identifying whether a measure is topped out and potentially considered for removal from MIPS. Using data from the 2024 QPP Experience Public Use File (*https://data.cms.gov/quality-of-care/quality-payment-program-experience/data*), just over 800 individuals and groups out of the more than 7,000 gastroenterologists reported this measure and 33 percent were small practices.

Response: We thank the commenter for their feedback and acknowledge their concern regarding the removal of measure Q320: *Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients*. In developing this proposal, we sought to balance meaningful quality reporting with the resources and operational demands required to collect measures that may not meaningfully inform performance. Although topped-out measures may address important aspects of care, the underlying quality actions are generally considered standard practice and offer limited opportunity for further improvement in clinical outcomes. Measure adoption is a statistic reviewed when identifying quality measures for removal and is included as part of the overarching criteria used for quality measure inventory refinements. Communication of procedure results and recommended follow-up should be a standard of care, which is reflected in the current MIPS data that shows that both collection types have been topped out for 10 years. We continue to encourage the development of new quality measures to fill important gaps in quality care that continue to drive high-quality outcomes.

Comment: One commenter supported removing measure Q320 from facility-based reporting programs because it inappropriately attributes clinician decisions to facilities. However, the commenter did not support removing the measure from MIPS because scores do not reflect true gastroenterology performance, it is the only colonoscopy-specific measure outside a QCDR, and it helps align quality with the Surveillance/Screening Colonoscopy episode-based cost measure. The commenter echoed the previous commenter above about experience data on reporting of this measure. The commenter stated that if CMS removes measure Q320 from MIPS, gastroenterologists who don't use a QCDR would lose the only colonoscopy-specific measure reportable via claims and MIPS CQM collection type. It would also reduce access to a widely available clinician-level colorectal cancer prevention quality measure while keeping the related cost accountability. This commenter and another commenter urged CMS to maintain topped-out or standard of care, GI-relevant measures when measure choice is limited and no clinically superior replacements are available using defined topped-out measure benchmarks where appropriate.

Response: We thank the commenters for their feedback and acknowledge the concern regarding the removal of measure Q320. We acknowledge the measure's role in supporting clear communication of follow-up intervals in adherence to USPSTF recommendations, promoting avoidance of unnecessary procedures and costs; however, the measure doesn't assess for

compliance. Therefore, the clinician may meet numerator compliance for all denominator eligible patients, but this would not indicate future appropriate use and screening. We acknowledge the commenters' concerns that measure Q320 is currently the only colonoscopy-specific quality measure reportable outside a QCDR. Although topped-out measures address important aspects of care, the underlying quality actions are generally considered standard practice and offer limited opportunity for further improvement in clinical outcomes. Removal of the measure does not preclude continuation of the underlying quality actions. While the measure was identified as being eligible for the defined topped-out benchmark and, therefore eligible to receive over 7 points, the measure's consistently high performance indicates little variability in completion of this quality action. Please note that measure Q113: *Colorectal Cancer Screening* is available for the Medicare Part B Claims collection type for MVP reporting and assesses appropriate colorectal cancer screening at the clinician-level. We continue to encourage the development of new quality measures to fill important gaps in quality care that continue to drive high-quality outcomes.

Comment: Two commenters opposed removal of measure Q320, stating that the measure ensures adherence to USPSTF recommendations for a 10-year follow-up interval after a normal, high-quality colonoscopy in average-risk adults and promotes clear communication of follow-up recommendations to patients and referring clinicians and is appropriately attributed at the individual clinician level within MIPS. They noted that this measure is also included in the CQMC Gastroenterology core measure set.

Response: We thank the commenters for their feedback and acknowledge the concern regarding the removal of measure Q320. We acknowledge the measure's role in supporting clear communication of follow-up intervals in adherence to USPSTF recommendations, promoting avoidance of unnecessary procedures and costs; however, the measure doesn't assess for compliance. Therefore, the clinician may meet numerator compliance for all denominator eligible patients, but this would not indicate future appropriate use and screening. We endeavor to maintain alignment in measures across programs; however, for the purposes of MIPS, reporting this measure doesn't produce meaningful benchmarks allowing for distinctions in quality of care.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44416), we are finalizing the removal of measure Q320 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.11 Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	326
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percentage of patients aged 18 years and older with atrial fibrillation (AF) or atrial flutter who were prescribed an FDA-approved oral anticoagulant drug for the prevention of thromboembolism during the measurement period.
Measure Steward	American Heart Association
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), at the measure steward's request because it will no longer be maintained for inclusion.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Cardiology, Family Medicine, Internal Medicine, Skilled Nursing Facility

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: Two commenters opposed removal of measure Q326: *Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy* because this measure would result in only one atrial fibrillation-related measure in the MIPS quality measure inventory, measure Q392: *Cardiac Tamponade and/or Pericardiocentesis Following Atrial Fibrillation Ablation*, which focuses on adverse events for an atrial fibrillation procedure that is only relevant to a subset of the overall atrial fibrillation population. One of these commenters suggested that CMS retain measure Q326 until CMS adopts a clinically appropriate successor measure focused on stroke risk reduction.

Response: We thank the commenters for their feedback. We acknowledge the concern that removal of measure Q326 would leave only one atrial fibrillation-related measure (Q392) in the MIPS quality inventory and that measure Q392 applies only to a subset of the atrial fibrillation population. However, as the measure steward is no longer supporting Q326, we are unable to continue implementation within MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44416 through 44417), we are finalizing the removal of measure Q326 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.12 Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	332
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of acute bacterial sinusitis that were prescribed amoxicillin, with or without clavulanate, as a first line antibiotic at the time of diagnosis.
Measure Steward	American Academy of Otolaryngology – Head and Neck Surgery Foundation (AAO-HNSF)
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure is duplicative in clinical topic of measure Q331: *Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse)*. Measure Q331 assesses patients with a diagnosis of acute viral sinusitis for receipt of antibiotics within 10 days of symptoms onset, highlighting inappropriate use of antibiotics in eligible patients. Measure Q331 is broader than measure Q332 as it encourages avoidance of prescribing any antibiotic for viral illnesses, capturing the patient populations found in both measures. Measure Q332 is narrower in scope, focusing only on patients with bacterial sinusitis appropriately receiving an antibiotic, impacting a smaller proportion of sinusitis cases.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Allergy/Immunology, Emergency Medicine, Family Medicine, Internal Medicine, Otolaryngology, Urgent Care

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the removal of measure Q332: *Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use)*, stating that its narrow scope limits meaningful reporting for many otolaryngology practices. The commenter encouraged CMS to retain measure Q331 as a more broadly relevant alternative.

Response: We thank the commenter for supporting the removal of this measure from MIPS. We note that measure Q331 was not proposed for removal from MIPS.

Comment: One commenter strongly opposed removal of measure Q332 because it is a key tool for antimicrobial stewardship and resistance prevention. The commenter disagreed that measure Q332 is duplicative of measure Q331, noting that measure Q331 addresses whether to prescribe antibiotics at all for viral sinusitis, while measure Q332 addresses which antibiotic to prescribe for bacterial sinusitis, representing two distinct clinical decisions in mutually exclusive patient populations. The commenter argued that removing measure Q332 would create a critical stewardship gap by failing to address inappropriate broad-spectrum antibiotic use in patients who genuinely need treatment, particularly given that acute sinusitis is a common source of overly broad outpatient antibiotic prescribing. The commenter urged CMS to retain measure Q332 or clearly identify replacement measures that will promote appropriate outpatient antibiotic selection, and more broadly to preserve and expand antimicrobial stewardship–relevant measures to support national efforts by HHS and CDC to combat antimicrobial resistance.

Response: We agree that appropriate antibiotic prescribing is essential, and MIPS will continue assessing overuse through measure Q331. To maintain a streamlined yet robust measure set, we are retaining this overuse measure as a critical first element. Per AAO-HNSF guidelines, only about 50 percent of clinically diagnosed acute bacterial rhinosinusitis (ABRS) cases have positive bacterial cultures, and many resolve spontaneously, making randomized controlled trial (RCT)-based efficacy difficult to determine.[498] Amoxicillin (with or without clavulanate) is recommended for its safety, efficacy, low cost, narrow spectrum, and alignment with antimicrobial stewardship principles, rather than RCT outcomes. As this measure targets a subpopulation already covered by measure Q331, we maintain that these actions would be part of the same episode of care given that the choice of antibiotic would follow the decision to treat with an antibiotic. We therefore proposed its removal, while encouraging the measure steward to incorporate this aspect into measure Q331 for a more comprehensive assessment of appropriate ABRS care.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44417), we are finalizing the removal of measure Q332 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

---

[498] Payne, S. C., McKenna, M., Buckley, J., Colandrea, M., Chow, A., Detwiller, K., Donaldson, A., Dubin, M., Finestone, S., Filip, P., Khalid, A., Peters, A. C.13 Total Knee or Hip Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	350
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percentage of patients regardless of age undergoing a total knee or total hip replacement with documented shared decision-making with discussion of conservative (non-surgical) therapy (e.g., non-steroidal anti-inflammatory drug (NSAIDs), analgesics, weight loss, exercise, injections) prior to the procedure.
Measure Steward	American Association of Hip and Knee Surgeons
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because it is a process measure. Removing this process measure will support the goal of prioritizing measures that improve patient outcomes and have meaningful impact. Additionally, this measure is not prescriptive to conservative therapy utilization; therefore, it only assesses for informed consent, which is a standard of care for any clinician. In the CY 2019 (83 FR 59763 through 59765) and CY 2020 (84 FR 62957) PFS final rules, we communicated to interested parties our desire to reduce the number of process measures within the MIPS quality measure set. In the CY 2017 QPP final rule (81 FR 77101), we explained that outcome measures are more valuable than clinical process measures and are instrumental to improving the quality-of-care patients receive. In the CY 2025 PFS final rule (89 FR 98561), we codified under § 414.1330(c)(1)(vii) that CMS uses the following criteria to determine the removal of a quality measure: If the quality measure is a process measure.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Orthopedic Surgery

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter indicated that measure Q350: *Total Knee or Hip Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy* was reported primarily through MVPs with more than 2,500 of the over 4,000 reporting groups using the MVP reporting option. As indicated under Table C.3 of this Appendix, the commenter expressed concerns about the topped-out methodology as the basis for removing measures from MIPS. Similarly, a second commenter requested CMS retain this measure and apply the defined topped out benchmark.

Another commenter opposed removal of measure Q350, stating that it promotes meaningful shared decision-making and that removing it would further limit MIPS CQM options, particularly within the Improving Care for Lower Extremity Joint Repair MVP. The commenter noted that reducing measure availability disproportionately harms clinicians without CEHRT and specialists with few applicable measures.

Response: We thank the commenters for their feedback and acknowledge their concern regarding this measure. In developing this proposal, we sought to balance meaningful quality reporting with the resources and operational demands required to collect measures that may not meaningfully inform performance. Although topped-out measures may address important aspects of care, the underlying quality actions are generally considered standard practice and; therefore, represent a relatively low bar for measuring quality performance, offering limited opportunity to drive or discern improvement in clinical outcomes. We appreciate the commenters' input on measure Q350. While the measure was identified as being eligible for the defined topped-out benchmark and, therefore eligible to receive over 7 points, removing this process measure will better support the goal of prioritizing measures that improve patient outcomes.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44418), we are finalizing the removal of measure Q350 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.14 Children Who Have Dental Decay or Cavities

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	378
CMS eCQM ID:	CMS75v15
Collection Type:	eCQM
Measure Description:	Percentage of children, 1 - 20 years of age at the start of the measurement period, who have had tooth decay or cavities during the measurement period as determined by a dentist.
Measure Steward:	Centers for Medicare & Medicaid Services
Measure Type:	Outcome
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), due to the robustness of the measure. This measure lacks a quality action that can be attributed to the clinicians reporting it, and as a result, the current scoring methodology for determination of measure achievement points for this measure is not a reflection of the quality of care provided. This measure focuses on incidence of tooth decay or cavities rather than the quality of care delivered, as patients will be attributed to clinicians based on encounter and not whether they have been involved in the patient's care. Therefore, it is likely they had no impact on the outcome being assessed. While tracking the incidence of tooth decay or cavities identifies the prevalence of the issue, it is not a reflection of the quality of care given, as currently specified, and does not promote meaningful dental care interventions that will drive improvements in oral health outcomes. The lack of an actionable quality assessment reduces the overall robustness of the measure.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Dentistry

We received no public comments on the proposed removal of this measure. For the reasons stated above and in the proposed rule (91 FR 44418), we are finalizing the removal of measure Q378 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.15 Adult Primary Rhegmatogenous Retinal Detachment Surgery: No Return to the Operating Room Within 90 Days of Surgery

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	384
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Patients aged 18 years and older who had surgery for primary rhegmatogenous retinal detachment who did not require a return to the operating room within 90 days of surgery.
Measure Steward:	American Academy of Ophthalmology
Measure Type:	Outcome
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure has reached the end of the topped-out lifecycle (82 FR 53640) and has a limited opportunity to improve clinical outcomes. This measure's continued topped-out status is based on the current 2026 MIPS benchmarking data located at *https://qpp.cms.gov/reporting-requirements/measures-activities/benchmarks*, in addition to previous years MIPS benchmarking data. For more information on benchmarks, see the MIPS 2026 Quality Benchmarks User Guide at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3611/2026-Quality-Benchmarks-User-Guide.pdf.*
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Ophthalmology

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table C.3 of this Appendix, one commenter urged CMS to implement a more thorough and thoughtful process based on specific criteria when identifying whether a measure is topped out and potentially considered for removal from MIPS. Using data from the 2024 QPP Experience Public Use File (*https://data.cms.gov/quality-of-care/quality-payment-program-experience/data*), this measure only had 154 individuals and groups out of the more than 11,000 ophthalmologists reporting the measure, with almost half classified as a small practice. A few commenters opposed removal based on topped-out status and stated there are limited measures in the Complete Ophthalmologic Care MVP and that retinal specialists face limited measure choice.

Response: We thank the commenters for their feedback and acknowledge the concern regarding the removal of measure Q384: *Adult Primary Rhegmatogenous Retinal Detachment Surgery: No Return to the Operating Room Within 90 Days of Surgery* due to the topped-out lifecycle of the measure; however, in developing this proposal, we sought to balance meaningful quality reporting with the resources and operational demands required to collect measures that may not meaningfully inform performance. Measure adoption is a statistic reviewed when identifying quality measures for removal and is included as part of the overarching criteria used for quality measure inventory refinements. Given the measure's current performance data, no meaningful comparisons can be made to drive quality improvement, which is MIPS goal. The Complete Ophthalmologic Care MVP for 2027 will have 8 MIPS quality measures available for reporting across the Retinal Disease (5 measures), Advancing Health and Wellness (2 measures), and Experience of Care (1 measure) clinical groupings.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44418 through 44419), we are finalizing the removal of measure Q384 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.16 Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 18 Years and Older

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	415
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percentage of emergency department visits for patients aged 18 years and older who presented with a minor blunt head trauma who had a head CT for trauma ordered by an emergency care provider who have an indication for a head CT.
Measure Steward:	American College of Emergency Physicians
Measure Type:	Efficiency
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure has reached the end of the topped-out lifecycle (82 FR 53640) and has a limited opportunity to improve clinical outcomes. This measure's continued topped-out status is based on the current 2026 MIPS benchmarking data located at *https://qpp.cms.gov/reporting-requirements/measures-activities/benchmarks*, in addition to previous years MIPS benchmarking data. For more information on benchmarks, see the MIPS 2026 Quality Benchmarks User Guide at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3611/2026-Quality-Benchmarks-User-Guide.pdf.*
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Emergency Medicine

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table C.3 of this Appendix, one commenter urged CMS to implement a more thorough and thoughtful process based on specific criteria when identifying whether a measure is topped out and potentially considered for removal from MIPS. Using data from the 2024 QPP Experience Public Use File (*https://data.cms.gov/quality-of-care/quality-payment-program-experience/data*), just under 2,000 out of the more than 25,000 emergency medicine physicians reported this measure with roughly 30 percent of them serving within a health professional shortage area; a similar percentage were also classified with safety-net status and a quarter were rural. A second commenter did not support removal of Q415 based on topped-out status.

Response: We thank the commenters for their feedback and acknowledge the concern regarding the removal of measure Q415: *Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 18 Years and Older* due to the topped-out lifecycle of the measure. While this measure was identified as being eligible for the defined topped-out benchmark and may still represent an important aspect of care, the associated quality actions are generally considered a standard of practice, presenting limited opportunity to further improve clinical outcomes. Measure adoption is a statistic reviewed when identifying quality measures for removal and is included as part of the overarching criteria used for quality measure inventory refinements. Removing this measure will better support the goal of prioritizing measures that promote meaningful quality reporting showing improvement in clinical quality care. The Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP for 2027 will have 6 MIPS quality measures available for reporting by emergency medicine clinicians.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44419), we are finalizing the removal of measure Q415 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.17 Prevention of Post-Operative Nausea and Vomiting (PONV) – Combination Therapy

Category	Description
CBE # / eCQM CBE #:	N/A /N/A
Quality#:	430
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percentage of patients, aged 18 years and older, who undergo a procedure under an inhalational general anesthetic, AND who have three or more risk factors for post-operative nausea and vomiting (PONV), who receive combination therapy consisting of at least two prophylactic pharmacologic antiemetic agents of different classes preoperatively and/or intraoperatively.
Measure Steward:	American Society of Anesthesiologists
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because the quality action being measured has become a standard of care, based upon MIPS performance data, and thus has limited opportunity to improve clinical outcomes. The average performance for this measure, 99.34 percent, is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance rate is based on the current 2026 MIPS benchmarking data located at *https://qpp.cms.gov/reporting-requirements/measures-activities/benchmarks.* For more information on benchmarks, see the MIPS 2026 Quality Benchmarks User Guide at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3611/2026-Quality-Benchmarks-User-Guide.pdf.*
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Anesthesiology

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter opposed removal of measures Q430: *Prevention of Post-Operative Nausea and Vomiting (PONV) – Combination Therapy* and Q463: *Prevention of Post-Operative Vomiting (POV) – Combination Therapy (Pediatrics)* from MIPS, emphasizing the measures capture most anesthesia patients and reflect a core, clinically integrated component of anesthesia care. The commenter noted that PONV remains a common, clinically significant, and preventable complication that affects patient comfort, satisfaction, recovery, and resource use, and stated that high MIPS scores should not be interpreted as evidence that the underlying quality gap has been eliminated or that performance is uniform across the broader clinical population. The commenter indicated that their submissions showed far fewer facilities achieving very high performance compared with CMS data, suggesting discrepancies in measure definition, implementation, and data capture.

The commenter stated that removing measures Q430 and Q463 would increase administrative burden because the measures are already embedded in existing data-capture systems and workflows, while adopting the newly proposed Patient-Reported Experience with Anesthesia and IOH measures would require significant vendor engagement, system updates, and workflow changes over several months. They argued that inclusion of these new measures should not be viewed as replacing measures Q430 and Q463 and encouraged CMS to maintain the existing measures until anesthesia groups can transfer to reporting the two newly proposed measures. To ensure continuity and reporting flexibility as clinicians move from traditional MIPS to MVPs, the commenter encouraged CMS to retain measure Q430 either within traditional MIPS or, at a minimum, as an MVP-only measure in the Anesthesia MVP.

A second commenter opposed removal of measure Q430 because it would eliminate an anesthesia measure and create a significant and inequitable barrier to successful MIPS participation for anesthesia clinicians and groups. This would impact the number of quality measures available in the Patient Safety and Support of Positive Experiences with Anesthesia MVP and would result in a practice needing to use a QCDR measure to satisfy the reporting requirement.

Response: We thank the commenters for their feedback and acknowledge their concern regarding the removal of anesthesia measures. In developing this proposal, we sought to balance meaningful quality reporting with the resources and operational demands required to collect measures that may not meaningfully inform performance. Although topped-out measures address important aspects of care, the underlying quality actions are generally considered standard practice; the continued high-performance rates don't allow for meaningful benchmarking, offering limited opportunity for further improvement in clinical outcomes. We appreciate the commenter's input on measures Q430 and Q463. While the measures were identified as being eligible for the defined topped-out benchmark and, therefore eligible to receive over 7 points, the measures' consistently high performance indicates little variability in completion of this quality action across reporting within MIPS. We recognize changes to the measure inventory may lead to system rework and updating; however, we don't want to maintain measures in MIPS that are no longer showing actionable data to drive quality care. To support continued robust anesthesia-related reporting, as the commenter stated above, we have proposed two new MIPS CQMs under Tables A.8 (*Patient-Reported Experience with Anesthesia*) and A.9 (*Intraoperative Hypotension (IOH) Among Non-Emergent Noncardiac Surgical Cases*) of this Appendix, maintaining the current number of four available MIPS CQMs.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44420), we are finalizing the removal of measure Q430 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.18 Prevention of Post-Operative Vomiting (POV) – Combination Therapy (Pediatrics)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	463
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percentage of patients aged 3 through 17 years, who undergo a procedure under general anesthesia in which an inhalational anesthetic is used for maintenance AND who have two or more risk factors for post-operative vomiting (POV), who receive combination therapy consisting of at least two prophylactic pharmacologic anti-emetic agents of different classes preoperatively and/or intraoperatively.
Measure Steward:	American Society of Anesthesiologists
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2018 Quality Payment Program final rule (82 FR 53966 through 53975), because the quality action being measured has become a standard of care, based upon MIPS performance data, and thus has limited opportunity to improve clinical outcomes. The average performance for this measure, 98.99 percent, is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance rate is based on the current 2026 MIPS benchmarking data located at *https://qpp.cms.gov/reporting-requirements/measures-activities/benchmarks.* For more information on benchmarks, see the MIPS 2026 Quality Benchmarks User Guide at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3611/2026-Quality-Benchmarks-User-Guide.pdf.*
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Anesthesiology

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter opposed removal of measure Q463: *Prevention of Post-Operative Vomiting (POV) – Combination Therapy (Pediatrics)* because it would eliminate an anesthesia measure and create a significant and inequitable barrier to successful MIPS participation for anesthesia clinicians and groups. This commenter also opposed removal of measure Q430: *Prevention of Post-Operative Nausea and Vomiting (PONV) – Combination Therapy* with full comments under Table C.17 of this Appendix. This measure's removal would impact the number of quality measures available in the Patient Safety and Support of Positive Experiences with Anesthesia MVP and would result in a practice needing to use a QCDR measure to satisfy the reporting requirement. This commenter and a second commenter recommended maintaining measures Q430 (under Table C.17 of this Appendix) and Q463 as MVP-only measures.

Response: We thank the commenters for their feedback and acknowledge their concern regarding the removal of anesthesia measures. In developing this proposal, we sought to balance meaningful quality reporting with the resources and operational demands required to collect measures that may not meaningfully inform performance. Although topped-out measures address important aspects of care, the associated quality actions are generally considered standard practice and offer limited opportunity to further improve clinical outcomes. While the measures were identified as being eligible for the defined topped-out benchmark and, therefore eligible to receive over 7 points, the measure's consistent high performance indicates little variability in completion of this quality action. The removal of the measure does not preclude continuation of the underlying quality actions. To support continued robust anesthesia-related reporting, we are finalizing two new anesthesia measures under Tables A.8 and A.9 of this Appendix, maintaining the current number of 4 available MIPS CQMs.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44420), we are finalizing the removal of measure Q463 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.19 Functional Status Change for Patients with Neck Impairments

Category	Description
CBE # / eCQM CBE #:	3461 / N/A
Quality#:	478
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	A patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients 14 years+ with neck impairments. The change in FS is assessed using the FOTO Neck FS PROM. The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient, individual clinician, and clinic levels to assess quality.
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2020 Quality Payment Program final rule (84 FR 63205 through 63213), because this measure is duplicative of the Functional Improvement for Patients with Neck Impairments measure being finalized in Table A.2 of this Appendix. Measure Q478 is specific to neck impairments and restricts clinicians to the use of the proprietary tool FOTO Neck FS PROM or a manual crosswalk for numerator assessment. The new measure in Table A.2 of this Appendix is a more comprehensive patient-reported outcome-based performance measure. The new measure allows the use of various validated assessment tools, such as the Neck Disability Index, PROMIS Pain Interference, or equivalent tools. The new measure focuses on clinically meaningful outcomes by assessing improvement against the P-MCI, a patient-specific, risk-adjusted threshold. This measure incorporates a risk adjustment model that will improve feasibility of reporting as all information to calculate performance will be provided by the measure steward.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Chiropractic Medicine, Orthopedic Surgery, Physical Therapy/Occupational Therapy

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table C.4 of this Appendix, a few commenters supported the proposal to replace the FOTO functional status measures with the new functional improvement measures in Table A of this Appendix.

Response: We thank the commenters for supporting the removal of this measure from MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44421), we are finalizing the removal of measure Q478 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.20 Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM)

Category	Description
CBE # / eCQM CBE #:	3568 / N/A
Quality#:	483
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	The Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) uses the PCPCM Patient Reported Outcome Measure (PROM) a comprehensive and parsimonious set of 11 patient-reported items - to assess the broad scope of primary care. Unlike other primary care measures, the PCPCM PRO-PM measures the high value aspects of primary care based on a patient's relationship with the clinician or practice.
Measure Steward:	The American Board of Family Medicine
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2020 Quality Payment Program final rule (84 FR 63205 through 63213), because the limited adoption of this quality measure does not allow for the creation of a benchmark after being in the program for two consecutive CY performance periods. For more information on benchmarks, see the MIPS 2026 Quality Benchmarks User Guide at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3611/2026-Quality-Benchmarks-User-Guide.pdf*. The current 2026 MIPS benchmarking data is located at *https://qpp.cms.gov/reporting-requirements/measures-activities/benchmarks.*
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Family Medicine, Internal Medicine

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported removing measure Q483: *Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM)*, noting concerns about whether the measure would meaningfully lead to improvements in care, a lack of evidence to demonstrate such improvement, and the instrument lacking face validity. The commenter stated that the measure is burdensome to implement in a general internal medicine practice.

Response: We thank the commenter for supporting the removal of this measure from MIPS.

Comment: Many commenters opposed removing measure Q483, noting that CMS already uses alternative approaches that could achieve benchmarking goals without eliminating this measure. They emphasized that the PCPCM PRO-PM aligns with the rule's focus on prevention, chronic disease management, longitudinal relationships, and outcomes-based, prospective payment, and that its removal would create a critical gap just as payment reforms most need this tool.

The commenters noted no concerns about the PCPCM's validity, reliability, clinical relevance, or patient burden. The commenters cited the measure is included in the Value in Primary Care MVP and primary care specialty sets, and the ACO Primary Care Flex Model. The measure is CBE-endorsed and a high-priority measure.

They also observed that limited adoption and missing benchmarks are common early on. Over 30 percent of current MIPS measures lack national benchmarks. CMS can use performance-period benchmarks, and scoring floors encourage reporting before benchmarks form; removing the broader 3-point floor in 2023 may have dampened adoption and slowed benchmark development. One commenter urged CMS to retain this measure and consider alternative scoring approaches such as a scoring floor.

The National Academies of Sciences, Engineering, and Medicine (NASEM) Standing Committee on Primary Care calls for metrics on core primary care functions (access, continuity, comprehensiveness, coordination, person-centeredness). PCPCM is the only validated, low-burden patient-reported measure of these kind and commenters believed its removal would undercut the "Redesigning Primary Care to Make America Healthy Again" initiative. The commenters recommended CMS retain measure Q483, apply a defined scoring floor for 2 performance periods, and keep it in the Value in Primary Care MVP and primary care specialty sets.

Response: We appreciate the commenters' feedback. While we agree that the measure concept is clinically relevant and aligned with core primary care functions important to the provision of high-quality person-centered care, removal of the measure does not preclude continuation of the underlying quality actions. Regardless of whether a clinician or group is formally assessed on this aspect of care, it should continue to be performed as a component of high-quality care. While commenters suggest relying on performance-period benchmarks and defined scoring floors to encourage ongoing reporting, further continuation of this measure

under the current conditions would prolong reporting burden without reasonable assurance that adequate adoption and benchmarking will be achieved. In addition, the implementation and reporting burden for both clinicians and patients, as well as the measure's non-proportional analytic, can make it challenging to assess performance consistently across all clinician types. We also note that removal would maintain alignment across CMS reporting programs as this measure has been removed from the ACO Primary Care Flex Model.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44421), we are finalizing the removal of measure Q483 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

Table Group D: Finalized and Finalized with Modification Substantive Changes to Previously Finalized MIPS Quality Measures for the CY 2027 Performance Period/2029 MIPS Payment Year and Future Years

The D Tables within this final rule provide the substantive changes finalized for the MIPS quality measures for CY 2027. We requested comments on these substantive changes. Two measures have finalized substantive changes that will result in a new benchmark. All measures with substantive changes are discussed in detail in the tables below. In addition, measures that are endorsed by a CBE are shown in Table Group D of this Appendix as follows: CBE # / eCQM CBE #.

We note that some MIPS quality measures available in traditional MIPS and MVPs are adopted by the Medicare Shared Savings Program for utilization in the Alternative Payment Model (APM) Performance Pathway (APP), specifically the inclusion of such measures in the APP Plus measure set, as finalized in the CY 2025 PFS final rule (89 FR 98363 through 98371). For such measures, the collection types solely applicable for purposes of the APP Plus measure set (Medicare Clinical Quality Measures for Accountable Care Organizations (ACOs) Participating in the Medicare Shared Savings Program (Medicare CQMs) collection type and newly finalized Medicare Electronic Clinical Quality Measures for ACOs Participating in the Medicare Shared Savings Program (Medicare eCQMs) collection type as described in section IV.A.4.d.(1)(c)(v) of this final rule) are also specified as a collection type available for such relevant measures described in Table Group D.

Changes made to denominator code sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2027 may not be identified within this final rule due to their later publication. Coding revisions to the denominator may be postponed until CY 2028, if measure steward review and their ability to implement the coding changes are impacted due to the timing of 2027 CPT and ICD-10 updates. The 2027 Quality Measure Release Notes provide a comprehensive, detailed reference of exact code changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types on the QPP website at *https://qpp.cms.gov*.

In addition to the proposed substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but they are important to communicate to interested parties. These changes align with the scope of the current coding; however, though not substantive in nature, these changes will expand or contract the measure's current eligible population. Therefore, please refer to the current year measure specification and the 2027 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation. Language has been added to all quality measure specifications in the form of a revised 'Instructions Note' to clearly identify if telehealth encounters are allowed for denominator eligibility regardless of changes in coding or billing practices that may occur. Eligibility of telehealth encounters will be based on the intent of the measure and those settings that are appropriate for inclusion.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the substantive changes, there may be revisions within the logic that are not considered substantive in nature; however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow for the most accurate implementation.

As indicated in the introduction to Table Group B of this Appendix, comments on measures that have substantive changes that are not related to what was proposed are considered out of scope and are not included in this final rule. In addition, requested changes on previously finalized measures that were not proposed under the CY 2027 PFS proposed rule are also out of scope to this final rule.

Section 1848(q)(2)(D)(i)(II)(cc) of the Act requires all substantive measure changes to be proposed and identified through notice-and-comment rulemaking. We have previously established criteria that will apply when we are considering making substantive changes to a quality measure (81 FR 77137 and 86 FR 65441 through 65442). On an annual basis, we review the established MIPS quality measure inventory to identify appropriate updates to the measures, based on, but not limited to, interested party feedback, known issues, and clinical guideline updates, for measure steward consideration. The measure steward is responsible for the maintenance of a measure and serves as the primary contact for suggested revisions for possible implementation in future years.

Commenters who requested clarifications on how to implement previously finalized quality measures should contact the QPP Service Center by emailing QPP@cms.hhs.gov, submitting a QPP Service Center ticket, or calling 1-866-288-8292 (Monday-Friday, 8 a.m. – 8 p.m. ET).

D.1 Diabetes: Glycemic Status Assessment Greater Than 9%

Category	Description
CBE # / eCQM CBE #:	0059 / N/A
Quality#:	001
CMS eCQM ID:	CMS122v15
Current Collection Type:	Medicare Part B Claims Measure / eCQM / Medicare CQM / MIPS CQM
Current Measure Description:	Percentage of patients 18-75 years of age with diabetes who had a glycemic status assessment (hemoglobin A1c [HbA1c] or glucose management indicator [GMI]) > 9.0% during the measurement period.
Substantive Change:	**Modified collection type:** Medicare Part B Claims Measure, eCQM, Medicare CQM, MIPS CQM, Medicare eCQM collection types. **Updated logic: For the eCQM collection type: Revised:** to prioritize identifying numerical glycemic status results over null values.
Measure Steward:	National Committee for Quality Assurance
MIPS Core Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We proposed to update the logic of the eCQM collection type to ensure clinically meaningful data is prioritized for inclusion in the measure, better aligning with the measure intent. We also proposed to update the collection types available for this measure to include the Medicare eCQM collection type to allow choice in submission method for Medicare Shared Savings Program ACOs reporting the APP Plus measure set. See section IV.A.4.d.(1)(c)(v) of this final rule for further information on the Medicare eCQM collection type.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the substantive changes to measure Q001: *Diabetes: Glycemic Status Assessment Greater Than 9%* to prioritize numerical glycemic status results over null values.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44422), we are finalizing the changes to measure Q001 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.2 Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	102
CMS eCQM ID:	CMS129v16
Current Collection Type:	eCQM / MIPS CQM
Current Measure Description:	Percentage of patients, regardless of age, with a diagnosis of prostate cancer at low (or very low) risk of recurrence receiving interstitial prostate brachytherapy, OR external beam radiotherapy to the prostate, OR radical prostatectomy who did not have a bone scan performed at any time since diagnosis of prostate cancer.
Substantive Change:	**Updated measure logic and logic definitions: For the eCQM collection type: Added:** Gleason Grade Group and anatomical site specificity for tumor staging. **Updated value set/coding: For the eCQM collection type: Added:** two direct reference codes representing Gleason Grade Group and value set 'Prostate Anatomical Site' (2.16.840.1.113762.1.4.1248.411). **Updated definition: For the MIPS CQM collection type**: **Added:** PET/CT, Ga-68 PSMA-11, F-18 flotufolastat PSMA PET/CT, PET/MRI (full body imaging) to 'Bone Scan'.
Measure Steward:	Centers for Medicare & Medicaid Services
MIPS Core Measure:	Yes
Measure Type:	Process
Rationale:	For the eCQM collection type, we proposed the addition of Gleason Grade Group and anatomical site specificity for tumor staging to facilitate the capture of low or very low risk of prostate cancer. With this addition to the eCQM, we also proposed revising the measure logic to include coding that will capture Gleason Grade Group as an option for assessing prostate cancer risk, as well as the addition of value set 'Prostate Anatomical Site,' which will ensure anatomical site specificity for tumor staging. For the MIPS CQM collection type, we proposed the addition of PET/CT, Ga-68 PSMA-11, F-18 flotufolastat PSMA PET/CT imaging, and PET/MRI (full body imaging) to the measure, to align with guideline-directed avoidance of advanced imaging related to low or very low risk prostate cancer.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported reducing low-value imaging but opposed including these newer molecular imaging modalities in measure Q102: *Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients* at this time because their role in evaluating prostate cancer is still evolving. Labeling these tools as overuse now could discourage clinically appropriate imaging for select low-risk patients who may still have metastatic disease and require individualized assessment. The commenter urged CMS to delay including PSMA PET and other advanced imaging in measure Q102 until there is stronger clinical consensus and clearer guidance to avoid penalizing appropriate patient care.

Response: We thank the commenter for their feedback. We acknowledge the commenter's request that the PSMA PET[499] and other advanced imaging be removed; however, the measure steward refined the list to include appropriate imaging for clarity and purposes of reporting this measure. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44423), we are finalizing the changes to measure Q102 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

[499] Fendler, W. P., Eiber, M., Beheshti, M., et al. (2017). 68Ga-PSMA PET/CT: Joint EANM and SNMMI Procedure Guideline for Prostate Cancer Imaging: Version 1.0. *European Journal of Nuclear Medicine and Molecular Imaging, 44*, 1014–1024. https://doi.org/10.1007/s00259-017-3670-z.

D.3 Documentation of Current Medications in the Medical Record

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	130
CMS eCQM ID:	CMS68v16
Current Collection Type:	eCQM / MIPS CQM
Current Measure Description:	Percentage of visits for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.
Substantive Change:	**Updated value set/coding**: **For the eCQM collection type: Revised:** Direct Reference Code (DRC) "Acute health crisis (finding)" (SNOMEDCT Code (705016005)) to value set 'Acute Health Crisis' (OID: 2.16.840.1.113762.1.4.1248.429) to allow for additional conditions to qualify for the exception. **Updated value set/coding**: **For the eCQM collection type: Revised:** 'Encounter to Document Medications' (2.16.840.1.113883.3.600.1.1609) to remove CPT code 99211 and add CPT code 92622 as outlined in the previous EKI.[500]
Measure Steward:	Centers for Medicare & Medicaid Services
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to update the coding for the eCQM collection type to ensure the measure includes additional coding for the denominator exception, aligning with measure intent and allowing for mapping to equivalent appropriate clinical circumstances. Additionally, the encounter coding has been revised to ensure the appropriate patient population is being captured in the denominator for assessment.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the substantive changes to measure Q130: *Documentation of Current Medications in the Medical Record* to expand the SNOMEDCT code set to allow for the additional exceptions. One commenter supported the substantive changes and continued to recommend that we define "Acute Health Crisis" clearly due to the importance of accurate medication reconciliation for patients with multimorbidity and polypharmacy.

Response: We thank the commenters for supporting the substantive changes to this measure. We acknowledge the request for a clearer definition of "acute health crisis" and will review and discuss this revision for possible implementation in future years. The value sets within the measure specification will contain all coding applicable to each measure component.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44424), we are finalizing the changes to measure Q130 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

[500] See eCQM Known Issue (EKI) #39 at https://oncprojectracking.healthit.gov/support/browse/EKI-39.

D.4 Preventive Care and Screening: Screening for Depression and Follow-Up Plan

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	134
CMS eCQM ID:	CMS2v16
Current Collection Type:	Medicare Part B Claims Measure / eCQM / Medicare CQM / MIPS CQM
Current Measure Description:	Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter.
Substantive Change:	**Modified collection type:** Medicare Part B Claims Measure, eCQM, Medicare CQM, MIPS CQM, Medicare eCQM collection types. **The measure description is revised to read: For the eCQM collection type:** Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented from the date of the screening to two days after the date of the qualifying encounter or an active depression medication or active depression management intervention was active or prescribed at any time on the date of qualifying encounter. **Updated definition: For the eCQM collection type: Added:** Active Depression Medication or Active Depression Management Intervention Documentation that patient is actively receiving interventions designed to treat depression such as behavioral health evaluation, psychotherapy, pharmacological interventions, or additional treatment options. **Updated guidance: For the eCQM collection type: Added:** clarifying language on screening tool to be used for screening a 17-year-old, and which screening should be used to satisfy the numerator. **The measure numerator is revised to read: For the eCQM collection type:** Patients screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented from the date of the screening to two days after the date of the qualifying encounter or an active depression medication or active depression management intervention was active or prescribed at any time during the qualifying encounter. **Updated numerator definition: For the MIPS CQM, Medicare CQM, and the Medicare Part B Claims Measure collection types: Added:** Prior screening within performance period: Patient previously screened by another clinician using an age-appropriate standardized depression screening tool with documented results within the performance period AND if positive, a follow-up plan is documented. **Updated denominator exception: For the MIPS CQM, Medicare CQM, and the Medicare Part B Claims Measure collection types: Added:** Screening for depression not completed, previous patient screening with results documented within performance period.
Measure Steward:	Centers for Medicare & Medicaid Services
MIPS Core Measure:	Yes
Measure Type:	Process
Rationale:	For the eCQM collection type, we proposed to expand the numerator so that an active depression medication or depression management intervention that is prescribed or in place at any time on the date of the qualifying encounter may meet the numerator quality action.[501] We proposed to revise the language in the description, definitions, and numerator statement to reflect the proposed revision and align with measure logic. We also proposed clarifying the screening tools that may be used to satisfy the measure for patients who are 17 years old at the start of the measurement period, as this age group may fall into a transitional category requiring unique considerations for tool selection. For the MIPS CQM, Medicare CQM, and Medicare Part B Claims Measure collection types, we proposed adding a new denominator exception for patients with documentation of being previously screened, with a follow-up care plan documented if appropriate, in accordance with the measure requirements, by another clinician within the performance period to enhance team-based, coordinated, and patient-centered care processes between clinicians.[502]

Category	Description
	We also proposed to update the collection types available for this measure to include the Medicare eCQM collection type to allow choice in submission method for Medicare Shared Savings Program ACOs reporting the APP Plus measure set. See section IV.A.4.d.(1)(c)(v) of this final rule for further information on the Medicare eCQM collection type.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the substantive changes to measure Q134: *Preventive Care and Screening: Screening for Depression and Follow-Up Plan* but expressed concern that differences between the eCQM and MIPS CQM requirements create unnecessary documentation burden and introduce performance variation unrelated to care quality. One of the commenters supported the proposed denominator exception for a patient that was previously screened within the same performance year but noted that it was not proposed for the eCQM collection type. Another commenter indicated the eCQM allows an active depression medication or an active depression management intervention to satisfy the follow-up requirement, while the MIPS CQM accepts only documentation of a follow-up plan. Commenters recommended aligning the eCQM and MIPS CQM criteria to reduce burden, improve consistency, and better represent real clinical pathways for depression identification and management.

Response: We thank the commenters for supporting the substantive changes to this measure. We reviewed and discussed this revision for all collection types; however, these revisions are unnecessary for the eCQM collection type, where the measure logic, and patient-based structure, already address and resolve the issue. The additional language and measure component are needed for appropriate implementation of the MIPS CQM, Medicare CQM, and the Medicare Part B Claims Measure collection types as they don't contain the same measure logic as the eCQM collection type. Therefore, differences in measure specification language and requirements between collection types reflect nuances in implementation within MIPS and address the abilities and constraints specifically inherent to each collection type.

Comment: One commenter appreciated CMS' proposed denominator exception for depression screening but stated it does not fully fix implementation problems for ACOs, especially when aggregating data across multiple practices and EHRs. The commenter recommended clarifying across all reporting options that one depression screen with follow-up (if positive) at any time in the performance period is sufficient, using the most recent screen if multiple exist, which would eliminate the need for the denominator exception. Similarly, another commenter stated the denominator exception for prior screenings within the performance period adds unnecessary complexity and instead recommended updating the numerator to: "Patients screened for depression during the measurement period using an age-appropriate standardized tool and if positive, a follow-up plan is documented on the date of or up to two days after the positive screening." The commenter also requested removal of the requirement that screening occur on the date of the encounter or up to 14 days prior, because tying screening to denominator-eligible encounters relies on billing rules rather than clinical relevance and penalizes clinicians when screening is done at non-eligible encounters despite meeting best practices.

Response: We thank the commenters for their feedback. We will review and discuss this revision for possible implementation in future years as it would be substantive in nature and would need to go through public notice and comment. Regarding implementation at the ACO level, measure Q134 has explicitly defined the timeframe and quality actions necessary to meet the numerator for this once per performance period patient level measure to ensure screenings, results, and care plans are appropriately aligned with best practices. As each collection type may have slight nuances in implementation, this revision has created harmonized specifications and clear guidance on handling multiple encounters and multiple screenings.

Comment: One commenter thanked CMS for expanding the eCQM numerator criteria for measure Q134 by making active depression or active depression management intervention active or prescribed. However, the commenter asked CMS to continue looking at adding CPT codes for measure qualifying encounter expansion. The commenter asked CMS through help desk tickets to consider post-partum visit codes for inclusion. The commenter further asked CMS to consider expanding screening exclusions or exceptions for patients that are unable to be screened as they may be cognitively impaired, non-verbal, or have other disabilities that may prevent them from accurate depression screening. Another commenter supported the substantive changes and requested CMS add CPT code 97168 to the denominator, noting that occupational therapy re-evaluations may identify functional or psychosocial changes that warrant depression screening and follow-up.

Response: We thank the commenters for supporting the substantive changes to this measure. We will review and discuss this revision for possible implementation in future years as it would be substantive in nature and would need to go through public notice and comment. We note this measure contains other occupational therapy codes within the measure's denominator eligible encounters. Therefore, patients being reevaluated should already be found within the denominator and assessed for depression screening; however, this doesn't preclude the quality action from being completed as a matter of high-quality care based on clinician judgement at any encounter.

Comment: One commenter did not support the proposed eCQM requirement that depression medication or depression management be active or prescribed only on the date of the qualifying encounter and instead recommended allowing documentation on or before that date to avoid unnecessary re-documentation that does not improve care. The commenter requested clarification of what qualifies as an "active depression management intervention" within the eCQM and recommended that a referral for behavioral health evaluation count as an appropriate intervention when clinically indicated. The commenter also

noted that requiring a behavioral health evaluation within 2 days of the encounter is often impractical due to cross-organization care and scheduling limitations and therefore requested clear and flexible eCQM documentation requirements that accommodate care delivered across multiple organizations.

Response: We thank the commenter for their feedback. We encourage the commenter to view the revised measure specification on the eCQI Resource Center (*https://ecqi.healthit.gov/*) for specific information; however, we note that the measure was updated to include a definition for 'Active Depression Medication or Active Depression Management Intervention' as noted in the Substantive Change row in Table D.4 above. We will review and discuss suggested revisions and clarifications for possible implementation in future years as it would be substantive in nature and would need to go through public notice and comment.

Comment: One commenter requested clarification regarding whether and how the exception for patients with documentation of being previously screened would be applied within the Medicare CQM collection methodology.

Response: As stated in the Substantive Change row in Table D.4 above, the numerator definition and denominator exception will be updated within the Medicare CQM collection type. Measure specifications will be posted prior to January 1, 2027.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44425 through 44426), we are finalizing the changes to measure Q134 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.5 Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 20% OR Documentation of a Plan of Care

Category	Description
CBE # / eCQM CBE #:	0563 / N/A
Quality#:	141
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure / MIPS CQM
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) whose glaucoma treatment has not failed (the most recent IOP was reduced by at least 20% from the pre-intervention level) OR if the most recent IOP was not reduced by at least 20% from the pre-intervention level, a plan of care was documented within the 12 month performance period.
Substantive Change:	**Measure description revised to read: For all collection types:** Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) whose glaucoma treatment has not failed (the most recent IOP was reduced by at least 20% from the pre-intervention level) OR if the most recent IOP was not reduced by at least 20% from the pre-intervention level, a plan of care was documented within 7 days after the patient encounter when IOP was assessed. **Updated denominator exclusions: For all collection types: Added:** 1. Eyes with absolute glaucoma blindness 2. Pre-existing visual acuity findings include: Count fingers (CF or FC), Hand motion (HM), Light perception (LP), No light perception (NLP) **Updated numerator: For all collection types: Added:** a plan of care was documented within 7 days after the patient encounter when IOP was assessed. **Updated numerator definition**: **For all collection types: Revised:** definition for Plan of Care to include: The plan of care must be documented within 7 days after the patient encounter when IOP was assessed. **Updated numerator options: For all collection types: Revised:** **Performance Met:** Glaucoma plan of care documented within 7 days after the patient encounter when IOP was assessed
Measure Steward:	American Academy of Ophthalmology
MIPS Core Measure:	Yes
Measure Type:	Outcome
Rationale:	We proposed to update multiple components of the measure for all collection types to align with the added numerator definition that specifies the timing of when the plan of care must be documented in the patient's medical record after the IOP is assessed. This will ensure timely and optimal patient care across clinicians for measure performance, as well as reduce variability in how the measure is applied. We proposed adding denominator exclusions for patients with absolute glaucoma blindness or specific visual acuity findings because they represent end-stage clinical conditions characterized by absolute blindness or profound vision loss, in which further IOP reduction is unlikely to provide meaningful benefit in preserving visual function or slowing glaucoma progression. The exclusions will align with the intent of the measure to assess IOP management in support of preserving remaining visual function and limiting disease progression and will refine the denominator to reflect patients who may reasonably benefit from vision-preserving IOP management and related care planning.[503]

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposed modification to require a glaucoma plan of care to be documented within 7 days after the patient encounter when IOP was assessed for measure Q141: *Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 20% OR Documentation of a Plan of Care*. One commenter supported the substantive changes to the denominator exclusion.

Response: We thank the commenters for supporting the substantive changes to this measure.

Comment: One commenter supported the substantive changes for measure Q141, but requested clarification on whether the exclusion criteria must be met in both eyes.

Response: We thank the commenter for supporting the substantive changes to this measure. For implementation purposes, it would be expected to assess each patient for eligibility and numerator compliance based upon each eye in accordance with the intent to maintain the IOP within a range to ensure any visual field loss is unlikely to significantly reduce a patient's health-related quality of life. Therefore, if a patient meets denominator eligibility based on one or both eyes, it would be expected that

[503] Kastner, A., & King, A. J. (2020). Advanced Glaucoma at Diagnosis: Current Perspectives. *Eye (London, England)*, *34*(1), 116–128. https://doi.org/10.1038/s41433-019-0637-2.

they are assessed for the quality action at that level (one or both eyes); ensuring the patient has received appropriate and complete care for their eyes.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44427), we are finalizing the changes to measure Q141 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.6 Oncology: Medical and Radiation - Plan of Care for Pain

Category	Description
CBE # / eCQM CBE #:	0383 / N/A
Quality#:	144
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain with a documented plan of care to address pain.
Substantive Change:	**Updated denominator note: For Submission Criteria 2: Added:** definition for lookback period in the instance a code has a billing date different from the face-to-face encounter.
Measure Steward:	American Society of Clinical Oncology
MIPS Core Measure:	Yes
Measure Type:	Process
Rationale:	We proposed adding a defined look-back window to identify the encounter at which the plan of care to address pain should be documented for numerator assessment. This will clarify implementation of the numerator assessment, which will ensure reporting is appropriate and consistent across clinician submissions. Addressing treatment-induced pain improves patients' health, quality of life, and long-term survival,[504] and reduces interruption in radiation therapy due to pain, thereby ensuring treatment compliance.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44428), we are finalizing the changes to measure Q144 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

[504] Konopka-Filippow, M., Polityńska, B., Wojtukiewicz, A. M., & Wojtukiewicz, M. Z. (2025). Cancer Pain: Radiotherapy as a Double-Edged Sword. *International Journal of Molecular Sciences*, *26*(11), 5223. https://doi.org/10.3390/ijms26115223.

D.7 Coronary Artery Bypass Graft (CABG): Postoperative Renal Failure

Category	Description
CBE # / eCQM CBE #:	0114 / N/A
Quality#:	167
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients aged 18 years and older undergoing isolated coronary artery bypass graft (CABG) surgery (without pre-existing renal failure) who develop postoperative renal failure or require dialysis.
Substantive Change:	**Updated definitions: Added:** **Denominator:** **Baseline serum creatinine** – Most recent creatinine level obtained prior to the operating room entry **Numerator:** **Postoperative period** – Period begins upon operating room exit and continues to discharge from the hospital after cardiac surgery.
Measure Steward:	Society of Thoracic Surgeons
MIPS Core Measure:	No
Measure Type:	Outcome
Rationale:	We proposed adding two definitions to clarify implementation of the denominator exclusion for documented history of baseline serum creatinine and the numerator assessment timeframe for patients who develop postoperative renal failure or require dialysis. The first definition (baseline serum creatinine) will ensure the denominator eligible patient population is appropriately identified, and the second definition (postoperative period) will clarify the numerator assessment timeframe. These additions will ensure appropriate and consistent implementation across clinician submissions.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter strongly supported the substantive changes to measure Q167: *Coronary Artery Bypass Graft (CABG): Postoperative Renal Failure*. The commenter explained these changes were intended to provide greater clarity and promote consistent implementation across clinician submissions. The proposed definitions for baseline serum creatinine and the postoperative period more clearly define the appropriate patient populations and assessment timeframes while maintaining the measure's clinical intent.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44429), we are finalizing the changes to measure Q167 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.8 Coronary Artery Bypass Graft (CABG): Surgical Re-Exploration

Category	Description
CBE # / eCQM CBE #:	0115 / N/A
Quality#:	168
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients aged 18 years and older undergoing isolated coronary artery bypass graft (CABG) surgery who require a return to the operating room (OR) for mediastinal bleeding with or without tamponade, unplanned coronary artery intervention (native vessel, graft or both), valve dysfunction, aortic reintervention or other cardiac reason during the current hospitalization.
Substantive Change:	**Updated definition: Added:** **Postoperative period –** Period for surgical re-exploration begins upon OR exit and continues to discharge from the hospital after cardiac surgery.
Measure Steward:	Society of Thoracic Surgeons
MIPS Core Measure:	No
Measure Type:	Outcome
Rationale:	We proposed adding a definition of postoperative period to clarify the numerator assessment timeframe, which will ensure appropriate and consistent implementation across clinician submissions.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter strongly supported the substantive changes to measure Q168: *Coronary Artery Bypass Graft (CABG): Surgical Re-Exploration.*

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44429), we are finalizing the changes to measure Q168 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.9 Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	176
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	If a patient has been newly prescribed a biologic and/or immune response modifier that includes a warning for potential reactivation of a latent infection, then the medical record should indicate TB testing in the preceding 12-month period.
Substantive Change:	**The measure numerator is revised to read:** Patients for whom any record of TB testing is documented or performed (PPD, Tspot or QuantiFERON-TB Gold Plus) in the medical record in the 12 months preceding the biologic and/or immune response modifier prescription.
Measure Steward:	American College of Rheumatology
MIPS Core Measure:	Yes
Measure Type:	Process
Rationale:	We proposed changes to the measure numerator to clarify the appropriate tests for TB screening to meet the numerator quality action. This revision will ensure the intent of the measure was met and numerator compliance is consistently assessed across all clinician submissions.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the substantive changes to measure Q176: *Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy*. The commenter supported CMS' proposed clarification of which TB tests count toward the numerator, so that only validated tests are recognized, performance is measured consistently, and clinicians using guideline-concordant screening are appropriately credited. The commenter recommended that both the Interferon-Gamma Release Assay (IGRA) and Tuberculin Skin Test (TST) remain specified as acceptable tests and urged CMS to maintain the measure's clinical integrity and support appropriate pre-treatment TB screening.

Response: We thank the commenter for their feedback. We acknowledge the commenter's request that the final specifications fully capture that both IGRA and TST remain specified as acceptable tests; however, the measure steward refined the list to include appropriate TB screenings for clarity and purposes of reporting this measure. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. Any potential new substantive changes need to go through notice and comment rulemaking.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44430), we are finalizing the changes to measure Q176 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.10 Rheumatoid Arthritis (RA): Functional Status Assessment

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	178
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients aged 18 years and older with two or more diagnoses of rheumatoid arthritis (RA) at least 90 days apart for whom a functional status assessment was performed at least once during the performance period.
Substantive Change:	**The measure title is revised from Rheumatoid Arthritis (RA): Functional Status Assessment to:** Rheumatic Disease: Functional Status Assessment. **The measure description is revised to read:** Percentage of patients aged 18 years and older with two or more encounters with a diagnosis of rheumatoid arthritis (RA), psoriatic arthritis (PsA), or systemic lupus erythematosus (SLE) at least 90 days apart for whom a functional status assessment was performed at least once during the performance period. **Updated intent and clinical applicability: Revised:** to include PsA and SLE. **The measure denominator is revised to read:** Patients aged 18 years and older with two or more RA, PsA, or SLE diagnoses documented at least 90 days apart with at least one encounter with an RA, PsA, or SLE diagnosis occurring during the performance period and an additional encounter with an RA, PsA or SLE diagnosis occurring in the performance period or prior performance period. **Updated denominator criteria: Revised:** to include diagnosis coding for PsA and SLE. Added PsA and SLE to the additional encounter criteria. **Updated denominator definition: Revised:** definition for additional encounter to include PsA and SLE. **Updated numerator definition: Revised:** definition for functional status assessment to include PsA and SLE.
Measure Steward:	American College of Rheumatology
MIPS Core Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to revise multiple components of this measure by adding psoriatic arthritis (PsA) or systemic lupus erythematosus (SLE) to ensure that all patients diagnosed with rheumatic disease are included in the measure's denominator. The addition of PsA and SLE to the RA measure improves the comprehensiveness of the measure, aligns with shared disease characteristics and treatment approaches, and ensures appropriate care across rheumatic diseases. In the event the proposed substantive change(s) were finalized, the substantive changes will not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for the creation of a performance period benchmark, a new benchmark will be used for scoring.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44431), we are finalizing the changes to measure Q178 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.11 Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery

Category	Description
CBE # / eCQM CBE #:	0565 / 0565e
Quality#:	191
CMS eCQM ID:	CMS133v15
Current Collection Type:	eCQM / MIPS CQM
Current Measure Description:	Percentage of cataract surgeries for patients aged 18 years and older with a diagnosis of uncomplicated cataract and no significant ocular conditions impacting the visual outcome of surgery and had best-corrected visual acuity of 20/40 or better (distance or near) achieved in the operative eye within 90 days following the cataract surgery.
Substantive Change:	**Updated value set/coding**: **For the eCQM collection type: Updated:** to a single value set for significant ocular conditions denominator exclusion.
Measure Steward:	American Academy of Ophthalmology
MIPS Core Measure:	No
Measure Type:	Outcome
Rationale:	We proposed to replace the individual condition specific value sets for the ocular conditions denominator exclusion with a single value set of significant ocular conditions to streamline implementation.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44431), we are finalizing the changes to measure Q191 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.12 Controlling High Blood Pressure

Category	Description
CBE # / eCQM CBE #:	NA / N/A
Quality#:	236
CMS eCQM ID:	CMS165v15
Current Collection Type:	Medicare Part B Claims Measure / eCQM / Medicare CQM / MIPS CQM
Current Measure Description:	Percentage of patients 18-85 years of age who had a diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period, and whose most recent blood pressure was adequately controlled (<140/90mmHg) during the measurement period.
Substantive Change:	**Modified collection type:** Medicare Part B Claims Measure, eCQM, Medicare CQM, MIPS CQM, Medicare eCQM collection types.
Measure Steward:	National Committee for Quality Assurance
MIPS Core Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We proposed to update the collection types available for this measure to include the Medicare eCQM collection type to allow choice in submission method for Medicare Shared Savings Program ACOs reporting the APP Plus measure set. See section IV.A.4.d.(1)(c)(v) of this final rule for further information on the Medicare eCQM collection type.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44432), we are finalizing the changes to measure Q236 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.13 Radical Prostatectomy Pathology Reporting

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	250
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure / MIPS CQM
Current Measure Description:	Percentage of radical prostatectomy pathology reports that include the pT category, the pN category, the Gleason score and a statement about margin status.
Substantive Change:	**Updated denominator exclusion**: **For all collection types: Removed:** Specimen site other than anatomic location of prostate. **Updated denominator exception: For all collection types: Added:** Specimen site other than anatomic location of prostate.
Measure Steward:	College of American Pathologists
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to move the denominator exclusion for "Specimen site other than anatomic location of prostate" to the numerator options as a denominator exception. Moving this criteria from a denominator exclusion to a denominator exception will allow for more automated capture of the relevant cases for the measure with less manual intervention required for measure reporting.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44432), we are finalizing the changes to measure Q250 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.14 Dementia: Education and Support of Caregivers for Patients with Dementia

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	288
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients with dementia whose caregiver(s) were provided with education on dementia disease management and health behavior changes AND were referred to additional resources for support in the last 12 months.
Substantive Change:	**The measure description is revised to read:** Percentage of patients with dementia whose caregiver(s), who are not part of the licensed care team, were provided with education on dementia disease management and health behavior changes AND were referred to additional resources for support in the last 12 months. **Updated intent and clinician applicability: Added:** whose caregiver(s), who are not part of the licensed care team, were provided with education on dementia disease. **The measure numerator is revised to read:** Patients with dementia whose caregiver(s), who are not part of the licensed care team, were provided with education on dementia disease management and health behavior changes AND were referred to additional resources for support in the last 12 months.
Measure Steward:	American Academy of Neurology
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to update multiple components of this measure to clarify that the education and support required as part of the numerator quality action is intended for caregivers who are not part of the licensed clinical care team. Consistent with the measure's intent, educating caregivers that are not part of the licensed care team recognizes their essential role in patient care, improves patient-centered care outcomes, enhances caregiver well-being, and strengthens the overall continuity of care across both formal and informal settings.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the substantive changes to measure Q288: *Dementia: Education and Support of Caregivers for Patients with Dementia.* One commenter stated that the measure revisions further recognize unpaid caregivers' essential role in patient care and was grateful for this update. One of the commenters recommended clarifying who is considered an unlicensed caregiver and encouraged future inclusion of multicomponent caregiver supports such as counseling, training, and connections to community services.

Response: We thank the commenters for supporting the substantive changes to this measure. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. Any potential new substantive changes need to go through notice and comment rulemaking.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44433), we are finalizing the changes to measure Q288 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.15 Assessment of Cognitive Impairment or Dysfunction for Patients with Parkinson's Disease

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	291
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of all patients with a diagnosis of Parkinson's Disease (PD) who were assessed for cognitive impairment or dysfunction once during the measurement period.
Substantive Change:	**Updated denominator criteria: Added:** coding for physical therapy.
Measure Steward:	American Academy of Neurology
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed adding physical therapy coding as part of the denominator criteria for this measure as it is clinically appropriate for this clinician type to assess patients with a diagnosis of PD for cognitive impairment or dysfunction. Physical therapists play a critical role in identifying functional limitations linked to cognitive decline and tailoring interventions accordingly. These codes recognize that cognitive dysfunction significantly influences physical function and safety, and they integrate the expertise of physical therapists into the multidisciplinary care of PD.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter urged CMS to ensure that expanding clinician eligibility to physical therapists does not blur distinctions between cognitive screening and specialized cognitive interventions for measure Q291: *Assessment of Cognitive Impairment or Dysfunction for Patients with Parkinson's Disease*. The commenter stated that such interventions require training and expertise not typically covered in physical therapist education and encouraged CMS to consider safeguards that maintain discipline-appropriate care and scope-of-practice standards.

Response: We thank the commenter for the feedback on this measure and for highlighting the importance of maintaining clear distinctions between cognitive screening and specialized cognitive interventions. We acknowledge the commenter's concerns regarding scope of practice and the need to ensure that clinicians performing specialized cognitive interventions have appropriate training and expertise; however, clinicians reporting this measure would need to meet all requirements as specified for numerator compliance. The measure steward has approved inclusion of all added physical therapy coding for this measure, allowing for it to be at the clinician's discretion to choose to report the measure based upon applicability to their scope of care. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. Any potential new substantive changes need to go through notice and comment rulemaking.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44433), we are finalizing the changes to measure Q291 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.16 Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	317
CMS eCQM ID:	CMS22v15
Current Collection Type:	Medicare Part B Claims Measure / eCQM / MIPS CQM
Current Measure Description:	Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is elevated or hypertensive.
Substantive Change:	**Updated denominator criteria: For all collection types: Added:** coding for physical and occupational therapy.
Measure Steward:	Centers for Medicare & Medicaid Services
MIPS Core Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to update the denominator criteria to include coding for physical and occupational therapy (PT/OT) as it is clinically appropriate for these clinician types to assess for high blood pressure. By adding PT/OT professionals in this measure, healthcare organizations can help ensure a more inclusive, proactive, and effective approach to managing cardiovascular health in patients aged 18 and older, while also capitalizing on all patient touchpoints to achieve comprehensive wellness and improved health outcomes.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported adding physical therapy and occupational therapy coding, noting that occupational therapy practitioners routinely identify health risks and play an underrecognized role in addressing chronic conditions.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44434), we are finalizing the changes to measure Q317 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.17 Maternity Care: Postpartum Follow-up and Care Coordination

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	336
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care before or at 12 weeks of giving birth and received the following at a postpartum visit: breastfeeding evaluation and education, postpartum depression screening, intimate partner violence screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update.
Substantive Change:	**The measure numerator is revised to read:** Patients receiving the following at a postpartum visit: • Evaluating the physical recovery from birth, including pain and incontinence • Evaluating and counseling for sleep hygiene and fatigue • Breastfeeding evaluation and education, including patient-reported breastfeeding • Postpartum depression and anxiety screening • Intimate partner violence screening • Postpartum glucose screening for gestational diabetes patients • Family and contraceptive planning counseling, including same-day placement of a long-acting reversible contraceptive (LARC) if desired • Tobacco use screening and cessation education • Substance use disorder /opioid use disorder screening • Physical activity and exercise counseling • Immunization review and update **Updated definitions: Added:** **Evaluating Physical Recovery From Birth –** Patients who were evaluated for physical recovery from birth, including pain and incontinence, with referral as indicated (e.g., to physical therapy, urogynecology). **Evaluating and Counseling for Sleep Hygiene and Fatigue –** Patients were evaluated for sleep hygiene and fatigue and clinicians discussed coping options for fatigue and sleep disruption. **Substance Use Disorder/Opioid Use Disorder Screening –** Patients were screened for substance use/opioid use and referred to postpartum psychosocial support services, including substance use disorder treatment and relapse prevention programs. **Revised:** **Physical Activity and Exercise Counseling –** Patients with uncomplicated pregnancies who were encouraged to undertake regular physical activity and/or to engage in aerobic and strength-conditioning exercises (of any intensity) after pregnancy, as part of efforts to recommend and reinforce a healthy lifestyle. **Postpartum Depression and Anxiety Screening –** added anxiety screening via a self-reported validated anxiety tool. **Updated Numerator Instructions: Revised:** to include evaluating for physical recovery from birth, including pain and incontinence; evaluating and counseling for sleep hygiene and fatigue; postpartum anxiety screening; same-day placement of a long-acting reversible contraceptive (LARC) if desired; substance use disorder /opioid use disorder screening; and physical activity and exercise counseling.
Measure Steward:	Centers for Medicare & Medicaid Services
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to revise the measure numerator by adding evaluations for physical recovery from birth, including pain and incontinence; evaluations and counseling for sleep hygiene and fatigue; postpartum anxiety screening; same-day placement of a long-acting reversible contraceptive (LARC) if desired; substance use disorder /opioid use disorder screening; and physical activity and exercise counseling as recommended by The American College of Obstetricians and Gynecologists (ACOG).[505] The additional evaluations provide significant added value to postpartum care by addressing broader aspects of maternal health that may impact recovery, well-being, and long-term outcomes. Additionally, we proposed to reflect this revision in the definitions and numerator instructions sections of the measure to ensure appropriate assessment of quality actions and consistent implementation across clinician submissions.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the substantive changes to measure Q336: *Maternity Care: Postpartum Follow-up and Care Coordination* to include physical activity and exercise counseling.

[505] American College of Obstetricians and Gynecologists. (2018). ACOG Committee Opinion No. 736: Optimizing Postpartum Care. *Obstetrics & Gynecology, 131*(5), e140–e150. https://doi.org/10.1097/AOG.0000000000002633.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44435), we are finalizing the changes to measure Q336 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.18 Closing the Referral Loop: Receipt of Specialist Report

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	374
CMS eCQM ID:	CMS50v15
Current Collection Type:	eCQM / MIPS CQM
Current Measure Description:	Percentage of patients with referrals, regardless of age, for which the referring clinician receives a report from the clinician to whom the patient was referred.
Substantive Change:	**Updated guidance: For the eCQM collection type: Added:** If two or more referrals have the same date/time stamp and are captured in the denominator as "first" referral, a consultant report for any of these "first" referrals will qualify the patient for the numerator. **Updated denominator criteria: For all collection types: Added:** coding for audiology visits. **Updated logic: For the eCQM collection type: Revised:** numerator logic to capture the 'first referral' when multiple instances of a "first referral" with the same date/time stamp are present.
Measure Steward:	Centers for Medicare & Medicaid Services
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to update the denominator criteria to include audiology visits as this measure is applicable to their scope of care. By including audiology visits in the measure, it will ensure that referrals made by audiologists are tracked, especially as specialization continues to increase in the provision of patient care, facilitating better coordination of care. Additionally, we proposed to update the measure guidance and logic for the eCQM collection type to clarify implementation when multiple referrals are received and ensure the logic is aligned. This will ensure consistent reporting across clinician submitters.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44435 through 44436), we are finalizing the changes to measure Q374 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.19 Adherence to Antipsychotic Medications For Individuals with Schizophrenia

Category	Description
CBE # / eCQM CBE #:	1879 / N/A
Quality#:	383
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of individuals at least 18 years of age as of the beginning of the performance period with schizophrenia or schizoaffective disorder who had at least two prescriptions filled for any antipsychotic medication and who had a Proportion of Days Covered (PDC) of at least 0.8 for antipsychotic medications during the performance period.
Substantive Change:	**Updated denominator: Revised:** (Table 1) added oral antipsychotic medications: - pimavanserin - pimozide - olanzapine-fluoxetine - xanomeline-tropisum chloride
Measure Steward:	Centers for Medicare & Medicaid Services
MIPS Core Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We proposed to update the list of medications used to identify denominator eligible patients by adding four oral antipsychotic medications to the existing list in the denominator. This expansion will provide an up-to-date list of appropriate oral antipsychotic medications that clinicians may have prescribed for their patients, thereby ensuring that as many of the appropriate patients are identified in the denominator of this measure as possible.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44436), we are finalizing the changes to measure Q383 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.20 Cardiac Tamponade and/or Pericardiocentesis Following Atrial Fibrillation Ablation

Category	Description
CBE # / eCQM CBE #:	2474 / N/A
Quality#:	392
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Rate of cardiac tamponade and/or pericardiocentesis following atrial fibrillation ablation. This measure is submitted as four rates stratified by age and sex. • Submission Age Criteria 1: Females 18-64 years of age • Submission Age Criteria 2: Males 18-64 years of age • Submission Age Criteria 3: Females 65 years of age and older • Submission Age Criteria 4: Males 65 years of age and older
Substantive Change:	**Updated reporting frequency and implementation considerations: Revised:** measure is to be submitted each time a denominator eligible procedure is performed.
Measure Steward:	American College of Cardiology Foundation
MIPS Core Measure:	No
Measure Type:	Outcome
Rationale:	We proposed to update the measure submission frequency to each time a denominator eligible procedure is performed as cardiac tamponade is a life-threatening emergency.[506] Requiring this measure to be submitted for each procedure will ensure MIPS eligible clinicians are monitoring and assessing patients for all instances of cardiac tamponade and/or pericardiocentesis occurring within 30 days following atrial fibrillation ablation, as well as adhering to evidence-based practices, which will improve clinical outcomes for patients. This change reflects a transition towards higher standards of care, increased accountability, and greater alignment with the goals of modern healthcare delivery systems.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44437), we are finalizing the changes to measure Q392 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

[506] Khan Z. (2023). Cardiac Tamponade During Catheter Atrial Fibrillation Ablation: A Life-Threatening Complication. *Cureus*, *15*(9), e44989. https://doi.org/10.7759/cureus.44989.

D.21 Infection within 180 Days of Cardiac Implantable Electronic Device (CIED) Implantation, Replacement, or Revision

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	393
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Infection rate following CIED device implantation, replacement, or revision.
Substantive Change:	**Updated reporting frequency and implementation considerations: Revised:** measure is to be submitted each time a denominator eligible procedure is performed. **The measure denominator is revised to read:** **For Submission Criteria 1:** All patients with a new CIED from January July 1, 2026, through June 30, 2027, of the performance period. **For Submission Criteria 2:** All patients with replacement or revision of a CIED from July 1, 2026, through June 30, 2027, of the performance period. **Updated denominator definition: Added:** Denominator Identification Period – The twelve month period in which eligible patients have a procedure. The "denominator identification period" includes dates of procedure 7/1/2026 to 6/30/2027.
Measure Steward:	American College of Cardiology Foundation
MIPS Core Measure:	No
Measure Type:	Outcome
Rationale:	We proposed to update the measure submission frequency to each time a denominator eligible procedure is performed as infections resulting from implantable cardiac devices are associated with substantial morbidity. Requiring this measure to be submitted for each procedure will ensure MIPS eligible clinicians are monitoring and assessing patients for all instances of an infection requiring device removal or surgical revision within 180 days following CIED implantation, replacement, or revision, as well as adhering to evidence-based practices, which will improve clinical outcomes for patient. This change reflects a transition towards higher standards of care, increased accountability, and greater alignment with the goals of modern healthcare delivery systems.[507] We also proposed to lengthen the denominator identification period from July of the previous year through June of the measurement period to allow for a full year of denominator eligibility, ensuring the denominator eligible patient population being assessed for the numerator action is complete.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44438), we are finalizing the changes to measure Q393 with modification for the CY 2027 performance period/2029 MIPS payment year and future years. There is a typographical error in the dates given for Submission Criteria 1 denominator, which will be revised to read, "All patients with a new CIED from July 1, 2026, through June 30, 2027, of the performance period."

Contemporary Management of Cardiac Implantable Electronic Device Infection: The American College of Cardiology COGNITO Survey. *JACC. Advances*, *3*(2), 100773. https://doi.org/10.1016/j.jacadv.2023.100773.

D.22 Lung Cancer Reporting (Biopsy/Cytology Specimens)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	395
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure / MIPS CQM
Current Measure Description:	Pathology reports based on lung biopsy and/or cytology specimens with a diagnosis of primary non-small cell lung cancer classified into specific histologic type following the International Association for the Study of Lung Cancer (IASLC) guidance or classified as non-small cell lung cancer not otherwise specified (NSCLC-NOS) with an explanation included in the pathology report.
Substantive Change:	**Updated denominator exclusion: For all collection types: Removed:** Specimen site other than anatomic location of lung or is not classified as primary non-small cell lung cancer. **Updated denominator exception: For all collection types: Added:** Specimen site other than anatomic location of lung or is not classified as primary non-small cell lung cancer.
Measure Steward:	College of American Pathologists
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to move the denominator exclusion for "specimen site other than anatomic location of lung or is not classified as primary non-small cell lung cancer" to the numerator options as a denominator exception. Moving this criteria from a denominator exclusion to a denominator exception will allow for more automated capture of the relevant cases for the measure with less manual intervention required for measure reporting.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44439), we are finalizing the changes to measure Q395 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.23 Lung Cancer Reporting (Resection Specimens)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	396
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure / MIPS CQM
Current Measure Description:	Pathology reports based on lung resection specimens with a diagnosis of primary lung carcinoma that include the pT category, pN category and for non-small cell lung cancer (NSCLC), histologic type.
Substantive Change:	**Updated denominator exclusion: For all collection types: Removed:** Specimen site other than anatomic location of lung OR classified as non-small cell lung cancer, not otherwise specified (NSCLC-NOS). **Updated denominator exception: For all collection types: Added:** Specimen site other than anatomic location of lung OR classified as NSCLC-NOS.
Measure Steward:	College of American Pathologists
MIPS Core Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to move the denominator exclusion for "Specimen site other than anatomic location of lung OR classified as NSCLC-NOS" to the numerator options as a denominator exception. Moving this criteria from a denominator exclusion to a denominator exception will allow for more automated capture of the relevant cases for the measure with less manual intervention required for measure reporting.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44439), we are finalizing the changes to measure Q396 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.24 Melanoma Reporting

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	397
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure / MIPS CQM
Current Measure Description:	Pathology reports for primary malignant cutaneous melanoma that include the pT category, thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors.
Substantive Change:	**The measure description is revised to read**: **For all collection types:** Pathology reports for primary malignant cutaneous melanoma that include the thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors, and for excisions, pT category. **Updated intent and applicability: For all collection types: Revised:** to clarify pT category reporting is only required for excisions. **Updated denominator instructions: For the MIPS CQM collection type: Removed**: instructions moved to the numerator. **Updated denominator exclusion: For all collection types: Removed:** Specimen site other than anatomic cutaneous location. **The measure numerator is revised to read: For all collection types:** Pathology reports for primary malignant cutaneous melanoma that include the thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors, and in excisions, pT Category. **Updated numerator instructions: For all collection types: Revised:** to clarify pT category reporting is only required for excisions. **Updated numerator options: For all collection types: Revised:** to clarify pT category reporting is only required for excisions. **Updated denominator exception: For all collection types: Added:** Specimen site other than anatomic cutaneous location.
Measure Steward:	College of American Pathologists
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to revise multiple components of the measure to align with the College of American Pathologists 2025 Protocols[508] [509] and improve the quality of care for melanoma patients by mandating the inclusion of specific, evidence-based pathological parameters in all reports. We are specifically requiring pT category reporting for excisions only. By standardizing and ensuring completeness in pathology reporting, clinicians will significantly enhance diagnostic accuracy, treatment planning, and patient outcomes. Additionally, we proposed to move the denominator exclusion for "Specimen site other than anatomic cutaneous location" to the numerator options as a denominator exception. Moving this criteria from a denominator exclusion to a denominator exception will allow for more automated capture of the relevant cases for the measure with less manual intervention required for measure reporting.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44440), we are finalizing the changes to measure Q397 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.25 Optimal Asthma Control

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	398
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Composite measure of the percentage of pediatric and adult patients whose asthma is well-controlled as demonstrated by one of three age appropriate patient reported outcome tools and not at risk for exacerbation.
Substantive Change:	**Updated numerator and component options: For Submission Criteria 1: Component 1: Removed:** Asthma control Questionnaire (ACQ) **Added:** Asthma Impairment and Risk Questionnaire (AIRQ) and Pediatric Asthma Impairment and Risk Questionnaire (Peds-AIRQ) **Updated numerator note: For Submission Criteria 1: Component 2: Revised:** to base exacerbation on one of two methods. **Added:** Method 2: Asthma Impairment and Risk Questionnaire (AIRQ) result of 0 or 1 – ages 12 and older Pediatric Asthma Impairment and Risk Questionnaire (Peds-AIRQ) result of 0 or 1 – ages 5 – 11 **Updated component options: For Submission Criteria 1: Component 2: Added:** **Performance Met:** Not at elevated risk of exacerbation based on AIRQ or Peds-AIRQ score and results documented **Performance Not Met:** At elevated risk of exacerbation based on AIRQ or Peds-AIRQ score and results documented OR specified asthma control tool not used, reason not given **Updated numerator and component options: For Submission Criteria 2: Component 1: Removed:** Asthma control Questionnaire (ACQ) **Added:** Asthma Impairment and Risk Questionnaire (AIRQ) **Updated numerator note: For Submission Criteria 2: Component 2: Revised:** to base exacerbation on one of two methods. **Added:** Method 2: Asthma Impairment and Risk Questionnaire (AIRQ) result of 0 or 1 – ages 12 and older **Updated component options: For Submission Criteria 2: Component 2: Added:** **Performance Met:** Not at elevated risk of exacerbation based on AIRQ score and results documented **Performance Not Met:** At elevated risk of exacerbation based on AIRQ score and results documented OR specified asthma control tool not used, reason not given
Measure Steward:	Minnesota Community Measurement
MIPS Core Measure:	Yes
Measure Type:	Outcome
Rationale:	We proposed to remove ACQ tools from the list of acceptable patient-reported outcome tools for all submission criteria. We proposed adding the AIRQ (both submission criteria) and Peds-AIRQ (Submission Criteria 1 only) tools for COMPONENT 1: Asthma well-controlled. Additionally, we proposed adding the AIRQ (both submission criteria) and Peds-AIRQ (Submission Criteria 1 only) tools as a second method for determining exacerbation risk for COMPONENT 2: Patient not at elevated risk of exacerbation. These changes will ensure that the tools used are better suited to current evidence-based practices for asthma management.[510] The AIRQ and Peds-AIRQ tools support the shift toward standardization, accuracy, and relevance in clinical decision-making.[511]

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the substantive changes to measure Q398: *Optimal Asthma Control* to update the list of acceptable patient-reported outcome tools.

Response: We thank the commenter for supporting the substantive changes to this measure.

[510] Murphy, K. R., Chipps, B., Lanz, M. J., Bacharier, L. B., Guilbert, T. W., George, M., Mohammad, A., Winders, T., LeNoir, M., Gilbert, I. A., Eudicone, J. M., Coyne, K. S., Harding, G., & Zeiger, R. S. (2025). Pediatric Asthma Impairment and Risk Questionnaire: A Control Assessment for Children Aged 5 to 11 years. *The Journal of Allergy and Clinical Immunology: In Practice, 13*(10), 2659–2671. https://doi.org/10.1016/j.jaip.2025.06.039.

[511] AstraZeneca. Pediatric Asthma Impairment and Risk Questionnaire. https://www.asthmaresourcecenter.com/home/peds_airq_studies.html.

Comment: One commenter supported the substantive changes to measure Q398 and stated that adding AIRQ and Peds-AIRQ as accepted instruments for both Component 1 (asthma control) and Component 2 (exacerbation risk) directly addresses a gap that the commenter previously raised with QPP's Service Center. The commenter had two clarifications before this change is finalized. First, the commenter wanted to confirm that the AIRQ tool as proposed reflects the same instrument its clients and members are already using in practice, since a mismatch in tool version or scoring methodology at this stage could recreate the same reporting gap in a different form. Second, the commenter also wanted to confirm if CMS is proposing to remove ACQ entirely, not just add AIRQ alongside it, which means practices currently reporting Component 1 or Component 2 using ACQ will need to transition to AIRQ, Peds-AIRQ, or one of the remaining accepted tools (ACT, C-ACT, ATAQ) by the time this change takes effect.

Response: We thank the commentor for the support and feedback on this measure. We are unable to verify alignment with specific instruments used in individual practices. Clinicians should refer to the official AIRQ and Peds-AIRQ materials[512] to ensure they are using the correct versions and scoring methodology. We did propose to remove ACQ entirely. Retiring ACQ in favor of AIRQ/Peds-AIRQ and other validated tools keeps measure Q398 aligned with current clinical science and measurement best practices, improving the measure's ability to capture clinically meaningful asthma control.[513] The measure steward's workgroup determined the AIRQ tools had several advantages including availability and ease of workflow incorporation, as well as accuracy and both risk and impairment assessment ability, which should help with the transition between tools by the time this measure change goes into effect. Eliminating ACQ rather than maintaining multiple overlapping tools also reduces measurement variability and ensures more consistent, interpretable data across clinicians and practices reporting measure Q398.[514]

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44441), we are finalizing the changes to measure Q398 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.26 Statin Therapy for the Prevention and Treatment of Cardiovascular Disease

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	438
CMS eCQM ID:	CMS347v10
Current Collection Type:	eCQM / MIPS CQM
Current Measure Description:	Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the performance period: • All patients who were previously diagnosed with or currently have a diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD), including an ASCVD procedure; OR • Patients aged 20 to 75 years who have ever had a low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR • Patients aged 40 to 75 years with a diagnosis of diabetes; OR • Patients aged 40 to 75 with a 10-year ASCVD risk score of ≥ 20 percent.
Substantive Change:	**The measure description is revised to read: For all collection types:** Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the performance period: • Patients ≥18 years of age who were previously diagnosed with or currently have a diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD), including an ASCVD procedure; OR • Patients aged 20 to 75 years who have ever had a low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR • Patients aged 40 to 75 years with a diagnosis of diabetes; OR • Patients aged 40 to 75 with a 10-year ASCVD risk score of ≥ 20 percent. **Updated rate aggregation: For eCQM collection type: Revised: For Population 1:** Patients greater than or equal to 18 years of age at the beginning of the measurement period were previously diagnosed with or currently have a diagnosis of clinical ASCVD, including an ASCVD procedure before the end of the measurement period. **Updated measure strata and performance rates: For MIPS CQM collection type: Revised: For Submission Criteria 1**: Patients ≥ 18 years of age at the beginning of the performance period and reporting timeframe for diagnosis of clinical ASCVD, including ASCVD procedure. **Updated guidance: For the eCQM collection type: Revised:** age for initial patient population 1 to greater than or equal to 18 years. **Updated initial patient population: For the eCQM collection type: Revised: For population 1:** age greater than or equal to 18 years. **The measure denominator is revised to read: For the MIPS CQM collection type: For Submission Criteria 1:** Patients ≥18 years of age who were previously diagnosed with or currently have a diagnosis of clinical ASCVD, including an ASCVD procedure. **Updated denominator criteria: For the MIPS CQM collection type:** **Revised: For Submission Criteria 1:** age ≥ 18 years at the beginning of the performance period and reporting timeframe for diagnosis of clinical ASCVD, including ASCVD procedure. **Removed**: **For Submission Criteria 3:** presymptomatic diabetes codes. **Updated denominator exclusion: For all collection types: Added: For all Submission Criteria:** Patients who are pregnant at any time during the performance period.
Measure Steward:	Centers for Medicare & Medicaid Services
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to revise Patient Population 1 / Submission Criteria 1 for the eCQM and MIPS CQM collection types, to include patients 18 years of age and older who were previously diagnosed with or currently have a diagnosis of clinical ASCVD, including an ASCVD procedure before the end of the performance period to align with the intent of the measure and current guidelines for adults.[515] [516] In addition, we proposed to update

[515] de Ferranti, S. D., Steinberger, J., Ameduri, R., Baker, A., Gooding, H., Kelly, A. S., Mietus-Snyder, M., et al. (2019). Cardiovascular Risk Reduction in High-Risk Pediatric Patients: A Scientific Statement From the American Heart Association. *Circulation, 139*(13). https://doi.org/10.1161/CIR.0000000000000618.

[516] Blumenthal, R., Morris, P., Gaudino, M., et al. (2026). 2026 ACC/AHA/AACVPR/ABC/ACPM/ADA/AGS/APhA/ASPC/NLA/PCNA Guideline on the Management of Dyslipidemia: A Report of the American College of Cardiology/American Heart Association Joint Committee on

Category	Description
	the rate aggregation and guidance for the eCQM collection type to align with the updated Patient Population 1. For the MIPS CQM collection type, we are updating the denominator criteria for Submission Criteria 1 with the updated age criteria. These updates aim to refine the population targeted by the measure and enhance alignment with clinical guidelines.[517] Additionally, we proposed to remove patients with presymptomatic diabetes from the denominator of Patient Population 3 / Submission Criteria 3 to focus on patients with established clinical diagnoses rather than those at risk or presymptomatic. Evidence suggests that use of statins may increase the risk of progression of prediabetes to type 2 diabetes.[518] Excluding these patients from Submission Criteria 3 will allow clinicians to use their clinical judgement and appropriately prescribe statin therapy to those patients who will benefit most without affecting their performance on the measure. We also proposed to add patients who are pregnant to the denominator exclusions, for all collection types, to align with current recommendations. It is recommended that patients stop statin therapy as soon as pregnancy is discovered.[519] Excluding pregnant patients will allow clinicians to align with evidence-based practices, ensuring safe and appropriate care for this patient population, without affecting their performance on the measure. We proposed to revise the measure description for all collection types, to improve the clarity, clinical utility, and applicability of the measure by explicitly defining high-risk patient populations. These enhancements aim to ensure more accurate identification of eligible patients, assess appropriate use of statin therapy, and ultimately drive improvements in cardiovascular health outcomes.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the substantive changes to measure Q438: *Statin Therapy for the Prevention and Treatment of Cardiovascular Disease*. One of the commenters requested that CMS ensure the final specifications capture the full range of clinical ASCVD recognized in current guidelines, including coronary, cerebrovascular, and peripheral arterial disease, while preserving shared decision-making and clinical judgment. Another commenter asked if CMS would look at denominator exception criteria logic that is not dependent on a specific statin or statin level for exception from the measure.

Response: We thank the commenters for supporting the substantive changes to this measure. We acknowledge the commenter's request that the final specifications fully capture the range of clinical ASCVD recognized in current guidelines (including coronary, cerebrovascular, and peripheral arterial disease) while preserving shared decision-making and clinical judgment. We will review and discuss revisions to the denominator exception for possible implementation in future years as it would be substantive in nature and would, therefore, need to go through public notice and comment.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44442 through 44443), we are finalizing the changes to measure Q438 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

Clinical Practice Guidelines. *Journal of the American College of Cardiology*, 0(0). https://doi.org/10.1016/j.jacc.2025.11.016.

D.27 Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	440
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of biopsies with a diagnosis of cutaneous basal cell carcinoma (BCC) and squamous cell carcinoma (SCC), or melanoma (including in situ disease) in which the pathologist communicates results to the clinician within 7 days from the time when the tissue specimen was received by the pathologist.
Substantive Change:	**The measure description is revised to read:** Percentage of biopsies with a diagnosis of cutaneous basal cell carcinoma (BCC) and squamous cell carcinoma (SCC), or melanoma (including in situ disease) in which the pathologist communicates results to the clinician within 5 business days from the time when the tissue specimen was received by the pathologist. **The measure numerator is revised to read:** Number of final pathology reports diagnosing cutaneous basal cell carcinoma or squamous cell carcinoma or melanoma (to include in situ disease) sent from the Pathologist/Dermatopathologist to the biopsying clinician for review within 5 business days from the time when the tissue specimen was received by the pathologist. **Updated the numerator option**: **Revised:** to within 5 business days.
Measure Steward:	American Academy of Dermatology
MIPS Core Measure:	Yes
Measure Type:	Process
Rationale:	We proposed revising multiple components of this measure to clarify the timing of when a pathologist must communicate the results to the biopsying clinician. Reporting the results within 5 business days will enable clinicians to make timely decisions regarding patient management, scheduling surgeries or therapies, and planning follow-up consultations.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the substantive change to measure Q440: *Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician*, agreeing that the updated timeframe to 5 business days enables timely care decisions and aligns with an existing QCDR measure, AAD6: *Skin Cancer: Biopsy Reporting Time – Clinician to Patient.*

Response: We thank the commenter for supporting the substantive change to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44444), we are finalizing the changes to measure Q440 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.28 Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	441
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	The IVD All-or-None Measure is one outcome measure (optimal control). The measure contains four goals. All four goals within a measure must be reached in order to meet that measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) - Using the IVD denominator optimal results include: • Most recent blood pressure (BP) measurement is less than or equal to 130/80 mm Hg -- AND • Most recent tobacco status is Tobacco Free -- AND • Daily Aspirin or Other Antiplatelet Unless Contraindicated – AND • High Intensity Statin Use Unless Contraindicated
Substantive Change:	**Updated the measure strata and performance rates: Revised:** a patient will only be included in Submission Criteria 2 of the measure if they meet the denominator criteria for both Submission Criteria 1 and Submission Criteria 2.
Measure Steward:	Wisconsin Collaborative for Healthcare Quality
MIPS Core Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We proposed to revise the measure strata and performance rates to clarify how to handle scenarios in which the patient meets denominator criteria for both Submission Criteria 1 and Submission Criteria 2. This change will ensure consistency in the abstraction of the measure's elements that support rigorous data for the calculation of MIPS performance rates.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44444), we are finalizing the changes to measure Q441 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.29 Percentage of Patients Who Died from Cancer Receiving Systemic Cancer-Directed Therapy in the Last 14 Days of Life (lower score – better)

Category	Description
CBE # / eCQM CBE #:	0210 / N/A
Quality#:	453
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients who died from cancer receiving systemic cancer-directed therapy in the last 14 days of life.
Substantive Change:	**The measure title is revised from 'Percentage of Patients who Died from Cancer Receiving Systemic Cancer-Directed Therapy in the Last 14 Days of Life (lower score – better)' to:** Percentage of Patients who Died with Cancer Receiving Systemic Cancer-Directed Therapy in the Last 14 Days of Life (lower score – better) **The measure description is revised to read:** Percentage of patients, aged 18 years and older, who died with cancer receiving systemic cancer-directed therapy in the last 14 days of life. **Updated intent and clinician applicability: Revised:** patients aged 18 years and older. **Updated Implementation Considerations: Revised:** Measure type revised to Intermediate Outcome. **Updated denominator note: Revised:** The patient must have two encounters during the performance period and both eligible encounters must include a diagnosis of cancer. **The measure denominator is revised to read:** Patients, aged 18 years and older, who died with cancer. **Updated denominator criteria:** **Revised:** Patients aged ≥ 18 years and Diagnosis for cancer during the encounter. **Added:** Patients who died during performance period. **Removed:** Patients who died from cancer. **Updated denominator exclusion: Added:** Patients given hydroxyurea or bruton tyrosine kinase (BTK) inhibitors. **Updated numerator definition: Revised:** **Systemic Cancer-directed Therapy –** Includes: ▪ Cytotoxic chemotherapy ▪ Drugs and biologics which activate or inhibit the hallmarks of cancer (e.g., kinase inhibitors) ▪ Antineoplastic Agents • Alkylating agents (id: L01A) • Antimetabolites (id: L01B) • Cytotoxic antibiotics and related substances (id: L01D) • Monoclonal antibodies and antibody drug conjugates (id: L01F) • Other antineoplastic agents (id: L01X) • Plant alkaloids and other natural products (id: L01C) • Protein kinase inhibitors (id: L01E) o Exclude: Cyclin-dependent kinase (CDK) inhibitors (id: L01EF) ▪ Immunostimulants (Includes only those that apply to cancer) • Interferons (id: L03AB) o Include only: interferon alfa-2b, ropeginterferon alfa-2b, and ropeginterferon alfa-2b-njft • Interleukins (id: L03AC) o Include only: aldesleukin • Other immunostimulants (id: L03AX) o Include only: sipuleucel-T ▪ Immunosuppressants (Includes only those that apply to cancer) • Selective immunosuppressants (id: L04AA) o Include only: alemtuzumab, everolimus, and sirolimus • Other immunosuppressants (id: L04AX) o Include only: lenalidomide, pomalidomide, and thalidomide Excludes: • Hormones and hormone antagonists • Red Blood Cell (RBC) growth factors used to treat chemotherapy-induced anemia • White Blood Cell (WBC) growth factors used to treat chemotherapy-induced neutropenia • Bisphosphonates and biologics used to treat osteopenia or osteoporosis • Antiemetics and antinauseants • Pain medications Example: Drugs and biologics under the World Health Organization's (WHO) Anatomical Therapeutic Chemical (ATC) classification "Antineoplastic Agents" and select "Immunostimulants" and "Immunosuppressants".

Category	Description
	"Antineoplastic and Immunomodulating Agents" Drug Classes and Identifiers: Note: To find the drug members under each class, go to https://mor.nlm.nih.gov/RxClass/ and enter the class name or ID on the "Search" field of the RxClass browser. **Updated numerator instructions: Added:** • Receipt of systemic cancer-directed therapy in the last 14 days of life can be calculated as follows: • (Date of death minus Most Recent Systemic cancer-directed therapy Administration Date or Date Filled) < 14 days. **Updated numerator note: Added:** The measure includes intramuscular, intravenous, oral, and subcutaneous routes of administration of systemic cancer-directed therapy. Oral systemic cancer-directed therapy is oral prescription of extension of same oral drug or prescription of new oral drug. The measure is limited to medications approved by the United States Food and Drug Administration (FDA). Patients that are given bridging chemotherapy and other cancer-directed therapies while awaiting transplant or chimeric antigen receptor T-cell therapy (CAR T-cell therapy) should be reported as a denominator exception. For patients given Hydroxyurea and bruton tyrosine kinase (BTK) inhibitors, it may be inappropriate to withdraw at the end of life and/or are used for palliative purposes. For the purposes of reporting this inverse quality measure, this scenario is considered "performance not met" only in the absence of other systemic therapies. **Updated denominator exception: Added:** Patient received systemic cancer-directed therapy due to 1) receipt or in process of receipt of bone marrow or peripheral blood stem cell transplant (transplant status) in the last 60 days of life, or 2) receipt or in process of receipt of CAR T-cell therapy in the last 60 days of life. **Updated numerator options: Added:** **Performance Not Met:** Patients given hydroxyurea or BTK inhibitors.
Measure Steward:	American Society of Clinical Oncology
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to update multiple components of this measure to ensure the appropriate patient population is identified by including an age, defined encounter eligibility, and additional guidance for defining the eligible patient population. We proposed revising the measure type to intermediate outcome to be reflective of the quality action. Additionally, we proposed adding a denominator exclusion for common drugs given for palliation or to prevent rapid disease acceleration at the end of life as recommended by ASCO's End of Life Technical Expert Panel as this conflicts with the measure's intent. We proposed adding further clarification and granularity to the numerator definition of systemic cancer-directed therapy to ensure numerator assessment is consistent across clinician submissions. Additionally, we proposed adding a denominator exception to remove patients receiving bone marrow or peripheral blood stem cell transplant, or CAR T-cell therapy as these patients are appropriately given bridging chemotherapy and other types of cancer-directed therapy beforehand. We proposed these changes to better align with the intent of the measure and to ensure consistent implementation across submissions. In the event the proposed substantive change(s) were finalized, the substantive changes will not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for the creation of a performance period benchmark, a new benchmark will be used for scoring.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed denominator exceptions to measure Q453: *Percentage of Patients Who Died from Cancer Receiving Systemic Cancer-Directed Therapy in the Last 14 Days of Life (lower score – better)* and encouraged CMS to periodically reassess these specifications as cell-therapy technologies evolve to ensure that quality measures do not become inadvertently tethered to an outdated description of the relevant therapeutic modalities. Another commenter urged CMS to consider adding a secondary 30-day measurement period in addition to the existing 14-day period, stating that a 30-day measure could more effectively prompt timely transitions to palliative care, support improved symptom management, and provide a more complete picture of end-of-life care for patients dying of cancer.

Response: We thank the commenters for supporting the substantive changes to this measure. We encourage the commenters to reach out to the measure steward to discuss revisions for possible implementation in future years. In addition, we complete measure analysis to evaluate measure performance, identify potential unintended consequences, assess alignment with current clinical guidelines and evidence, and determine whether technical or substantive updates are needed for future performance periods, which we recommend to measure stewards for their consideration. Any potential new substantive changes need to go through notice and comment rulemaking.

After consideration of public comments, we are finalizing the changes to measure Q453 with modification for the CY 2027 performance period/2029 MIPS payment year and future years. The proposal to "**Updated denominator exclusion: Added:** Patients given hydroxyurea or bruton tyrosine kinase (BTK) inhibitors" is duplicative of the proposed numerator revision **"Updated numerator options: Added: Performance Not Met:** Patients given hydroxyurea or BTK inhibitors." While administration of these drugs appears discordant with the measure intent, it may be inappropriate to withdraw at the end of life. Therefore, it would be appropriate to include patients receiving these medications in the eligible patient population to ensure they are assessed for utilization of other systemic therapies. For this inverse measure, appropriate use of hydroxyurea or BTK inhibitors would be reported as Performance Not Met, indicating better quality care.

D.30 Percentage of Patients who Died from Cancer Admitted to Hospice for less than 3 Days (lower score – better)

Category	Description
CBE # / eCQM CBE #:	0216 / N/A
Quality#:	457
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of Patients who Died from Cancer Admitted to Hospice for less than 3 Days (lower score – better)
Substantive Change:	**The measure title is revised from Percentage of Patients who Died from Cancer Admitted to Hospice for Less than 3 Days (lower score – better) to:** Percentage of Patients who Died with Cancer Enrolled in Hospice For At Least 3 Days Immediately Before Death. **The measure description is revised to read:** Percentage of patients, aged 18 years and older, who died with cancer and were enrolled in hospice for at least 3 days immediately before and on date of death. **Updated Implementation Considerations: Revised:** Measure analytic to no longer be inverse and measure type to Intermediate Outcome. **The measure denominator is revised to read:** Patients, aged 18 years and older, who died with cancer. **Updated denominator note: Revised:** The patient must have two encounters during the performance period and both eligible encounters must include a diagnosis of cancer. **Updated denominator criteria:** **Revised:** Patients aged ≥ 18 years and Diagnosis for cancer during the encounter. **Removed:** Patients enrolled in hospice and Patients who died from cancer. **Added:** Patients who died during performance period. **The measure numerator is revised to read:** Patients enrolled in hospice for at least 3 days immediately before and on the date of death. **Updated numerator instructions: Removed:** Inverse measure analytic **Added:** • Patients should be currently enrolled in hospice on date of death to meet the numerator. • Enrolled in hospice for at least 3 days immediately before death can be calculated as follows: • (Date of death minus Most Recent Date of Hospice Admission) ≥ 3 days **Updated numerator note: Added:** • Receipt of or in the process of receipt of bone marrow transplant, peripheral blood stem cell transplant, or CAR T-cell therapy are typically not covered in hospice but may be appropriate for select patients at the end of life. In these scenarios, the denominator exception should be reported. • It may be inappropriate to withdraw Hydroxyurea and bruton tyrosine kinase (BTK) inhibitors at the end of life and/or are used for palliative purposes, however these treatments are not covered by hospice. In this situation, the denominator exception should be reported. **The measure numerator options are revised to read**: **Performance Met:** Patient enrolled in hospice for at least 3 days immediately before and on the date of death. **Denominator Exception:** Patient not enrolled in hospice due to 1) receipt or in process of receipt of bone marrow or peripheral blood stem cell transplant (transplant status) in the last 60 days of life, or 2) receipt or in process of receipt of CAR T-cell therapy in the last 60 days of life. **Denominator Exception:** Patients given hydroxyurea or BTK inhibitors. **Performance Not Met:** Patient enrolled in hospice less than 3 days immediately before death or on date of death.
Measure Steward:	American Society of Clinical Oncology
MIPS Core Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to revise the measure type to intermediate outcome and to allow for a proportional non-inverse analytic for the purpose of determining measure performance. We proposed these changes to better align with the intent of the measure and to provide a performance rate reflective of appropriate resource utilization. We proposed to update multiple components of this measure to ensure the appropriate patient population is identified by including an age, defined encounter eligibility, and additional guidance for defining the eligible patient population. We also proposed to update the numerator options to align with a proportional non-inverse measure analytic such that a higher score indicates better quality care; and add denominator exceptions to remove patients 1) receiving bone marrow or peripheral blood stem cell transplant, or CAR T-cell therapy or 2) receiving drugs for palliation or to prevent rapid disease acceleration at the end of life as recommended by ASCO's End Of Life Technical Expert Panel. We proposed these changes to better align with the intent of the measure and to ensure consistent implementation across clinician submissions.

Category	Description
	In the event the proposed substantive change(s) are finalized, the substantive changes will not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for the creation of a performance period benchmark, a new benchmark will be used for scoring.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed denominator exceptions to measure Q457: *Percentage of Patients who Died from Cancer Admitted to Hospice for less than 3 Days (lower score – better)* and encouraged CMS to periodically reassess these specifications as cell-therapy technologies evolve to ensure that quality measures do not become inadvertently tethered to an outdated description of the relevant therapeutic modalities. Another commenter urged CMS to extend the measurement window to include hospice lengths of stay of less than seven days, noting that the current three-day window captures only the most extreme cases of late referrals. The commenter stated that evidence consistently shows longer hospice stays are associated with improved symptom control, higher patient and family satisfaction, fewer in-hospital deaths, and lower end-of-life expenditures, while shorter stays are a marker of poorer-quality care.

Response: We thank the commenters for supporting the substantive changes to the measure. We encourage the commenters to reach out to the measure steward to discuss revisions for possible implementation in future years. In addition, we complete measure analysis to evaluate measure performance, identify potential unintended consequences, assess alignment with current clinical guidelines and evidence, and determine whether technical or substantive updates are needed for future performance periods, which we recommend to measure stewards for their consideration. Any potential new substantive changes need to go through notice and comment rulemaking.

Comment: One commenter indicated that the revisions to measure Q457 are substantial enough to limit comparability with historical performance. The commenter noted that changes to the measure name, type, denominator specifications, denominator exceptions, and directionality would affect interpretation, scoring, benchmarking, and communication to clinicians. They recommended that CMS treat measure Q457 as a new measure for the 2027 performance year and apply the corresponding new-measure policies for benchmarking and scoring.

Response: We thank the commenter for their feedback and acknowledge that the data would not be comparable to previous years; therefore, we will remove the historical benchmark. While the analytic of the measure has changed, the intent and quality action being assessed remains consistent and doesn't constitute a need to classify this as a new quality measure. In addition, as this measure concept has shown sufficient adoption in MIPS, the new measure benchmarking and scoring would not be appropriate.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44447 through 44448), we are finalizing the changes to measure Q457 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.31 Otitis Media with Effusion: Systemic Antimicrobials - Avoidance of Inappropriate Use

Category	Description
CBE # / eCQM CBE #:	0657 / N/A
Quality#:	464
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients aged 2 months through 12 years with a diagnosis of OME who were not prescribed systemic antimicrobials.
Substantive Change:	**The measure description is revised to read**: Percentage of patients aged 2 months through 12 years with a diagnosis of otitis media with effusion (OME) who were not prescribed systemic antimicrobials within 3 months of diagnosis. **Updated implementation and considerations: Revised:** 90 days to 3 months. **The measure numerator is revised to read:** Patients who were not prescribed systemic antimicrobials within 3 months of diagnosis. **Updated numerator options**: **Revised:** to include timeframe of within 3 months of diagnosis.
Measure Steward:	American Academy of Otolaryngology – Head and Neck Surgery Foundation
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to update multiple components of the measure by adding "within 3 months of diagnosis" to clarify the timeframe during which systemic antimicrobials were not prescribed to patients. This clarification, based on AAO-HNS's Clinical Practice Guideline on Otitis Media with Effusion (Update),[520] will ensure the numerator quality action is appropriately and consistently assessed.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter did not support the substantive change modifying the timeframe from 90 days to 3 months, stating that the current 90-day period is clearer and supports consistent interpretation for measure Q464: *Otitis Media with Effusion: Systemic Antimicrobials - Avoidance of Inappropriate Use*.

Response: We thank the commenter for the feedback on the substantive change to the measure. The language change from 90 days to 3 months is in accordance with current clinical practice guidelines,[521] where they recommend watchful waiting for 3 months after onset/diagnosis, ensuring the patient population is consistently and appropriately assessed for numerator compliance. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. Any potential new substantive changes need to go through notice and comment rulemaking.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44449), we are finalizing the changes to measure Q464 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

A., & Corrigan, M. D. (2016). Clinical Practice Guideline: Otitis Media with Effusion (Update). *Otolaryngology--Head and Neck Surgery: Official Journal of American Academy of Otolaryngology-Head and Neck Surgery*, *154*(1 Suppl), S1–S41. https://doi.org/10.1177/0194599815623467.

[521] See footnote Rosenfeld et al., 2016.

D.32 HIV Screening

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	475
CMS eCQM ID:	CMS349v9
Current Collection Type:	eCQM
Current Measure Description:	Percentage of patients aged 15-65 at the start of the measurement period who were between 15-65 years old when tested for Human immunodeficiency virus (HIV).
Substantive Change:	**Updated initial patient population: Removed:** without an HIV diagnosis prior to the start of the measurement period.
Measure Steward:	Centers for Disease Control and Prevention
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to revise the initial patient population language to better align with the logic of the measure as this patient population is removed by the denominator exclusion: Patients diagnosed with HIV prior to the day of the start of the measurement period.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter urged CMS not to remove the exclusion for patients with a prior HIV diagnosis, since screening measures are intended to identify undiagnosed infection and it is clinically inappropriate to "screen" patients already known to have HIV. The commenter was concerned that this change would misalign the measure with guideline-defined screening populations, distort performance results, and could drive redundant testing of patients already in HIV care without improving detection of new infections. The commenter recommended retaining the current exclusion and, if CMS seeks to achieve a different objective (such as targeted testing in specific groups), developing a separate measure designed for that purpose, while ensuring any changes keep measure Q475: *HIV Screening* aligned with screening guidelines and strengthen its role in promoting broad, guideline-concordant HIV screening.

Response: We thank the commentor for their feedback on the substantive change and note this revision addresses duplicative criteria but doesn't change the patient population being assessed. This change does not modify the denominator exclusion, rather it removes the redundancy from the initial population. The denominator exclusion already ensures all patients being assessed don't have an HIV diagnosis and will remain as "Patients diagnosed with HIV prior to the day of the start of the measurement period" within the measure specifications.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44450), we are finalizing the changes to measure Q475 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.33 Urinary Symptom Score Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	476
CMS eCQM ID:	CMS771v8
Current Collection Type:	eCQM
Current Measure Description:	Percentage of patients with an office visit within the measurement period and with a new diagnosis of clinically significant Benign Prostatic Hyperplasia who have International Prostate Symptoms Score (IPSS) or American Urological Association (AUA) Symptom Index (SI) documented at time of diagnosis and again 6-12 months later with an improvement of 3 points.
Substantive Change:	**The measure description is revised to read:** Percentage of patients with an office visit during the measurement period and a new diagnosis of clinically significant benign prostatic hyperplasia (BPH) who have International Prostate Symptom Score (IPSS) or American Urological Association Symptom Index (AUA-SI) documented within one month of diagnosis and again 6-12 months after diagnosis, with an improvement of at least 3 points. **The measure numerator is revised to read:** Patients with an improvement of at least 3 points in their IPSS or AUA-SI urinary symptom score from baseline to the 6-12 month follow-up assessment.
Measure Steward:	Large Urology Group Practice Association and Oregon Urology Institute
MIPS Core Measure:	No
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We proposed to revise both the description of the measure and the numerator to include specific timeframes for completion of the assessments. By explicitly detailing timeframes (baseline within one month of diagnosis and follow-up assessment within 6–12 months) and the outcome metric (3-point improvement), the measure reduces ambiguity in performance measurement and ensures consistency in reporting.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter encouraged CMS to consider allowing the documentation of patient preference when symptoms are stable and treatment escalation is not desired to ensure goal concurrent care.

Response: We thank the commenter for their feedback on this measure. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. Any potential new substantive changes need to go through notice and comment rulemaking.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44450), we are finalizing the changes to measure Q476 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.34 Hospital-wide, 30-day, All-cause Unplanned Readmission (HWR) Rate for the Merit-based Incentive Payment System (MIPS) Groups

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	479
CMS eCQM ID:	N/A
Current Collection Type:	Administrative Claims
Current Measure Description:	This measure is a re-specified version of the measure, "Risk-adjusted readmission rate (RARR) of unplanned readmission within 30 days of hospital discharge for any condition" (NQF 1789), which was developed for patients 65 years and older using Medicare claims. This re-specified measure attributes outcomes to MIPS participating clinician groups and assesses each group's readmission rate. The measure comprises a single summary score, derived from the results of five models, one for each of the following specialty cohorts (groups of discharge condition categories or procedure categories): medicine, surgery/gynecology, cardio-respiratory, cardiovascular, and neurology.
Substantive Change:	**Updated denominator exclusion: Removed:** With a principal or a secondary diagnosis code of COVID-19 coded as present on admission (POA) on the index admission claim.
Measure Steward:	Centers for Medicare & Medicaid Services
MIPS Core Measure:	No
Measure Type:	Outcome
Rationale:	We proposed to remove the exclusion for admissions with either a principal or secondary diagnosis of COVID–19 present on admission from the measure denominator due to the end of the public health emergency. This change will align this measure with language finalized under the Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals (IPPS) and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year (FY) 2026 Rates; Changes to the FY 2025 IPPS Rates Due to Court Decision; Requirements for Quality Programs; and Other Policy Changes; Health Data, Technology, and Interoperability: Electronic Prescribing, Real-Time Prescription Benefit and Electronic Prior Authorization final rule (90 FR 36948 through 36950).

We received public comments on the substantive change proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the substantive change to measure Q479: *Hospital-wide, 30-day, All-cause Unplanned Readmission (HWR) Rate for the Merit-based Incentive Payment System (MIPS) Groups*, stating that the change will improve consistency in specifications and enhance comparability of performance results across MIPS groups.

Response: We thank the commenter for supporting the substantive change to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44451), we are finalizing the change to measure Q479 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.35 Intravesical Bacillus-Calmette-Guerin for Non-Muscle Invasive Bladder Cancer

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	481
CMS eCQM ID:	CMS646v7
Current Collection Type:	eCQM
Current Measure Description:	Percentage of patients initially diagnosed with non-muscle invasive bladder cancer and who received intravesical Bacillus-Calmette-Guerin (BCG) within 6 months of bladder cancer staging.
Substantive Change:	**Measure description is revised to read:** Percentage of patients initially diagnosed with non-muscle invasive bladder cancer and who received intravesical Bacillus-Calmette-Guerin (BCG) within 6 months of initial diagnosis of bladder cancer. **Updated denominator exclusion: Revised:** timing is centered around diagnosis. **Updated numerator: Revised:** timing is centered around diagnosis. **Updated denominator exception: Revised:** timing is centered around diagnosis. **Updated logic and logic definitions: Revised:** timing is centered around diagnosis.
Measure Steward:	Oregon Urology
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to update multiple components of the measure to clarify that the timing for receipt of intravesical BCG is based on the initial diagnosis of bladder cancer and not staging. The revision to base the timing of intravesical BCG administration on the initial diagnosis of bladder cancer enhances clinical clarity, promotes consistency in care measurement and measure reporting, and encourages more timely treatment, all of which contributes to improved patient care.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44451), we are finalizing the changes to measure Q481 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.36 Mismatch Repair (MMR) or Microsatellite Instability (MSI) Biomarker Testing Status

Category	Description
CBE # / eCQM CBE #:	3661 / N/A
Quality#:	491
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of surgical pathology reports for primary colorectal, endometrial, gastroesophageal or small bowel carcinoma, biopsy or resection, that contain impression or conclusion of or recommendation for testing of mismatch repair (MMR) by immunohistochemistry (biomarkers MLH1, MSH2, MSH6, and PMS2), or microsatellite instability (MSI) by DNA-based testing status, or both.
Substantive Change:	**Updated denominator criteria: Added:** coding to diagnosis criteria for genetic susceptibility.
Measure Steward:	College of American Pathologists
MIPS Core Measure:	Yes
Measure Type:	Process
Rationale:	We proposed adding additional codes to the denominator criteria for genetic susceptibility as it will ensure better targeting of high-risk populations, optimize resources, and contribute to improved patient outcomes and data reliability for cancer care.[522]

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44452), we are finalizing the changes to measure Q491 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

[522] Robson, M. E., Storm, C. D., Weitzel, J., Wollins, D. S., & Offit, K. (2015). American Society of Clinical Oncology Policy Statement Update: Genetic and Genomic Testing for Cancer Susceptibility. *Journal of Clinical Oncology, 33*, 3660–3667. https://doi.org/10.1200/JCO.2015.63.0996.

D.37 Preventive Care and Wellness (composite)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	497
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients who received age- and sex-appropriate preventive screenings and wellness services. This measure is a composite of seven component measures that are based on recommendations for preventive care by the U.S. Preventive Services Task Force (USPSTF), Advisory Committee on Immunization Practices (ACIP), American Association of Clinical Endocrinology (AACE), and American College of Endocrinology (ACE).
Substantive Change:	**Updated numerator definition: For Submission Criteria 3: Added: Reviewed** – to meet the quality action, there must be documentation in the medical record that the clinician reviewed the mammography report. The mammography report may also be provided by the patient for the clinician's review during the visit and should be documented in the medical record. **Updated numerator definition: For Submission Criteria 4: Added: Reviewed** – to meet the quality action, there must be documentation in the medical record that the clinician reviewed the colorectal screening report. The colorectal screening report may also be provided by the patient for the clinician's review during the visit and should be documented in the medical record. **Updated denominator criteria: For Submission Criteria 7: Added:** coding for physical and occupational therapy.
Measure Steward:	Centers for Medicare & Medicaid Services
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to revise the measure numerator definition for Submission Criteria 3 and 4, the medical record must document the clinician's review of the mammography or colorectal screening report, whether obtained directly or provided by the patient, during the visit. By specifying that the review should be documented in the medical record, the measure ensures clinicians are confirming review of mammography and colorectal screening results, not just receipt, and the measure encourages standardization in documentation practices across different clinical settings, which promotes care coordination and appropriate patient follow-up if needed. We also proposed to update the denominator criteria for Submission Criteria 7 with physical and occupational therapy codes to align with the eCQM measure specifications. By adding PT/OT coding in this measure, healthcare organizations can help ensure a more inclusive, proactive, and effective approach to managing cardiovascular health, while also capitalizing on all patient touchpoints to achieve comprehensive wellness and improve health outcomes.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the substantive changes to measure Q497: *Preventive Care and Wellness (composite)*, Submission Criteria 4, noting the changes align with those made to measure Q113: *Colorectal Cancer Screening*. The commenter noted, however, that the measure did not recognize all FDA-approved, Medicare-covered colorectal cancer screening options, specifically blood-based tests and stool RNA tests. The commenter recommended that CMS work with NCQA to ensure that colorectal cancer screening quality measures used across CMS programs incorporate all FDA-authorized, Medicare-covered screening tests. A second commenter noted that the measure still relies on an outdated definition of "appropriate" screening based on old USPSTF recommendations that exclude newer FDA-approved, Medicare-covered tests and recommended updating measures Q497 and Q113 to reflect current coverage and clinical practice guidelines.

Response: We thank the commenters for supporting the substantive changes to this measure. We will review and discuss this revision for possible implementation in future years as it would be substantive in nature and would therefore need to go through public notice and comment. We encourage the commenter to reach out to the measure steward of measure Q113 to discuss revisions for possible implementation and application to measure Q497 in future years.

Comment: Two commenters opposed the proposed updates to the numerator definitions for Submission Criteria 3 (Breast Cancer Screening) and 4 (Colorectal Cancer Screening). They emphasized that adding a requirement for explicit documentation that the clinician "reviewed" the mammography or colorectal cancer screening report would create additional administrative burden without meaningful clinical benefit. Commenters noted that when screening results are already available in the electronic health record, reviewing those results is part of routine clinical workflow. Introducing a separate attestation or specific notation of review solely for reporting purposes adds unnecessary documentation steps for clinicians and staff. Commenters also expressed concern that expanding the numerator definition beyond the original intent of the measure could lead to unintended consequences. Because the lookback period for colorectal cancer screening can extend up to 10 years, commenters cautioned that it is unlikely prior reviews and discussions are documented in an accessible way. As a result, clinicians may feel compelled to order repeat mammograms or colorectal screenings not because they are clinically indicated, but to satisfy measure requirements. They noted that this could lead to overuse of screening procedures, patient confusion, and unnecessary alarm, especially if

physicians must discuss old test results ordered or reviewed by other providers. Lastly, one of the commenters recommended that CMS consider including patient refusal as an exception in the future.

Response: We appreciate the feedback on measure Q497 on Submission Criteria 3 and 4. The added definition of "reviewed" is intended to clarify, not expand, the original measure intent by specifying that review of a mammography or colorectal cancer screening report includes documenting that review in the medical record, consistent with usual clinical practice. There are a multitude of benefits for both the patient and provider in having a clinician review, discuss, and document the results/findings and discussion, including but not limited to, supporting shared decision-making[523] and ensuring continuity of care.[524] Screening decisions should continue to be based on clinical judgment, evidence-based guidelines, and patient preferences. While in healthcare it is standard practice to document care provided to a patient, including documenting a discussion upon the review of results/findings of a medical test or exam, the measure specification does not dictate the format or structure of such documentation. We encourage the commenters to reach out to the measure steward to discuss revisions for possible implementation in future years.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44453), we are finalizing the changes to measure Q497 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.38 Reduction in Suicidal Ideation or Behavior Symptoms

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	505
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	The percentage of patients aged 18 and older with a mental and/or substance use disorder AND suicidal thoughts, behaviors or risk symptoms who demonstrated a reduction in suicidal ideation and/or behavior symptoms based on results from the Columbia-Suicide Severity Rating Scale (C-SSRS) 'Screen Version' or 'Since Last Visit' within 120 days after an index assessment.
Substantive Change:	**The measure description is revised to read**: The percentage of patients aged 12 years and older with a mental and/or substance use disorder AND suicidal thoughts, behaviors or risk symptoms who demonstrated a reduction in suicidal ideation and/or behavior symptoms based on results from the Columbia-Suicide Severity Rating Scale 'Screen Version' or 'Since Last Visit' (C-SSRS), or other clinician rating tools such as the Clinician Rating of Potential Suicide Risk (CRPSR) or the Suicide Assessment Five-step Evaluation & Triage (SAFE-T) protocol with C-SSRS, within 120 days after an index assessment. **The measure denominator is revised to read**: Patients aged 12 and older with a mental and/or substance use disorder with an index assessment completed who were identified as having suicidal ideation and/or behavior symptoms as determined by a non-zero score on the patient-rated C-SSRS OR deemed a suicide risk based on their clinician's evaluation using a clinician rating tool such as the CRPSR or the SAFE-T protocol with C-SSRS during the denominator identification period. **Updated denominator definitions: Revised:** **Suicide risk based on clinician rating tool –** clarified suicide risk to be based on a clinician-rating tool, which may be C-SSRS or other. **Denominator Identification Period** and **Index Assessment –** updated to reflect use of other clinician-rating tools. **Updated the denominator criteria: Revised:** age to 12 **Removed:** 'Suicidal Ideation and/or Behavior Symptoms based on the C-SSRS' and 'Suicide risk based on their clinician's evaluation or a clinician-rated tool' **Revised:** index assessment criteria to reflect use of other clinician-rating tools. **The measure numerator is revised to read**: Patients who demonstrated a reduction in suicidal ideation and/or behavior symptoms as demonstrated by results of a follow-up assessment using the patient-rated C-SSRS OR reduction in suicide risk based on their clinician's evaluation using a clinician rating tool such as the CRPSR or the SAFE-T protocol with C-SSRS, within 120 days after the index assessment during the measurement period. **Updated numerator definitions: Revised:** **Reduction –** to account for use of other clinician-rating tools. **Follow-up Assessment –** to account for use of other clinician-rating tools and require consistency in index and follow-up assessment.
Measure Steward:	American Psychiatric Association
MIPS Core Measure:	No
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We proposed to update multiple components of the measure to lower the denominator eligible age to 12 years and older and expand the denominator requirements to allow use of other clinician-rating tools for the index assessment and follow-up, to ensure inclusion of a critical demographic group in suicide prevention and substance use disorder interventions. This measure enhances alignment with CMS' mental health priorities, leverages validated tools like the C-SSRS and promotes actionable insights into improved care outcomes for a vulnerable population. We also proposed to update the numerator definition to clarify that the same patient-rated C-SSRS or clinician rating tool must be used at a follow-up encounter after the index assessment. This will ensure consistent implementation and ensure direct comparability of data between assessments.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter encouraged CMS and the measure steward to reevaluate whether the current methodology for defining improvement accurately reflects clinically meaningful changes in suicide risk for measure Q505: *Reduction in Suicidal Ideation or Behavior Symptoms*.

The measure defines improvement as any reduction in the total C-SSRS score, calculated as the sum of all Yes/No responses (Yes = 1, No = 0), with performance met when the follow-up score is lower than the index score. However, in clinical practice, clinicians primarily rely on the C-SSRS to assess and interpret suicide risk rather than to calculate or trend a total numerical score. As a result, clinicians and health IT systems may not routinely display, track, or act upon changes in the cumulative score required for measure reporting. The commenter encouraged CMS and the measure steward to consider whether future

refinements should incorporate changes in clinically validated risk categories, item-level weighting, or other approaches that better reflect meaningful changes in suicide risk. At a minimum, CMS should evaluate whether the current score-based methodology accurately captures the measure's stated intent of reducing suicidal ideation and behavior symptoms while maintaining consistency with real-world clinical workflows and suicide risk assessment practices.

Response: We thank the commentor for their feedback regarding the substantive changes to this measure. The intent of the measure was not changed with these revisions; rather, we streamlined and clarified the components to support more consistent and efficient implementation. We also considered the need for the measure to be feasible within the program's reporting structure and to generate meaningful, actionable metrics. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. In addition, we complete measure analysis to evaluate measure performance, identify potential unintended consequences, assess alignment with current clinical guidelines and evidence, and determine whether technical or substantive updates are needed for future performance periods, which we recommend to measure stewards for their consideration. Any potential new substantive changes will need to go through notice and comment rulemaking.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44454), we are finalizing the changes to measure Q505 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.39 Appropriate Germline Testing for Ovarian Cancer Patients

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	507
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients, aged 18 and older, diagnosed with epithelial ovarian, fallopian tube, or primary peritoneal cancer who undergo germline testing within 6 months of diagnosis.
Substantive Change:	**Updated denominator criteria**: **Removed:** Audio only Telehealth codes.
Measure Steward:	American Society of Clinical Oncology
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to remove audio only visits from the denominator criteria because they lack the visual assessment necessary to confirm a patient's physical condition (e.g., performance status; physical signs of toxicity, pain, and distress) and the physical assessment required by the clinician providing the care and responsible for conducting germline testing.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the substantive changes to measure Q507: *Appropriate Germline Testing for Ovarian Cancer Patients*.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44455), we are finalizing the changes to measure Q507 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.40 Melanoma: Tracking and Evaluation of Recurrence

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	509
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients who had an excisional surgery for melanoma or melanoma in situ with initial American Joint Committee on Cancer (AJCC) staging of 0, I, or II, in the past 5 years in which the operating provider examines and/or diagnoses the patient for recurrence of melanoma.
Substantive Change:	**The measure description is revised to read**: Percentage of patients who had an excisional surgery for melanoma or melanoma in situ with initial American Joint Committee on Cancer (AJCC) staging of 0, I, or II, in the past 5 years for whom the clinician or practice responsible for longitudinal care documents examination and/or diagnosis for recurrence of melanoma during the performance period. **Updated intent and clinician applicability: Revised:** The examination for recurrence may be performed by any qualified clinician, provided that the clinician or practice reporting the measure documents that the examination occurred in the medical record. **Updated denominator note**: **Added**: The excisional surgery may have been performed by any clinician or practice, provided documentation of the qualifying procedure and staging is present in the medical record of the clinician or practice reporting the measure.
Measure Steward:	American Academy of Dermatology
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed revising this measure to address instances where one clinician may perform the excision and another performs the subsequent skin examinations. This measure revision will ensure inclusiveness, continuity, and accuracy in reporting excisional surgery outcomes by allowing documentation from any qualified clinician or practice, as is common in clinical practice.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the substantive changes to measure Q509: *Melanoma: Tracking and Evaluation of Recurrence* and requested information on the examination and how to implement the measure.

Response: We thank the commenter for supporting the substantive changes to this measure. The examination for recurrence may be performed by any qualified clinician, allowing for care coordination and continuity. Please see the measure specification, once posted by January 1, 2027, for specific reporting requirements.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44455), we are finalizing the changes to measure Q509 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.41 Patient Reported Falls and Plan of Care

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	513
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients (or caregivers as appropriate) with an active diagnosis of a movement disorder, multiple sclerosis, a neuromuscular disorder, dementia, or stroke who reported a fall occurred and those that fell had a plan of care for falls documented at every visit.
Substantive Change:	**Updated denominator criteria: Removed: For all Submission Criteria:** diagnosis coding not specific to an active diagnosis of a movement disorder, multiple sclerosis, a neuromuscular disorder, dementia, or stroke. **Updated definitions: For all Submission Criteria: Added:** **Last Visit –** if the patient is established, this would be since the last visit with the same clinician/group. If the patient is new, it would be since the patient's last visit with any clinician. **Updated denominator**: **For Submission Criteria 2: Added**: Patient reported a fall since last visit OR Accidental Fall **Updated numerator note: For Submission Criteria 1: Added:** Denominator Exception medical reason(s) should be documented at the time of the denominator eligible encounter. **Updated numerator options: For Submission Criteria 2: Revised:** **Performance Met:** Patients that reported a fall occurred who had a plan of care for falls documented **Performance Not Met:** Patients that had a fall who did not have a plan of care for falls documented **Removed:** Denominator Exception
Measure Steward:	American Academy of Neurology
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to revise multiple components of this measure to ensure alignment with intent and clinical workflow. We proposed to remove coding that is broad in nature and not specific to the diagnosis of a movement disorder, multiple sclerosis, a neuromuscular disorder, dementia, or stroke. Removal will ensure the denominator does not include patients beyond those in neurology with symptomology who will not be appropriate for assessment of the quality action. While patient safety in context of falls is important in all patients, the quality action for this measure is specific for the patient population intended and may not be appropriate for any falls patient. For clarity we proposed adding a definition for 'Last Visit' so that all clinicians reporting are following the same timeline, ensuring consistent implementation across clinician submissions. Additionally, we proposed adding to the Submission Criteria 1 numerator note to clarify that the medical reason should be documented as active or present on the day of the denominator eligible encounter. This will ensure that regardless of condition, whether it be chronic or acute, active or historical, it will be attributable to that interaction. Finally, we proposed to revise Submission Criteria 2 to focus on those patients who reported a fall since their last visit as this is the at-risk patient population requiring the quality action; plan of care for falls. This revision aligns with measure intent as well as the structure of other screening measures in MIPS for better consistency.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter opposed limiting measure Q513: *Patient Reported Falls and Plan of Care* to a narrow set of diagnoses, stating that fall assessment is important for a broader patient population and noting concerns about further reducing measure choice for clinicians. The commenter requested CMS expand the numerator to include all patients for whom fall risk assessment and appropriate follow-up are clinically important.

Response: We thank the commenter for the feedback on the substantive changes to this measure. Limiting the diagnosis will ensure the denominator does not include patients beyond those in neurology with symptomology who will not be appropriate for assessment of the quality action. In addition, there are two alternative quality measures that address falls within MIPS that are age-based as opposed to diagnosis-based. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. Any potential new substantive changes need to go through notice and comment rulemaking.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44456), we are finalizing the changes to measure Q513 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

Table Group DD: Finalized Substantive Changes to Previously Finalized MIPS Quality Measures Available Only for Use in Relevant MVPs for the CY 2027 Performance Period/2029 MIPS Payment Year and Future Years

As finalized for the CY 2024 performance period/2026 MIPS payment year and future years, the following three MIPS quality measures were retained for utilization in MVPs only while removed from traditional MIPS: Q112**:** *Breast Cancer Screening*, Q113: *Colorectal Cancer Screening*, and Q128**:** *Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan* (88 FR 79897 through 79902). We note that measures Q112 and Q113 available only in MVPs are adopted by the Medicare Shared Savings Program for utilization in the Alternative Payment Model (APM) Performance Pathway (APP), specifically for inclusion in the APP Plus measure set, as finalized in the CY 2025 PFS final rule (89 FR 98363 through 98371). For such measures, the collection types solely applicable for purposes of the APP Plus measure set (Medicare Clinical Quality Measures for Accountable Care Organizations (ACOs) Participating in the Medicare Shared Savings Program (Medicare CQMs) collection type and newly finalized Medicare Electronic Clinical Quality Measures for ACOs Participating in the Medicare Shared Savings Program (Medicare eCQMs) collection type as described in section IV.A.4.d.(1)(c)(v) of this final rule) are also specified as a collection type available for such relevant measures described in Table Group DD of this Appendix.

Table Group DD within this final rule provides substantive changes finalized for the CY 2027 performance period/2029 MIPS payment year for MIPS quality measures available only in a relevant MVP. The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2027 may not be identified within this final rule due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2027 CPT and ICD-10 updates and assessment of these codes' inclusion by the Measure Steward, these changes may be postponed until CY 2028. The 2027 Quality Measure Release Notes provide a comprehensive, detailed reference of exact codes changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the Quality Payment Program website at *https://qpp.cms.gov*.

Measures that are endorsed by a CBE are shown in Table Group DD of this Appendix as follows: CBE # / eCQM CBE #.

In addition to the finalized substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but it is important to communicate to interested parties. These changes align with the scope of the current coding; however, though not substantive in nature, these changes will expand or contract the measure's current eligible patient population. Therefore, please refer to the current year measure specification and the 2027 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the finalized substantive changes, there may be revisions within the logic that are not considered substantive in nature; however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow.

There were no proposed substantive changes for measure Q128. We requested comments on the substantive changes for the other measures outlined below.

DD.1 Breast Cancer Screening

Category	Description
CBE # / eCQM CBE #:	2372 / N/A
Quality#:	112
CMS eCQM ID:	CMS125v15
Current Collection Type:	Medicare Part B Claims Measure / eCQM / Medicare CQM / MIPS CQM
Current Measure Description:	Percentage of women 40-74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.
Substantive Change:	**Modified collection type:** Medicare Part B Claims Measure, eCQM, Medicare CQM, MIPS CQM, Medicare eCQM collection types.
Measure Steward:	National Committee for Quality Assurance
Core Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to update the collection types available for this measure to include the Medicare eCQM collection type to allow choice in submission method for Medicare Shared Savings Program ACOs reporting the APP Plus measure set. See section IV.A.4.d.(1)(c)(v) of this final rule for further information on the Medicare eCQM collection type.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44458), we are finalizing the changes to measure Q112 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

DD.2 Colorectal Cancer Screening

Category	Description
CBE # / eCQM CBE #:	0034 / N/A
Quality#:	113
CMS eCQM ID:	CMS130v15
Current Collection Type:	Medicare Part B Claims Measure / eCQM / Medicare CQM / MIPS CQM
Current Measure Description:	Percentage of patients 45-75 years of age who had appropriate screening for colorectal cancer.
Substantive Change:	**Modified collection type:** Medicare Part B Claims Measure, eCQM, Medicare CQM, MIPS CQM, Medicare eCQM collection types.
Measure Steward:	National Committee for Quality Assurance
Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to update the collection types available for this measure to include the Medicare eCQM collection type to allow choice in submission method for Medicare Shared Savings Program ACOs reporting the APP Plus measure set. See section IV.A.4.d.(1)(c)(v) of this final rule for further information on the Medicare eCQM collection type.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44458), we are finalizing the changes to measure Q113 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

APPENDIX 2: IMPROVEMENT ACTIVITIES

In the CY 2027 PFS proposed rule (90 FR 44143), we proposed, for the CY 2027 performance period/2029 MIPS payment year and future years, to add **six** new improvement activities, modify **five** previously finalized improvement activities, and remove **eleven** previously finalized improvement activities. These proposals are discussed in section IV.A.4.d.(3).(b). of this final rule and in more detail below. We solicited comment on our proposals. Overall, we received comments sharing support, concerns, and suggestions. Many of the comments focused on specific proposed improvement activity additions, modifications, and removals, which are detailed below. Generally, comments addressed the safety of AI use for clinicians and patients and offered suggestions for developing additional activities in the future to support health initiatives aimed at reducing cardiovascular disease risk and preventing HIV.

TABLE F-B1: New Improvement Activities

New Improvement Activity	
Proposed Activity ID:	**IA_CC_20**
Proposed Subcategory:	Care Coordination
Proposed Activity Title:	Use of Data to Improve Practice Workflows
Proposed Activity Description:	MIPS-eligible clinicians collaborate to design, implement, and continuously refine evidence based utilization pathways and clinical workflows that support the integration of current research and clinical guidelines into everyday practice. Eligible activities include the creation or maintenance of any algorithm, clinical pathway, process, or order set that is grounded in established clinical practice guidelines and/or peer reviewed literature. Actions that fulfill this activity may include: • Collecting and analyzing clinical data to identify the need for a new or revised pathway, order set, or process • Developing and deploying the updated pathway, order set, or process within clinical operations • Evaluating adoption, effectiveness, and clinical impact through ongoing monitoring and feedback. Additional qualifying activities may include, for example, conducting annual reviews of existing pathways or algorithms by a pathology group and/or in collaboration with ordering clinician, developing and disseminating educational materials, and identifying or engaging new stakeholders to support pathway improvement and implementation.
Rationale:	Promoting uptake of best clinical practices from guidelines and other resources is critical for improving quality of patient care. However, translating recommendation statements into action can be challenging for individual practices due to resource constraints. Clinical pathways and algorithms are effective ways to encourage implementation of guidelines.[525] Development of such pathways requires clinical expertise and time, although a 10-step process has been established by other organizations.[526] By including a multi-disciplinary team in pathway development, care coordination can be maximized and all stakeholders can ensure that the pathway is feasible to implement. Such guidance requires regular review as new clinical practice statements become available, especially if the pathway includes multiple specialties (e.g., oncology, radiology, pathology, pain management, etc.).

[525] Fiordalisi, C., Borsky, A., Chang, S., & Guise, J.-M. (2019). AHRQ EPC Series on Improving Translation of Evidence into Practice for the Learning Health System: Introduction. Journal on Quality and Patient Safety, 45(8), 558-565. doi: 10.1016/j.jcjq.2019.05.006

[526] Flores, E. J., Jue, J. J., Giradi, G., Schoelles, K., Mull, N. K., & Umscheid, C. A. (2019). AHRQ EPC series on improving translation of evidence: use of a clinical pathway for C. Difficile treatment to facilitate the translation of research findings into practice. The Joint Commission Journal on Quality and Patient Safety, 45(12), 822-828. doi: 10.1016/j.jcjq.2019.10.002.

	Therefore, the effort involved in this activity is ongoing and requires input from many members of the care team.
Comment & Response:	*Comment*: We received several comments in support of finalizing this new activity. *Response*: We thank commenters for their support of this new activity.
Final Action:	After consideration of public comments, we are finalizing this new activity as proposed.
New Improvement Activity	
Proposed Activity ID:	**IA_CC_21**
Proposed Subcategory:	Care Coordination
Proposed Activity Title:	Understand and Improve Diagnostic Performance
Proposed Activity Description:	This activity aims to improve patient safety by reducing diagnostic safety events, including delayed, inaccurate, or missed diagnoses, as well as failures to communicate correct diagnoses to patients and their families. This activity should support diagnostic transparency, build staff competency through training, and improve the completeness and accuracy of patient data. Understanding and improving diagnostic performance includes establishing a standardized process to monitor diagnostic discrepancies, diagnostic safety events, near misses, and miscommunications. Key components of this activity may include: • Identifying a metric to track (e.g., frozen section discrepancy rate) • Implementing a consistent tracking mechanism • Conducting ongoing monitoring • Initiating mitigation or education efforts when needed. Processes must incorporate both routine tracking and root cause analysis, followed by appropriate corrective actions such as workflow changes, education, and/or targeted training for individuals and/or groups.
Rationale:	Accurate and timely diagnosis is the cornerstone of effective patient care. Diagnostic performance directly influences treatment decisions, patient outcomes, and healthcare resource utilization. Recent studies have emphasized the importance of addressing diagnostic safety events in clinical settings.[527] A deeper understanding of diagnostic processes--including cognitive, systemic, and technological factors--enables healthcare providers to identify gaps, implement targeted interventions, and promote a culture of continuous learning and accountability. As healthcare becomes increasingly data-driven, integrating diagnostic improvement efforts with quality metrics, patient feedback, and interdisciplinary collaboration ensures that care is not only clinically sound but also patient-centered.
Comment & Response	*Comment*: We received several comments in support of finalizing this new activity. *Response*: We thank commenters for their support of this new activity.
Final Action:	After consideration of public comments, we are finalizing this new activity as proposed.
New Improvement Activity	
Proposed Activity ID:	**IA_AHW_2**
Proposed Subcategory:	Advancing Health and Wellness
Proposed Activity Title:	Systematic Screening and Intervention for Nutrition and other Health-Impacting, Non-Clinical Issues
Proposed Activity Description:	This activity supports the implementation of standardized health-related, non-clinical issues screening tools and workflows to identify and address wellness-impacting factors such as poor nutrition, housing instability, transportation barriers, and financial strain. It may include: • Training staff on screening protocols • Embedding validated screening tools into the electronic health record (EHR)

[527] Auerbach, A. D., Lee, T. M., Hubbard, C. C., Ranji, S. R., Raffel, K., Valdes, G., ... & Schnipper, J. L. (2024). Diagnostic errors in hospitalized adults who died or were transferred to intensive care. JAMA Internal Medicine, 184(2), 164-173.

	• Establishing referral pathways to community-based resources • Tracking follow-up and resolution of identified needs.
Rationale:	This activity addresses a gap for a nutrition-focused improvement activity. It aligns with CMS's focus on wellness and whole-person care, and supports Enhancing Oncology Model (EOM) and MVP efforts by integrating health-related, non-clinical issues into quality improvement strategies. This activity builds on existing patient navigation and care coordination activities but focuses specifically on upstream factors.
Comment & Response:	*Comment*: We received several comments in support of finalizing this new activity. *Response*: We thank commenters for their support of this new activity.
Final Action:	After consideration of public comments, we are finalizing this new activity as proposed.
New Improvement Activity	
Proposed Activity ID:	**IA_AHW_3**
Proposed Subcategory:	Advancing Health and Wellness
Proposed Activity Title:	Advance Care Planning Conversations to Support Patient Wellness and Care Preferences
Proposed Activity Description:	MIPS-eligible clinicians engage patients and their caregivers in structured, proactive discussions about end-of-life preferences, advance care planning (ACP), and palliative care options as part of comprehensive wellness and care management. This activity integrates conversations about goals of care, symptom management, and quality of life into routine encounters with patients who have serious or life limiting illness. CMS reminds clinicians that they must not attempt to influence the ACP-related decisions of their patients. Participating clinicians must document: • Use of standardized communication tools or frameworks (e.g., Serious Illness Conversation Guide, Practitioner Orders for Life Sustaining Treatment (POLST)) to support consistent, high quality discussions; • Inclusion of wellness oriented topics, such as symptom relief, emotional wellbeing, social supports, and patient identified priorities; • Coordination and alignment of care plans across specialties, including primary care, palliative care, behavioral health, and other involved clinicians; and • Regular review and updates of advance directives or care preferences to ensure they remain accurate and reflective of the patient's evolving goals and clinical status.
Rationale:	End-of-life care planning discussions contribute to improved patient and caregiver well-being by reducing stress, enhancing understanding of care options, and ensuring treatment aligns with patient goals. Integrating these conversations into wellness and/or chronic care management visits supports a holistic approach to health, one that prioritizes quality of life, emotional and physical comfort, and patient autonomy. Evidence indicates that patients who engage in structured end-of-life care planning experience better symptom control, higher satisfaction, and reduced hospitalizations, aligning with MIPS goals of improved care coordination and patient-centered outcomes.
Comment & Response:	*Comment*: We received several comments in support of finalizing this new activity. One commenter recommended encouraging clinicians to assess existing ACP documents, verifying that patient preferences remain current, and promoting availability and exchange of ACP information across care settings. *Response:* We thank commenters for sharing their support and suggestions for this new activity. While we appreciate the recommendations, we believe these aspects are already incorporated into the activity.
Final Action:	After consideration of public comments, we are finalizing this new activity as proposed.
New Improvement Activity	
Proposed Activity ID:	**IA_AHW_4**
Proposed Subcategory:	Advancing Health and Wellness
Proposed Activity Title:	Clinician Use of Artificial Intelligence (AI) to Improve Patient Care

Proposed Activity Description:	MIPS-eligible clinicians implement and participate in structured organizational initiatives that improve patient care through the responsible and transparent use of artificial intelligence (AI) in clinical and operational workflows. This activity supports the safe adoption of AI-enabled technologies while encouraging the development, evaluation, and refinement of AI resources designed to improve patient outcomes, care-team efficiency, and population health management. As part of this activity, participating clinicians and organizations must: • Establish and maintain organizational policies and procedures for AI use in healthcare settings that guide the evaluation, deployment, and monitoring of AI-enabled tools ○ These policies incorporate key AI model characteristics including fairness, appropriateness, validity, and effectiveness as foundational criteria for assessing model performance, identifying event patterns, and determining appropriate risk-mitigation and escalation actions and • Engage in or support innovative initiatives that encourage the creation, piloting, and/or enhancement of AI-enabled tools, workflows, and/or resources ○ Examples include developing risk-stratification models, AI-supported clinical decision support (CDS), predictive analytics for chronic-disease management, and/or tools that expand patient access, wellness interventions, and/or care-coordination capabilities. Additional examples include using AI tools to summarize medical literature for clinical decision making, support documentation (e.g., generate notes with AI for clinician review), and/or support population health management by identifying care gaps, determining patient eligibility for clinical trials, or generating draft responses to patient questions for clinician review.
Rationale:	The rapid expansion of artificial intelligence (AI) in healthcare presents significant opportunities to improve clinical outcomes, reduce clinician burden, and enhance population health management. However, realizing these benefits requires deliberate, responsible, and transparent implementation practices that ensure AI tools are safe, fair, reliable, and aligned with evidence-based care. This improvement activity encourages MIPS-eligible clinicians to adopt AI in a structured, governance-driven manner that promotes innovation while safeguarding patient well-being. Establishing organizational policies and procedures for AI use provides an essential foundation for ensuring that deployed tools are evaluated using key model characteristics (fairness, appropriateness, validity, and effectiveness). By incentivizing participation in innovation initiatives such as developing or piloting new AI-enabled tools and workflows, this activity further advances the field of applied clinical AI, encouraging clinicians and practices to collaborate in the creation and refinement of AI resources. This activity also aligns with the AI-related goals of the CMS ACCESS (Advancing Chronic Care with Effective, Scalable Solutions) Model, a 10-year voluntary Medicare program testing outcome-aligned payments to expand technology-supported chronic care for common conditions.[528]
Comment & Response:	*Comment*: We received many comments related to this new activity. The majority of comments shared support for finalizing the new activity with some offering suggestions on additional protections or technologies to include within the activity. One commenter opposed AI in medicine and asked to delay the integration of AI into the Improvement Activities Inventory. *Response*: We thank commenters for expressing their support, concerns, and suggestions for this activity. We will continue to track the progression of AI technology and tools, best practices, and safeguards. We note that the activity requires participating clinicians and organizations to: "Establish and maintain organizational policies and procedures for AI use in healthcare settings that guide the evaluation, deployment, and monitoring of AI-enabled tools." We will continue to make modifications and additions to the Improvement Activity Inventory as needed. We welcome collaboration with interested parties on this topic.
Final Action:	After consideration of public comments, we are finalizing this new activity as proposed.
New Improvement Activity	

[528] Centers for Medicare and Medicaid Services. (n.d). ACCESS (Advancing Chronic Care with Effective, Scalable Solutions) Model. https://www.cms.gov/priorities/innovation/innovation-models/access.

Proposed Activity ID:	**IA_AHW_5**
Proposed Subcategory:	Advancing Health and Wellness
Proposed Activity Title:	Lifestyle Approaches to Diabetes Remediation
Proposed Activity Description:	MIPS-eligible clinicians engage patients and their caregivers in structured, evidence-based lifestyle interventions to support the treatment and management of diabetes. Clinicians use the American College of Lifestyle Medicine's (ACLM) Lifestyle Empowerment Approach for Diabetes Remission (LEADR) or a similar diabetes-focused lifestyle program to help patients address modifiable behavioral factors and improve overall health status. These programs provide education, coaching, and support across key lifestyle domains such as nutrition, physical activity, sleep, stress management, and reducing harmful behaviors. Participating clinicians may use one or more of the following evidence-based programs and resources: • ACLM Lifestyle Empowerment Approach for Diabetes Remission (LEADR)[529] • Diabetes Self-Management Education and Support (DSMES)[530] • American Diabetes Association Institute of Learning – Hands On Webinar: Diet, Lifestyle, Medicine, and Beyond—CardioKidneyMetabolic Strategies for Managing Obesity in People with Type 2 Diabetes[531] Use of each resource includes participating in the LEADR and/or Hands on Webinar programs and implementing learnings into practice with patients as clinically appropriate or referring patients when clinically appropriate to a DSMES program in-house or externally.
Rationale:	This activity aligns with CMS's focus on wellness and whole-person care and supports MVP efforts by integrating health-related, non-clinical issues into quality improvement strategies.
Comment & Response:	*Comment*: Several commenters expressed support for finalizing this activity. Commenters shared how this activity aligns with evidence-based approaches to managing diabetes. Some commenters suggested adding more information to the activity description to explain how each resource should be used. *Response*: We thank the commenters for sharing their support and suggestions for this activity.
Final Action:	We have made minor edits to this activity description accordingly and are otherwise finalizing this new activity as proposed.

In this proposed rule, we are proposing to modify **five** previously finalized improvement activities for the CY 2027 performance period/2029 MIPS payment year and future years. These

proposed changes are discussed in section IV.A.4.d.(3)(b)(IV) of this proposed rule and in more detail below.

TABLE F-B2: Modifications to Previously Finalized Improvement Activities

Current Improvement Activity	
Current Activity ID:	**IA_PSPA_16**
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools —and standardized treatment protocols to manage workflow on the care team to meet patient needs
Current Activity Description:	Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools—and standardized treatment protocols to manage workflow on the care team to meet patient needs. Clinicians should focus on utilizing open-source, freely available, interoperable CDS in completing the requirements of this activity.
Proposed Change and Rationale:	Stakeholder comments on the CY 2026 PFS NPRM supported stronger oversight of clinical AI, including monitoring, root cause analysis, and mitigation of AI-related diagnostic safety events and near-misses. This activity, IA_PSPA_16, already contains core patient safety elements, making it a strong candidate for modification to explicitly include AI-enabled decision support, aligned with the Office of the National Coordinator for Health Information Technology (ONC) definition of predictive decision-support interventions in 45 CFR 170.102 and stakeholder concerns about safety, liability, and governance.
Revised Activity Title:	Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools, including AI-enabled predictive decision-support interventions—and standardized treatment protocols to manage workflow on the care team to meet patient needs
Revised Activity Description:	MIPS-eligible clinicians use platform-agnostic, interoperable clinical decision support (CDS) tools—including artificial intelligence (AI)-enabled predictive decision-support interventions—to guide care-team workflow and support evidence-based, patient-centered decision-making. As part of this activity, clinicians prioritize open-source or freely available CDS tools where feasible and implement organizational policies to ensure the safe, appropriate, and effective use of these technologies. This activity may include: • Use of interoperable CDS tools, including AI-enabled technologies that meet the ONC definition of predictive decision-support interventions in 45 CFR 170.102: "technology that supports decision-making based on algorithms or models that derive relationships from training data and then produce an output that results in prediction, classification, recommendation, evaluation, or analysis"[532] • Organizational policies for safe CDS and AI use, including processes to identify, review, and mitigate AI-related adverse events or near-misses, and to address clinician concerns about liability, model reliability, and appropriate use • Evaluation of AI-enabled CDS tools using the following quality principles: ○ Fairness: outputs free from bias or undue risk ○ Appropriateness: relevance to the clinical context ○ Validity: accurate and reliable predictions or recommendations ○ Effectiveness: demonstrated benefit in real-world use • Workflow integration practices showing that CDS recommendations—whether originally human-curated or AI-generated—are applied consistently in treatment planning, patient counseling, and follow-up • Periodic review and updating of CDS tools and related protocols to maintain alignment with best practices, organizational policies, and patient-safety standards.

[532] Office of the National Coordinator for Health IT. (2026). *45 CFR 170.315: ONC certification criteria for Health IT*. U.S. Code of Federal Regulations. https://www.ecfr.gov/current/title-45/subtitle-A/subchapter-D/part-170/subpart-C/section-170.315.

Comment & Response:	*Comment*: We received several comments related to the modification of this activity. All comments shared support for finalizing the modification with some suggesting additional requirements to include within the activity. *Response*: We thank commenters for expressing their support and suggestions for this activity modification. We will continue to track the progression of AI technology and tools, best practices, and safeguards. We will propose further modifications to this activity as needed in the future. We welcome collaboration with interested parties on this topic.
Final Action:	After consideration of public comments, we are finalizing this activity modification as proposed
Current Improvement Activity	
Current Activity ID:	**IA_BMH_4**
Current Subcategory:	Behavioral And Mental Health
Current Activity Title:	Depression screening
Current Activity Description:	Depression screening and follow-up plan: Regular engagement of MIPS eligible clinicians or groups in integrated prevention and treatment interventions, including depression screening and follow-up plan (refer to NQF #0418) for patients with co-occurring conditions of behavioral or mental health conditions
Proposed Change and Rationale:	IA_BMH_4 and IA_BMH_5 contain similar elements that could be combined into one, more robust activity.
Proposed Revised Activity Title:	Depression Screening, Treatment, and Prevention
Proposed Revised Activity Description:	MIPS-eligible clinicians or groups regularly engage in integrated screening, treatment, and/or prevention interventions for patients with behavioral or mental health conditions, with a focus on early identification and coordinated management of major depressive disorder and associated risks. This activity includes systematic depression screening and follow-up planning, along with suicide risk assessment for individuals at elevated risk. Clinicians participating in this activity should implement and document: • Use of validated depression screening tools administered at appropriate intervals for patients • Completion of suicide risk assessments when clinically indicated, using standardized tools for patients who screen positive for depression or exhibit mental-illness warning signs • Development and execution of evidence-based follow-up plans, including safety planning, symptom management, referral to behavioral health specialists, and monitoring of treatment response • Integrated, team-based coordination of care between primary care, behavioral health, psychiatry, and other relevant specialties to support continuity, patient safety, and positive patient outcomes • Routine monitoring and reassessment, including documentation of treatment adjustments, patient (and/or family/caregiver) engagement, and adherence to follow-up intervals consistent with clinical guidelines.
Comment & Response:	*Comment*: We received some comments specifically related to the modification of this activity. One comment shared support for finalizing the modification and suggested adding "evidence-based depression treatment" to the activity. Another comment shared concern that the combination of two depression-related improvement activities could diminish the visibility of depression management. *Response*: We thank commenters for expressing their support, concern, and suggestions for this activity modification. We believe that language relating to evidence-based depression treatment is already incorporated into the activity description sufficiently. The combination of depression-related improvement activities will not lessen focus on depression management. This modification is aimed at reducing duplicative activities to reduce administrative effort.
Final Action:	After consideration of public comments, we are finalizing this activity modification as proposed.
Current Improvement Activity	

Current Activity ID:	**IA_CC_8**
Current Subcategory:	Care Coordination
Current Activity Title:	Implementation of documentation improvements for practice/process improvements
Current Activity Description:	Implementation of practices/processes that document care coordination activities (e.g., a documented care coordination encounter that tracks all clinical staff involved and communications from date patient is scheduled for outpatient procedure through day of procedure).
Proposed Change and Rationale:	IA_CC_8, IA_CC_10, IA_CC_11, and IA_CC_12 all contain similar elements that could be combined into one, more robust activity.
Proposed Revised Activity Title:	Implementation of Documentation and/or Operational Improvements for Practice/Process Improvements
Proposed Revised Activity Description:	This activity aims to strengthen communication, transparency, and patient-centered care across all transitions—outpatient, inpatient, specialty, and community settings. It seeks to promote clinicians' proactively coordinating care, tracking patient progress, documenting actions taken, and maintaining clear, structured processes that reduce fragmentation and improve clinical outcomes. This activity may include: • Documentation of care coordination encounters that track all clinical staff involved, communication steps, and handoffs from the time a patient is scheduled for an outpatient procedure or referral through completion of the episode of care • Systematic tracking of patients referred to consultants or specialists, including confirmation that the referral was received, appointments were completed, and recommendations were integrated into the plan of care • Documentation of care transition practices reflecting a patient-centered action plan aligned with the patient's values, preferences, and social context • Implementation of care coordination agreements with frequently used consultants or facilities that set expectations for timely, bidirectional information sharing and clearly define responsibilities across settings.
Comment & Response:	We did not receive public comment specifically on this modification.
Final Action:	We are finalizing this activity modification as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_CC_9**
Current Subcategory:	Care Coordination
Current Activity Title:	Implementation of practices/processes for developing regular individual care plans
Current Activity Description:	Implementation of practices/processes, including a discussion on care, to develop regularly updated individual care plans for at-risk patients that are shared with the beneficiary or caregiver(s). Individual care plans should include consideration of a patient's goals and priorities, as well as desired outcomes of care.
Proposed Change and Rationale:	IA_CC_9 and IA_BE_15 contain similar elements that could be combined into one, more robust activity.
Proposed Activity Title:	Implementation of Practices/Processes for Developing Regular Individual Care Plans
Proposed Revised Activity Description:	Implementation of practices/processes, including a discussion about care goals and preferences, to develop regularly updated individual care plans for at-risk patients that are developed and shared with the beneficiary and family and/or caregiver(s). Individual care plans should include consideration of a patient's (and family/caregiver's, as appropriate) goals and priorities, as well as desired outcomes of care.
Comment & Response:	*Comment*: We received some comments specifically related to the modification of this activity. One commenter supports the modification of this activity and its consolidation with IA_BE_15. However, a commenter also expressed concern that beneficiary-engagement activities previously recognized under IA_BE_15 may be excluded if the modification is finalized. Another commenter requested that this activity retain references to family and caregivers. *Response*: We thank commenters for expressing their support and concern with this activity modification. We do not believe that beneficiary-engagement activities will be diminished by combining these activities. The revised activity is intended to recognize care coordination and individualized care planning activities in partnership with

	patients' goals. Beneficiary engagement remains an important element of this activity because effective individualized care plans depend on engaging patients, family, and caregivers in developing a care plan and prioritizing their goals. This modification aims to reduce redundancy in the Inventory and administrative effort for clinicians. References to family and caregivers remain in this activity description post-modification. We also note that fifteen activities will remain in the Inventory in the Beneficiary Engagement subcategory.
Final Action:	After consideration of public comments, we are finalizing this activity modification as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_PM_4**
Current Subcategory:	Population Management
Current Activity Title:	Glycemic management services
Current Activity Description:	For outpatient Medicare beneficiaries with diabetes and who are prescribed antidiabetic agents (e.g., insulin, sulfonylureas), MIPS eligible clinicians and groups must attest to having: For the first performance year, at least 60 percent of medical records with documentation of an individualized glycemic treatment goal that: a) Considers patient-specific factors, including, at least 1) age, 2) comorbidities, and 3) risk for hypoglycemia, and b) Is reassessed at least annually. The performance threshold will increase to 75 percent for the second performance year and onward. Clinician would attest that, 60 percent for first year, or 75 percent for the second year, of their medical records that document individualized glycemic treatment represent patients who are being treated for at least 90 days during the performance period.
Proposed Change and Rationale:	IA_PM_4, IA_PM_19, and IA_PM_20 all contain similar elements that could be combined into one, more robust activity.
Proposed Revised Activity Title:	Glycemic Screening, Referral, and Management
Proposed Revised Activity Description:	For outpatient Medicare beneficiaries, MIPS-eligible clinicians and groups must attest to having: For the first performance year, at least 60 percent of medical records with documentation of screening patients for abnormal blood glucose, referring eligible patients with prediabetes to a CDC-recognized diabetes prevention program, and developing individualized glycemic treatment plans that: a) Consider patient-specific factors, including, at least 1) age, 2) comorbidities, and 3) risk for hypoglycemia, and b) Are reassessed at least annually. The performance threshold will increase to 75 percent for the second performance year and onward. Clinicians must attest that 60 percent (for the first year) and 75 percent (for the second year and beyond) of their medical records include documentation of screening patients for abnormal blood glucose according to current US Preventive Services Task Force (USPSTF) and/or American Diabetes Association (ADA) guidelines. Clinicians must attest that 60 percent (for the first year) and 75 percent (for the second year and beyond) of their medical records include documentation of referring eligible patients with prediabetes to a CDC-recognized diabetes prevention program operating under the framework of the National Diabetes Prevention Program. Clinicians must attest that 60 percent (for the first year) and 75 percent (for the second year and beyond) of their medical records document individualized glycemic treatment

	plans representing patients who are being seen for at least 90 days during the performance period.
Comment & Response:	*Comment*: We received some comments related to the modification of this activity, including expressions of support. A specific comment suggested recognizing nutrition-risk and food-access assessments, coordinating glycemic and nutrition intervention, longitudinal follow up, and referrals within this activity. *Response*: We thank commenters for expressing their support and providing suggestions for this activity modification. We believe that this activity as modified already includes follow up and referral. We will continue to monitor the implementation of this activity, and make further modifications to this activity as needed. We welcome collaboration with interested parties on this topic. We are finalizing this activity as proposed, and will carefully monitor its implementation..
Final Action:	After consideration of public comments, we are finalizing this activity modification as proposed.

In this proposed rule, we are proposing to remove **eleven** previously finalized improvement activities beginning with the CY 2027 performance period/2029 MIPS payment year. These changes are discussed in section IV.A.4.d.(3)(b)(V) of this proposed rule and in more detail below; activity removal factors are discussed in the CY 2020 PFS final rule (84 FR 62568 through 63563).

TABLE F-B3: Improvement Activities Being Removed

Current Improvement Activity	
Current Activity ID:	**IA_BMH_5**
Current Subcategory:	Behavioral And Mental Health
Current Activity Title:	MDD prevention and treatment interventions
Current Activity Description:	Major depressive disorder: Regular engagement of MIPS eligible clinicians or groups in integrated prevention and treatment interventions, including suicide risk assessment (refer to NQF #0104) for mental health patients with co-occurring conditions of behavioral or mental health conditions.
Removal Rationale:	Proposed removal to combine with IA_BMH_4; Factor 1, activity is duplicative
Comment & Response:	*Comment*: We received some comments related to the removal of this activity. One specific comment shared support for finalizing this removal. Another comment shared concern that the combination of two depression-related improvement activities could diminish the visibility of depression management. *Response*: We thank commenters for expressing their support and concern regarding this activity removal. We believe that the combination of depression-related improvement activities will not lessen focus on depression management. This removal is aimed at reducing duplicative activities to reduce administrative effort.
Final Action:	After consideration of public comments, we are finalizing this activity removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_CC_10**
Current Subcategory:	Care Coordination
Current Activity Title:	Care transition documentation practice improvements
Current Activity Description:	In order to receive credit for this activity, a MIPS eligible clinician must document practices/processes for care transition with documentation of how a MIPS eligible clinician or group carried out an action plan for the patient with the patient's preferences in mind (that is, a "patient-centered" plan) during the first 30 days following a discharge. Examples of these practices/processes for care transition include: staff involved in the care transition; phone calls conducted in support of transition; accompaniments of patients to appointments or other navigation actions; home visits; patient information access to their medical records; real time communication between PCP and consulting clinicians; PCP included on specialist follow-up or transition communications.
Removal Rationale:	Proposed removal to combine with IA_CC_8; Factor 1, activity is duplicative
Comment & Response:	*Comment*: We received some comments related to the removal of this activity. One specific comment shared concern that removing IA_CC_10, IA_CC_11, and IA_CC_12 could inadvertently reduce recognition of the care transition and coordination activities performed by clinicians, particularly infectious disease physicians whose patients regularly move across care settings.

	Response: We thank commenters for sharing their concern and emphasizing the importance of care transitions and care coordination for patients with complex conditions. Proposed removals are aimed at reducing duplication within the Inventory while maintaining recognition of the importance of care transitions and care coordination. We note that--with ten activities remaining in the Care Coordination subcategory--the Improvement Activities Inventory will continue to recognize care transitions, care coordination, and information-sharing practices and give clinicians credit for this work.
Final Action:	After consideration of public comments, we are finalizing this activity removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_CC_11**
Current Subcategory:	Care Coordination
Current Activity Title:	Care transition standard operational improvements
Current Activity Description:	Establish standard operations to manage transitions of care that could include one or more of the following: • Establish formalized lines of communication with local settings in which empaneled patients receive care to ensure documented flow of information and seamless transitions in care; and/or • Partner with community or hospital-based transitional care services.
Removal Rationale:	Proposed removal to combine with IA_CC_8; Factor 1, activity is duplicative
Comment & Response:	*Comment*: We received some comments related to the removal of this activity. One specific comment shared concern that removing IA_CC_10, IA_CC_11, and IA_CC_12 could inadvertently reduce recognition of the care transition and coordination activities performed by clinicians, particularly infectious disease physicians whose patients regularly move across care settings. *Response*: We thank commenters for sharing their support and concern and emphasizing the importance of care transitions and care coordination for patients with complex conditions. Proposed removals are aimed at reducing duplication within the Inventory while maintaining recognition of the importance of care transitions and care coordination. We note that--with ten activities remaining in the Care Coordination subcategory--the Improvement Activities Inventory will continue to recognize care transitions, care coordination, and information-sharing practices and give clinicians credit for this work.
Final Action:	After consideration of public comments, we are finalizing this activity removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_CC_12**
Current Subcategory:	Care Coordination
Current Activity Title:	Care coordination agreements that promote improvements in patient tracking across settings
Current Activity Description:	Establish effective care coordination and active referral management that could include one or more of the following: • Establish care coordination agreements with frequently used consultants that set expectations for documented flow of information and MIPS eligible clinician or MIPS eligible clinician group expectations between settings. Provide patients with information that sets their expectations consistently with the care coordination agreements; • Track patients referred to specialist through the entire process; and/or • Systematically integrate information from referrals into the plan of care.
Removal Rationale:	Proposed removal to combine with IA_CC_8; Factor 1, activity is duplicative

Comment & Response:	*Comment*: We received some comments related to the removal of this activity. One commenter shared concern that removing IA_CC_10, IA_CC_11, and IA_CC_12 could inadvertently reduce recognition of the care transition and coordination activities performed by clinicians, particularly infectious disease physicians whose patients regularly move across care settings. *Response*: We thank commenters for their support and for sharing concern and emphasizing the importance of care transitions and care coordination for patients with complex conditions. Proposed removals are aimed at reducing duplication within the Inventory while maintaining recognition of the importance of care transitions and care coordination. We note that--with ten activities remaining in the Care Coordination subcategory--the Improvement Activities Inventory will continue to recognize care transitions, care coordination, and information-sharing practices and give clinicians credit for this work.
Final Action:	After consideration of public comments, we are finalizing this activity removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_PSPA_2**
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Participation in MOC Part IV
Current Activity Description:	In order to receive credit for this activity, a MIPS eligible clinician must participate in Maintenance of Certification (MOC) Part IV. Maintenance of Certification (MOC) Part IV requires clinicians to perform monthly activities across practice to regularly assess performance by reviewing outcomes addressing identified areas for improvement and evaluating the results. Some examples of activities that can be completed to receive MOC Part IV credit are: the American Board of Internal Medicine (ABIM) Approved Quality Improvement (AQI) Program, National Cardiovascular Data Registry (NCDR) Clinical Quality Coach, Quality Practice Initiative Certification Program, American Board of Medical Specialties Practice Performance Improvement Module or American Society of Anesthesiologists (ASA) Simulation Education Network, for improving professional practice including participation in a local, regional or national outcomes registry or quality assessment program; specialty- specific activities including Safety Certification in Outpatient Practice Excellence (SCOPE); American Psychiatric Association (APA) Performance in Practice modules.
Removal Rationale:	Many physicians are already required (e.g., by states) to participate in MOC; therefore, this activity is not likely to be driving additional meaningful clinical care improvement; Factors 1 & 7, activity is duplicative and/or obsolete
Comment & Response:	*Comment*: We received one comment specifically related to this activity removal. This commenter opposed this removal, stating that the MOC Part IV activity incentivizes clinician education and practical quality improvement. *Response*: We thank the commenter for sharing their opposition to this activity removal. We believe that MOC Part IV participation is standard practice and/or required and is therefore unlikely to be driving additional meaningful clinical care improvement.
Final Action:	After consideration of public comments, we are finalizing this activity removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_CC_16**
Current Subcategory:	Care Coordination
Current Activity Title:	Primary Care Physician and Behavioral Health Bilateral Electronic Exchange of Information for Shared Patients
Current Activity Description:	The primary care and behavioral health practices use the same electronic health record system for shared patients or have an established bidirectional flow of primary care and behavioral health records.

Removal Rationale:	Given advancements in EHR adoption and data-sharing practices, this activity is no longer likely driving additional meaningful clinical care improvement; Factor 7, activity is obsolete.
Comment & Response:	*Comment*: We received some comments specifically related to the removal of this activity. One comment opposed the removal of this improvement activity, stating that information exchange between primary care and behavioral health providers remains inconsistent and that this activity would continue to incentivize information exchange. *Response*: We thank commenters for sharing their concern and emphasizing the importance of information exchange between primary care and behavioral health providers. We agree that information exchange is important, but believe this activity is unlikely to drive additional meaningful clinical care improvement because EHR adoption and data sharing has advanced significantly since the creation of this activity. Also, please see existing IA_CC_13, Practice improvements to align with OpenNotes principles; and IA_BE_4, Engagement of Patients through Implementation of New Patient Portal.
Final Action:	After consideration of public comments, we are finalizing this activity removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_BE_15**
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
Current Activity Description:	Engage patients, family, and caregivers in developing a plan of care and prioritizing their goals for action, documented in the electronic health record (EHR) technology.
Removal Rationale:	Proposed removal to combine with IA_CC_9; Factor 1, activity is duplicative
Comment & Response:	*Comment*: We received some comments related to the removal of this activity, including the expression of support. However, a specific comment also expressed concern that beneficiary-engagement activities previously recognized under IA_BE_15 will be excluded if the removal is finalized. *Response*: We thank commenters for expressing their support and concern with this activity removal. We do not believe that beneficiary-engagement activities will be diminished by this activity's removal, which is intended to reduce redundancy in the Inventory and administrative effort for clinicians. Beneficiary engagement remains an important element of the modified activity because effective individualized care plans depend on engaging patients, family, and caregivers in developing a care plan and prioritizing their goals. We also note that fifteen activities will remain in the Inventory in the Beneficiary Engagement subcategory.
Final Action:	After consideration of public comments, we are finalizing this activity removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_PM_19**
Current Subcategory:	Population Management
Current Activity Title:	Glycemic Screening Services
Current Activity Description:	For at-risk outpatient Medicare beneficiaries, individual MIPS eligible clinicians and groups must attest to implementation of systematic preventive approaches in clinical practice for at least 60 percent for the 2018 performance period and 75 percent in future years, of electronic medical records with documentation of screening patients for abnormal blood glucose according to current US Preventive Services Task Force (USPSTF) and/or American Diabetes Association (ADA) guidelines.
Removal Rationale:	Proposed removal to be combined with IA_PM_4; Factor 1, activity is duplicative

Comment & Response:	We did not receive public comments specifically on this removal.
Final Action:	We are finalizing this removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_PM_20**
Current Subcategory:	Population Management
Current Activity Title:	Glycemic Referring Services
Current Activity Description:	For at-risk outpatient Medicare beneficiaries, individual MIPS eligible clinicians and groups must attest to implementation of systematic preventive approaches in clinical practice for at least 60 percent for the CY 2018 performance period and 75 percent in future years, of medical records with documentation of referring eligible patients with prediabetes to a CDC-recognized diabetes prevention program operating under the framework of the National Diabetes Prevention Program.
Removal Rationale:	Proposed removal to be combined with IA_PM_4; Factor 1, activity is duplicative
Comment & Response:	We did not receive public comments specifically on this removal.
Final Action:	We are finalizing this removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_EPA_4**
Current Subcategory:	Expanded Practice Access
Current Activity Title:	Additional improvements in access as a result of QIN/QIO TA
Current Activity Description:	As a result of Quality Innovation Network (QIN)-Quality Improvement Organization (QIO) technical assistance, performance of additional activities that improve access to services or improve care coordination (for example, investment of on-site diabetes educator).
Removal Rationale:	This activity is one of several focused on improvements that can be supported and/or driven by QIN/QIOs. This particular activity could be attested to with relatively low levels of effort and without a need to measure specific outcomes. If this concept is important to eligible clinicians, they can attest to IA_PSPA_19. Other QIN/QIO-relevant activities will remain in the Inventory. Factor 2; There is an alternative activity with a stronger relationship to quality care or improvements in clinical practice. Factor 7; Activity is obsolete.
Comment & Response:	We did not receive public comments specifically on this removal.
Final Action:	We are finalizing this removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_PM_2**
Current Subcategory:	Population Management
Current Activity Title:	Anticoagulant management improvements
Current Activity Description:	Individual MIPS eligible clinicians and groups who prescribe anti-coagulation medications (including, but not limited to oral Vitamin K antagonist therapy, including warfarin or other coagulation cascade inhibitors) must attest that for 75 percent of their ambulatory care patients receiving these medications are being managed with support from one or more of the following improvement activities:

	• Participation in a systematic anticoagulation program (coagulation clinic, patient self-reporting program, or patient self-management program); • Patients are being managed by an anticoagulant management service, that involves systematic and coordinated care, incorporating comprehensive patient education, systematic prothrombin time (PT-INR) testing, tracking, follow-up, and patient communication of results and dosing decisions; • Patients are being managed according to validated electronic decision support and clinical management tools that involve systematic and coordinated care, incorporating comprehensive patient education, systematic PT-INR testing, tracking, follow-up, and patient communication of results and dosing decisions; • For rural or remote patients, patients are managed using remote monitoring or telehealth options that involve systematic and coordinated care, incorporating comprehensive patient education, systematic PT-INR testing, tracking, follow-up, and patient communication of results and dosing decisions; or • For patients who demonstrate motivation, competency, and adherence, patients are managed using either a patient self-testing (PST) or patient-self-management (PSM) program.
Removal Rationale:	Direct oral anticoagulant medications (DOACs) have dramatically changed clinical practice, with significantly decreased use of warfarin over the last decade. Despite these changes, there are still specific circumstances that require use of warfarin, including the presence of prosthetic valves, antiphospholipid syndrome, and a high risk of bleeding complications, particularly gastrointestinal bleeding. This activity drives 'classic' quality actions related to the use of warfarin. Given the transition away from warfarin's common use, removing this activity is likely appropriate. We acknowledge the ongoing importance of medication management and will work to ensure that, going forward, improvement activities that support continued enhancement and maintenance of anticoagulation medication management are reflected in MIPS. Factor 7; activity is obsolete.
Comment & Response:	Comment: We received some comments related to the removal of IA_PM_2. One commenter opposed the removal of IA_PM_2 and recommended maintaining the activity within the inventory. Response: We thank commenters for their feedback. However, this activity no longer reflects current anticoagulation practice broadly. To ensure improvement activities remain strongly and widely clinically relevant, we will finalize the removal of this activity. We will continue to consider opportunities to develop future activities that reflect current approaches to anticoagulation management.
Final Action:	After consideration of public comments, we are finalizing this activity removal as proposed.

APPENDIX 3: MVP INVENTORY

MVP Development: Background

In the CY 2021 PFS final rule (85 FR 84849 through 84854), the CY 2022 PFS final rule (86 FR 65998 through 66031), and the CY 2023 PFS final rule (87 FR 70210 through 70211) we finalized a set of criteria to use in the development of MVPs. These criteria include MVP reporting requirements, MVP maintenance, and the selection of measures and activities within an MVP.

This appendix includes three groups of finalized MVP tables: Table 1 covers the MVP Foundational Layer, Group A presents 3 finalized new MVPs, and Group B outlines finalized modifications to 27 previously finalized MVPs.

Each MVP is composed of measures and activities from the quality, improvement activities, and cost performance categories relevant to the clinical specialty of the MVP. Additionally, every MVP includes a foundational layer which consists of population health measures and Promoting Interoperability performance category objectives and measures. The foundational layer is consistent across all MVPs and is detailed in Table 1: MVP Foundational Layer.

When applicable and substantive, we included a brief overview of the planned modifications to QCDR measures within relevant MVPs. Although QCDR measures are exempt from public notice and comment, providing this overview ensures transparency and offered interested parties the opportunity to provide comment on all aspects of each MVP prior to finalization. Final decisions regarding modifications to QCDR measure specifications are made by QCDR measure stewards independently of the rulemaking process, though these modifications may have influenced the decisions in this final rule.

IA_PCMH: Electronic submission of Patient Centered Medical Home Accreditation is not listed in the finalized MVP tables. In accordance with § 414.1380(b)(3)(ii), MIPS eligible clinicians in practices certified or recognized as a patient-centered medical home or comparable specialty practice, as determined by the Secretary, may attest to this activity and receive an improvement activities performance category score of 100 percent (81 FR 77179 through 77180).

MVP Development: Performance Category Sources

Table 1, Group A, and Group B MVP tables include foundational measures and sets of MIPS quality measures, QCDR measures (as applicable), improvement activities, and cost measures organized around clinical topics. For further reference, the sources for the measures and activities included in the MVP tables can be found on the Quality Payment Program website, as detailed below:

- Existing MIPS quality measures are included in the 2026 MIPS Quality Measures List.[533] For details on finalized changes, refer to Appendix 1: MIPS Quality Measures in this final rule, which outlines the following: finalized additions (Table Group A), finalized removals (Table Group C), and finalized modifications to existing quality measures (Table Groups D and DD).

[533] See the 2026 MIPS Quality Measures List: *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3570/2026-MIPS-Quality-Measures-List.xlsx.*

● Existing QCDR measures are derived from the latest publication of the 2026 QCDR Measure Specification file.[534] We anticipate updating the list of 2027 QCDR measures in December 2026.

● Existing improvement activities are included in the 2026 Improvement Activities Inventory and the 2026 MIPS Data Validation Criteria.[535] For details on finalized changes, refer to Appendix 2: Improvement Activities in this final rule, which outlines the following: finalized additions (Table Group A), finalized modifications to existing improvement activities (Table Group B), and finalized removals (Table Group C).

● Existing cost measures are included in the 2026 Cost Measures Inventory.[536] There were no proposed changes to cost measures included in the finalized CY 2027 MVPs.

● Existing Promoting Interoperability measures and attestations, adopted in prior rulemaking and included in the foundational layer, can be found on the Quality Payment Program website.[537] For details on finalized proposals to the Promoting Interoperability performance category, we refer readers to section IV.A.4.d.(4) of this final rule. Finalized proposals include a modification to the definition of CEHRT, a reduction in requirements, and the following: A modification to the PI_HIE_7: Electronic Prior Authorization measure, which changed the measure from being a required measure to an optional measure for the CY 2027 performance period/2029 MIPS payment year (measure was previously finalized as a required measure in the CMS Interoperability and Prior Authorization final rule (89 FR 8915 through 8927); and the addition of a new measure, Electronic Prior Authorization for Prescription Drugs (PI_HIE_8), which would be a required measure starting with the CY 2028 performance period/2030 MIPS payment year.

● For more information on the population health measures, attributed to the quality performance category and included in the foundational layer, refer to the CY 2022 PFS final rule (86 FR 65408 through 65409).

MVP Development: Measure and Improvement Activity Updates

● Group A and Group B MVPs include an additional table, identifying the finalized MIPS core measures within each MVP. For details on the finalized MIPS core measure proposal and selection criteria for MVPs refer to section IV.A.4.d.(1)(c) of this final rule.

● Refer to Appendix 1: MIPS Quality Measures (Table Group C) in this final rule for details on the removal of MIPS quality measures.

● Refer to Appendix 2: Improvement Activities (Table Group C) in this final rule for details on the removal of improvement activities.

● Refer to section IV.A.4.d.(4) Promoting Interoperability Performance Category measures in this final rule for details on the removal of Promoting Interoperability Performance Category measures. The following Promoting Interoperability measures, previously included in the foundational layer of MVPs, were finalized for removal from MIPS: **PI_PPHI_1:** Security Risk Analysis, **PI_ONCDIR_1:** ONC Direct Review Attestation, and **PI_ONCACB_1:** ONC-ACB Surveillance Attestation (Optional).

MVP Symbol Information and Definitions

Please note the following symbols and definitions used within the MVP tables in this appendix:

- Quality measures finalized as MIPS core measures in an MVP are identified with a single exclamation point (!).
- Quality measures, improvement activities, cost measures, and Promoting Interoperability measures finalized for addition to a previously finalized MVP are identified with a plus sign (+).
- Finalized new MIPS quality measures, improvement activities, and Promoting Interoperability measures included in an MVP beginning with the CY 2027 performance period/2029 MIPS payment year and future years are identified with a caret symbol (^). See Appendix 1: MIPS Quality Measures: Table Group A, Appendix 2: Improvement Activities: Table Group A, and section IV.A.4.d.(4) of this final rule for further information regarding new MIPS quality measures, improvement activities and Promoting Interoperability measures.
- Existing measures and improvement activities with finalized revisions are identified with a single asterisk (*). For further information regarding finalized revisions see Appendix 1: MIPS Quality Measures: Tables Group D and DD for revisions to MIPS quality measures, Appendix 2: Improvement Activities: Table Group B for revisions to improvement activities, and section IV.A.4.d.(4) for revisions to Promoting Interoperability measures. Unless changes were required to continue to meet programmatic standards for inclusion, we included existing measures or activities with proposed revisions in MVPs (as applicable) regardless of whether the proposed revisions were finalized beginning with the CY 2027 performance period/2029 MIPS payment year.
- QCDR measures finalized with modifications by the QCDR measure stewards are identified in this appendix with a single asterisk (*). When applicable and substantive in nature, we provide a brief overview of the planned modifications within applicable MVPs. Since QCDR measures are exempt from public notice and comment, this overview allowed for transparency with interested parties and an opportunity to comment on all aspects of each MVP prior to finalization. Final decisions to modify QCDR measure specifications are determined by QCDR measure stewards, separate from rulemaking, but may impact decisions as finalized in the final rule.
- Quality measures and improvement activities identified with a double asterisk (**) can only be submitted when included in an MVP.
- Improvement activities that include an advancing health and wellness component are identified with a double exclamation point (!!).
- Quality measure collection types are identified in parentheses after each quality measure title.

Foundational Layer

Each MVP contains a foundational layer, which includes the entire set of Promoting Interoperability performance category measures and two population health measures. The foundational layer is the same for all MVPs, as listed in Table 1.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with finalized revisions.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.

TABLE 1: MVP Foundational Layer

Population Health Measures	Promoting Interoperability Measures
(*) Q479: Hospital-wide, 30-Day, All-cause Unplanned Readmission (HWR) Rate for the Merit-based Incentive Payment System (MIPS) Groups (Collection Type: Administrative Claims) **Q484:** Clinician and Clinician Group Risk-Standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (MCC) (Collection Type: Administrative Claims)	**PI_PPHI_2:** High Priority Practices Safety Assurance Factors for EHR Resilience (SAFER) Guide **PI_EP_1:** e-Prescribing **PI_EP_2:** Query of Prescription Drug Monitoring Program (PDMP) **PI_PEA_1:** Provide Patients Electronic Access to Their Health Information **PI_HIE_1:** Support Electronic Referral Loops By Sending Health Information AND **PI_HIE_4:** Support Electronic Referral Loops By Receiving and Reconciling Health Information OR **PI_HIE_5:** Health Information Exchange (HIE) Bi-Directional Exchange OR **PI_HIE_6:** Enabling Exchange Using the Trusted Exchange Framework and Common Agreement (TEFCA) **(+)(*) PI_HIE_7:** Electronic Prior Authorization (Optional) **PI_PHCDRR_1:** Immunization Registry Reporting **PI_PHCDRR_2:** Syndromic Surveillance Reporting (Optional) **PI_PHCDRR_3:** Electronic Case Reporting **PI_PHCDRR_4:** Public Health Registry Reporting (Optional) **PI_PHCDRR_5:** Clinical Data Registry Reporting (Optional) **PI_PHCDRR_6:** Public Health Reporting Using TEFCA (Optional) **PI_INFBLO_1:** Actions to Limit or Restrict Compatibility or Interoperability of CEHRT Attestation

Group A: New MVPs Proposed for the CY 2027 Performance Period/2029 MIPS Payment Year and Future Years

A.1 Diabetic Disease MVP

In the CY 2027 PFS proposed rule (91 FR 43842), we proposed and solicited comments on the Diabetic Disease MVP. The proposed Diabetic Disease MVP assesses meaningful outcomes in diabetic disease care. This MVP would be most applicable to clinicians who provide diabetic disease patient care, including primary care, endocrinology, ophthalmology, podiatry, and nonphysician practitioners (NPPs) such as nurse practitioners, clinical nurse specialists, and

physician assistants. The summary of the public comments received and our responses to this MVP are included immediately after Table A.1b and the list of improvement activities.

Quality Measures

We proposed to include 11 MIPS quality measures and 2 QCDR measures within the quality performance category of this MVP, which are relevant to the clinical topic of diabetic disease care. We reviewed the MIPS quality measure inventory and considered feedback received during the 2026 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

For the reasons stated in the introduction of this appendix,[538] we proposed the following measures as MIPS core measures for the Diabetic Disease MVP:

- **Q001**: Diabetes: Glycemic Status Assessment Greater Than 9%
- **Q128:** Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan
- **Q317**: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented
- **Q488**: Kidney Health Evaluation

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in diabetic disease care:

- **Q001**: Diabetes: Glycemic Status Assessment Greater Than 9%: This inverse outcome MIPS quality measure assesses patients diagnosed with diabetes mellitus for poor control of their HbA1c.
- **Q019**: Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care: This MIPS quality measure focuses on the communication between the primary physician managing ongoing care and the physician performing the dilated macular or fundus exam on patients with diabetic retinopathy.
- **Q117**: Diabetes: Eye Exam: This MIPS quality measure supports eye screening for diabetic retinal disease.
- **Q126**: Diabetes Mellitus: Diabetic Foot and Ankle Care, Peripheral Neuropathy – Neurological Evaluation: This MIPS quality measure ensures patients diagnosed with diabetes mellitus have a lower extremity neurological exam performed at least once every 12 months.
- **Q127**: Diabetes Mellitus: Diabetic Foot and Ankle Care, Ulcer Prevention – Evaluation of Footwear: This MIPS quality measure ensures patients diagnosed with diabetes mellitus are evaluated for proper footwear and sizing at least once every 12 months.
- **Q128:** Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: This MIPS quality measure assesses patients for a documented BMI with a follow-up plan documented if their most recent documented BMI was outside of normal parameters
- **Q317**: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented: This MIPS quality measure ensures all adult patients are screened for high blood pressure at each visit and have a recommended follow-up plan if blood pressure is elevated or hypertensive.
- **Q438**: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease: This MIPS quality measure identifies patients at high risk of cardiovascular events and ensures they are prescribed or currently on a statin therapy.

[538] See MVP Development: Quality Measure and Improvement Activity Updates

- **Q488**: Kidney Health Evaluation: This MIPS quality measure ensures patients with diabetes receive a kidney health evaluation including both an estimated glomerular filtration rate (eGFR) and a urine albumin-creatinine ratio (uACR).
- **IRIS58**: Improved Visual Acuity after Vitrectomy for Complications of Diabetic Retinopathy within 120 Days: This QCDR measure assesses success of vitrectomy procedures in patients with diabetic retinopathy by reviewing patients for complications within 120 days of the procedure.
- **USWR35**: Adequate Off-loading of Diabetic Foot Ulcers performed at each visit, appropriate to location of ulcer: This QCDR measure assesses for adequate off-loading for diabetic foot ulcers during patient visits, which supports positive outcomes of Diabetic Foot Ulcer (DFU) healing.

The following broadly applicable MIPS quality measures are relevant to clinicians who specialize in diabetic disease care. The quality measures below assess for screenings and follow-up actions for select measures:

- **Q134:** Preventive Care and Screening: Screening for Depression and Follow-Up Plan: This MIPS quality measure ensures all patients are screened for depression with a follow-up plan documented for those patients who screen positive.
- **Q226**: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: This MIPS quality measure screens patients for tobacco use. Any patients that are found to be tobacco users should receive tobacco cessation intervention.

Improvement Activities

We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 13 improvement activities that reflect actions and processes undertaken by clinicians who specialize in diabetic disease care, as well as activities that promote advancing health and wellness, patient engagement and patient-centeredness, shared decision-making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities were proposed for inclusion in this MVP:

- **IA_AHW_1:** Chronic Care and Preventative Care Management for Empaneled Patients
- **IA_AHW_5:** Lifestyle Approaches to Diabetes Remediation
- **IA_BE_1:** Use of certified EHR to capture patient reported outcomes
- **IA_BE_3:** Engagement with QIN-QIO to implement self-management training programs
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_16:** Promote Self-management in Usual Care
- **IA_BE_19:** Use group visits for common chronic conditions (e.g., diabetes)
- **IA_BE_23:** Integration of patient coaching practices between visits
- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans
- **IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_4:** Glycemic management services
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PM_25:** Save a Million Hearts: Standardization of Approach to Screening and Treatment for Cardiovascular Disease Risk

Cost Measures

We proposed to include two MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of diabetes. We reviewed the MIPS cost measure inventory and considered feedback received during the 2026 MVP candidate feedback period to

determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in diabetic care and align with other measures and activities within this MVP:

- **COST_D_1**: Diabetes: This MIPS cost measure applies to clinicians providing diabetic care.
- **TPCC_1:** Total Per Capita Cost (TPCC): This MIPS cost measure assesses the overall cost of care delivered to a Medicare patient with a focus on the primary care the patient receives from their providers.

Symbol Key:
Single exclamation point (!): MIPS core measure within an MVP.
Caret symbol (^): finalized new measure or improvement activity.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

- **(!!) IA_PM_25:** Save a Million Hearts: Standardization of Approach to Screening and Treatment for Cardiovascular Disease Risk

The following is a summary of the comments we received and our responses.

Comment: Many commenters supported this new MVP.

Response: We thank the commenters for their support.

Comment: A few commenters recognized the importance of this MVP for assessing diabetes care once traditional MIPS sunsets, but believed its current measures are too narrowly focused on glycemic thresholds and disease control rather than disease reversal and complexity. They noted that the central HbA1c poor control measure rewards staying below a high threshold, often through medication intensification, without recognizing substantial improvement, remission, or reduction in medications (for example, a patient lowering A1c from 8.5% to 5.6% off medications is treated similarly to a patient with an A1c of 6.8% on multiple drugs). Commenters also urged that the MVP be designed with type 1 diabetes (T1D) in mind, explaining that most existing measures are built around type

2 diabetes and do not reflect key T1D realities: lifelong insulin dependence from diagnosis, continuous hypoglycemia risk, and routine use of devices as standard care. They cautioned that measures based solely on glycemic thresholds could systematically disadvantage clinicians caring for the most complex T1D patients and, in a workforce-strained field, might discourage clinicians from accepting high-need beneficiaries. They therefore recommended incorporating measures that better capture disease reversal, lifestyle-driven improvement, and the distinct risks and care patterns in T1D.

Another commenter believed this MVP fails to reflect the full value of podiatric clinicians, who manage complex interactions among chronic lower-extremity conditions to prevent infection, hospitalization, and amputation. As a result, the commenter believed that for CY2028–CY2029 there is no MVP that accurately measures the work of clinicians providing chronic lower-extremity and complex-comorbidity care. The commenter recommended that podiatric and other lower-extremity chronic-disease measures—such as diabetic foot risk stratification, offloading, and amputation-prevention outcomes—be incorporated into any diabetes-related or chronic-care MVP.

Additional commenters focused on broadening participation and emphasizing meaningful outcomes. One commenter requested that the MVP include measures and activities that would allow pharmacists to participate, including medication-specific quality measures (for example, medication optimization, adherence, reconciliation, and comprehensive medication management) that capture the impact of pharmacist-led services on outcomes and costs, particularly for chronic conditions commonly addressed in the Quality Payment Program. Another commenter emphasized that the value of this MVP depends on its measure composition and urged that we prioritize outcome measures, such as rates of achieved disease control across a clinician's panel, rather than process attestations, noting that documenting counseling without improving control does not deliver value to the public. Finally, a couple of commenters recommended adding Q517: Low Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management to this MVP.

Response: We thank the commenters for their feedback and may consider modifications to this MVP, including the addition of quality measures, through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter opposed this MVP, arguing it duplicates existing MVPs and should be folded into the Value in Primary Care MVP. They noted that diabetes care is often delivered by primary care providers, so a separate MVP is unnecessary and would increase administrative complexity. Another commenter appreciated the proposal to include this new MVP concept but stated that, as designed, it is not representative of comprehensive diabetes care. The commenter noted that the MVP identifies primary care, endocrinology, ophthalmology, podiatry, and nonphysician clinicians such as nurse practitioners, clinical nurse specialists, and physician assistants as the clinicians for whom this MVP would be most applicable. However, while these specialties participated in diabetes care, they were not responsible for diabetes care as a whole. For example, ophthalmologists and podiatrists address diabetes-related issues affecting the eyes and feet, respectively, but did not manage overall diabetes care.

Response: While we recognize that primary care clinicians often manage diabetes care, this MVP is designed to support clinicians who focus on diabetes management and the continuum of care, to provide meaningful performance measurement across this patient population. The Value of Primary Care MVP is most applicable to clinicians who specialize in preventive, internal, or family medicine or geriatrics, inclusion of these measures would pull in specialties beyond its intended scope. We acknowledge that there may be overlap between MVPs; however, our goal with offering disease-specific MVPs is to increase flexibility allowing clinicians to report on the MVP most relevant to their patient population and scope of care.

Comment: A commenter noted that although many quality measures in this MVP apply to all people with diabetes, Type 1 diabetes differs fundamentally from Type 2 diabetes. Because of these differences, the commenter recommended that the quality measures included in this MVP recognize these differences and support clinicians caring for people with Type 1 diabetes and others who require intensive insulin management. The commenter further recommended considering additional measures that better reflect high-quality diabetes care than A1C alone. Specifically, they suggested that quality measures should recognize the following: improvement over time; prevention of severe hypoglycemia and diabetic ketoacidosis; appropriate use of diabetes technology; individualized treatment plans; patient education and shared decision-making; and continuity and coordination of care.

Response: We appreciate the commenter's observations about the fundamental differences between Type 1 and Type 2 diabetes and the need for measures that support clinicians caring for patients who require intensive insulin

management. We agree that the current quality measure set does not fully capture high-quality diabetes care and encourage the commenter to work with measure developers and stewards to develop and submit measures that address these aspects of care through the Call for Measures process; such as improvement over time, prevention of complications, individualized treatment plans, patient education and shared decision-making, and continuity and coordination of care.

As we continue to refine the diabetes MVP, we will consider whether additional or alternative measures can better reflect these elements of high-quality diabetes care. Finalized MVPs are reviewed annually, and we may consider the addition of new quality measures through the MVP Maintenance Process and future rulemaking. Guidance on submitting recommended changes to an MVP is available on the Quality Payment Program website, and we will evaluate all recommendations to determine whether they are appropriate and aligned with the broader vision for the MVP.

Comment: A couple of commenters supported this MVP in concept but recommended revising to focus on the core elements of diabetes care and patient health conditions rather than medical specialties. Another commenter recommended the addition of the Adult Immunization Status measure. One commenter recommended the MVP include at least one prevention-focused concept measure, emphasizing identification and intervention for prediabetes rather than focusing exclusively on glycemic control and management of already diagnosed diabetes. A commenter recommended the addition of measures recognizing appropriate diagnostic testing, timely diagnosis, and follow-up based on test results in this MVP. Another commenter recommended anchoring MVP performance metrics in this MVP in objective, laboratory confirmed results, such as glycemic status assessment, kidney health evaluation, and lipid management. Another commenter was concerned that the MVP is overly broad and that its groupings are organized by specialty. One commenter expressed concern that the MVP does not adequately account for the foundational role Registered Dietitian Nutritionists (RDNs) play in chronic disease detection and intervention, including for the medical conditions associated with this MVP. The commenter recommended incorporating additional nutrition-related measures in this MVP that reflect the full scope of an RDN's role in preventing, managing, and treating such conditions as part of team-based, high-value care, and requested that RDNs be listed as an applicable clinician type for this MVP. A commenter recommended this MVP include at least one concept addressing prevention of diabetes onset rather than management of diagnosed disease alone.

Response: We appreciate the commenter's feedback. We encourage interested parties to submit potential new measures that will align with current program goals and priorities and fill these identified gaps allowing meaningful and complete assessment of MIPS eligible clinician's performance within MIPS during the annual Call for Measures. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A couple of commenters supported this MVP. A commenter requested clarification that reporting of Q117: Diabetes: Eye Exam can be any clinician who participates in this MVP.

Response: We thank the commenters for their support. For measure requested clarifications please contact the QPP Service Center by emailing QPP@cms.hhs.gov, submitting a QPP Service Center ticket, or calling 1-866-288-8292 (Monday-Friday, 8 a.m. – 8 p.m. ET).

Comment: A commenter requested the removal of the Total Per Capita Cost (TPCC) measure from this MVP, noting that a diabetes-specific episode cost measure already exists and is more appropriate. They stated that TPCC is fundamentally flawed because it holds physicians accountable for costs related to conditions they did not treat, decisions made by other providers, and spending they cannot influence (such as drug price changes and coverage for high-cost supplies). Since TPCC captures all Medicare Part A and B spending, it offers little actionable information for physicians to reduce costs or for patients to lower out-of-pocket expenses or choose clinicians, making it unsuitable for inclusion in this MVP.

Response: We consider TPCC an appropriate measure for use in this MVP, for reasons outlined in the CY 2027 PFS proposed rule (91 FR 43842). The costs of primary care services captured by the TPCC measure may be related to diabetic care management. Clinicians or groups who choose to report the Diabetic Disease MVP may be scored on the TPCC measure if they meet the established case minimum. We recognize that a portion of a patient's total cost of care may reflect services furnished or ordered by other providers. The measure's revised attribution methodology, specialty exclusion criteria, risk adjustment model, and payment standardization are all elements of the measure construction that help TPCC assess costs within a clinician's influence. We continue to consider potential updates for the TPCC measure and ways to enhance the actionability of the measure for attributed clinicians. We may

consider the addition or removal of cost measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Diabetic Disease MVP* as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

A.2 Hospitalist MVP

In the CY 2027 PFS proposed rule (91 FR 43842), we proposed and solicited comments on the Hospitalist MVP. The proposed Hospitalist MVP assesses meaningful outcomes for patients receiving care provided by hospitalists. This MVP would be most applicable to hospitalists, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. The summary of the public comments received and our responses to this MVP are included immediately after Table A.2b and the list of improvement activities.

Quality Measures

We proposed to include four MIPS quality measures and five QCDR measures within the quality performance category of this MVP, which are relevant to care provided by hospitalists. We reviewed the MIPS quality measure inventory and considered feedback received during the 2026 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

For the reasons stated in the introduction of this appendix,[539] we proposed the following measures as MIPS core measures for the Hospitalist MVP:

- **Q005:** Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD)
- **Q008:** Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD)
- **Q047:** Advance Care Plan

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for hospitalists:

- **Q005:** Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD): This MIPS quality measure ensures patients diagnosed with heart failure and a left ventricular ejection fraction of less than or equal to 40% are prescribed an ACE inhibitor, ARB or ARNI therapy.
- **Q008:** Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD): This MIPS quality measure ensures patients diagnosed with heart failure and a left ventricular ejection fraction of less than or equal to 40% are prescribed beta-blocker therapy.
- **Q238:** Use of High-Risk Medications in Older Adults: This inverse MIPS quality measure supports patient safety by assessing high-risk medication utilization in the older adult population.
- **ECPR51:** Discharge Prescription of Naloxone after Opioid Poisoning or Overdose: This QCDR measure ensures patients treated for opioid poisoning in the acute care setting are prescribed naloxone and receive education on its proper use before discharge.

[539] See MVP Development: Quality Measure and Improvement Activity Updates

- **HCPR24:** Appropriate Utilization of Vancomycin for Cellulitis: This QCDR measure ensures the appropriate use of vancomycin for patients diagnosed with cellulitis in the hospital setting, whether admitted or under observation.
- **HCPR25:** Physician's Orders for Life-Sustaining Treatment (POLST) Form: This QCDR measure ensures patients with advanced illness have a completed POLST form during their hospitalization.
- **HCPR27:** Point-of-Care Ultrasound: Evaluation for Pneumothorax after Central Venous Catheter (CVC) Placement: This QCDR measure ensures patients undergoing CVC placement receive appropriate pneumothorax evaluation using point-of-care ultrasound.
- **HCPR30**: Avoidance of Sliding-Scale Insulin Monotherapy for Admitted Diabetic Patients: This QCDR measure ensures patients admitted to the hospital with a diagnosis of diabetes mellitus receive an order for basal insulin therapy.

The following broadly applicable MIPS quality measure is relevant to clinicians who specialize in hospitalist care.

- **Q047:** Advance Care Plan: This MIPS quality measure assesses for medical record documentation of an advance care plan or surrogate decisions maker.

Modifications were considered for the following QCDR measure:

- **ECPR51:** Discharge Prescription of Naloxone after Opioid Poisoning or Overdose: This QCDR measure is undergoing modifications to expand the measure to include the treatment for opioid withdrawal in additional care settings.

Improvement Activities

We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 12 improvement activities that reflect actions and processes undertaken by hospitalists, as well as activities that promote advancing health and wellness, patient engagement and patient-centeredness, shared decision-making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities were proposed for inclusion in this MVP:

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BMH_12:** Promoting Clinician Well-Being
- **IA_BMH_15:** Behavioral/Mental Health and Substance Use Screening & Referral for Older Adults
- **IA_CC_8:** Implementation of documentation improvements for practice/process improvements
- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans
- **IA_CC_13:** Practice improvements to align with OpenNotes principles
- **IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PM_21:** Advance Care Planning
- **IA_PSPA_8:** Use of patient safety tools
- **IA_PSPA_15:** Implementation of an ASP
- **IA_PSPA_21:** Implementation of fall screening and assessment programs

Cost Measures

We proposed to include one MIPS cost measure within the cost performance category of this MVP, which applies to hospitalists. We reviewed the MIPS cost measure inventory and considered feedback received during the 2026 MVP candidate feedback period to determine the

set of cost measures to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for hospitalists and aligns with other measures and activities within this MVP:

- **MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to hospitalists.

Symbol Key:
Single exclamation point (!): MIPS core measure within an MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE A.2a: Hospitalist MVP MIPS Core Measures

Hospitalist MVP MIPS Core Measures
Q005: Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD)
Q008: Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD)
Q047: Advance Care Plan

TABLE A.2b: Hospitalist MVP Clinical Groupings

Hospitalist MVP		
Clinical Grouping	**Quality**	**Cost**
Medication	**(!) Q005:** Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD) (Collection Type: eCQM^^, MIPS CQM)	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	(!) Q008: Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD) (Collection Type: eCQM^^, MIPS CQM)	
	(*) ECPR51: Discharge Prescription of Naloxone after Opioid Poisoning or Overdose (Collection Type: QCDR)	
	HCPR24: Appropriate Utilization of Vancomycin for Cellulitis (Collection Type: QCDR)	
General Clinical Care	**HCPR27:** Point-of-Care Ultrasound: Evaluation for Pneumothorax after Central Venous Catheter (CVC) Placement (Collection Type: QCDR)	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	HCPR30: Avoidance of Sliding-Scale Insulin Monotherapy for Admitted Diabetic Patients (Collection Type: QCDR)	
Advancing Health and Wellness	**Q238:** Use of High-Risk Medications in Older Adults (Collection Type: eCQM, MIPS CQM)	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
Experience of Care	**(!) Q047:** Advance Care Plan (Collection Type: Medicare Part B Claims, MIPS CQM)	

Hospitalist MVP		
Clinical Grouping	**Quality**	**Cost**
	HCPR25: Physician's Orders for Life-Sustaining Treatment (POLST) Form (Collection Type: QCDR)	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician

^^Please note this collection type does not include inpatient coding and may not be applicable.

Hospitalist Improvement Activities

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(!!) IA_BMH_12:** Promoting Clinician Well-Being
- **(!!) IA_BMH_15:** Behavioral/Mental Health and Substance Use Screening & Referral for Older Adults
- **(*) IA_CC_8:** Implementation of documentation improvements for practice/process improvements
- **(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_CC_13:** Practice improvements to align with OpenNotes principles
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PM_21:** Advance Care Planning
- **IA_PSPA_8:** Use of patient safety tools
- **(!!) IA_PSPA_15:** Implementation of an ASP
- **(!!) IA_PSPA_21:** Implementation of fall screening and assessment programs

The following is a summary of the comments we received and our responses.

Comment: Many commenters supported this new MVP. A commenter supported the designation of the three MIPS core measures in this MVP.

Response: We thank the commenters for their support.

Comment: A commenter appreciated the recognition of hospitalists through a proposed Hospitalist MVP but believed its four non-QCDR measures do not reflect the full scope of the specialty. They argued the MVP should include at least eight non-QCDR measures and a broader range beyond heart failure, given hospitalists care for patients across many service lines (e.g., cardiology, pulmonology, nephrology, oncology). They concluded that this MVP should only be finalized if at least four additional, relevant non-QCDR quality measures are added. Another commenter encouraged the identification of alternate measures that would remain meaningful for hospitalists should Q005: Heart Failure: Angiotensin-Converting Enzyme Inhibitor or Angiotensin Receptor Blocker Therapy for Left Ventricular Systolic Dysfunction, and Q008: Heart Failure: Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction become retired.

Response: We acknowledge that there are a limited number of quality measures included in this MVP and appreciate the commenter's feedback that the hospitalist clinician type represents a gap for quality measurement. We encourage the commenters to reach out to measure developers and stewards to develop applicable and meaningful measures for hospitalists for submission to the Call for Measures for possible future implementation. Finalized MVPs are reviewed annually to determine if additional updates are needed to meet the needs of the MVP and program requirements.

Comment: A few commenters requested the inclusion of Q130: Documentation of Current Medications in this MVP. They noted that Q130 had long been part of the Hospitalists Specialty Measure Set, is clinically relevant, and aligned with core responsibilities in the hospitalist setting. They also emphasized that Q130 was operationally feasible and already integrated into clinical workflows, unlike Q238.

Response: We may consider the addition of quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter stated that including Q047: Advance Care Plan as a MIPS core measure creates redundant reporting and unnecessary administrative burden because the same information is already captured through the

hospital inpatient eCQM CMS1317v1. The commenter questioned the rationale for maintaining two separate measures that collect the same content in the same setting for a subset of clinicians and urged alignment of advance care planning measures across clinician and hospital programs to reduce duplicative workflows, lessen documentation burden, and support consistent digital quality measurement.

Response: We thank the commenter for their feedback. We acknowledge there may be redundancy between clinical topics across programs; however, to be considered for purposes of reporting as a MIPS core measure, it must be proposed and finalized for MIPS. As each program has unique reporting requirements and nuances, the specification must be developed for that program to ensure feasible implementation. Currently, the hospital inpatient measure is not a part of the MIPS quality measure inventory. We will continue to work towards program alignment as applicable.

Comment: A couple of commenters appreciated both the proposal to include a Hospitalist MVP and the modifications made in response to stakeholder input, including the decision not to blend hospitalists and critical care intensivists into a single MVP. However, the commenters believed additional changes are needed. They stated that this MVP is specialty-based rather than focused on patient conditions and that categories such as "Medications" and "General Clinical Care" do not meaningfully distinguish the diverse patient populations and complications hospitalists manage. A commenter noted that many quality measures apply only to a small subset of patients (for example, heart failure measures for a minority of hospitalist cases) and that most measures are QCDR or eCQM measures that require extraction of data from hospital EHR systems. They explained that hospitalists cannot seamlessly aggregate EHR or registry data, and that hospital EHRs are certified and configured for hospital-level, not clinician-level, eCQMs. The commenters also expressed concern that there were only three eCQM reporting options despite related eCQMs having been adopted in other facility-based reporting programs.

Response: We appreciate the commenter's feedback. We acknowledge limitations to MVP development based upon the current MIPS quality measure inventory. Therefore, we had to balance clinical grouping identification based on selected measures that are meaningful and cover care assessment in alignment with the MVP intent. We encourage interested parties to submit potential new measures that will align with current program goals and priorities and fill these identified gaps allowing meaningful and complete assessment of MIPS eligible clinician's performance within MIPS during the annual Call for Measures. As each program has unique reporting requirements and nuances, the specification has to be developed for that program to ensure feasible implementation; then it must be proposed and finalized for MIPS. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Hospitalist MVP* as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

A.3 Hypertension MVP

In the CY 2027 PFS proposed rule (91 FR 43842), we proposed and solicited comments on the Hypertension MVP. The proposed Hypertension MVP assesses meaningful outcomes for patients receiving care for hypertension and appropriate preventive interventions for those considered high-risk. This MVP would be most applicable to clinicians who treat patients at risk for hypertension and with a hypertension diagnosis, including cardiology, family medicine, geriatrics, internal medicine, nutrition and dietician, preventive medicine, and NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. The summary of the public comments received and our responses to this MVP are included immediately after Table A.3b and the list of improvement activities.

Quality Measures

We proposed to include 13 MIPS quality measures within the quality performance category of this MVP, which are specific to the clinical topic of hypertension. We reviewed the MIPS quality measure inventory and considered feedback received during the 2026 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

For the reasons stated in the introduction of this appendix,[540] we proposed the following measures as MIPS core measures for the Hypertension MVP:

- **Q128:** Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan
- **Q226:** Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention
- **Q236:** Controlling High Blood Pressure

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in the treatment of hypertension:

- **Q128:** Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: This MIPS quality measure assesses patients for a documented BMI with a follow-up plan documented if their most recent documented BMI was outside of normal parameters.
- **Q236:** Controlling High Blood Pressure: This intermediate outcome MIPS quality measure assesses patients diagnosed with hypertension for adequately controlled blood pressure.
- **Q239:** Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents: This MIPS quality measure ensures that patients aged 3-17 years have a BMI recorded with appropriate nutrition and physical activity counseling.
- **Q317:** Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented: This MIPS quality measure ensures all adult patients are screened for high blood pressure at each visit and have a recommended follow-up plan if blood pressure is elevated or hypertensive.
- **Q441:** Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control): This intermediate outcome MIPS quality measure ensures optimal control of patients with IVD by assessing goals for blood pressure management, smoking cessation, antiplatelet use, and high intensity statin use.
- **Q489:** Adult Kidney Disease: Angiotensin Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy: This MIPS quality measure ensures patients diagnosed with chronic kidney disease and proteinuria are prescribed an ACE inhibitor or ARB therapy.
- **Q517:** Low Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management: This proposed intermediate outcome MIPS quality measure ensures lipid monitoring in patients with atherosclerotic cardiovascular disease (ASCVD) and achieving the target goal of an LDL-C less than 70mg/dL.

The following broadly applicable MIPS quality measures are relevant to clinicians who specialize in the treatment of hypertension. The quality measures below assess for age-specific screenings and follow-up actions for select measures:

- **Q047:** Advance Care Plan: This MIPS quality measure assesses for medical record documentation of an advance care plan or surrogate decision maker.
- **Q130:** Documentation of Current Medications in the Medical Record: This MIPS quality measure assesses for review and documentation of all current medications at each visit.
- **Q226:** Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: This MIPS quality measure screens patients for tobacco use. Any patients that are found to be tobacco users should receive tobacco cessation intervention.
- **Q374:** Closing the Referral Loop: Receipt of Specialist Report: This MIPS quality measure is attributable to the clinician referring the patient and ensures that the referring

[540] See MVP Development: Quality Measure and Improvement Activity Updates

clinician receives a report from the clinician to whom the patient was referred, therefore closing the communication loop.

- **Q431:** Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling: This MIPS quality measure screens patients for unhealthy alcohol use. Any patients that screen positive for unhealthy alcohol use should receive brief counseling.
- **Q503:** Gains in Patient Activation Measure (PAM®) Scores at 12 Months: This MIPS quality measure ensures capture of the patient voice and experience of care related to the patient's understanding and confidence in the clinician's ability to manage their health and be an active partner in the health care journey.

Improvement Activities

We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 11 improvement activities that reflect actions and processes undertaken by clinicians who specialize in the treatment of hypertension, as well as activities that promote advancing health and wellness, engagement and patient-centeredness, shared decision-making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities were proposed for inclusion in this MVP:

- **IA_AHW_1:** Chronic care and preventative care management for empaneled patients
- **IA_AHW_5:** Lifestyle Approaches to Diabetes Remediation
- **IA_BE_16:** Promote Self-management in Usual Care
- **IA_BMH_2:** Tobacco use
- **IA_CC_8:** Implementation of documentation improvements for practice/process improvements
- **IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_4:** Glycemic management services
- **IA_PM_5:** Engagement of community for health status improvement
- **IA_PM_25:** Save a Million Hearts: Standardization of Approach to Screening and Treatment for Cardiovascular Disease Risk
- **IA_PSPA_16:** Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools —and standardized treatment protocols to manage workflow on the care team to meet patient needs
- **IA_PSPA_28:** Completion of an Accredited Safety or Quality Improvement Program

Cost Measures

We proposed to include one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of hypertension. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who care for patients with hypertension:

- **TPCC_1:** Total Per Capita Cost (TPCC): This MIPS cost measure assesses the overall cost of care delivered to a Medicare patient with a focus on the primary care the patient receives from their providers.

Symbol Key:

Single exclamation point (!): MIPS core measure within an MVP.
Caret symbol (^): finalized new measure or improvement activity.

Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

- **IA_PSPA_28:** Completion of an Accredited Safety or Quality Improvement Program

The following is a summary of the comments we received and our responses.

Comment: Many commenters supported this new MVP. A couple of commenters supported the inclusion of Q517:Low-Density Lipoprotein (LDL-C) Monitoring and Management in this MVP.

Response: We thank the commenters for their support.

Comment: A couple of commenters requested the addition of Q488: Kidney Health Evaluation to this MVP. A commenter recommended the inclusion of Q493: Adult Immunization Status. A commenter urged that this MVP prioritize outcome measures such as rates of achieved disease control in a clinician's panel, rather than process attestations, noting that documenting counseling without improving control fails to deliver value to the public. One commenter believed further refinements are needed. The commenter stated that the MVP is overly broad and that its groupings are organized by specialty.

Response: Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter requested the inclusion of at least one adult nutrition-focused measure to this MVP so registered dietitians electing to report this MVP can satisfy the four-measure requirement, noting Q239: Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents is specified for patients aged 3 to 17 and is therefore inapplicable to the Medicare population that registered dietitians serve.

Response: The eCQM collection type uses all-payer data and therefore this measure is appropriate for inclusion; however, we acknowledge not all measures included within the MVP will be applicable to all clinicians that elect to report the MVP. The commenter is encouraged to submit recommended changes to an MVP. Guidance on how to submit recommended changes can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter recommended the addition of measures recognizing appropriate diagnostic testing, timely diagnosis, and follow-up based on test results in this MVP. Another commenter recommended anchoring MVP performance metrics in this MVP in objective, laboratory confirmed results, such as glycemic status assessment,

kidney health evaluation, and lipid management. A commenter requested measures and activities be included in this MVP that would allow for pharmacists to participate, including medication-specific quality measures (e.g., medication optimization, adherence, reconciliation, comprehensive medication management) that capture the impact of pharmacist-led services on outcomes and costs, especially for chronic conditions commonly addressed in the Quality Payment Program.

Response: We encourage the commenters to reach out to measure developers to develop new measures applicable and meaningful to the clinical topic of this MVP and submit them to the Call for Measures for possible future implementation. Finalized MVPs are reviewed annually to determine if additional updates are needed to meet the needs of the MVP and program requirements.

Comment: A commenter opposed this MVP, stating it duplicates existing MVPs. They noted that all its quality measures already appear in the Value in Primary Care and Advancing Care for Heart Disease MVPs, making a separate MVP unnecessary and adding avoidable administrative complexity. Another commenter recommended that this MVP either adopt a narrower focus limited to the treatment of hypertension, or that the Advancing Care for Heart Disease MVP be updated to include measures addressing hypertension treatment in addition to the existing measures related to heart failure and other cardiac conditions.

Response: We acknowledge that there may be overlap between MVPs; however, each MVP is designed to target a specific clinical topic or specialty, allowing clinicians to report on the MVP most relevant to their patient population and scope of care. Additionally, each quality measure has unique denominator criteria which may constrain applicability to settings, clinician types, or patient populations. Our goal with offering disease-specific MVPs is to increase flexibility in the MVPs that clinicians can report. Consolidating these measures into existing MVPs would pull in specialties and patients beyond its intended scope.

Comment: A few commenters recommended the Low-Density Lipoprotein (LDL-C) Monitoring and Management measure be identified as a MIPS core measure.

Response: We may consider alternative MIPS core measures for this MVP through future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A couple of commenters expressed concern that Q236: Controlling High Blood Pressure does not reflect current evidence-based clinical guidelines and is identified as a MIPS core measure for this MVP. Q236 uses a less stringent blood pressure control threshold of 140/90 mm Hg than the American Heart Association and American College of Cardiology recommendation of 130/80, as evidence indicates further reduces the risk of heart attack, stroke, heart failure, cardiovascular events, and death.

Response: We thank the commenters for sharing their concern regarding alignment with current evidence-based hypertension guidelines. Q236: Controlling High Blood Pressure is a MIPS core measure for this MVP for several reasons. Q236 is a standardized quality measure with an established 140/90 mm Hg control threshold that supports consistent data collection which allows comparability across practices and enables benchmarking against existing national performance. While its 140/90 mm Hg threshold is less aggressive than the 130/80 mm Hg target recommended by the American Heart Association and American College of Cardiology, it still reflects a clinically meaningful level of control and allows us to assess hypertension management. Including Q236 as a MIPS core measure provides a practical and interpretable outcome measure that supports early learning, comparability, and broad adoption across many practice settings. We will continue to monitor the evidence base and measure landscape and may consider updates in future program years.

Comment: A commenter opposed limiting participation in this MVP. The commenter explained that focusing only on hospital-based physicians fails to reflect how hypertension care is actually delivered, since effective management relies on interdisciplinary teams that include registered nurses, advanced practice registered nurses (APRNs), primary care clinicians, care coordinators, pharmacists, and other professionals involved in patient education, medication management, care coordination, and ongoing monitoring across settings. The commenter recommended revising this MVP to better recognize and incentivize these interdisciplinary care teams, including nurses, that coordinate and deliver high-quality hypertension care.

Response: We appreciate the commenter's feedback. This MVP is not limited to facility-based clinicians. All MIPS-eligible clinicians whose scope of care relates to this MVP and the measures and activities in it may report this MVP.

Comment: A commenter noted that several measures included in this MVP may overlap conceptually or operationally. For example, the Ischemic Vascular Disease All-or-None Outcome Measure includes blood pressure control, smoking cessation, statin therapy, and other components that are also represented elsewhere in the MVP. The commenter questioned whether this overlap creates duplicate accountability, increases reporting burden, or disproportionately influences performance scoring without providing additional clinical value.
The commenter also observed that hypertension management increasingly relies on out-of-office blood pressure assessment and encouraged continued exploration of opportunities to incorporate validated home blood pressure measurements and ambulatory blood pressure monitoring into future quality measurement efforts when appropriate infrastructure exists. The commenter emphasized that current practice increasingly depends on out-of-office monitoring to support accurate diagnosis, treatment adjustment, and long-term management and recommended that future MVP development reflect this growing role while avoiding unnecessary reporting burden.

Response: We thank the commenter for the feedback. The individual measures can assess performance on specific processes or outcomes, which can help clinicians pinpoint where gaps exist and guide quality improvement efforts. The IVD All-or-None Outcome Measure assesses whether patients receive all recommended elements of care, providing a broader view of care coordination and overall quality that is not fully captured by any single component measure.

Please note, in reference to the numerator element for the IVD All-or-None Outcome Measure, only blood pressure readings performed by a clinician or an automated blood pressure monitor or device are acceptable for numerator compliance with this measure. This includes blood pressures taken in person by a clinician and blood pressures measured remotely by electronic monitoring devices capable of transmitting the blood pressure data to the clinician. Blood pressure readings taken by an automated blood pressure monitor or device and conveyed by the patient to the clinician are also acceptable. It is the clinician's responsibility and discretion to confirm the automated blood pressure monitor or device used to obtain the blood pressure is considered acceptable and reliable and whether the blood pressure reading is considered accurate before documenting it in the patient's medical record. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.

Comment: If the TPCC cost measure will be included in this MVP, a commenter recommended revising the measure so that it is limited to or focused on cost components physicians can reasonably control and does not disincentivize preventive care, including by excluding preventive services from cost calculations and grouping costs by patient condition categories.

Response: We consider TPCC the most appropriate cost measure available for use in this MVP. There is currently no episode-based measure applicable to hypertension. Clinicians or groups who choose to report the Hypertension MVP will be scored on TPCC if they meet the established case minimum. The costs of the primary care services captured by TPCC may be related to management of hypertension. Assessing the cost of care for this population encourages clinicians to provide effective, well-coordinated care to patients with hypertension in a way that supports both improved outcomes and lower overall cost of care. We appreciate the commenter's recommendation regarding the design of the TPCC measure. The TPCC measure incorporates several features intended to limit costs outside of a clinician's influence, including an updated attribution methodology, specialty exclusion criteria, risk adjustment, and payment standardization. We do not currently exclude preventive services from the measure's cost calculations, as these services are relevant to the cost of primary care and doing so could create adverse incentives. We consider the measure as it is currently specified appropriate for use in the Hypertension MVP. However, we will consider enhancements to the TPCC measure and its actionability for future rulemaking. We may consider the addition or removal of cost measures through the MVP Maintenance Process and future rulemaking, such as the availability of a related hypertension episode-based measure. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Hypertension MVP* as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

Group B: Modifications to Previously Finalized MVPs for the CY 2027 Performance Period/2029 MIPS Payment Year and Future Years

B.1: Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP

Table B.1a represents the proposed MIPS core measures for the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP. The B.1b table, followed by a list of improvement activities, represents the measures and activities finalized within the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP (90 FR 50406 through 50408) with proposed modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP focuses on important assessors of the care emergency clinicians provide to patients. By focusing on these specific measures and activities, emergency clinicians can reduce clinical variability, improve the quality of emergency care and potentially lower costs. This MVP would be most applicable to clinicians who treat patients within the practice of emergency medicine, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.1b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[541] we proposed the following measures as MIPS core measures for the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP:

- **Q116:** Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis
- **Q331:** Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse)
- **Q416:** Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 2 Through 17 Years

We proposed adding one MIPS quality measure:

- **Q066:** Appropriate Testing for Pharyngitis: This appropriate use MIPS quality measure assesses for completion of a group A streptococcus test for patients diagnosed with pharyngitis or tonsilitis who were prescribed an antibiotic.

For the reasons stated in the introduction of this appendix,[542] we proposed to remove **Q415:** Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 18 Years and Older. We proposed to remove one QCDR measure due to low adoption, no benchmark after 2 consecutive years in MIPS and one high performing QCDR measure:

- **ACEP52:** Appropriate Emergency Department Utilization of Lumbar Spine Imaging for Acute Atraumatic Low Back Pain (low adoption, no benchmark after 2 consecutive years in MIPS)
- **ECPR46:** Avoidance of Opiates for Low Back Pain or Migraines (high performing)

Modifications were considered for the following QCDR measure:

- **ACEP52:** Appropriate Emergency Department Utilization of Lumbar Spine Imaging for Acute Atraumatic Low Back Pain: If the measure is not finalized for removal in the CY 2027 PFS final rule, this QCDR measure would undergo modifications to the denominator to exclude patients aged 65 and older, as they experience higher rates of osteoporosis-related vertebral fractures during routine activities and have higher rates of

[541] See MVP Development: Quality Measure and Improvement Activity Updates
[542] Ibid.

malignancies with spinal metastases compared to patients under 65 years old.

Symbol Key:

Adopting Best Practices and Promoting Patient Safety within Emergency Medicine Improvement Activities

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(!!) IA_BMH_12:** Promoting Clinician Wellbeing
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways

- **IA_PSPA_1:** Participation in an AHRQ-listed patient safety organization
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements
- **(!!) IA_PSPA_15:** Implementation of an ASP

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. Another commenter specifically supported the addition of Q066: Appropriate Testing for Pharyngitis.

Response: We thank the commenters for their support.

Comment: A commenter recommended the addition of Q187: Stroke and Stroke Rehabilitation: Thrombolytic Therapy and Q332: Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis to this MVP. Another commenter recommended the inclusion of the Medicare Spend Per Beneficiary (MSPB) and Total Per Capita Cost (TPCC) cost measures as they are currently available to emergency medicine clinicians.

Response: We may consider the addition of quality and cost measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter was concerned that several of the measures identified as MIPS core measures in this MVP were not universally applicable across emergency medicine practice settings and requested that the MIPS core measures be broadly appliable and reflective of the full spectrum of emergency medicine.

Response: We appreciate the commenter's feedback and may consider alternative MIPS core measures for this MVP through future rulemaking. Understanding that some clinicians may be unable to report the selected MIPS core measures, we do allow attestation for cases in which a MIPS core measure is not available and applicable. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A few commenters opposed removing Q415: Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 18 Years and Older, arguing there is no feasible replacement and that the measure provides important clinical stewardship for imaging. The commenter noted Q415 is high-volume and widely reportable, so its removal could leave many clinicians unable to meet case minimums and stressed that topped-out status should be weighed against feasibility and denominator volume. Another commenter believed it is critical that the MVP includes enough measure options for clinicians, especially with the proposed sunsetting of traditional MIPS.

Response: We acknowledge the commenters' concern regarding the removal of measure Q415: Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 18 Years and Older. We seek to balance meaningful quality reporting with minimizing strain placed on clinicians. This measure may still represent an important aspect of care, however, it meets criteria for removal from MIPS, finalized in the CY2017 Quality Payment Program final rule (81 FR 77558 through 77675).

Comment: A commenter opposed the removal of ACEP52 and ECPR46, both of which are part of ACEP's Qualified Clinical Data Registry (QCDR), and the Clinical Emergency Data Registry (CEDR). With these removals, only one CEDR measure would remain available within the MVP, significantly limiting emergency physicians' ability to report measures tailored to emergency medicine practice. The commenter believed QCDR measures are essential for capturing specialty specific quality and safety priorities which is not reflected in general MIPS measures. The commenter agreed with the proposed modifications for ACEP52 and believed its removal would be premature, particularly given ongoing efforts to improve adoption and benchmarking.

Response: We appreciate the commenters' feedback on ACEP52 and ECPR46. We agree that ACEP52 may be showing increased adoption; therefore, it will continue to be removed from the MVP based on the reporting requirements. However, we will consider maintaining it in MIPS for an additional year to monitor adoption. While we agree these concepts are important to quality care, the removal of these measures does not preclude clinicians

from continuing these quality actions. Whether the clinician is being assessed for the quality action or not, it should still be completed as part of routine clinical practice. Additionally, QCDR measures must meet established inclusion criteria to be finalized for MIPS and for inclusion within an MVP. Based upon review of ECPR46, it no longer meets MVP inclusion criteria. MIPS performance data shows high performance and presents limited opportunity to further improve clinical outcomes.

After consideration of public comments, we are finalizing the *Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.2: Advancing Cancer Care MVP

Table B.2a represents the proposed MIPS core measures for the Advancing Cancer Care MVP. The B.2b table, followed by a list of improvement activities, represents the measures and activities finalized within the Advancing Cancer Care MVP (90 FR 50408 through 50411) with proposed modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Advancing Cancer Care MVP focuses on the clinical specialty of providing fundamental treatment and management of cancer care. This MVP would be most applicable to clinicians who treat patients within the practices of oncology and hematology, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.2b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[543] we proposed the following measures as MIPS core measures for the Advancing Cancer Care MVP:

- **Q102:** Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients
- **Q144:** Oncology: Medical and Radiation - Plan of Care for Pain
- **Q451:** RAS (KRAS and NRAS) Gene Mutation Testing Performed for Patients with Metastatic Colorectal Cancer who receive Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibody Therapy
- **Q457:** Percentage of Patients who Died with Cancer Enrolled in Hospice For At Least 3 Days Immediately Before Death
- **Q495:** Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood
- **Q506:** Positive PD-L1 Biomarker Expression Test Result Prior to First-Line Immune Checkpoint Inhibitor Therapy

We proposed adding two QCDR measures:

- **PIMSH19:** Antiemetic Therapy for Low- and Minimal-Emetic-Risk Antineoplastic Agents - Avoidance of Overuse (Lower Score - Better): This QCDR measure is an inverse measure (lower score is better) that ensures clinicians follow clinical guidelines for patients treated with low- or minimal-emetic-risk antineoplastic agents by assessing for inappropriate pre-treatment antiemetic therapy.
- **PIMSH20:** Appropriate Antiemetic Therapy for High- and Moderate-Emetic-Risk Antineoplastic Agents: This QCDR measure ensures clinicians follow clinical guidelines for patients treated with high- or moderate-emetic-risk antineoplastic agents by ensuring they receive the appropriate pre-treatment antiemetic therapy, which could result in

[543] See MVP Development: Quality Measure and Improvement Activity Updates

improved control of nausea and vomiting in patients.

For the reasons stated in the introduction of this appendix,[544] we proposed to remove **Q143:** Oncology: Medical and Radiation – Pain Intensity Quantified.

Modifications were considered for the following QCDR measure:

- **PIMSH13:** Oncology: Mutation Testing for Stage IV Lung Cancer Completed Prior to the Start of Targeted Therapy: This QCDR measure is undergoing modifications to provide additional clarification and to emphasize its focus on first-line treatment. Updates are being made to the description, denominator, denominator exclusions, and numerator, along with the addition of a numerator note.

Improvement Activities

We proposed adding one improvement activity that is relevant to this MVP and includes an advancing health and wellness component:

- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans

For the reasons stated in the introduction of this appendix,[545] we proposed to remove **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care.

Symbol Key:

Single exclamation point (!): MIPS core measure within an MVP.

Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Double exclamation point (!!): improvement activities with an advancing health and wellness component.

- **IA_PM_15:** Implementation of episodic care management practice improvements
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PM_21:** Advance Care Planning
- **IA_PSPA_13:** Participation in Joint Commission Evaluation Initiative
- **(*) IA_PSPA_16:** Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools, including AI-enabled predictive decision-support interventions—and standardized treatment protocols to manage workflow on the care team to meet patient needs
- **IA_PSPA_28:** Completion of an Accredited Safety or Quality Improvement Program

The following is a summary of the comments we received and our responses.

Comment: Many commenters supported this MVP. A commenter supported Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood as a MIPS core measure in this MVP. Other commenters supported the addition of PIMSH19: Antiemetic Therapy for Low- and Minimal-Emetic Risk Antineoplastic Agents - Avoidance of Overuse, and PIMSH20: Appropriate Antiemetic Therapy for High- and Moderate-Emetic-Risk Antineoplastic Agents.

Response: We thank the commenters for their support.

Comment: A commenter recommended PIMSH19 and PIMSH20 be considered MIPS core measures for this MVP given their broad applicability.

Response: MIPS core measures must be publicly available measures. For details on the finalized MIPS core measure proposal and selection criteria for MVPs refer to section IV.A.4.d.(1)(c) of this final rule. We may consider alternative MIPS core measures for this MVP through future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter recommended broadening this MVP to include additional cancer-related measures from key diagnostic and management specialties—such as Diagnostic Radiology (Q405, Q406), Women's Health (Q112, Q309), and Pathology (Q249, Q250, Q395, Q396, Q397, Q440, Q491). The commenter believed these measures capture critical information on diagnosis and tumor staging that directly informs treatment decisions and affects patient outcomes and, as such, should be recognized as part of comprehensive cancer care. The commenter further

suggested that expanding the MVP to incorporate measures across the cancer care continuum would better support meaningful performance measurement, reduce reporting burden for multispecialty organizations, and advance efforts to improve patient outcomes. Another commenter recommended the addition of the PIMSH4: Patient-Reported Pain Improvement Within 30 Days, a patient-reported outcome measure.

Response: We may consider the addition of quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A few commenters opposed the removal of Q143: Oncology: Medical and Radiation – Pain Intensity Quantified from this MVP, explaining that removing this measure would leave an insufficient number of eCQMs to support an all-eCQM reporting strategy and would force organizations to contract with third-party vendors to report alternative measure types solely to meet the requirement to report four quality measures. Another commenter opposed the removal of Q143: Oncology: Medical and Radiation – Pain Intensity Quantified from this MVP because Q143 and Q144: Plan of Care for Pain function as a paired workflow, requiring pain to be quantified before a plan of care is documented. Removing Q143 would force practices to continue collecting pain intensity data to satisfy Q144 without receiving reporting credit. The commenter also noted that Q143 and Q144 are currently used in the Enhancing Oncology Model (EOM-4), and removing Q143 from this MVP would create administrative disruption and benchmarking misalignment between this MVP and EOM. The commenter is developing a new pain Patient-Reported Outcome Performance Measure (PRO-PM) intended to ultimately replace both Q143 and Q144. They therefore recommended retaining Q143 alongside Q144 in this MVP until the new Pain PRO-PM is fully developed, validated through the MUC process, and ready for implementation, with both Q143 and Q144 serving as MIPS core measures in the meantime.

Response: We acknowledge the commenters' concern regarding the removal of measure Q143: Oncology: Medical and Radiation – Pain Intensity Quantified; however, as we refine the MIPS quality measure inventory we seek to remove measures that split apart quality actions, as the resultant data doesn't represent a full assessment of the patient's quality of care. While we endeavor to align across programs as applicable, this measure meets criteria for removal from MIPS, finalized in the CY2017 Quality Payment Program final rule (81 FR 77558 through 77675). Please refer to Appendix 1: MIPS Quality Measures (Table Group C) in this final rule for details on the removal of Q143.

After consideration of public comments, we are finalizing the *Advancing Cancer Care MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.3: Advancing Care for Heart Disease MVP

Table B.3a represents the proposed MIPS core measures for the Advancing Care for Heart Disease MVP. The B.3b table, followed by a list of improvement activities, represents the measures and activities finalized within the Advancing Care for Heart Disease MVP (90 FR 50411 through 50415) with proposed modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Advancing Care for Heart Disease MVP focuses on the clinical theme of providing fundamental treatment and management of costly clinical conditions that contribute to, or may result from, heart disease. This MVP would be most applicable to clinicians who treat patients within the practices of cardiology, internal medicine and family medicine, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.3b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[546] we proposed the following measures as MIPS core measures for the Advancing Care for Heart Disease MVP:

- **Q441:** Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control)
- **Q492:** Risk-standardized Acute Cardiovascular-related Hospital Admission Rates for Patients with Heart Failure under the Merit-based Incentive Payment System
- **Q517:** Low Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management

We proposed adding one MIPS quality measure:

- **Q517:** Low Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management: This proposed intermediate outcome MIPS quality measure ensures lipid monitoring in patients with atherosclerotic cardiovascular disease (ASCVD) and achieving the target goal of an LDL-C less than 70mg/dL.

For the reasons stated in the introduction of this appendix,[547] we proposed to remove **Q006:** Coronary Artery Disease (CAD): Antiplatelet Therapy, **Q007:** Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%), and **Q326:** Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy.

Improvement Activities

For the reasons stated in the introduction of this appendix,[548] we proposed to remove **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Caret symbol (^): finalized new measure or improvement activity.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

Advancing Care for Heart Disease Improvement Activities

- **(!!) IA_AHW_1:** Chronic Care and Preventative Care Management for Empaneled Patients
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(!!) IA_BE_12:** Use evidence-based decision aids to support shared decision-making
- **IA_BE_24:** Financial Navigation Program
- **IA_BE_25:** Drug Cost Transparency
- **(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_14:** Implementation of methodologies for improvements in longitudinal care management for high risk patients
- **IA_PSPA_4:** Administration of the AHRQ Survey of Patient Safety Culture
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. Several commenters supported the inclusion of the Low-Density Lipoprotein (LDL-C) Monitoring and Management measure in this MVP. The commenters believed the measure is meaningful, guideline-directed, and outcome-based and therefore critical to influencing clinician and patient behavior to improve chronic disease outcomes in the United States. A couple of commenters supported the measure as a MIPS core measure in this MVP. Another commenter supported the removal of Q006: Coronary Artery Disease (CAD): Antiplatelet Therapy, Q007: Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%), and Q326: Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy.

Response: We thank the commenters for their support.

Comment: A commenter recommended the inclusion of Q488: Kidney Health Evaluation to this MVP. The commenter believed the measure will help reinforce the importance of identifying and managing kidney disease risk

in patients with cardiovascular conditions and would better reflect the interconnected nature of cardiovascular-kidney-metabolic health.

Response: We may consider the addition of quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter requested Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood be considered a MIPS core measure within this MVP.

Response: We may consider alternative MIPS core measures for this MVP through future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter expressed concern that the three proposed MIPS core measures may not be applicable across the diverse cardiovascular subspecialties expected to participate in this MVP. Some cardiovascular clinicians may have limited opportunity to influence these measures in a way that meaningfully reflects their practice.

Response: We thank the commenter for their feedback and acknowledge limitations to MIPS core measure selection based upon the current MIPS quality measure inventory. Therefore, we had to balance between choosing measures that most closely represent care central to the MVP intent, while also ensuring measure availability for those clinicians who chose to report the MVP. Additionally, the policy includes an option for self-attestation when the MIPS core measures are not appropriate or applicable to their scope of care, allowing clinicians to choose an alternate measure that is more relevant. We encourage interested parties to submit potential new measures that will align with current program goals and priorities and fill these identified gaps allowing meaningful and complete assessment of MIPS eligible clinician's performance within MIPS during the annual Call for Measures.

After consideration of public comments, we are finalizing the *Advancing Care for Heart Disease MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.4: Advancing Rheumatology Patient Care MVP

Table B.4a represents the proposed MIPS core measures for the Advancing Rheumatology Patient Care MVP. The B.4b table, followed by a list of improvement activities, represents the measures and activities finalized within the Advancing Rheumatology Patient Care MVP (90 FR 50415 through 50418) with proposed modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Advancing Rheumatology Patient Care MVP focuses on the clinical theme of providing fundamental treatment and management of rheumatological conditions. This MVP would be most applicable to clinicians who treat patients within the practice of rheumatology, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.4b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[549] we proposed the following measures as MIPS core measures for the Advancing Rheumatology Patient Care MVP:

- **Q039:** Screening for Osteoporosis for Women Aged 65-85 Years of Age
- **Q178:** Rheumatoid Arthritis (RA): Functional Status Assessment

[549] See MVP Development: Quality Measure and Improvement Activity Updates

- **Q180:** Rheumatoid Arthritis (RA): Glucocorticoid Management

We proposed adding one QCDR measure:

- **UREQA8:** Vitamin D level: Effective Control of Low Bone Mass/Osteopenia and Osteoporosis: Therapeutic Level Of 25 OH Vitamin D Level Achieved: This QCDR measure ensures that patients diagnosed with osteopenia or osteoporosis maintain a hydroxy-vitamin D level at or above the targeted threshold.

We proposed to remove one process QCDR measure that does not include a quality action:

- **ACR12:** Disease Activity Measurement for Patients with PsA

Modifications were considered for the following QCDR measures:

- **ACR10:** Hepatitis B Safety Screening: This QCDR measure is undergoing modifications to add denominator instructions that provide clearer guidance on what qualifies as a 'newly initiated' biologic.
- **ACR12:** Disease Activity Measurement for Patients with PsA: If the measure is not finalized for removal in the CY 2027 PFS final rule, this QCDR measure would undergo modifications to the denominator to add a specific age-related timeframe and clarify the required timeframe for the additional face-to-face encounter.
- **ACR14:** Gout: Serum Urate Target: This QCDR measure is undergoing modifications to the denominator to include a specific age-related timeframe. There would also be updates to the denominator exceptions to align with the American College of Rheumatology (ACR) clinical guidelines.
- **ACR15:** Safe Hydroxychloroquine Dosing: This QCDR measure is undergoing modifications to the description and numerator to add a second option for meeting numerator compliance. An alternative criterion, allowing completion and documentation of an Hydroxychloroquine (HCQ) whole blood level measurement would satisfy numerator requirements.

Improvement Activities

We proposed adding one improvement activity that is relevant to this MVP and includes an advancing health and wellness component:

- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans

For the reasons stated in the introduction of this appendix,[550] we proposed to remove **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

Clinical Grouping	**Quality**	**Cost**
		TPCC_1: Total Per Capita Cost

Advancing Rheumatology Improvement Activities

- **IA_BE_1:** Use of certified EHR to capture patient reported outcomes
- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_24:** Financial Navigation Program
- **IA_BE_25:** Drug Cost Transparency
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **(!!) IA_BMH_2:** Tobacco use
- **(+)(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PSPA_28:** Completion of an Accredited Safety or Quality Improvement Program

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. A couple of commenters supported the designation of Q039: Screening for Osteoporosis for Women Aged 65-85 Years of Age as a MIPS core measure for this MVP.

Response: We thank the commenters for their support.

Comment: A commenter opposed the removal of ACR12: Disease Activity Measurement for Patients with PsA from this MVP, arguing that it further reduces the already limited number of specialty-relevant measures and eliminated the only psoriatic arthritis measure, thereby disadvantaging rheumatologists. The commenter believed the removal is premature because no concerns had been raised when prior measure changes were communicated and noted that the measure steward could have revised and improved ACR12 if alerted earlier. They requested that ACR12 be retained for the upcoming performance year and refined collaboratively in future rulemaking to maintain meaningful, rheumatology-specific quality assessment.

Response: We thank the commenter for their feedback. We agree that the concept is important to the care of rheumatology patients, specifically those with psoriatic arthritis. However, this process measure only requires the screening of disease activity and does not evaluate whether appropriate follow-up care or interventions occur after the screening. Removing this process measure will support the goal of prioritizing measures that improve patient outcomes and have meaningful impact. We do not want to arbitrarily limit measures within MVPs; however, we do want to have a streamlined set of robust quality measures that drive positive outcomes. We note this MVP still contains over 10 meaningful quality and QCDR measures to ensure applicability and clinician choice for selection. Lastly, we encourage the commenter to reach out to measure developers and stewards to develop new outcome measures for submission to the Call for Measures for possible future implementation.

After consideration of public comments, we are finalizing the *Advancing Rheumatology MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.5 Complete Ophthalmologic Care MVP

Table B.5a represents the proposed MIPS core measures for the Complete Ophthalmologic Care MVP. The B.5b table, followed by a list of improvement activities, represents the measures and activities finalized within the Complete Ophthalmologic Care MVP (90 FR 50418 through 50421) with proposed modifications for the CY 2027 performance period/2029 MIPS payment year and future years. This MVP would be most applicable to clinicians who treat patients within the practices of ophthalmology and optometry, including NPPs such as nurse practitioners,

clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.5b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[551] we proposed the following measures as MIPS core measures for the Complete Ophthalmologic Care MVP:

- **Q012:** Primary Open-Angle Glaucoma (POAG): Optic Nerve Evaluation
- **Q141:** Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 20% OR Documentation of a Plan of Care
- **Q304:** Cataracts: Patient Satisfaction within 90 Days Following Cataract Surgery
- **Q385:** Adult Primary Rhegmatogenous Retinal Detachment Surgery: Visual Acuity Improvement Within 90 Days of Surgery
- **Q501:** Acute posterior vitreous detachment and acute vitreous hemorrhage appropriate examination and follow-up

Modifications were considered for the following QCDR measure:

- **IRIS2:** Glaucoma – Intraocular Pressure Reduction: This QCDR measure is undergoing modifications to ensure compliance is based upon assessment of intraocular pressure for each eye effected.

For the reasons stated in the introduction of this appendix,[552] we proposed to remove **Q384:** Adult Primary Rhegmatogenous Retinal Detachment Surgery: No Return to the Operating Room Within 90 Days of Surgery. We proposed to remove two high performing QCDR measures:

- **IRIS13:** Diabetic Macular Edema - Loss of Visual Acuity
- **IRIS54:** Complications After Cataract Surgery

Improvement Activities

We proposed adding one improvement activity relevant to this MVP, which includes elements of an activity that is proposed for removal from MIPS:

- **IA_CC_8:** Implementation of documentation improvements for practice/process improvements.

For the reasons stated in the introduction of this appendix,[553] we proposed to remove **IA_CC_10:** Care transition documentation practice improvements.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

	Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	
Experience of Care	**Q503:** Gains in Patient Activation Measure (PAM®) Scores at 12 Months (Collection Type: MIPS CQM)	**COST_IOL_1** Cataract Removal with Intraocular Lens (IOL) Implantation

Complete Ophthalmologic Care Improvement Activities

- **(!!) IA_AHW_1:** Chronic Care and Preventative Care Management for Empaneled Patients
- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_25:** Drug Cost Transparency
- **(+)(*) IA_CC_8:** Implementation of documentation improvements for practice/process improvements
- **(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_CC_13:** Practice improvements to align with OpenNotes principles
- **IA_EPA_7:** Enhance Engagement of Medicaid and Other Underserved Populations
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP.

Response: We thank the commenter for their support.

Comment: A commenter expressed concern with the selection of Q304: Cataracts: Patient Satisfaction within 90 Days Following Cataract Surgery as a MIPS core measure for this MVP.

Response: We thank the commenter for their feedback and acknowledge that not all MIPS core measures will be applicable to all clinicians reporting the MVP. Therefore, in each MVP, we identified multiple MIPS core measures that represent care central to the MVP intent, ensuring measure availability for those clinicians who chose to report the MVP.

Comment: A couple of commenters opposed the removal of IRIS13: Diabetic Macular Edema - Loss of Visual Acuity and IRIS54: Complications After Cataract Surgery, with one commenter also opposing the removal of Q384: Adult Primary Rhegmatogenous Retinal Detachment Surgery: No Return to the Operating Room Within 90 Days of Surgery. The commenters believed eliminating these measures would further narrow an already limited measure set, reduce the MVP's relevance across the scope of ophthalmic practice, and remove a measure that directly supports our priority of addressing chronic disease.

Response: We appreciate the commenter's feedback on IRIS13: Diabetic Macular Edema - Loss of Visual Acuity and IRIS54: Complications After Cataract Surgery. While we agree the focus of these QCDR measures are important to addressing this highly prevalent chronic disease, the removal of these measures does not preclude clinicians from continuing these quality actions. Whether the clinician or group is being assessed for the quality action or not, it should still be completed as part of routine clinical practice. Additionally, we seek to balance meaningful quality reporting with minimizing burden placed on clinicians. While topped-out measures may still represent an important aspect of care, the associated quality actions are generally considered a standard of practice, presenting limited opportunity to further improve clinical outcomes. Measure Q384 meets criteria for removal from MIPS, finalized in the CY2017 Quality Payment Program final rule (81 FR 77558 through 77675). Please refer to Appendix 1: MIPS Quality Measures (Table Group C) in this final rule for details on the removal of Q384. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter requested additional measures be added to this MVP. The commenter is concerned that the current ophthalmology MVP measure is too limited and does not adequately represent the full breadth of ophthalmic practice, particularly for subspecialties with few or no meaningful reporting options, and that adding registry-based QCDR measures such as IRIS1: Endothelial Keratoplasty – Post-operative improvement in best corrected visual acuity to 20/40 or better; IRIS17: Acute Anterior Uveitis – Post-treatment Grade 0 anterior chamber cells; IRIS23: Refractive Surgery – Patients with a postoperative improvement in uncorrected visual acuity of 20/20 or better within 30 days; IRIS38: Endothelial Keratoplasty – Dislocation Requiring Surgical Intervention; IRIS50: Amblyopia – Interocular visual acuity; IRIS59: Regaining Vision After Cataract Surgery; and IRIS63: Exudative Age-Related Macular Degeneration – Gain of Visual Acuity would provide more meaningful reporting opportunities across cornea, uveitis, pediatric ophthalmology, and other subspecialties.

Response: We appreciate the commenter's feedback. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Complete Ophthalmologic Care MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.6: Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP

Table B.6a represents the proposed MIPS core measures for the Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP. The B.6b table, followed by a list of improvement activities, represents the measures and activities finalized within the Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP (90 FR 50422 through 50424) with proposed modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP focuses on the clinical theme of providing fundamental prevention and treatment of those patients at risk for or have had a stroke. This MVP would be most applicable to clinicians who treat patients within the practices of neurology, neurosurgical, and vascular surgery, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received

and our responses to this MVP are included immediately after Table B.6b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[554] we proposed the following measures as MIPS core measures for the Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP:

- **Q047:** Advance Care Plan
- **Q236:** Controlling High Blood Pressure
- **Q441:** Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control).

For the reasons stated in the introduction of this appendix,[555] we proposed to remove **Q326:** Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy.

Symbol Key:

Exclamation point (!): MIPS core measures within MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

- **(!!) IA_AHW_1:** Chronic Care and Preventative Care Management for Empaneled Patients
- **IA_BE_1:** Use of certified EHR to capture patient reported outcomes
- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_24:** Financial Navigation Program
- **IA_BMH_15:** Behavioral/Mental Health and Substance Use Screening and Referral for Older Adults
- **IA_CC_13:** Practice improvements to align with OpenNotes principles
- **IA_CC_17:** Patient Navigator Program
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_15:** Implementation of episodic care management practice improvements

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP.

Response: We thank the commenter for their support.

Comment: A few commenters recommended the inclusion of Q517: Low Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management to this MVP.

Response: We may consider the addition of quality measures for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

Comment: A commenter expressed concern that Q236: Controlling High Blood Pressure does not reflect current evidence-based clinical guidelines and is identified as a MIPS core measure for this MVP. Q236 uses a less stringent blood pressure control threshold of 140/90 mm Hg than the American Heart Association and American College of Cardiology recommendation of 130/80, as evidence indicates further reduces the risk of heart attack, stroke, heart failure, cardiovascular events, and death.

Response: We thank the commenter for sharing their concern regarding alignment with current evidence-based hypertension guidelines. Q236: Controlling High Blood Pressure is a MIPS core measure for this MVP for several reasons. Q236 is a standardized quality measure with an established 140/90 mm Hg control threshold that supports consistent data collection which allows comparability across practices and enables benchmarking against existing national performance. While its 140/90 mm Hg threshold is less aggressive than the 130/80 mm Hg target recommended by the American Heart Association and American College of Cardiology, it still reflects a clinically meaningful level of control and allows us to assess hypertension management. Including Q236 as a MIPS core measure provides a practical and interpretable outcome measure that supports early learning, comparability, and

broad adoption across many practice settings. We will continue to monitor the evidence base and measure landscape and may consider updates in future program years.

Comment: A commenter requested Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood be considered a MIPS core measure within this MVP.

Response: We may consider alternative MIPS core measures for this MVP through future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.7: Dermatological Care MVP

Table B.7a represents the proposed MIPS core measures for the Dermatological Care MVP. The B.7b table, followed by a list of improvement activities, represents the measures and activities finalized within the Dermatological Care MVP (90 FR 50424 through 50428) with proposed modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Dermatological Care MVP focuses on the clinical theme of providing treatment and management of dermatologic care. This MVP would be most applicable to clinicians who treat patients within the practice of dermatology, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.7b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[556] we proposed the following measures as MIPS core measures for the Dermatological Care MVP:

- **Q176:** Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy
- **Q410:** Psoriasis: Clinical Response to Systemic Medications
- **Q486:** Dermatitis – Improvement in Patient-Reported Itch Severity

We proposed to remove one high performing QCDR measure:

- **AAD16:** Avoidance of Post-operative Systemic Antibiotics for Office-based Closures and Reconstruction After Skin Cancer Procedures

Modifications were considered for the following QCDR measures:

- **AAD6:** Skin Cancer: Biopsy Reporting Time - Clinician to Patient: This QCDR measure is undergoing modifications to update the description and numerator to reflect a shortened timeframe for clinician notification of final pathology findings, reducing the requirement from 8 days to 7 days.
- **AAD12:** Melanoma: - Appropriate Surgical Margins: This QCDR measure is undergoing modifications to update the title, description, denominator, and numerator to reflect a broader measure that would include additional skin cancers, specifically squamous cell carcinoma and basal cell carcinoma.

Improvement Activities

[556] See MVP Development: Quality Measure and Improvement Activity Updates

We proposed adding one improvement activity that is relevant to this MVP and includes an advancing health and wellness component:

- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans

For the reasons stated in the introduction of this appendix,[557] we proposed to remove **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care.

Symbol Key:
Exclamation point (!): MIPS core measure within an MVP.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(+)(*)(!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **IA_EPA_7:** Enhance Engagement of Medicaid and Other Underserved Populations
- **(!!) IA_EPA_8:** Provide Education Opportunities for New Clinicians
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PSPA_8:** Use of Patient Safety Tools

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP.

Response: We thank the commenter for their support.

Comment: A couple of commenters expressed concern regarding the removal of AAD16: Avoidance of Post-operative Systemic Antibiotics for Office-based Closures and Reconstruction After Skin Cancer Procedures, believing this measure is crucial for ensuring that clinicians are not unnecessarily prescribing post-operative systemic antibiotics immediately after reconstruction surgery, that its removal would further reduce the pool of available measures in an MVP that already has a limited number of measures and insufficient measures for dermatologic subspecialties, and that retaining it is important to produce a performance benchmark that is more representative of real-world practice. The commenter also requested the inclusion of IA_PSPA_7: Use of QCDR Data for Ongoing Practice Assessment and Improvements to provide dermatology practices with a meaningful improvement activity that is directly relevant to specialty-specific quality improvement.

Response: We acknowledge the commenters' concerns regarding the removal of measure AAD16: Avoidance of Post-operative Systemic Antibiotics for Office-based Closures and Reconstruction After Skin Cancer Procedures; however, we seek to balance meaningful quality reporting with minimizing burden placed on clinicians. While topped-out measures may still represent an important aspect of care, the associated quality actions are generally considered a standard of practice, presenting limited opportunity to further improve clinical outcomes. The removal of this measure does not preclude clinicians from continuing these quality actions. Whether the clinician is being assessed for the quality action or not, it should still be completed as part of routine clinical practice. Additionally, we encourage the commenter to reach out to measure developers and stewards to develop new measures applicable and meaningful to dermatologists for submission to the Call for Measures for possible future implementation. Interested parties are also welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will

evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter was concerned that the three proposed MIPS core measures, which all focus on inflammatory skin disease, did not reflect the full scope of dermatologic care, particularly skin cancer detection, biopsy, pathology, and surgical management. The commenter urged expanding the MIPS core measure options to include measures representing these areas and recommends Q238: Use of High-Risk Medications in Older Adults, Q397: Melanoma Reporting, Q509: Melanoma: Tracking and Evaluation of Recurrence, and as a fourth option, Q486: Dermatitis – Improvement in Patient-Reported Itch Severity as a MIPS core measure set that better reflects general dermatology, dermatopathology, dermatologic surgery, and inflammatory conditions.

Response: We thank the commenter for the suggestions provided to refine the MIPS core measure set for this MVP. We acknowledge that not all MIPS core measures will be applicable to all clinicians reporting an MVP; however, to the extent possible, we considered implementation factors and availability. While broadly applicable measures, such as measure Q238, were included in some MVPs based upon topic alignment and support of clinician's reporting the MVP, we noted that the specialty specific measures were more indicative of dermatological care. Additionally, we accounted for each measure's clinician type applicability; the final selected measures represent that balance between clinical topic alignment, availability, and applicability.

After consideration of public comments, we are finalizing the *Dermatological Care MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.8 Diagnostic Radiology MVP

Table B.8a represents the proposed MIPS core measures for the Diagnostic Radiology MVP. The B.8b table, followed by a list of improvement activities, represents the measures and activities finalized within the Diagnostic Radiology MVP (90 FR 50376 through 50381) with proposed modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Diagnostic Radiology MVP assesses meaningful outcomes in diagnostic radiology. This MVP would be most applicable to clinicians who treat patients within the practices of diagnostic radiology and nuclear medicine. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.8b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[558] we proposed the following measures as MIPS core measures for the Diagnostic Radiology MVP:

- **Q145:** Radiology: Exposure Dose Indices Reported for Procedures Using Fluoroscopy
- **Q360:** Optimizing Patient Exposure to Ionizing Radiation: Count of Potential High Dose Radiation Imaging Studies: Computed Tomography (CT) and Cardiac Nuclear Medicine Studies
- **Q405:** Appropriate Follow-up Imaging for Incidental Abdominal Lesions

We proposed adding four MIPS quality measures to the new Nuclear Medicine clinical grouping:

- **Q282:** Dementia: Functional Status Assessment: This MIPS quality measure focuses on the importance of ensuring that patients diagnosed with dementia receive a comprehensive functional assessment annually.
- **Q286:** Dementia: Safety Concern Screening and Follow-Up for Patients with Dementia: This MIPS quality measure aims to address safety concerns in patients diagnosed with dementia by ensuring that appropriate screening and follow-up actions are conducted.

[558] See MVP Development: Quality Measure and Improvement Activity Updates

- **Q288:** Dementia: Education and Support of Caregivers for Patients with Dementia: This MIPS quality measure focuses on the importance of providing education and support to caregivers of patients with Dementia.
- **Q386:** Amyotrophic Lateral Sclerosis (ALS) Patient Care Preferences: This MIPS quality measure focuses on the importance of addressing end-of-life care preferences for patients diagnosed with ALS.

We proposed adding one QCDR measure:

- **ACRAD34:** Multi-strata weighted average for 3 CT Exam Types: Overall Percent of CT exams for which Dose Length Product is at or below the size-specific diagnostic reference level (for CT abdomen-pelvis with contrast/single-phase scan, CT chest without contrast/single-phase scan, and CT head/brain without contrast/single-phase scan): This QCDR measure ensures that all CT scans—abdomen-pelvis with contrast, chest without contrast, and head/brain single-phase—maintain a Dose Length Product at or below the established threshold to help manage patient radiation exposure.

Improvement Activities

For the reasons stated in the introduction of this appendix,[559] we proposed to remove **IA_CC_12:** Care coordination agreements that promote improvements in patient tracking across settings and **IA_PSPA_2:** Participation in MOC Part IV.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.8a: Diagnostic Radiology MVP MIPS Core Measures

	(+) Q386: Amyotrophic Lateral Sclerosis (ALS) Patient Care Preferences (Collection Type: MIPS CQM)	
Advancing Health and Wellness	**QMM18:** Use of Breast Cancer Risk Score on Mammography (Collection Type: QCDR)	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	QMM26: Screening Abdominal Aortic Aneurysm Reporting with Recommendations (Collection Type: QCDR)	

Diagnostic Radiology Improvement Activities

- **IA_BE_6**: Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(!!) IA_BMH_12**: Promoting Clinician Well-Being
- **IA_CC_7**: Regular training in care coordination
- **(*) IA_CC_8**: Implementation of documentation improvements for practice/process improvements
- **IA_CC_19**: Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes

- **(**) IA_MVP**: Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PSPA_1**: Participation in an AHRQ-listed patient safety organization
- **IA_PSPA_7**: Use of QCDR data for ongoing practice assessment and improvements
- **IA_PSPA_12**: Participation in private payer CPIA

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. Another commenter supported the addition of ACRAD34: Overall Percent of CT Exams for which Dose Length Product is at or below the Size-Specific Dose Reference Level in this MVP.

Response: We thank the commenters for their support.

Comment: One commenter expressed appreciation that the proposed MIPS core measures are widely used and commonly reported by radiologists but noted that all three have been topped out for many years. They recommended working with relevant specialty societies to develop and introduce new, clinically meaningful measures that are not topped out, and to create pathways for newer measures that do not yet have established benchmarks.

Response: We appreciate the commenter's feedback. We encourage the commenter to reach out to measure developers and stewards to develop new measures applicable and meaningful to diagnostic radiology for submission to the Call for Measures for possible future implementation. Finalized MVPs are reviewed annually to determine if additional updates are needed to meet the needs of the MVP and program requirements.

Comment: A commenter recommended considering Q494 as a MIPS core measure in this MVP. CT radiation doses vary widely and are projected to cause substantial numbers of preventable cancers in adults and children, yet the measures identified as MIPS core measures are process-based, largely topped out, and do not directly influence dose or image quality. ACRAD34 only partially addresses dose, omits multiphase scanning (a major source of excess exposure), lacks an image-quality safeguard, and is ineligible for core status. By contrast, Q494 is an automated, low-burden intermediate outcome measure that flags CT exams with excessive size-adjusted dose or inadequate image quality using indication-specific thresholds, while keeping patient data within the institution. The commenter noted that core designation would align clinician and facility accountability for dose-related decisions and is projected to reduce unnecessary multiphase scanning, lower radiation exposure, prevent about 39,600 cancers over a decade, and save approximately $26.7 billion across all payers—benefits that documentation-focused measures cannot achieve.

Response: We thank the commenter for their feedback and acknowledge the importance of minimizing CT radiation doses. However, as currently specified, the measure requires specific software capability for calculating and reporting. As part of identifying MIPS core measures, we want to ensure that we are selecting measures most meaningful to the specific clinician specialty while also ensuring they are widely available and implementable within MIPS. To avoid requiring clinicians to expend resources on reporting this measure, we have not included it as a MIPS core measure at this time.

Comment: A commenter recommended the inclusion of QMM23: Low-Dose Cancer Screening Recommendation for CT and CTA of the Chest with Diagnosis of Emphysema and ACRAD44: Comprehensive Reporting of Coronary Artery Calcification (CAC) on Chest CT as these measures focus on improving preventative care, and chronic disease management. Another commenter recommended the inclusion of the Rate of Timely Follow-up on Abnormal Screening Mammograms for Breast Cancer Detection measure in this MVP. Commenters also recommended the inclusion of the new Clinician Use of Artificial Intelligence (AI) to Improve Patient Care improvement activity.

Response: We may consider the addition of quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter expressed concern that expecting QCDRs to support the measures included in the Nuclear Medicine clinical grouping is inappropriate as they noted the measures are not aligned with radiology workflows or data capture. A few commenters recommended the removal of the Nuclear Medicine clinical grouping measures

(measures Q282, Q286, Q288, and Q386) and replacing them with measures that reflect the real-world clinical work of diagnostic radiologists.

Response: We thank the commenters for their feedback regarding Nuclear Medicine clinical grouping measures. This MVP reflects recommendations received from clinical specialties to support different scopes of care to allow for comprehensive MVP reporting. We acknowledge that not all quality measures will be appropriate or applicable to all clinicians who choose to report the MVP.

After consideration of public comments, we are finalizing the *Diagnostic Radiology MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.9: Focusing on Women's Health MVP

Table B.9a represents the proposed MIPS core measures for the Focusing on Women's Health MVP. The B.9b table, followed by a list of improvement activities, represents the measures and activities finalized within the Women's Health MVP (90 FR 50428 through 50430) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Focusing on Women's Health MVP focuses on the clinical specialty of providing treatment and management of women's health. This MVP would be most applicable to clinicians who treat patients within the practices of gynecology, obstetrics, and urogynecology, including NPPs such as certified nurse-midwives, nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.9b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[560] we proposed the following measures as MIPS core measures for the Focusing on Women's Health MVP:

- **Q039:** Screening for Osteoporosis for Women Aged 65-85 Years of Age
- **Q112:** Breast Cancer Screening
- **Q432:** Proportion of Patients Sustaining a Bladder or Bowel Injury at the Time of any Pelvic Organ Prolapse Repair

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.9a: Focusing on Women's Health MVP MIPS Core Measures

[560] See MVP Development: Quality Measure and Improvement Activity Updates

Focusing on Women's Health MVP MIPS Core Measures
Q039: Screening for Osteoporosis for Women Aged 65-85 Years of Age
Q112: Breast Cancer Screening
Q432: Proportion of Patients Sustaining a Bladder or Bowel Injury at the Time of any Pelvic Organ Prolapse Repair

Focusing on Women's Health Improvement Activities

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **(!!) IA_BE_16:** Promote Self-management in Usual Care
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **IA_BMH_11:** Implementation of a Trauma-Informed Care (TIC) Approach to Clinical Practice
- **(!!) IA_BMH_14:** Behavioral/Mental Health and Substance Use Screening and Referral for Pregnant and Postpartum Women
- **(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **IA_EPA_7:** Enhance Engagement of Medicaid and Other Underserved Populations
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **(!!) IA_PM_23:** Use of Computable Guidelines and Clinical Decision Support to Improve Adherence for Cervical Cancer Screening and Management Guidelines

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. A couple of commenters supported the designation of Q039: Screening for Osteoporosis for Women Aged 65-85 Years of Age as a MIPS core measure for this MVP. Several commenters supported the MVP's overall direction and recommended adding specific measures to better assess and improve women's health care. Suggestions included adding a menopause-management measure to systematically evaluate care for midlife women, in line with the principle that what is not measured is not managed; expanding maternal health measures beyond a single encounter or hospital stay to include breastfeeding initiation and continuation and the use of longitudinal, patient-generated data after discharge; and creating a measure for management of genitourinary syndrome of menopause and recurrent urinary tract infections, including use of vaginal estrogen. A commenter recommended the inclusion of the Rate of Timely Follow-up on Abnormal Screening Mammograms for Breast Cancer Detection measure in this MVP. A few commenters requested the addition of Q418: Osteoporosis Management in Women Who Had a Fracture. Other commenters recommended the addition of Q517: Low Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management to this MVP.

Response: We appreciate the commenters' feedback and thank them for their support. We encourage interested parties to submit potential new measures that will align with current program goals and priorities and fill these identified gaps allowing meaningful and complete assessment of MIPS eligible clinician's performance within MIPS during the annual Call for Measures. We may consider the addition of quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Focusing on Women's Health MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.10: Gastroenterology Care MVP

Table B.10a represents the proposed MIPS core measures for the Gastroenterology Care MVP. The B.10b table, followed by a list of improvement activities, represents the measures and activities finalized within the Gastroenterology Care MVP (90 FR 50430 through 50434) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Gastroenterology Care MVP focuses on the clinical theme of providing treatment and management of the digestive system and the liver. This MVP would be most applicable to clinicians who treat patients within the practice of gastroenterology, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality and cost measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.10b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[561] we proposed the following measures as MIPS core measures for the Gastroenterology Care MVP:

- **Q226:** Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention
- **Q275:** Inflammatory Bowel Disease (IBD): Assessment of Hepatitis B Virus (HBV) Status Before Initiating Anti-TNF (Tumor Necrosis Factor) Therapy
- **Q516:** Hepatitis C Virus (HCV): Sustained Virological Response (SVR)

For the reasons stated in the introduction of this appendix,[562] we proposed to remove **Q320:** Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients. We proposed to remove one high performing QCDR measure:

- **NHCR4:** Repeat screening or surveillance colonoscopy recommended within one year due to inadequate bowel preparation.

Modifications were considered for the following QCDR measures:

- **GIQIC23:** Appropriate follow-up interval based on pathology findings in screening colonoscopy: This QCDR measure is undergoing modifications to ensure patients are receiving appropriate follow up within the recommended timeframe.

Improvement Activities

We proposed adding one improvement activity relevant to this MVP:

- **IA_CC_8:** Implementation of documentation improvements for practice/process improvements.

For the reasons stated in the introduction of this appendix,[563] we proposed to remove **IA_CC_10:** Care transition documentation practice improvements.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.

- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP.

Response: We thank the commenter for their support.

Comment: A commenter asserted that the proposed MIPS core measures for this MVP do not reflect where most gastroenterology specialists spend their clinical time and effort. They noted that most individual gastroenterologists, and even many groups, are unlikely to meet the 20-case minimum needed to be scored on Q275 or Q516, effectively leaving Q226—which does not represent "the care that is central to the clinical focus" of gastroenterology—as the only reliably scorable MIPS core measure for many GI clinicians. The commenter therefore recommended delaying implementation of the MIPS core measure requirement for this MVP until MIPS core measures can be identified that satisfy the selection criteria for gastroenterology.

Response: We thank the commenter for their feedback and acknowledge that there were limitations to MIPS core measure selection based upon the current MIPS quality measure inventory. Therefore, we had to balance between choosing measures that most closely represent care central to the MVP intent, while also ensuring measure availability for those clinicians who chose to report the MVP. Of note, reversion to the high priority requirement would create a similar situation and may even decrease ability to achieve maximum points. We will continue to review MIPS core measures annually to determine if revisions are appropriate.

Comment: A couple of commenters opposed the removal of NHCR4: Repeat screening or surveillance colonoscopy recommended within one year due to inadequate bowel preparation and Q320: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients from this MVP and requested their retention. One commenter stated that NHCR4 addresses a critical and still-unresolved quality gap: when bowel preparation is inadequate, patients are at substantially higher risk of missed adenomas, yet only about 25% are advised to have the recommended repeat

exam within one year. The commenter asserted that the measure is therefore not topped out and continues to identify important underuse of follow-up care. They further stated that maintaining NHCR4 preserves the integrity of this MVP, maintains economic value for patients who already paid for an incomplete colonoscopy, and keeps attention on payer and prior authorization barriers that limit access to better bowel prep regimens and undermine colorectal cancer prevention. This commenter also requested that Q320 be retained through the CY 2028 performance period. Another commenter asserted that eliminating these measures would leave the MVP with only two colonoscopy-specific QCDR measures (GIQIC26 and GIQIC23), neither of which would be eligible for designation as a MIPS core measure. Given that colonoscopy and upper endoscopy codes (45378, 45385, 45380, G0121/G0105, 43239, 43235) represent some of the highest-volume procedures billed by gastroenterologists, this commenter expressed concern that the resulting colonoscopy-related measure set within the MVP would be unacceptably limited. The commenter also recommended that GIQIC23: Appropriate Follow-Up Interval Based on Pathology Findings in Screening Colonoscopy be maintained as currently specified, emphasizing that it evaluates the clinical decision made and documented by the physician performing the procedure and communicated to the patient and referring clinician, thereby guiding the timing of the patient's next colonoscopy. They added that if a separate retrospective measure of completed follow-up or surveillance is desired, that concept should be independently specified, tested, and validated rather than replacing the existing prospective measure.

Response: While we agree the concepts are important to quality care, the removal of these measures does not preclude the quality action from continuing. Whether the clinician is being assessed for the quality action or not, it should still be completed as a matter of high-quality care. Regarding NHCR4: Repeat Screening or Surveillance Colonoscopy Recommended Within One Year Due to Inadequate Bowel Preparation, QCDR measures must meet established inclusion criteria to be finalized for MIPS and for inclusion within an MVP. Based upon review of NHCR4, the measure no longer meets that MVP inclusion criteria. MIPS performance data indicate that NHCR4 is high-performing and presents limited opportunity to further improve clinical outcomes. For measure Q320, see Table Group C of Appendix 1 in this final rule for any comments and responses pertaining to measures that were proposed for removal from MIPS.

We agree with the commenter and the proposed modification to GIQIC23: Appropriate Follow-Up Interval Based on Pathology Findings in Screening Colonoscopy will not be finalized as the measure steward determined no updates to the measure were necessary for CY 2027.

After consideration of public comments, we are finalizing the *Gastroenterology Care MVP* with modifications in Table B.10b for the CY 2027 performance period/2029 MIPS payment year and future years. We are not finalizing the modifications to GIQIC23: Appropriate follow-up interval based on pathology findings in screening colonoscopy as the measure steward has determined updates to the measure were unnecessary for CY2027.

B.11: Improving Care for Lower Extremity Joint Repair MVP

Table B.11a represents the proposed MIPS core measures for the Improving Care for Lower Extremity Joint Repair MVP. The B.11b table, followed by a list of improvement activities, represents the measures and activities finalized within the Improving Care for Lower Extremity Joint Repair MVP (90 FR 50434 through 50435) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Improving Care for Lower Extremity Joint Repair MVP focuses on the clinical theme of providing fundamental treatment and management of patients with osteoarthritis and lower extremity surgical repair, such as fracture and total joint replacement, to ensure appropriate care and reduce costs. This MVP would be most applicable to clinicians who treat patients within the practice of orthopedic surgery, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.11b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[564] we proposed the following measures as MIPS core measures for the Improving Care for Lower Extremity Joint Repair MVP:

- **Q351:** Total Knee or Hip Replacement: Venous Thromboembolic and Cardiovascular Risk Evaluation
- **Q470:** Functional Status After Primary Total Knee Replacement
- **Q480:** Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) for Merit-based Incentive Payment System (MIPS)

For the reasons stated in the introduction of this appendix,[565] we proposed to remove **Q350:** Total Knee or Hip Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy.

Symbol Key:
Exclamation point (!): MIPS core measure within an MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.11a: Improving Care for Lower Extremity Joint Repair MVP MIPS Core Measures

Improving Care for Lower Extremity Joint Repair MVP MIPS Core Measures
Q351: Total Knee or Hip Replacement: Venous Thromboembolic and Cardiovascular Risk Evaluation
Q470: Functional Status After Primary Total Knee Replacement
Q480: Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) for Merit-based Incentive Payment System (MIPS)

TABLE B.11b: Improving Care for Lower Extremity Joint Repair MVP Clinical Groupings

Improving Care for Lower Extremity Joint Repair MVP		
Clinical Grouping	**Quality**	**Cost**
	(!) Q470: Functional Status After Primary Total Knee Replacement (Collection Type: MIPS CQM)	**COST_KA_1:** Knee Arthroplasty
	(!) Q480: Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) for Merit-based Incentive Payment System (MIPS) (Collection Type: Administrative Claims)	**COST_PHA_1:** Elective Primary Hip Arthroplasty **COST_KA_1:** Knee Arthroplasty
Advancing Health and Wellness	**(**) Q128:** Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	**COST_PHA_1:** Elective Primary Hip Arthroplasty **COST_KA_1:** Knee Arthroplasty

Improving Care for Lower Extremity Joint Repair Improvement Activities

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_12:** Use evidence-based decision aids to support shared decision-making
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **IA_CC_7:** Regular training in care coordination
- **(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_CC_13:** Practice improvements to align with OpenNotes principles
- **IA_CC_15:** PSH Care Coordination
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements
- **IA_PSPA_18:** Measurement and improvement at the practice and panel level

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP.

Response: We thank the commenter for their support.

Comment: A commenter requested the addition of the following measures: Q155: Falls: Plan of Care, Q318: Falls: Screening for Future Fall Risk, Q355: Unplanned Reoperation Within the 30-Day Postoperative Period, Q357: Surgical Site Infection, Q461: Leg Pain After Lumbar Surgery.

Response: Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter expressed concern regarding the removal of Q350: Total Knee or Hip Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy from this MVP, and noted the measure promotes meaningful shared decision-making between clinicians and patients that is critically important to high-quality care and that removing will reduce the number of MIPS CQMs to four, effectively eliminating meaningful measure choice for clinicians reporting MIPS CQMs within this MVP.

Response: We acknowledge the commenter's concern regarding the removal of measure Q350: Total Knee or Hip Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy. While process measures may still represent an important aspect of care, this measure's associated quality action essentially assesses for informed consent, a standard of care. Please refer to Appendix 1: MIPS Quality Measures (Table Group C) in this final rule for details on the removal of measure Q350.

After consideration of public comments, we are finalizing the *Improving Care for Lower Extremity Joint Repair MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.12 Interventional Radiology MVP

Table B.12a represents the proposed MIPS core measures for the Interventional Radiology MVP. The B.12b table, followed by a list of improvement activities, represents the measures and activities finalized within the Interventional Radiology MVP (90 FR 50381 through 50386) with proposed modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Interventional Radiology MVP assesses meaningful outcomes in interventional radiology. This MVP would be most applicable to clinicians who treat patients within the practice of interventional radiology, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.12b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[566] we proposed the following measures as MIPS core measures for the Interventional Radiology MVP:

- **Q145:** Radiology: Exposure Dose Indices Reported for Procedures Using Fluoroscopy
- **Q413:** Door to Puncture Time for Endovascular Stroke Treatment
- **Q420:** Varicose Vein Treatment with Saphenous Ablation: Outcome Survey

Improvement Activities

We proposed to remove one improvement activity as the activity is more relevant to general surgery and surgical subspecialties:

- **IA_CC_15:** PSH Care Coordination

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.12a: Interventional Radiology MVP MIPS Core Measures

Interventional Radiology Improvement Activities

- **IA_BE_1:** Use of certified EHR to capture patient reported outcomes
- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_12:** Use evidence-based decision aids to support shared decision-making
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **(!!) IA_BMH_12:** Promoting Clinician Well-Being
- **IA_CC_7:** Regular training in care coordination
- **(*) IA_CC_8:** Implementation of documentation improvements for practice/process improvements
- **(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_CC_17:** Patient Navigator Program
- **IA_CC_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **IA_EPA_3:** Collection and use of patient experience and satisfaction data on access
- **(!!) IA_EPA_8:** Provide Education Opportunities for New Clinicians
- **(**) IA_MVP**: Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_17:** Participation in Population Health Research
- **IA_PSPA_1:** Participation in an AHRQ-listed patient safety organization.
- **IA_PSPA_18:** Measurement and improvement at the practice and panel level

- **IA_PSPA_25:** Cost Display for Laboratory and Radiographic Orders

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. Another commenter requested the addition of quality measures and improvement activities that are broadly applicable to interventional radiology practice, including measures addressing care coordination, patient safety, shared decision-making, patient-reported outcomes, access, and practice-based quality improvement.

Response: We thank the commenters for their support and feedback. We may consider the addition of quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Interventional Radiology MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.13 Neuropsychology MVP

Table B.13a represents the proposed MIPS core measures for the Neuropsychology MVP. The B.13b table, followed by a list of improvement activities, represents the measures and activities finalized within the Neuropsychology MVP (90 FR 50386 through 50390) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Neuropsychology MVP focuses on the clinical specialty of providing treatment and management of neuropsychological care. This MVP would be most applicable to clinicians who treat patients within the practice of neuropsychology, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.13b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[567] we proposed the following measures as MIPS core measures for the Neuropsychology MVP:

- **Q134:** Preventive Care and Screening: Screening for Depression and Follow-Up Plan
- **Q181:** Elder Maltreatment Screen and Follow-up Plan
- **Q282:** Dementia: Functional Status Assessment

Improvement Activities

For the reasons stated in the introduction of this appendix,[568] we proposed to remove **IA_BE_15:** Engagement of Patients, Family and Caregivers in Developing a Plan of Care.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.

[567] See MVP Development: Quality Measure and Improvement Activity Updates
[568] Ibid.

Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.13a: Neuropsychology MVP MIPS Core Measures

Neuropsychology MVP MIPS Core Measures

	(!) Q181: Elder Maltreatment Screen and Follow-up Plan (Collection Type: Medicare Part B Claims, MIPS CQM)	

Neuropsychology Improvement Activities

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **(!!) IA_BE_14:** Engage Patients and Families to Guide Improvement in the System of Care
- **(!!) IA_BE_16:** Promote Self-management in Usual Care
- **IA_BE_22:** Improved Practices that Engage Patients Pre-Visit
- **IA_BMH_7:** Implementation of Integrated Patient Centered Behavioral Health Model
- **(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **(*) IA_EPA_7:** Enhance Engagement of Medicaid and Other Underserved Populations
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_21:** Advance Care Planning

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. Another commenter recommended Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood be added to this MVP. Another commenter requested the addition of IA_BMH_1: Antipsychotic-Medication-Associated Physical Health Condition Assessment and Monitoring to this MVP.

Response: We thank the commenter for their support. We may consider the addition of quality measures for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

After consideration of public comments, we are finalizing the *Neuropsychology MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.14: Optimal Care for Kidney Health MVP

Table B.14a represents the proposed MIPS core measures for the Optimal Care for Kidney Health MVP. The B.14b table, followed by a list of improvement activities, represents the measures and activities finalized within the Optimal Care for Kidney Health MVP (90 FR 50435 through 50438) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Optimal Care for Kidney Health MVP focuses on the clinical specialty of providing fundamental treatment and management of costly clinical conditions that contribute to, or may result from, kidney disease. This MVP would be most applicable to clinicians who treat patients within the practice of nephrology, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.14b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[569] we proposed the following measures as MIPS core measures for the Optimal Care for Kidney Health MVP:

- **Q236:** Controlling High Blood Pressure
- **Q482:** Hemodialysis Vascular Access: Practitioner Level Long-term Catheter Rate
- **Q489:** Adult Kidney Disease: Angiotensin Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy

Improvement Activities

We proposed adding one improvement activity that is relevant to this MVP and includes an advancing health and wellness component:

- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans

For the reasons stated in the introduction of this appendix,[570] we proposed to remove **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

- **(!!) IA_BE_16**: Promote Self-management in Usual Care
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **(+)(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_CC_13**: Practice improvements to align with OpenNotes principles
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_11:** Regular Review Practices in Place on Targeted Patient Population Needs
- **IA_PM_16:** Implementation of medication management practice improvements
- **(*) IA_PSPA_16:** Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools, including AI-enabled predictive decision-support interventions—and standardized treatment protocols to manage workflow on the care team to meet patient needs

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. A few commenters recommended the inclusion of the Low-Density Lipoprotein (LDL-C) Monitoring and Management measure in this MVP. One commenter supported

the updates to this MVP and recommend adding new early-stage measures to not only advance the important goals of prevention, earlier intervention, and chronic disease management, but also make the make the MVP most useful for clinicians who are interested in focusing on prevention and early intervention.

Response: We appreciate the commenters' support. We may consider the addition of quality measures for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

Comment: A commenter expressed concern that Q236: Controlling High Blood Pressure does not reflect current evidence-based clinical guidelines and is identified as a MIPS core measure for this MVP. Q236 uses a less stringent blood pressure control threshold of 140/90 mm Hg than the American Heart Association and American College of Cardiology recommendation of 130/80, as evidence indicates further reduces the risk of heart attack, stroke, heart failure, cardiovascular events, and death.

Response: We appreciate the commenters' concern regarding alignment with current evidence-based hypertension guidelines. Q236: Controlling High Blood Pressure is a MIPS core measure for this MVP for several reasons. Q236 is a standardized quality measure with an established 140/90 mm Hg control threshold that supports consistent data collection which allows comparability across practices and enables benchmarking against existing national performance. While its 140/90 mm Hg threshold is less aggressive than the 130/80 mm Hg target recommended by the American Heart Association and American College of Cardiology, it still reflects a clinically meaningful level of control and allows us to assess hypertension management. Including Q236 as a MIPS core measure provides a practical and interpretable outcome measure that supports early learning, comparability, and broad adoption across many practice settings. We will continue to monitor the evidence base and measure landscape and may consider updates in future program years.

Comment: A commenter requested Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood be considered a MIPS core measure within this MVP.

Response: We may consider alternative MIPS core measures for this MVP through future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Optimal Care for Kidney Health MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.15: Optimal Care for Patients with Urologic Conditions MVP

Table B.15a represents the proposed MIPS core measures for the Optimal Care for Patients with Urologic Conditions MVP. The B.15b table, followed by a list of improvement activities, represents the measures and activities finalized within the Optimal Care for Patients with Urologic Conditions MVP (90 FR 50438 through 50441) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Optimal Care for Patients with Urologic Conditions MVP focuses on assessing optimal care for patients treated for a broad range of urologic conditions, including kidney stones, urinary incontinence, bladder cancer, and prostate cancer. This MVP would be most applicable to clinicians who treat patients within the practices of urology, general urologists, urology oncologists, and urogynecology, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.15b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[571] we proposed the following measures as MIPS core measures for the Optimal Care for Patients with Urologic Conditions MVP:

- **Q050:** Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older
- **Q358:** Patient-Centered Surgical Risk Assessment and Communication
- **Q462:** Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy

We proposed to remove two high performance QCDR measures, one process QCDR measure, and one QCDR measure due to low adoption, no benchmark after 2 consecutive years in MIPS:

- **AQUA8:** Hospital Admissions or Infectious Complications Within 30 days of Prostate Biopsy (high performing)
- **AQUA14:** Stones: Repeat Shock Wave Lithotripsy (SWL) Within 6 Months of Initial Treatment (high performing)
- **AQUA15:** Stones: Urinalysis or Urine Culture Performed Before Surgical Stone Procedures (process measure)
- **AQUA16:** Non-Muscle Invasive Bladder Cancer: Repeat Transurethral Resection of Bladder Tumor (TURBT) for T1 Disease (low adoption, no benchmark after 2 consecutive years in MIPS)

Modifications were considered for the following QCDR measures:

- **AQUA14:** Stones: Repeat Shock Wave Lithotripsy (SWL) Within 6 Months of Initial Treatment: If the measure is not finalized for removal in the CY 2027 PFS final rule, this QCDR measure would undergo modifications to the title, description, and numerator to align with the American Urological Association (AUA) updated clinical guidelines, which recommend a second SWL or ureteroscopy (URS) when the initial SWL does not achieve complete clearance.
- **AQUA15:** Stones: Urinalysis or Urine Culture Performed Before Surgical Stone Procedures: If the measure is not finalized for removal in the CY 2027 PFS final rule, this QCDR measure would undergo modifications to add a quality action to the numerator to ensure abnormal results are appropriately addressed.
- **MUSIC4:** Prostate Cancer: Active Surveillance/Watchful Waiting for Newly Diagnosed Low Risk Prostate Cancer Patients: This QCDR measure is undergoing modifications to ensure patients newly diagnosed with low-risk prostate cancer on active surveillance undergo a confirmation biopsy within 24 months of their diagnosis.

Improvement Activities

We proposed adding two improvement activities relevant to this MVP, both of which include an advancing health and wellness component:

- **IA_BE_16:** Promote Self-management in Usual Care
- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans

For the reasons stated in the introduction of this appendix,[572] we proposed to remove **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.

---

[571] See MVP Development: Quality Measure and Improvement Activity Updates

[572] See MVP Development: Quality Measure and Improvement Activity Updates

Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

- **IA_CC_13:** Practice improvements to align with OpenNotes principles
- **IA_CC_17:** Patient Navigator Program
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_17:** Participation in Population Health Research
- **IA_PM_21:** Advance Care Planning
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements
- **IA_PSPA_12:** Participation in private payer CPIA
- **IA_PSPA_21:** Implementation of fall screening and assessment programs

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. A commenter supported the removal of AQUA14 and the improvement activity modifications.

Response: We thank the commenters for their support.

Comment: A few commenters recommended that clinically meaningful urology quality measures should not be removed without replacements. The proposed removal of AQUA8, AQUA14, AQUA15, and AQUA16 would eliminate measures addressing prostate biopsy complications, repeat shock wave lithotripsy, urine testing before stone procedures, and repeat TURBT for T1 bladder cancer. A commenter urged AQUA8 be maintained as they believed as more clinicians report the measure, performance will look different. This commenter believed AQUA15 should be maintained because it addresses an important clinical area. In addition, the commenter opposed any modifications to the measure outside of the measure development and update process established by the measure developer or intellectual property holder. Also, the commenter requested AQUA16 be retained due to its clinical importance and the likelihood of increased adoption as more urologists elect MVP reporting. The commenters believed these measures are relevant patient safety and quality measures and noted high performance or limited adoption should prompt improvement of the measures and reporting process, not automatic removal.

Response: We appreciate the commenter's feedback on AQUA8, AQUA14, AQUA15, and AQUA16. While we agree the concepts addressed by these measures are important to delivering high-quality care, the removal of these measures does not preclude clinicians from continuing these quality actions. Whether the clinician or group is being assessed for the quality action or not, it should still be completed as part of routine clinical practice. Additionally, QCDR measures must meet established inclusion criteria to be finalized for MIPS and for inclusion within an MVP. Based upon review of AQUA8, AQUA14, AQUA15, and AQUA16, they no longer meet the MVP inclusion criteria. MIPS performance data indicates that AQUA14 is high performing and AQUA8 has had minimal variation in its historical benchmark. AQUA16 has not met the case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive years. In addition, AQUA15 only assesses for documentation of a urinalysis or urine culture and does not require a quality action or plan of care to account for abnormal results; therefore, missing a workflow step necessary to driving positive health outcomes.

Comment: A commenter requested that more generally applicable measures and a broader range of measures be added to this MVP so that urology clinicians can more easily meet minimum reporting thresholds.

Response: We may consider the addition of quality measures for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

Comment: A commenter opposed the MIPS core measures in this MVP as they noted the measures identified as MIPS core measures do not provide meaningful options across urology subspecialties and were selected without sufficient specialty input.

Response: We thank the commenter for their feedback and acknowledge that there were limitations to MIPS core measure selection based upon the current inventory of quality measures. Therefore, we had to balance between choosing measures that most closely represent care central to the MVP intent, while also ensuring measure availability for those clinicians who chose to report the MVP. We will continue to review MIPS core measures annually to determine if revisions are appropriate.

Comment: A commenter opposed the proposed modification to MUSIC4: Prostate Cancer: Active Surveillance/Watchful Waiting for Newly Diagnosed Low Risk Prostate Cancer Patients as it is outside of the measure development and update process established by the measure developer or intellectual property holder.

Response: Proposed modifications to MUSIC4: Prostate Cancer: Active Surveillance/Watchful Waiting for Newly Diagnosed Low Risk Prostate Cancer Patients will not be finalized as the measure steward determined no updates to the measure were necessary for CY 2027.

After consideration of public comments, we are finalizing the *Optimal Care for Patients with Urologic Conditions MVP* with modifications in Table B.15b for the CY 2027 performance period/2029 MIPS payment year and future years. We are not finalizing the modifications to MUSIC4: Prostate Cancer: Active Surveillance/Watchful Waiting for Newly Diagnosed Low Risk Prostate Cancer Patients as the measure steward has determined updates to the measure were unnecessary for CY2027.

B.16 Pathology MVP

Table B.16a represents the proposed MIPS core measures for the Pathology MVP. The B.16b table, followed by a list of improvement activities, represents the measures and activities finalized within the Pathology MVP (90 FR 50390 through 50395) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Pathology MVP focuses on assessing meaningful outcomes in pathology. This MVP would be most applicable to pathology clinicians. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.16b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[573] we proposed the following measures as MIPS core measures for the Pathology MVP:

- **Q396:** Lung Cancer Reporting (Resection Specimens)
- **Q440:** Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician
- **Q491:** Mismatch Repair (MMR) or Microsatellite Instability (MSI) Biomarker Testing Status

We proposed adding one QCDR measure that is relevant to this MVP:

- **QMM33:** Immunohistochemistry (IHC) and/or Molecular BRAF Testing Status in Metastatic Melanoma: This QCDR measure ensures that pathologists include a recommendation for BRAF testing, documentation of current or prior BRAF test results,

[573] See MVP Development: Quality Measure and Improvement Activity Updates

or confirmation that BRAF testing is pending in all final immunohistochemical staining reports for patients with an initial diagnosis of metastatic melanoma.

We proposed to remove one QCDR measure due to low adoption, no benchmark after 2 consecutive years in MIPS:

- **QMM25:** Use of Structured Reporting for Urine Cytology Specimens

Modifications were considered for the following QCDR measures:

- **CAP30:** Urinary Bladder Cancer: Complete Analysis and Timely Reporting: This QCDR measure is undergoing modifications to the title and description to clarify the quality action in relation to patient outcomes and the overarching goal of supporting informed treatment decisions.

Improvement Activities

We proposed adding four additional improvement activities relevant to this MVP, all of which include an advancing health and wellness component:

- **IA_CC_8:** Implementation of documentation improvements for practice/process improvements
- **IA_CC_20:** Use of Data to Improve Practice Workflows
- **IA_CC_21:** Understand and Improve Diagnostic Performance
- **IA_EPA_8:** Provide Education Opportunities for New Clinicians

For the reasons stated in the introduction of this appendix,[574] we proposed to remove **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care, **IA_CC_12:** Care coordination agreements that promote improvements in patient tracking across settings and **IA_PSPA_2:** Participation in MOC Part IV.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Caret symbol (^): finalized new measure or improvement activity.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

	QMM30: Appropriate Use of Bethesda System for Reporting Thyroid Cytopathology on Fine Needle Aspirations (FNA) of Thyroid Nodule(s) (Collection Type: QCDR)	
	(+) QMM33: Immunohistochemistry (IHC) and/or Molecular BRAF Testing Status in Metastatic Melanoma (Collection Type: QCDR)	

Pathology Improvement Activities

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **(!!) IA_BMH_12:** Promoting Clinician Well-Being
- **(+)(*)(!!) IA_CC_8:** Implementation of documentation improvements for practice/process improvements
- **(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_CC_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **(^)(+) IA_CC_20:** Use of Data to Improve Practice Workflows
- **(^)(+) IA_CC_21:** Understand and Improve Diagnostic Performance

- **(+) IA_EPA_8:** Provide Education Opportunities for New Clinicians
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PSPA_1:** Participation in an AHRQ-listed patient safety organization
- **IA_PSPA_12:** Participation in private payer CPIA
- **IA_PSPA_13:** Participation in Joint Commission Evaluation Initiative
- **IA_PSPA_35:** Adopt Certified Health Information Technology for Security Tags for Electronic Health Record Data

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP.

Response: We thank the commenter for their support.

Comment: One commenter requested the addition of CAP43: Complete Reporting of Gastrointestinal Metaplasia, and CAP44: Molecular Assessment for Endometrial Carcinoma to this MVP. The commenter believed these new measures would expand the diseases addressed and represent opportunities for improvement for pathologists.

Response: We may consider the addition of quality measures for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

After consideration of public comments, we are finalizing the *Pathology MVP* with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. We are not finalizing the modifications to the title for CAP30: Urinary Bladder Cancer: Complete Analysis and Timely Reporting as the measure steward has determined updates to the measure title were unnecessary for CY2027. Additionally, the measure steward updated the numerator to align with the clarification added in the description.

B.17: Patient Safety and Support of Positive Experiences with Anesthesia MVP

Table B.17a represents the proposed MIPS core measures for the Patient Safety and Support of Positive Experiences with Anesthesia MVP. The B.17b table, followed by a list of improvement activities, represents the measures and activities finalized within the Patient Safety and Support of Positive Experiences with Anesthesia MVP (90 FR 50441 through 50444) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Patient Safety and Support of Positive Experiences with Anesthesia MVP focuses on increasing the quality of anesthesia care, improving postoperative outcomes, promoting patient safety, and enhancing satisfaction for patients receiving anesthesia. This MVP would be most applicable to anesthesiologists practicing within ambulatory, outpatient, and inpatient hospital settings, including NPPs such as certified registered nurse anesthetists (CRNAs), nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.17b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[575] we proposed the following measures as MIPS core measures for the Patient Safety and Support of Positive Experiences with Anesthesia MVP:

[575] See MVP Development: Quality Measure and Improvement Activity Updates

- **Q404:** Anesthesiology Smoking Abstinence
- **Q477:** Multimodal Pain Management
- **Q525:** Intraoperative Hypotension (IOH) among Non-Emergent Noncardiac Surgical Cases

We proposed adding two new MIPS quality measures and two QCDR measures:

- **Q525:** Intraoperative Hypotension (IOH) among Non-Emergent Noncardiac Surgical Cases: This proposed MIPS quality measure assesses the mean arterial pressure (MAP) of patients undergoing noncardiac, non-emergency surgery that requires general anesthesia or monitored anesthesia.
- **Q524:** Patient-Reported Experience with Anesthesia: This proposed MIPS quality measure assesses patient experience and satisfaction with anesthesia care.
- **AQI65:** Avoidance of Cerebral Hyperthermia for Procedures Involving Cardiopulmonary Bypass: This QCDR measure ensures patients receive appropriate intraoperative temperature monitoring during cardiopulmonary bypass, with documentation that pulmonary artery, oropharyngeal, or nasopharyngeal temperatures are maintained at or above 37.0 degrees Celsius.
- **AQI71:** Ambulatory Glucose Management: This QCDR measure ensures patients with diabetes undergoing office-based or ambulatory surgery receive appropriate blood glucose monitoring and intervention throughout the entire anesthesia care episode.

For the reasons stated in the introduction of this appendix,[576] we proposed to remove **Q430:** Prevention of Post-Operative Nausea and Vomiting (PONV) – Combination Therapy and **Q463:** Prevention of Post-Operative Vomiting (POV) – Combination Therapy (Pediatrics). We proposed to remove one high performing QCDR measures and two QCDR measures proposed to transition to MIPS measures:

- **ABG44:** Low Flow Inhalational General Anesthesia (high performing)
- **AQI48:** Patient-Reported Experience with Anesthesia (proposed as a MIPS measure)
- **EPREOP31:** Intraoperative Hypotension (IOH) among Non-Emergent Noncardiac Surgical Cases (proposed as a MIPS measure)

Symbol Key:
Exclamation point (!): MIPS core measure within an MVP.
Caret symbol (^): finalized new measure or improvement activity.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.17a: Patient Safety and Support of Positive Experiences with Anesthesia MVP MIPS Core Measures

Patient Safety and Support of Positive Experiences with Anesthesia Improvement Activities

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_22:** Improved practices that engage patients pre-visit
- **(!!) IA_BMH_2:** Tobacco use
- **IA_CC_15:** PSH Care Coordination
- **IA_CC_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PSPA_1:** Participation in an AHRQ-listed patient safety organization
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements
- **(*) IA_PSPA_16:** Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools, including AI-enabled predictive decision-support interventions—and standardized treatment protocols to manage workflow on the care team to meet patient needs

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. Another commenter supported the inclusion of Q525: Interoperative Hypotension Among Non-Emergent Noncardiac Surgical Cases as well as the addition of addition of AQI65 and AQI71 to this MVP.

Response: We thank the commenters for their support.

Comment: A commenter supported the concepts for the Interoperative Hypotension Among Non-Emergent Noncardiac Surgical Cases and Patient-Reported Experience with Anesthesia measures but had significant concerns about immediate feasibility. The commenter explained that the intraoperative hypotension measure depends on electronic intraoperative blood pressure data from anesthesia information management systems (AIMS) or automated monitor integrations that many anesthesia practices cannot access or control, particularly when clinicians work across multiple facilities with different platforms and limited authority to modify interfaces, standardize workflows, or implement upgrades. The commenter also noted that the patient experience measure relies on post-discharge surveys and robust patient engagement and communication capabilities that are often managed by facilities or vendors rather than anesthesia organizations and would require substantial new infrastructure and resources. The commenter recommended a transition period of at least 12–24 months, with optional reporting for the patient experience measure, so practices could work with facilities to upgrade systems and develop the technical and patient engagement infrastructure needed before these measures become mandatory. Another commenter expressed concern that many anesthesia groups do not own or control the electronic medical record (EMR), making extraction

of the detailed data required for certain measures in this MVP—such as Intraoperative Hypotension/EPREOP 31 and similar measures—nearly impossible. The commenter further noted that AQI65 has a very limited denominator, making it difficult for clinicians outside cardiac anesthesia to have enough eligible cases, and that the ongoing removal of measures like Q430 and Q463 leaves the anesthesia specialty with few achievable options unless groups own the EMR and practice in high-volume academic settings.

Response: We appreciate the commenters' feedback and their support for the concepts underlying the intraoperative hypotension and anesthesia patient experience measures, as well as their detailed explanations of feasibility concerns. We acknowledge that not all quality measures will be applicable or available to all clinicians reporting an MVP, and these measures remain optional for reporting as we continue working towards the sunsetting of traditional MIPS, providing transition time for practices. We recognize that many anesthesia groups do not own or control the electronic medical record (EMR) or AIMS and may face challenges accessing the data required for measures such as Intraoperative Hypotension (IOH) among Non-Emergent Noncardiac Surgical Cases and related measures. We also acknowledge concerns about limited denominators for certain measures and the impact of measure removals on the availability of achievable options for anesthesia clinicians. We will continue to encourage collaboration among clinicians, facilities, and vendors to support data access and interoperable workflows that enable more consistent and reliable reporting. We encourage interested parties to reach out to the relevant measure stewards to discuss potential revisions and implementation considerations for future years, including feasibility, denominator size, and data access issues. Finalized MVPs are reviewed annually to determine whether additional updates are needed to meet the needs of the MVP and program requirements, and we will take these comments into account as part of that ongoing review.

Comment: A few commenters opposed the removal of measures Q430 and Q463 as they believed this leaves the MVP with only three MIPS measures to report and therefore forces anesthesia practices to use a QCDR to satisfy MIPS reporting requirements. One commenter recommended maintaining these two measures for a transition period while practices, facilities, vendors, and registries develop the capabilities necessary to support the new measures.

Response: We acknowledge the commenters' concern regarding the removal of measures Q430: Prevention of Post-Operative Nausea and Vomiting (PONV) – Combination Therapy, and Q463: Prevention of Post-Operative Vomiting (POV) – Combination Therapy (Pediatrics); however, we seek to balance meaningful quality reporting with minimizing burden placed on clinicians. While topped-out measures may still represent an important aspect of care, the associated quality actions are generally considered a standard of practice, presenting limited opportunity to further improve clinical outcomes. We have proposed two new MIPS CQM measures, which will result in a total of four MIPS CQM measures available for reporting as well as two QCDR measures. These measures have been finalized for removal from the program and, consequently, will be removed from this MVP. For the full rationale supporting the removal of Q430 and Q463, please refer to Appendix 1: MIPS Quality Measures of this final rule, Table Group C.

Comment: A commenter supported updating and refining this MVP but highlighted the operational complexity for large multispecialty organizations that must evaluate multiple pathways, determine clinician applicability, and set up reporting structures across specialties. The commenter requested that future modifications to existing MVPs continue to account for clinical relevance and operational feasibility across different specialties and practice settings.

A couple of commenters supported the addition of four new quality measures. A commenter supported the creation of a MIPS core measure set for this MVP, stating these changes would improve measurement stability, reduce reporting burden, enhance comparability, and better reflect CRNA services. They agreed with requiring CRNAs to report a MIPS core measure (or attest that none applies) and exempting small practices, but urged that CRNAs have multiple, clinically relevant MIPS core measure options feasible across diverse settings. A commenter recommended ongoing evaluation and expansion of anesthesia-specific MIPS core measures, clarification that newly developed anesthesia measures can be designated as core in future rulemaking, and removal of technical, administrative, and attribution barriers so CRNAs can fully participate and be appropriately attributed in the MVP.

Response: We appreciate the commenters' feedback and thank them for their support. We may consider the addition of quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter opposed the removal of ABG44: Low Flow Inhalational General Anesthesia.

Response: QCDR measures must meet established inclusion criteria to be finalized for MIPS and for inclusion within an MVP. Based upon review of ABG44, the measure no longer meets that MVP inclusion criteria. MIPS performance data indicate that ABG44 is high performing and presents limited opportunity to further improve clinical outcomes.

After consideration of public comments, we are finalizing the *Patient Safety and Support of Positive Experiences with Anesthesia MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.18 Podiatry MVP

Table B.18a represents the proposed MIPS core measures for the Podiatry MVP. The B.18b table, followed by a list of improvement activities, represents the measures and activities finalized within the Podiatry MVP (90 FR 50395 through 50400) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Podiatry MVP focuses on assessing meaningful outcomes in foot and ankle care for patients with chronic conditions, wound/ulcers, and general care for the podiatry patient. This MVP would be most applicable to podiatry clinicians, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.18b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[577] we proposed the following measures as MIPS core measures for the Podiatry MVP:

- **Q126:** Diabetes Mellitus: Diabetic Foot and Ankle Care, Peripheral Neuropathy – Neurological Evaluation
- **Q155:** Falls: Plan of Care
- **Q358:** Patient-Centered Surgical Risk Assessment and Communication

We proposed to remove two QCDR measures due to low adoption, no benchmark after 2 consecutive years in MIPS:

- **REGCLR5:** Offloading with Remote Monitoring
- **REGCLR8:** Monitor and Improve Treatment Outcomes in Chronic Wound Healing

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.18a: Podiatry MVP MIPS Core Measures

[577] See MVP Development: Quality Measure and Improvement Activity Updates

Podiatry MVP MIPS Core Measures
Q126: Diabetes Mellitus: Diabetic Foot and Ankle Care, Peripheral Neuropathy – Neurological Evaluation
Q155: Falls: Plan of Care
Q358: Patient-Centered Surgical Risk Assessment and Communication

TABLE B.18b: Podiatry MVP Clinical Groupings

Podiatry MVP		
Clinical Grouping	**Quality**	**Cost**
Chronic Conditions	**(!) Q126:** Diabetes Mellitus: Diabetic Foot and Ankle Care, Peripheral Neuropathy – Neurological Evaluation (Collection Type: MIPS CQM)	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	Q127: Diabetes Mellitus: Diabetic Foot and Ankle Care, Ulcer Prevention – Evaluation of Footwear (Collection Type: MIPS CQM)	
Wound/Ulcer	**USWR32:** Adequate Compression at each visit for Patients with Venous Leg Ulcers (VLUs) appropriate to arterial supply (Collection Type: QCDR)	**N/A**
	USWR33: Diabetic Foot Ulcer (DFU) Healing or Closure (Collection Type: QCDR)	
	USWR34: Venous Leg Ulcer (VLU) Healing or Closure (Collection Type: QCDR)	
	USWR35: Adequate Off-loading of Diabetic Foot Ulcers performed at each visit, appropriate to location of ulcer (Collection Type: QCDR)	
General Podiatry	**(*) Q374:** Closing the Referral Loop: Receipt of Specialist Report (Collection Type: eCQM, MIPS CQM,)	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
Advancing Health and Wellness	**(!) Q155:** Falls: Plan of Care (Collection Type: MIPS CQM)	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	
	(*) Q317: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	
	(!) Q358: Patient-Centered Surgical Risk Assessment and Communication (Collection Type: MIPS CQM)	
	MEX5: Hammer Toe Outcome (Collection Type: QCDR)	**N/A**
	REGCLR1: Heel Pain Treatment Outcomes for Adults (Collection Type: QCDR)	
	REGCLR3: Bunion Outcome - Adult and Adolescent (Collection Type: QCDR)	

Podiatry Improvement Activities

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(!!) IA_BMH_12:** Promoting Clinician Well-Being
- **IA_CC_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **IA_EPA_7:** Enhance Engagement of Medicaid and Other Underserved Populations

- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_14:** Implementation of methodologies for improvements in longitudinal care management for high risk patients
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements
- **IA_PSPA_18:** Measurement and improvement at the practice and panel level
- **IA_PSPA_22:** CDC Training on CDC's Guideline for Prescribing Opioids for Chronic Pain
- **IA_PSPA_23:** Completion of CDC Training on Antibiotic Stewardship

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP.

Response: We thank the commenter for their support.

Comment: A commenter expressed support for the MIPS core measures identified in this MVP and recommended identifying both Q226: Tobacco Use: Screening and Cessation Intervention and Q317: Screening for High Blood Pressure and Follow-Up Documented as MIPS core measure options.

Response: We thank the commenters for their support. We may consider alternative MIPS core measures for this MVP through future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter requested USWR33 and USWR34 be considered MIPS core measures for this MVP. As outcome measures the commenter believed they would be more applicable than the three proposed MIPS core measures which are all process measures. The commenter also requested the inclusion of two additional QCDR measures relevant to this MVP; USWR30: Non-invasive arterial assessment of patients with leg ulcers and USWR22: Nutritional Assessment and Intervention Plan in Patients with Wounds and Ulcers.

Response: We appreciate the commenter's feedback. MIPS core measures must be publicly available measures. For details on the finalized MIPS core measure proposal and selection criteria for MVPs refer to section IV.A.4.d.(1)(c) of this final rule. We may consider the addition of quality measures to this MVP through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A few commenters opposed the removal of REGCLR5: Offloading with Remote Monitoring and REGCLR8: Monitor and Improve Treatment Outcomes in Chronic Wound Healing from this MVP and urged that both measures be retained for CY 2027 and subsequent years to allow time to assess participation, reporting, and benchmarking. One commenter emphasized that these measures should be evaluated for their clinical relevance to podiatry and their importance in keeping this MVP a meaningful reporting pathway for podiatrists who provide chronic wound care. A second commenter argued that these QCDR measures capture important aspects of podiatry care and should be retained despite currently low adoption. This commenter stated that keeping the measures in the MVP would incentivize reporting as clinicians face a more limited, focused set of choices, potentially generating sufficient data to establish benchmarks and offering podiatrists a broader set of measures that better match their patient population. The second commenter also noted that retention would allow Registry Clearinghouse QCDR users to report a full set of four QCDR measures and requested that these measures be maintained for at least a few more years to see whether increased MVP participation improves reporting rates for historically un-benchmarked measures.

Response: We appreciate the commenter's feedback on REGCLR5 and REGCLR8. While we agree these concepts are important to quality care, the removal of these measures does not preclude clinicians from continuing these quality actions. Whether the clinician is being assessed for the quality action or not, it should still be completed as part of routine clinical practice. Additionally, QCDR measures must meet established inclusion criteria to be finalized for MIPS and for inclusion within an MVP. Based upon review of REGCLR5 and REGCLR8, they no longer meet that MVP inclusion criteria. MIPS performance data indicate that both measures have not met reporting requirements and have not established a benchmark after being in the program for 2 consecutive years.

Comment: A commenter requested the addition of Q318: Falls: Screening for Future Fall Risk in this MVP as this measure is included in the Podiatry Specialty Set and therefore recognized as relevant to podiatry, reflects podiatrists' role in fall prevention through pain treatment, balance improvement, and stabilizing devices. The commenter requested the addition of two new improvement activities to this MVP for 2027—one on advance care planning conversations that reflects podiatrists' role in managing chronic conditions and goals of care, and one on responsible clinician use of AI given its rapidly expanding role in clinical care. The commenter acknowledged the existing MVP Maintenance Process, which normally delays changes to finalized MVPs by a year, but argues that this creates unnecessary lag for newly proposed activities and asks that these activities be incorporated into relevant MVPs as soon as they are finalized, noting that the rulemaking process already provides sufficient opportunity for public feedback.

Response: We may consider the addition of quality measures and improvement activities for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

After consideration of public comments, we are finalizing the *Podiatry MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.19: Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP

Table B.19a represents the proposed MIPS core measures for the Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP. The B.19b table, followed by a list of improvement activities, represents the measures and activities finalized within the Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP (90 FR 50444 through 50447) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP focuses on promoting quality care for patients suffering from infectious disorders. This MVP would be most applicable to clinicians who treat patients within the practices of infectious disease and immunology, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality and cost measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.19b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[578] we proposed the following measures as MIPS core measures for the Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP:

- **Q205:** Sexually Transmitted Infection (STI) Testing for People with HIV
- **Q338:** HIV Viral Suppression
- **Q516:** Hepatitis C Virus (HCV): Sustained Virological Response (SVR)

Improvement Activities

We proposed adding one improvement activity that is relevant to this MVP and includes an advancing health and wellness component:

- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans

[578] See MVP Development: Quality Measure and Improvement Activity Updates

For the reasons stated in the introduction of this appendix,[579] we proposed to remove **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care.

Symbol Key:
Exclamation point (!): MIPS core measure within an MVP.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.19a: Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP MIPS Core Measures

Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP MIPS Core Measures
Q205: Sexually Transmitted Infection (STI) Testing for People with HIV
Q338: HIV Viral Suppression
Q516: Hepatitis C Virus (HCV): Sustained Virological Response (SVR)

	Q493: Adult Immunization Status (Collection Type: MIPS CQM)	

Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV Improvement Activities

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **(+)(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_EPA_7:** Enhance Engagement of Medicaid and Other Underserved Populations
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_11:** Regular review practices in place on targeted patient population needs
- **IA_PM_14:** Implementation of methodologies for improvements in longitudinal care management for high risk patients
- **(!!) IA_PM_22:** Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services
- **IA_PSPA_23:** Completion of CDC Training on Antibiotic Stewardship
- **(!!) IA_PSPA_32:** Use of CDC Guideline for Clinical Decision Support to Prescribe Opioids for Chronic Pain via Clinical Decision Support

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. A few commenters supported Q205 and Q338 as core MIPS measures in the MVP. One commenter also supported Q516 as a MIPS core measure in this MVP.

Response: We thank the commenters for their support.

Comment: A commenter requested that Q065: Appropriate Treatment for Upper Respiratory Infection, Q130: Documentation of Current Medications in the Medical Record, and Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan be designated as MIPS core measures within the infectious diseases MVP. The commenter stated that this would provide additional viable reporting options and help ensure that, even when clinicians must rely on a topped-out measure, they can still earn meaningful points reflective of their performance.

Response: We welcome feedback on all MIPS core measures and encourage commenters to submit this during the annual MVP maintenance review process. Understanding that some clinicians may be unable to report the selected MIPS core measures, we do allow attestation for cases in which a MIPS core measure is not available and applicable. When identifying MIPS core measures within this MVP, the focus was on HIV and Hepatitis, as they are associated with high healthcare costs and poor patient outcomes.

After consideration of public comments, we are finalizing the *Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.20: Pulmonology Care MVP

Table B.20a represents the proposed MIPS core measures for the Pulmonology Care MVP. The B.20b table, followed by a list of improvement activities, represents the measures and activities finalized within the Pulmonology Care MVP (90 FR 50447 through 50449) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Pulmonology Care MVP focuses on assessing optimal care for patients treated for a broad range of pulmonology conditions including COPD, asthma, sleep apnea, and general pulmonology. This MVP would be most applicable to clinicians who specialize in pulmonology and sleep medicine, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.20b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[580] we proposed the following measures as MIPS core measures for the Pulmonology Care MVP:

- **Q052:** Chronic Obstructive Pulmonary Disease (COPD): Spirometry Evaluation and Long-Acting Inhaled Bronchodilator Therapy
- **Q279:** Sleep Apnea: Assessment of Adherence to Obstructive Sleep Apnea (OSA) Therapy
- **Q398:** Optimal Asthma Control

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.20a: Pulmonology Care MVP MIPS Core Measures

Pulmonology Care MVP MIPS Core Measures
Q052: Chronic Obstructive Pulmonary Disease (COPD): Spirometry Evaluation and Long-Acting Inhaled Bronchodilator Therapy
Q279: Sleep Apnea: Assessment of Adherence to Obstructive Sleep Apnea (OSA) Therapy
Q398: Optimal Asthma Control

TABLE B.20b: Pulmonology Care MVP Clinical Groupings

	Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months (Collection Type: MIPS CQM)	

Pulmonology Care Improvement Activities

- **(!!) IA_AHW_1:** Chronic Care and Preventative Care Management for Empaneled Patients
- **(!!) IA_BE_23:** Integration of patient coaching practices between visits
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_16:** Implementation of medication management practice improvements

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP.

Response: We thank the commenter for their support.

Comment: A commenter recommended adding Q317: Screening for High Blood Pressure and Follow-Up to this MVP. Another commenter requested adding Q240: Childhood Immunization Status, Q394: Immunizations for Adolescents, and Q493: Adult Immunization Status, while separate commenters recommended adding Q322: Adult Sinusitis: Appropriate Antibiotic Choice and Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood. In addition, a commenter requested that CMS support development of new measures that promote earlier identification of ILD and bronchiectasis in higher-risk pulmonary patients.

Response: We may consider the addition of quality measures for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We also encourage commenters to work with measure developers and stewards to develop and submit measures that address these aspects of care through the Call for Measures process.

After consideration of public comments, we are finalizing the *Pulmonology MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.21: Quality Care for Patients with Neurological Conditions MVP

Table B.21a represents the proposed MIPS core measures for the Quality Care for Patients with Neurological Conditions MVP. The B.21b table, followed by a list of improvement activities, represents the measures and activities finalized within the Quality Care for Patients with Neurological Conditions MVP (90 FR 50449 through 50451) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Quality Care for Patients with Neurological Conditions MVP focuses on the clinical theme of promoting quality care for patients suffering from neurological conditions. This MVP would be most applicable to clinicians who specialize in neurology care, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.21b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[581] we proposed the following measures as MIPS core measures for the Quality Care for Patients with Neurological Conditions MVP:

- **Q238:** Use of High-Risk Medications in Older Adults
- **Q282:** Dementia: Functional Status Assessment
- **Q495:** Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

Quality Care for Patients with Neurological Conditions Improvement Activities

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings

- **(!!) IA_BE_16:** Promote Self-management in Usual Care
- **IA_BE_24:** Financial Navigation Program
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **(*)(!!) IA_BMH_4:** Depression Screening, Treatment, and Prevention
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_11:** Regular review practices in place on targeted patient population needs
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PM_21:** Advance Care Planning
- **(!!) IA_PSPA_21:** Implementation of fall screening and assessment programs

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. Another commenter supported Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood as a MIPS core measure in this MVP.

Response: We thank the commenters for their support.

Comment: A commenter requested the addition of IA_BMH_1: Antipsychotic-Medication-Associated Physical Health Condition Assessment and Monitoring to this MVP. Another commenter requested the addition of Q182: Functional Outcome and Q283: Dementia: Associated Behavioral and Psychiatric Symptoms Screening and Management to this MVP.

Response: We may consider the addition of quality measures and improvement activities for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

After consideration of public comments, we are finalizing the *Quality Care for Patients with Neurological Conditions MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.22: Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP

Table B.22a represents the proposed MIPS core measures for the Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP. The B.22b table, followed by a list of improvement activities, represents the measures and activities finalized within the Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP (90 FR 50451 through 50453) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP focuses on providing care for patients experiencing some of the most common otolaryngology conditions such as, but not limited to: otologic conditions, chronic rhinosinusitis (CRS), age-related hearing loss (ARHL), and otitis media. This MVP would be most applicable to clinicians who treat patients within the practice of otolaryngology, including NPPs such as audiologists, nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.22b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[582] we proposed the following

[582] See MVP Development: Quality Measure and Improvement Activity Updates

measures as MIPS core measures for the Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP:

- **Q331:** Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse)
- **Q357:** Surgical Site Infection (SSI)
- **Q523:** Age-Related Hearing Loss: Comprehensive Audiometric Evaluation

We proposed adding one new MIPS quality measure that is relevant to this MVP:

- **Q523:** Age-Related Hearing Loss: Comprehensive Audiometric Evaluation: This proposed MIPS quality measure assesses patients with hearing loss or tinnitus for completion of a comprehensive audiometric evaluation.

For the reasons stated in the introduction of this appendix,[583] we proposed to remove **Q332:** Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use). We proposed to remove one duplicative QCDR measure and one QCDR measure proposed to transition to a MIPS measure:

- **AAO16:** Age-Related Hearing Loss: Audiometric Evaluation (proposed as a MIPS measure)
- **AAO21:** Otitis Media with Effusion (OME): Comprehensive Audiometric Evaluation for Chronic OME > or = 3 months (duplicative measure)

Modifications were considered for the following QCDR measures:

- **AAO16:** Age-Related Hearing Loss: Audiometric Evaluation: If the measure is not finalized for removal in the CY 2027 PFS final rule, this QCDR measure would undergo modifications to update the description, denominator, and numerator to reflect the addition of a tinnitus diagnosis and clarifying that a hearing screening does not meet the measure's intent. Expanding the measure to include patients diagnosed with tinnitus will help capture a broader group of individuals who may have underlying or undiagnosed hearing loss.
- **AAO20:** Tympanostomy Tubes: Comprehensive Audiometric Evaluation: This QCDR measure is undergoing modifications to update the description, denominator, and instructions to remove the otitis media with effusion (OME) diagnosis and expand the eligible population to include all patients undergoing tympanostomy tube insertion. This would increase the measure's applicability and case volume. This change reflects that preoperative hearing evaluation is an important component of care for any patient receiving tubes, not just those with OME.

Improvement Activities

We proposed adding eight improvement activities relevant to this MVP, several of which include an advancing health and wellness component:

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_CC_7:** Regular training in care coordination
- **IA_CC_8:** Implementation of documentation improvements for practice/process improvements
- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans
- **IA_CC_17:** Patient Navigator Program
- **IA_PM_14:** Implementation of methodologies for improvements in longitudinal care management for high risk patients
- **IA_PM_17:** Participation in Population Health Research

[583] Ibid.

- **IA_PSPA_12:** Participation in private payer CPIA

For the reasons stated in the introduction of this appendix,[584] we proposed to remove **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care.

Symbol Key:
Exclamation point (!): MIPS core measure within an MVP.
Caret symbol (^): finalized new measure or improvement activity.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

Quality Care for the Treatment of Ear, Nose, and Throat Disorders Improvement Activities

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **(+) IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **(+) IA_CC_7:** Regular training in care coordination
- **(+)(*) IA_CC_8:** Implementation of documentation improvements for practice/process improvements
- **(+)(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_CC_13:** Practice improvements to align with OpenNotes principles
- **(+) IA_CC_17:** Patient Navigator Program
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **(+) IA_PM_14:** Implementation of methodologies for improvements in longitudinal care management for high risk patients
- **IA_PM_16:** Implementation of medication management practice improvements
- **(+) IA_PM_17:** Participation in Population Health Research
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements
- **(+) IA_PSPA_12:** Participation in private payer CPIA

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. Another commenter supported the adoption of the new measure for Age-Related Hearing Loss: Comprehensive Audiometric Evaluation measure and addressing a gap in this MVP.

Response: We thank the commenters for their support.

Comment: A couple of commenters recommended the addition of Q317: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented, Q374: Closing the Referral Loop: Receipt of Specialist Report, and Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months to this MVP. The commenter also recommended the addition of IA_AHW_1: Chronic Care and Preventative Care Management for Empaneled Patients, IA_EPA_2: Use of telehealth services that expand practice access, and IA_BE_23: Integration of patient coaching practices between visits.

Response: We may consider the addition of quality measures and improvement activities for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

Comment: A couple of commenters opposed the removal of Q332: Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use) as this would leave allergy and immunology specialists with three potentially relevant measures to report through this MVP, making it impossible for those clinicians to meet the requirement to report four measures.

Response: We acknowledge the commenters' concern regarding the removal of measure Q332: Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use). Please refer to Appendix 1: MIPS Quality Measures (Table Group C) in this final rule for details on the removal of Q332. While this MVP may not contain sufficient quality measures

appropriate to some clinician's scope of care, we encourage you to review other MVPs for potential applicability. In addition, we encourage the commenter to reach out to measure developers and stewards to develop new measures applicable and meaningful to allergists and immunologists for submission to the Call for Measures for possible future implementation. Finalized MVPs are reviewed annually to determine if additional updates are needed to meet the needs of the MVP and program requirements.

Comment: A commenter opposed the removal of AAO21 and consolidating it with AAO20, explaining that although they appear related, they address different patient cohorts and care pathways, and combining them would obscure clinically meaningful differences and affect scoring. The commenter added that eliminating AAO21 would further narrow already limited, specialty-specific quality options in this MVP, making it harder for some otolaryngologists to find four applicable measures, especially since prior recommendations to add ENT-relevant measures were not adopted, and urges retaining AAO21 as a separate measure with decisions based on patient populations, clinical pathways, performance distributions, and impacts on specialty participation.

Response: We thank the commenter for their feedback. Measure AA021: Otitis Media with Effusion (OME): Comprehensive Audiometric Evaluation for Chronic OME > or = 3 months is duplicative of AAO20: Tympanostomy Tubes: Comprehensive Audiometric Evaluation in clinical topic, as both assess receipt of a comprehensive audiometric evaluation when clinically indicated. We therefore proposed its removal, while encouraging the measure steward to incorporate the patient population into measure AAO20 for a more comprehensive assessment of appropriate audiologic care. We do not want to arbitrarily limit measures within MVP; however, we do want to have a streamlined set of robust quality measures that drive positive outcomes.

After consideration of public comments, we are finalizing the *Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.23: Quality Care in Mental Health and Substance Use Disorders MVP

Table B.23a represents the proposed MIPS core measures for the Quality Care in Mental Health and Substance Use Disorders MVP. The B.23b table, followed by a list of improvement activities, represents the measures and activities finalized within the Quality Care in Mental Health and Substance Use Disorders MVP (90 FR 50453 through 50456) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Quality Care in Mental Health and Substance Use Disorders MVP focuses on clinical actions promoting prevention of and quality care in behavioral health, including mental health and substance use disorders (SUD). This MVP would be most applicable to clinicians who treat patients with mental health and substance use disorders within the practices of mental/behavioral health and psychiatry, including NPPs such as clinical social workers, nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.23b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[585] we proposed the following measures as MIPS core measures for the Quality Care in Mental Health and Substance Use Disorders MVP:

- **Q305:** Initiation and Engagement of Substance Use Disorder Treatment
- **Q370:** Depression Remission at Twelve Months
- **Q383:** Adherence to Antipsychotic Medications For Individuals with Schizophrenia

[585] See MVP Development: Quality Measure and Improvement Activity Updates

Improvement Activities

We proposed adding one improvement activity that is relevant to this MVP and includes an advancing health and wellness component:

- **IA_BMH_4:** Depression Screening, Treatment, and Prevention.

For the reasons stated in the introduction of this appendix,[586] we proposed to remove **IA_BMH_5:** MDD prevention and treatment interventions.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.23a: Quality Care in Mental Health and Substance Use Disorders MVP MIPS Core Measures

Quality Care in Mental Health and Substance Use Disorders MVP MIPS Core Measures
Q305: Initiation and Engagement of Substance Use Disorder Treatment
Q370: Depression Remission at Twelve Months
Q383: Adherence to Antipsychotic Medications For Individuals with Schizophrenia

Mental Health and Substance Use Disorders Improvement Activities

- **(!!) IA_BE_12:** Use evidence-based decision aids to support shared decision-making
- **(!!) IA_BE_16:** Promote Self-management in Usual Care
- **(!!) IA_BE_23:** Integration of patient coaching practices between visits
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **(!!) IA_BMH_2:** Tobacco use
- **(+)(*)(!!) IA_BMH_4:** Depression Screening, Treatment, and Prevention
- **IA_BMH_7:** Implementation of Integrated Patient Centered Behavioral Health Model
- **(!!) IA_BMH_14:** Behavioral/Mental Health and Substance Use Screening and Referral for Pregnant and Postpartum Women
- **(!!) IA_BMH_15:** Behavioral/Mental Health and Substance Use Screening and Referral for Older Adults
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **IA_EPA_7:** Enhance Engagement of Medicaid and Other Underserved Populations
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **(!!) IA_PSPA_32:** Use of CDC Guideline for Clinical Decision Support to Prescribe Opioids for Chronic Pain via Clinical Decision Support

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. Another commenter supported the addition of IA_BMH_4: Depression Screening, Treatment, and Prevention and the removal of IA_BMH_5: MDD prevention and treatment interventions from this MVP.

Response: We thank the commenters for their support.

Comment: A couple of commenters requested the addition of IA_BMH_1: Antipsychotic-Medication-Associated Physical Health Condition Assessment and Monitoring to this MVP.

Another commenter requested the addition of the tobacco use and unhealthy alcohol use preventive screening and counseling measures to this MVP, arguing that excluding measures addressing two of the most commonly abused substances makes the MVP incomplete and that including them would reduce reporting burden for psychiatrists, who have historically reported these measures frequently.

Response: We may consider the addition of quality measures and improvement activities for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

After consideration of public comments, we are finalizing the *Mental Health and Substance Use Disorders MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.24: Rehabilitative Support MVP

Table B.24a represents the proposed MIPS core measures for the Rehabilitative Support MVP. The B.24b table, followed by a list of improvement activities, represents the measures and activities finalized within the Rehabilitative Support for Musculoskeletal Care MVP (90 FR 50457 through 50461) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years, including an MVP title update to Rehabilitative Support MVP to more closely reflect the measures and activities included in the MVP. The Rehabilitative Support MVP focuses on clinical actions promoting quality rehabilitative care for patients. This MVP would be most applicable to clinicians who specialize in providing rehabilitative support such as chiropractic, physiatry, physical therapy and occupational therapy, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.24b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[587] we proposed the following measures as MIPS core measures for the Rehabilitative Support MVP:

- **Q050:** Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older
- **Q155:** Falls: Plan of Care
- **Q520:** Functional Improvement for Patients with Back Impairments

We proposed adding five new MIPS quality measures relevant to this MVP:

- **Q518:** Functional Improvement for Patients with Neck Impairments: This proposed MIPS quality measure assesses functional improvement for patients with neck impairments after completing an episode of care, excluding surgical interventions. This measure is proposed to replace Q478: Functional Status Change for Patients with Neck

[587] See MVP Development: Quality Measure and Improvement Activity Updates

Impairments.

- **Q519:** Functional Improvement for Patients with Upper Extremity Impairments: This proposed MIPS quality measure assesses functional improvement for patients with upper extremity impairments after completing an episode of care, excluding surgical interventions. This measure is proposed to replace Q222: Functional Status Change for Patients with Elbow, Wrist or Hand Impairments.
- **Q521:** Functional Improvement for Patients with Lower Extremity Impairments: This MIPS quality measure assesses functional improvement for patients with lower extremity impairments after completing an episode of care, excluding surgical interventions. This measure is proposed to replace Q218 Functional Status Change for Patients with Hip Impairments and Q219: Functional Status Change for Patients with Lower Leg, Foot or Ankle Impairments.
- **Q522:** Functional Improvement for Patients with Knee Impairments: This proposed MIPS quality measure assesses functional improvement for patients with knee impairments after completing an episode of care, excluding surgical interventions. This measure is proposed to replace Q217: Functional Status Change for Patients with Knee Impairments.
- **Q520:** Functional Improvement for Patients with Back Impairments: This proposed MIPS quality measure assesses functional improvement for patients with back impairments after completing an episode of care, excluding surgical interventions. This measure is proposed to replace Q220: Functional Status Change for Patients with Low Back Impairments.

For the reasons stated in the introduction of this appendix,[588] we proposed to remove **Q217:** Functional Status Change for Patients with Knee Impairments, **Q218:** Functional Status Change for Patients with Hip Impairments, **Q219:** Functional Status Change with Lower Leg, Foot or Ankle Impairments, **Q220:** Functional Status Change for Patients with Low Back Impairments, **Q221:** Functional Status Change for Patients with Shoulder Impairments, **Q222:** Functional Status Change for Patients with Elbow, Wrist or Hand Impairments, and **Q478:** Functional Status Change for Patients with Neck Impairments.

Improvement Activities

We proposed adding one improvement activity that is relevant to this MVP and includes an advancing health and wellness component:

- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans

For the reasons stated in the introduction of this appendix,[589] we proposed to remove **IA_BE_15:** Engagement of Patients, Family and Caregivers in Developing a Plan of Care and **IA_CC_12:** Care coordination agreements that promote improvements in patient tracking across settings.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Caret symbol (^): finalized new measure or improvement activity.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.

Rehabilitative Support MVP		
Clinical Grouping	**Quality**	**Cost**
	(!) Q155: Falls: Plan of Care (Collection Type: MIPS CQM)	

Rehabilitative Support Improvement Activities

- **(!!) IA_AHW_1:** Chronic Care and Preventative Care Management for Empaneled Patients
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(!!) IA_BE_16:** Promote Self-management in Usual Care
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **(!!) IA_BMH_12:** Promoting Clinician Well-Being
- **(!!) IA_BMH_15:** Behavioral/Mental Health and Substance Use Screening and Referral for Older Adults
- **(*) IA_CC_8**: Implementation of documentation improvements for practice/process improvements
- **(+)(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **IA_EPA_3:** Collection and use of patient experience and satisfaction data on access
- **(!) IA_EPA_8:** Provide Education Opportunities for New Clinicians
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **(*) IA_PSPA_16:** Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools, including AI-enabled predictive decision-support interventions—and standardized treatment protocols to manage workflow on the care team to meet patient needs
- **(!!) IA_PSPA_21:** Implementation of fall screening and assessment programs

The following is a summary of the comments we received and our responses.

Comment: A couple of commenters supported the updates to this MVP. A few commenters supported the proposed renaming of this MVP. One commenter believed the broader designation better encompasses the holistic, multi-system interventions that occupational therapists provide. A couple of commenters appreciated the inclusion of Q155: Falls: Plan of Care as one of the MIPS core measures and one commenter supported all of the measures identified as MIPS core measures. A few commenters supported the replacement of the FOTO "functional status" measures with the PROMIS PRO-PM measures. While a commenter believed PROMIS could enhance measure relevance and feasibility for physiatrists they noted that key technical details are missing, preventing assessment of how the measures will work or whether they are meaningful. The commenter requested complete specifications to be released early and designed to enable participation by physiatrists across diverse rehabilitation conditions and settings. One commenter supported the core-measure designation for functional improvement in patients with back impairments, given how common and costly low back conditions are in outpatient rehabilitation. And one commenter supported the addition of IA_CC_9.

Response: We thank the commenters for their support. The complete measure specifications will be publicly posted after publication of the final rule.

Comment: A commenter recommended the addition of Q318: Falls: Screening for Future Fall Risk as fall risk is clinically relevant to musculoskeletal and orthopedic rehabilitation patients. In addition, the commenter recommended the addition of Q513: Patient Reported Falls and Plan of Care as an additional applicable measure. Another commenter recommended the addition of Q281: Dementia; cognitive assessment, Q286: Dementia safety concern screening and follow-up for patients with dementia, Q288: Dementia: education and support of caregivers for patients with dementia, Q502: Improvement or Maintenance of Functioning for Individuals with a Mental and/or Substance Use Disorder, and Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months to this MVP.

Response: We may consider the addition of quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter requested that a cross-cutting functional outcome MIPS core measure option be added to this MVP. Another commenter recommended the MIPS core measures for this MVP include at least one cross-cutting, patient-reported functional outcome that can apply across body regions and diagnoses, such as PROMIS

Physical Function, and recommended PROMIS Pain Interference or an appropriate Global Health measure stating these measures could offer an additional cross condition option. The commenter also urged CMS to consider using the Patient-Specific Functional Scale (PSFS). Another commenter recommended at least one additional MIPS core measure from the existing PT/OT specialty measure set that captures outcomes beyond physical impairments be included.

Response: We encourage the commenters to suggest changes to the MIPS core measures through the MVP Maintenance Process and we may consider alternative MIPS core measures for this MVP through future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter recommended that, prior to removing IA_BE_15: Engagement of Patients, Family and Caregivers in Developing a Plan of Care and IA_CC_12: Care coordination agreements that promote improvements in patient tracking across settings, there should be confirmation that the remaining or replacement activities fully recognize those functions, and, if they do not, IA_BE_15 and IA_CC_12 should be retained. Another commenter wanted to understand how beneficiary-engagement activities previously recognized under IA_BE_15 will be appropriately included under the modified language. Care planning and beneficiary engagement are complementary but distinct activities and eliminating a standalone beneficiary engagement activity may reduce the visibility of patient-centered engagement efforts within the improvement activities performance category.

Response: We acknowledge the commenter's concern regarding the removal of IA_BE_15: Engagement of Patients, Family and Caregivers in Developing a Plan of Care and IA_CC_12: Care coordination agreements that promote improvements in patient tracking across settings. These improvement activities have been finalized for removal from the program and, consequently, will be removed from this MVP. Please refer to Appendix 2: Improvement Activities (Table Group C) in this final rule for details on the removal of IA_BE_15 and IA_CC_12. We are seeking to ensure that elements of removed activities such as these two are retained in the Inventory, either in combined activities or other existing activities. We are continuing to prioritize patient-centered engagement efforts in improvement activities. IA_CC_9: Implementation of Practices/Processes for Developing Regular Individual Care Plans has been proposed for addition to this MVP, as part of our preserving elements of removed or combined activities.

Comment: A commenter recommended that quality measures for rehabilitation clinicians focus on patient-centered functional outcomes aligned with rehabilitative goals, rather than process metrics used for physician specialties. The commenter emphasized assessing outpatient rehabilitation by functional improvement, safety, independence, and patient-reported outcomes (including PROMs and PROMIS), arguing this better reflects rehabilitation's value in promoting healthy aging, independence, and reduced healthcare utilization. The commenter suggested expanding the MVP to ensure it adequately reflects the breadth of contemporary rehabilitation practice. Another commenter recommended the incorporation of measures that assess functional cognitive, psychosocial, and participation-based outcomes, and successful engagement in everyday activities.

Response: We thank the commenter for the feedback. We may consider the addition of quality measures for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

Comment: A commenter expressed support for meaningful, functional measures of therapy outcomes and opposed tying accurate valuation and payment to new or untested reporting requirements. The commenter urged closing measurement gaps for occupational therapy, avoiding instruments that simply reflect treatment volume, and ensuring small practices can participate without costly infrastructure. They further recommended that voluntary, CMS-funded testing be used to evaluate whether condition-agnostic patient-reported outcome tools (such as PROMIS Global Health) add value alongside discipline-specific functional measures, with data collected at clinically meaningful intervals rather than every visit and post-treatment follow-up included only when feasible.

Response: We thank the commenter for the support. We encourage interested parties to submit potential new measures that will align with current program goals and priorities and fill these identified gaps allowing meaningful and complete assessment of MIPS eligible clinician's performance within MIPS during the annual Call for Measures. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Rehabilitative Support MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years

B.25: Surgical Care MVP

Table B.25a represents the proposed MIPS core measures for the Surgical Care MVP. The B.25b table, followed by a list of improvement activities, represents the measures and activities finalized within the Surgical Care MVP (90 FR 50461 through 50464) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Surgical Care MVP focuses on the clinical theme of surgery. This MVP would be most applicable to clinicians who specialize in general surgery, neurosurgery, and cardiothoracic surgery, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.25b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[590] we proposed the following measures as MIPS core measures for the Surgical Care MVP:

- **Q047:** Advance Care Plan
- **Q164:** Coronary Artery Bypass Graft (CABG): Prolonged Intubation
- **Q354:** Anastomotic Leak Intervention
- **Q357:** Surgical Site Infection (SSI)
- **Q358:** Patient-Centered Surgical Risk Assessment and Communication
- **Q459:** Back Pain After Lumbar Surgery

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.25a: Surgical Care MVP MIPS Core Measures

Surgical Care MVP MIPS Core Measures
Q047: Advance Care Plan
Q164: Coronary Artery Bypass Graft (CABG): Prolonged Intubation
Q354: Anastomotic Leak Intervention
Q357: Surgical Site Infection (SSI)
Q358: Patient-Centered Surgical Risk Assessment and Communication
Q459: Back Pain After Lumbar Surgery

- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements
- **IA_PSPA_8:** Use of Patient Safety Tools

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP.

Response: We thank the commenter for their support.

Comment: A commenter requested expanding this MVP to provide additional clinically meaningful quality measures applicable to spine surgery. The commenter specifically requested the expansion of eligible procedure populations for Q355: Unplanned Reoperation within the 30 Day Postoperative Period, and Q356: Unplanned Hospital Readmission within 30 Days of Principal Procedure, to include appropriate cervical and lumbar spine surgical procedures. Another commenter requested the addition of the following improvement activities: IA_BE_6:

Regularly Assess Patient Experience of Care and Follow Up on Findings and IA_EPA_6: Create and Implement a Language Access Plan.

Response: We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years as well as submission of potential new measures that will align with current program goals and priorities and fill these identified gaps allowing meaningful and complete assessment of MIPS eligible clinician's performance within MIPS during the annual Call for Measures. We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter believed the MIPS core measures identified for this MVP is fundamentally flawed because it applies the same MIPS core measures to very different types of clinicians and procedures, creating misleading comparisons. Measures broad enough to apply across all included clinicians (like Advance Care Plan) do not reflect surgical quality, while measures that truly capture surgical performance (like CABG: Prolonged Intubation) apply only to narrow subsets and are not reportable by most clinicians in the MVP. Requiring three or more MIPS core measures but allowing clinicians to report only one worsens this issue, since two surgeons in the same MVP could report entirely different measures, giving a false impression of comparability. The commenter opposed the MIPS core measure concept as designed and recommended that it should instead focus MIPS core measures on patient-reported outcome–based performance measures (PRO-PMs), which can apply to all patients and better capture outcomes that matter to them, such as function, recovery, quality of life, and goal attainment.

Response: We thank the commenter for their feedback and acknowledge limitations to MIPS core measure selection based upon the current MIPS quality measure inventory. Therefore, we had to balance between choosing measures that most closely represent care central to the MVP intent, while also ensuring measure availability for those clinicians who chose to report the MVP. For some MVPs, such as the Surgical Care MVP, we determined more than three measures must be selected to reflect the care central to the subspecialties able to report MVP. The intent of the selected measures is to provide a comparable data point for each of the represented specialties, while also including a more broadly applicable measure to ensure coverage for those without a specialty-specific surgical quality measure. It would be expected that like clinicians able to report the specialty-specific MIPS core measures would do so, allowing for comparison across that measure's performance. We encourage interested parties to submit potential new measures that will align with current program goals and priorities and fill these identified gaps allowing meaningful and complete assessment of MIPS eligible clinician's performance within MIPS during the annual Call for Measures.

Comment: A commenter expressed concern with the proposed MIPS core measures in this MVP as several are tied to specific procedures—such as CABG, anastomotic leak intervention, and lumbar surgery—and therefore have little or no applicability to neurosurgeons who do not perform them. The commenter added that while broader surgical measures like surgical site infection and patient-centered surgical risk assessment may apply to neurosurgeons, they still do not directly evaluate the specialized clinical care provided by many neurosurgical subspecialists.

Response: We acknowledge that not all MIPS core measures will be applicable to all clinicians reporting an MVP; however, to the extent possible, we took into account implementation factors and availability. Therefore, we identified a small subset of measures within each MVP that represents care central to the MVP intent. For MVPs that represent multiple clinician types, settings, or care scopes, we identified additional MIPS core measures ensuring measure availability for those clinicians who chose to report the MVP. Additionally, the policy includes an option for self-attestation when the MIPS core measures are not appropriate or applicable to their scope of care, allowing clinicians to choose an alternate measure that is more relevant.

After consideration of public comments, we are finalizing the *Surgical Care MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.26: Value in Primary Care MVP

Table B.26a represents the proposed MIPS core measures for the Value in Primary Care MVP. The B.26b table, followed by a list of improvement activities, represents the measures and activities finalized within the Value in Primary Care MVP (90 FR 50465 through 50467) with

modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Value in Primary Care MVP focuses on the clinical theme of promoting quality care for patients to reduce the risk of diseases, disabilities, and death. This MVP would be most applicable to clinicians who specialize in preventive medicine, internal medicine, family medicine, and geriatrics, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.26b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[591] we proposed the following measures as MIPS core measures for the Value in Primary Care MVP:

- **Q001:** Diabetes: Glycemic Status Assessment Greater Than 9%
- **Q134:** Preventive Care and Screening: Screening for Depression and Follow-up Plan
- **Q236:** Controlling High Blood Pressure

We proposed adding one new MIPS quality measure:

- **Q517:** Low Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management: This proposed intermediate outcome MIPS quality measure ensures lipid monitoring in patients with atherosclerotic cardiovascular disease (ASCVD) and assesses target goal achievement of an LDL-C less than 70mg/dl.

For the reasons stated in the introduction of this appendix,[592] we proposed to remove **Q483:** Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM).

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Caret symbol (^): finalized new measure or improvement activity.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

- **IA_PM_11:** Regular review practices in place on targeted patient population needs
- **IA_PM_16:** Implementation of medication management practice improvements
- **(!!) IA_PM_22:** Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services
- **(!!) IA_PM_23:** Use of Computable Guidelines and Clinical Decision Support to Improve Adherence for Cervical Cancer Screening and Management Guidelines
- **(!!) IA_PM_25:** Save a Million Hearts: Standardization of Approach to Screening and Treatment for Cardiovascular Disease Risk

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. A couple of commenters supported the inclusion of the Low-Density Lipoprotein (LDL-C) Monitoring and Management measure in this MVP.

Response: We thank the commenters for their support.

Comment: A couple of commenters requested the addition of IA_BMH_1: Antipsychotic-Medication-Associated Physical Health Condition Assessment and Monitoring to this MVP. A couple of commenters requested the addition of Q488: Kidney Health Evaluation be added. Other commenters recommended Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood and Q117: Diabetes Eye Exam. Another commenter requested the addition of Q281: Dementia: Cognitive Assessment and Q282: Dementia: Functional Status Assessment. A commenter recommended the addition of measures to this MVP that better capture advanced primary care management and longitudinal, team-based care. The commenter emphasized that these measures should recognize the roles of nurses, advanced practice registered nurses (APRNs), and other interdisciplinary team members in coordinating care, managing complex conditions, improving outcomes, and supporting chronic disease prevention and management.

Response: We may consider the addition of quality measures and improvement activities for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

Comment: A few commenters recommended designating HIV screening as a MIPS core measure in this MVP, emphasizing that screening is the gateway to the full continuum of HIV services. A negative result can prompt prevention discussions and offer pre-exposure prophylaxis (PrEP), while a positive result should lead quickly to confirmatory testing, linkage to care, and treatment. The commenter cautioned that treating HIV screening as optional in primary care contributes to missed and delayed diagnoses, especially when providers make assumptions based on age, gender, sexual orientation, or relationship status. Another commenter requested Q515: Screening for Abnormal Glucose Metabolism in Patients at Risk of Developing Diabetes be considered a MIPS core measure within this MVP. A few commenters requested the Low-Density Lipoprotein (LDL-C) Monitoring and Management measure be identified as a MIPS core measure.

Response: We thank the commenters for their feedback and agree that screening for HIV is a critically important step in prompting either prevention discussions or treatment options. The intent of the Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP is to focus on driving quality care for patients suffering from an infectious disorder, such as HIV, and those clinicians within the practices of infectious disease and immunology, including NPPs. When determining which quality measures to include as MIPS core measures, we sought to include measures that assess quality actions and outcomes for patients that are being actively treated by the clinician. We may consider alternative MIPS core measures for this MVP through future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: Many commenters opposed the removal of Q483: Person-Centered Primary Care Measure Patient-Reported Outcome Performance Measure (PCPCM PRO-PM) from MIPS and from this MVP. They expressed concern that eliminating this measure would leave the MVP without a patient-reported outcome (PRO) performance measure that reflects the core functions of primary care—accessibility, continuity, comprehensiveness, coordination, and person-centeredness—from the patient's perspective.

Response: We acknowledge the commenters' concern regarding the removal of measure Q483: Person-Centered Primary Care Measure Patient-Reported Outcome Performance Measure (PCPCM PRO-PM). This measure has been finalized for removal from the program and, consequently, will be removed from this MVP. Please refer to Appendix 1: MIPS Quality Measures (Table Group C) in this final rule for details on the removal of Q483.

After consideration of public comments, we are finalizing the *Value in Primary Care MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.27 Vascular Surgery MVP

Table B.27a represents the proposed MIPS core measures for the Vascular Surgery MVP. The B.27b table, followed by a list of improvement activities, represents the measures and activities finalized within the Vascular Surgery MVP (90 FR 50400 through 50405) with proposed modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Vascular Surgery MVP focuses on the clinical theme of providing high quality care for patients treated under vascular surgery. This MVP would be most applicable to clinicians who treat patients within the surgical setting of vascular surgery, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.27b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[593] we proposed the following measures as MIPS core measures for the Vascular Surgery MVP:

- **Q344:** Rate of Carotid Endarterectomy (CEA) or Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2)
- **Q356:** Unplanned Hospital Readmission within 30 Days of Principal Procedure
- **Q358:** Patient-Centered Surgical Risk Assessment and Communication

Improvement Activities

For the reasons stated in the introduction of this appendix,[594] we proposed to remove **IA_PM_2:** Anticoagulant Management Improvements.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.27a: Vascular Surgery MVP MIPS Core Measures

	(!) Q358: Patient-Centered Surgical Risk Assessment and Communication (Collection Type: MIPS CQM)	

Vascular Surgery Improvement Activities

- **IA_BE_1:** Use of certified EHR to capture patient reported outcomes
- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **(!!) IA_BE_12:** Use evidence-based decision aids to support shared decision-making
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **IA_CC_15:** PSH Care Coordination
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **IA_EPA_3:** Collection and use of patient experience and satisfaction data on access
- **IA_EPA_8:** Provide Education Opportunities for New Clinicians
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **(!!) IA_PM_5:** Engagement of community for health status improvement
- **IA_PM_11:** Regular Review Practices in Place on Targeted Patient Population Needs
- **IA_PM_15:** Implementation of episodic care management practice improvements
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PM_21:** Advance Care Planning
- **IA_PSPA_1:** Participation in an AHRQ-listed patient safety organization

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. Another commenter supported the designation of Q344: Rate of Carotid Endarterectomy (CEA) or Carotid Artery Stenting (CAS) for Asymptomatic Patients,

Without Major Complications (Discharged to Home by Post-Operative Day #2) as a MIPS core measure for this MVP.

Response: We thank the commenters for their support.

Comment: A few commenters recommended the inclusion of the Low-Density Lipoprotein (LDL-C) Monitoring and Management measure in this MVP. A commenter recommended the addition of Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood. Another commenter recommended the addition of all of the newly proposed improvement activities.

Response: We may consider the addition of quality measures for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

Comment: A commenter suggested alternative MIPS core measures for this MVP, including Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention; Q259: Rate of Endovascular Aneurysm Repair (EVAR) of Small or Moderate Non-Ruptured Infrarenal Abdominal Aortic Aneurysms (AAA) without Major Complications (Discharged to Home by Post-Operative Day #2); Q438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease; and the new Low-Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management measure.

Response: We may consider alternative MIPS core measures and the addition of quality measures and improvement activities for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

Comment: A commenter requested this MVP include at least one eCQM, CAHPS Survey Vendor, or Administrative Claims measure as a MIPS core measure option. As proposed, participants may be required to engage a third-party reporting vendor solely to satisfy the MIPS core measure requirements, increasing reporting complexity and expense. Providing a reporting pathway that leverages existing eCQM, CAHPS, or claims-based infrastructure would better support participation while reducing administrative burden.

Response: We thank the commenter for their suggestions. The commenter may suggest changes to the MIPS core measures through the MVP Maintenance Process and we may consider alternative MIPS core measures for this MVP through future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Currently, the policy includes an option for self-attestation when the MIPS core measures are not appropriate or applicable to their scope of care, allowing clinicians to choose an alternate measure within the MVP that is more relevant.

After consideration of public comments, we are finalizing the *Vascular Surgery MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

[CMS–1844–F]

RIN 0938–AV80

Calendar Year 2027 Home Health Prospective Payment System (HH PPS) Rate Update; Requirements for the HH Quality Reporting Program and the Expanded HH Value-Based Purchasing Model; Medicare Provider Enrollment, Durable Medical Equipment (DME), and DME, Prosthetics, Orthotics, and Supplies (DMEPOS) Policies

AGENCY: Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services (HHS).

ACTION: Final rule.

SUMMARY: This final rule sets forth routine updates to the Medicare home health payment rates in accordance with existing statutory and regulatory requirements. In addition, this final rule discusses the behavior adjustments and finalizes a temporary behavior adjustment. It also finalizes the recalibrated case-mix weights and updated functional impairment levels; comorbidity subgroups; and low-utilization payment adjustment (LUPA) thresholds for CY 2027. Additionally, this final rule discusses and responds to comments on the provision of home health palliative care services and includes a summary of comments received on the request for information (RFI) on a home health specific wage index included in the proposed rule.

This rule also finalizes changes to the Home Health Quality Reporting Program (HH QRP) and summarizes potential initiatives to improve alignment between the HH QRP and expanded Home Health Value-Based Purchasing (HHVBP) Model.

Lastly, the rule clarifies the application of the DMEPOS face-to-face encounter requirements for the replacement of DMEPOS items; makes changes to the provider and supplier enrollment requirements; makes changes to implement a DME benefit expansion for infusion pumps and drugs; and discusses collection of information requirement changes regarding the DMEPOS Competitive Bidding Program (CBP) country of origin.

DATES: With the exception of the HH PPS and HH QRP provisions specified in sections II. and III. of this final rule and the regulatory changes at 42 CFR 484.245, these regulations are effective on January 4, 2026. The HH PPS and HH QRP provisions specified in sections II. and III. of this final rule and the regulatory changes at 42 CFR 484.245 are effective January 1, 2027.

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Purpose and Legal Authority

1. Home Health Prospective Payment System (HH PPS)

As required under section 1895(b) of the Social Security Act (the Act), this final rule updates the CY 2027 Medicare payment rates for home health agencies (HHAs). In this final rule, we include an analysis of home health utilization, as well as analysis of the difference between assumed versus actual behavior change on estimated aggregate expenditures for home health payments as a result of the change in the unit of payment to 30 days and the implementation of the Patient Driven Groupings Model (PDGM) case-mix adjustment methodology. This final rule also discusses the permanent adjustments applied in previous years and finalizes a temporary adjustment to the CY 2027 home health base payment rate. In addition, this rule recalibrates the PDGM case-mix weights and updates the low-utilization payment adjustment (LUPA) thresholds, functional impairment levels, and comorbidity adjustment subgroups under sections 1895(b)(4)(A)(i) and (b)(4)(B) of the Act for 30-day periods of care in CY 2027. This final rule updates the CY 2027 fixed-dollar loss (FDL) ratio for outlier payments (so that outlier payments as a percentage of estimated total payments are projected not to exceed 2.5 percent, as required by section 1895(b)(5)(A) of the Act).

Additionally, this rule responds to comments received on the discussion of the provision of palliative care services under the Medicare home health benefit and summarizes public comments received on the request for information (RFI) regarding the construction of a home health specific wage index.

2. Home Health (HH) Quality Reporting Program (QRP)

In accordance with the statutory authority at section 1895(b)(3)(B)(v) of the Act, we are finalizing updated quality reporting policies. First, we summarize potential initiatives to improve alignment between the HH QRP and expanded HHVBP Model. We also finalize revisions to the HH QRP data submission deadlines beginning with the CY 2027 HH QRP. We also revise the HH QRP OASIS and HHCAHPS Annual Payment Update (APU) reporting timeframe to report a calendar year of data (January 1 through December 31). We also finalize revisions to the HH QRP OASIS and HHCAHPS Annual Payment Update (APU) reporting timeframe to report a calendar year of data (January 1 through December 31). We finalize some revisions to regulatory text in support of rule proposals and to improve digital transfer of information during the reconsiderations process. Finally, we summarize the public comments received in response to a Request for Information (RFI) on future measure concepts for the HH QRP.

3. Expanded Home Health Value-Based Purchasing (HHVBP) Model

We did not propose any expanded HHVBP Model-specific policy changes in the CY 2027 HH PPS proposed rule. However, we have included a brief summary of the Model with context relevant to a potential alignment between the HH QRP and the expanded HHVBP Model.

4. Durable Medical Equipment, Prosthetics, Orthotics, and Supplies (DMEPOS) Encounter Requirements for Identical Replacement Items

We are finalizing clarifications regarding the application of the DMEPOS face-to-face encounter requirements, as outlined in 42 CFR 410.38, and the related documentation necessary to support the replacement of DMEPOS items. We do not believe it necessary to require an additional in-depth beneficiary examination to ''gather[ ] subjective and objective information associated with diagnosing, treating, or managing a clinical condition for which the DMEPOS is ordered'' for replacement items. Such information should be recorded when the beneficiary is initially assessed and receives the item, and the practitioner should only write replacement orders for beneficiaries with an ongoing medical need for the item(s). Therefore, we are finalizing our proposal that an additional face-to-face encounter within the 6 months preceding an order/prescription for replacement of a DMEPOS item will not be required per 42 CFR 410.38. We clarify that for purposes of 42 CFR 410.38(d)(2), a ''replacement'' refers to the provision of an item that replaces an item falling under the same Healthcare Common Procedure Coding System (HCPCS) code; it does not include those situations involving the provision of a different item, for example, because of a change in medical condition.

5. Provider Enrollment and DMEPOS Accreditation

Consistent with section 1866(j) of the Act, we are finalizing a number of Medicare provider enrollment provisions to strengthen and clarify certain aspects of the provider enrollment process. These include but are not limited to: (1) adding grounds for denying or revoking a provider's or supplier's Medicare enrollment; and (2) expanding the reasons for which CMS can apply a retroactive effective date for provider and supplier revocations. These changes are necessary to help ensure that payments are made only to qualified providers and suppliers, which we believe will assist in protecting the Trust Funds and Medicare beneficiaries.

We also are finalizing several minor changes to our DMEPOS accreditation provisions in § 424.58, such as a timeframe by which an accrediting organization must report suspected fraud, waste, and abuse to CMS. We believe these changes will help improve the DMEPOS accreditation program's efficiency.

6. Durable Medical Equipment (DME) Benefit Expansion for Infusion Pumps and Drugs

We are finalizing changes to the Medicare Part B definition of DME at 42 CFR 414.202 to implement amendments made to the definition of DME at section 1861(n) of the Act by section 6222(a) of the Consolidated Appropriations Act, 2026 (CAA, 2026), expanding the scope of the benefit for DME to include certain external infusion pumps and associated home infusion drugs or other associated supplies. The legal authority for this final rule is provided by section 1861(n) of the Act, as amended by section 6222(a) of the CAA, 2026, and section 1871 of the Act.

7. DMEPOS Competitive Bidding Program—Country of Origin

We discuss requesting to revise the DMEPOS Competitive Bidding Program (CBP) information collection under Office of Management and Budget (OMB) Control Number 0938–1408 (CMS–10744) to require DMEPOS CBP contract suppliers to report the country of origin for the lead items furnished during the contract's period of performance. This information will allow beneficiaries and interested parties to learn where the DMEPOS item originated, if interested.

8. DMEPOS Competitive Bidding Program—Technical Corrections

We discuss technical corrections that need to be made to § 414.414(d) based on a regulations text error in the CY 2026 HH PPS final rule.

B. Summary of the Provisions of the Final Rule

1. Home Health Prospective Payment System (HH PPS)

In section II.B.1. of this final rule, we discuss the permanent behavior adjustment and finalize a temporary adjustment to the base payment rate under the HH PPS.

In section II.C. of this final rule, we finalize the recalibrated CY 2027 PDGM case-mix weights and updated low-utilization payment adjustment (LUPA) thresholds, functional impairment levels, and comorbidity adjustment subgroups.

In section II.D. of this final rule, we finalize updates to the home health wage index. We also finalize updates to the CY 2027 national, standardized 30-day period payment rates and the CY 2027 national per-visit payment amounts by the home health payment update percentage. Additionally, this rule finalizes the CY 2027 fixed dollar loss (FDL) ratio to ensure that aggregate outlier payments are projected not to exceed 2.5 percent of the total aggregate payments, as required by section 1895(b)(5)(A) of the Act.

In section II.E. of this final rule, we discuss and respond to comments on the provision of palliative care services under the Medicare home health benefit.

In section II.F. of this final rule, we summarize comments received on the request for information (RFI) on the construction of a home health specific wage index.

2. Home Health Quality Reporting Program (HH QRP)

In section III.D. of this final rule, we summarize potential initiatives to improve alignment between the HH QRP and expanded HHVBP Model.

In section III.E. of this final rule, we are finalizing as proposed to revise the HH QRP data submission deadlines beginning with the CY 2027 HH QRP.

We also are finalizing our proposed revisions to the HH QRP OASIS and HHCAHPS Annual Payment Update (APU) reporting timeframe to report a calendar year of data (January 1 through December 31). Additionally, we are finalizing as proposed some revisions to regulatory text in support of rule proposals or to improve digital transfer of information during the reconsiderations process.

In section III.F. of this final rule, we discuss the public comments received in response to our request for information (RFI) on future measure concepts for the HH QRP.

3. Expanded Home Health Value Based Purchasing (HHVBP) Model

In section IV. of this final rule, we summarize the expanded HHVBP Model with context relevant to a potential alignment between the HH QRP and expanded HHVBP Model. We did not propose any expanded HHVBP Model-specific changes in the CY 2027 HH PPS proposed rule.

4. DMEPOS Encounter Requirements for Identical Replacement Items

In section V.B. of this final rule, we are finalizing a clarification that while an order would continue to be required for replacement of DMEPOS items, a new face-to-face encounter would not need to occur to support payment for these DMEPOS items.

5. Provider Enrollment and DMEPOS Accreditation

In section V.C. of this final rule, we discuss a number of finalized Medicare

provider enrollment provisions designed to strengthen and clarify certain aspects of the provider enrollment process. These include, but are not limited to, the following:

- Adding grounds for denying or revoking a provider's or supplier's Medicare enrollment.
- Expanding the reasons for which CMS can apply a retroactive effective date for provider and supplier revocations.
- CMS can currently impose a reapplication bar of up to 10 years if the provider or supplier is denied enrollment for submitting false or misleading information on or with their enrollment application. (This means they cannot reapply to Medicare for up to 10 years.) We are expanding this to permit a reapplication bar regardless of the denial reason.

We believe these revisions will help keep unqualified providers and suppliers out of the Medicare program, which, in turn will prevent improper Medicare payments to such parties.

We also are finalizing several minor changes to our DMEPOS accreditation provisions in § 424.58, such as a timeframe by which an accrediting organization must report suspected fraud, waste, or abuse to CMS. We believe these changes will help improve the DMEPOS accreditation program's efficiency.

6. DME Benefit Expansion for Infusion Pumps and Drugs

In section V.D. of this final rule, we finalize a modification to the definition of ''durable medical equipment'' at 42 CFR 414.202 to implement section 6222(a) of the CAA, 2026 by providing that certain external infusion pumps, associated home infusion drugs, or other associated supplies are treated as meeting the ''appropriate for use in the home'' requirement when specified statutory criteria are satisfied.

7. DMEPOS Competitive Bidding Program—Country of Origin

In sections V.E. and VI.B.5. of this final rule, we plan to request a revision to the collection currently approved under OMB Control Number 0938–1408 (CMS–10744) to collect from DMEPOS CBP contract suppliers the country of origin for the lead items furnished during the DMEPOS CBP contract's period of performance.

As done historically with the product information reported on Form C by a DMEPOS CBP contract supplier, the reported country of origin information would be populated in the Medicare Supplier Directory for the contract supplier during the contract period of performance.

8. DMEPOS Competitive Bidding Program—Technical Corrections

In section V.F. of this final rule, we discuss the technical corrections to the provisions at § 414.414(d) regarding the covered document review date that were finalized in the CY 2026 HH PPS final rule.

BILLING CODE 4169–69–P

TABLE 1: SUMMARY OF ECONOMIC COSTS AND TRANSFERS, BY FINAL PROVISION

Provision Description	Costs and Cost Savings	Transfers	Other Notes
CY 2027 HH PPS Payment Rate Update		The overall economic impact related to the finalized changes in payments under the HH PPS for CY 2027 is estimated to be $415 million (2.4 percent). The $415 million increase in estimated payments for CY 2027 reflects the effects of the CY 2027 final home health payment update percentage of 2.1. percent ($365 million increase), and an estimated 0.3 percent increase that reflects the effects of an updated FDL ($50 million increase).	To ensure that home health payments are consistent with statutory payment authority for CY 2027.
HH QRP	There are no anticipated changes to burden related to the HH QRP proposals.		
Expanded HHVBP Model		The overall economic impact of the expanded HHVBP Model for CYs 2023 through 2027 is an estimated $3.376 billion in total savings to fee-for-service (FFS) Medicare from a reduction in unnecessary hospitalizations and skilled nursing facility (SNF) usage as a result of greater quality improvements in the home health industry. As for payments to HHAs, there are no aggregate increases or decreases expected to be applied to HHAs competing in the expanded HHVBP Model.	
DMEPOS Encounter Requirements for Identical Replacement Items			The fiscal impact of this proposed clarification cannot be estimated as it only identifies whether a face-to-face encounter is required for payment for replacement of DMEPOS items.
Provider Enrollment and DMEPOS Accreditation	We project an annual cost of approximately $1.4 million to conduct the State surveys or accreditations for reactivating hospices. We project a total cost of $46.8 million over the first three years of this rule (or $15.6 million per year) for providers and suppliers to comply with the signage requirement in § 424.510(f).	We estimate an annual transfer from Medicare providers and suppliers to the federal government of approximately $82 million. This will stem from our expansion of the grounds for which we can retroactively revoke providers and suppliers.	
DME Benefit Expansion for Infusion Pumps and Drugs		The expansion is estimated to result in net savings to Medicare of approximately $800,000 per year.	Beneficiaries may be able to choose to receive additional drugs via home infusion that are currently only available in an outpatient healthcare setting.
DMEPOS Competitive Bidding Program--Country of Origin	We anticipate a minimal financial impact for DMEPOS contract suppliers as we believe they will be familiar with the DMEPOS they provide and should be able to identify the country of origin based on the markings on the product or by obtaining documentation from the manufacturer. The estimated burden estimates for DMEPOS contract suppliers are included in the COI section.		
DMEPOS Competitive Bidding Program—Technical Corrections	There are no costs or savings associated with these technical corrections.		

BILLING CODE 4169–69–C

II. Home Health Prospective Payment System

A. Overview of the Home Health Prospective Payment System

1. Statutory Background

Section 1895(b)(1) of the Act requires the Secretary to establish a Home Health Prospective Payment System (HH PPS) for all costs of home health services paid under Medicare. Section 1895(b)(2)(A) of the Act requires that, in defining a prospective payment amount, the Secretary shall consider an appropriate unit of service and the number, type, and duration of visits provided within that unit, potential changes in the mix of services provided within that unit and their cost, and a general system design that provides for continued access to quality services. In accordance with the statute, as amended by the Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33), we issued a final rule which appeared in the July 3, 2000, **Federal Register** (65 FR 41128) to implement the HH PPS legislation.

Section 5201(c) of the Deficit Reduction Act of 2005 (DRA) (Pub. L. 109–171, enacted February 8, 2006) added new section 1895(b)(3)(B)(v) to the Act, requiring home health agencies (HHAs) to submit data for purposes of measuring health care quality, and linking the quality data submission to the annual applicable home health payment update percentage increase. This data submission requirement is applicable for CY 2007 and each subsequent year. Pursuant to section 1895(b)(3)(B)(v)(I) of the Act, if an HHA does not submit quality data, the home health market basket percentage increase is reduced by 2 percentage points. In the November 9, 2006, **Federal Register** (71 FR 65935), we issued a final rule to implement the pay-for-reporting requirement of the DRA, which was codified at § 484.225(h) and (i) in accordance with the statute. The pay-for-reporting requirement was implemented on January 1, 2007.

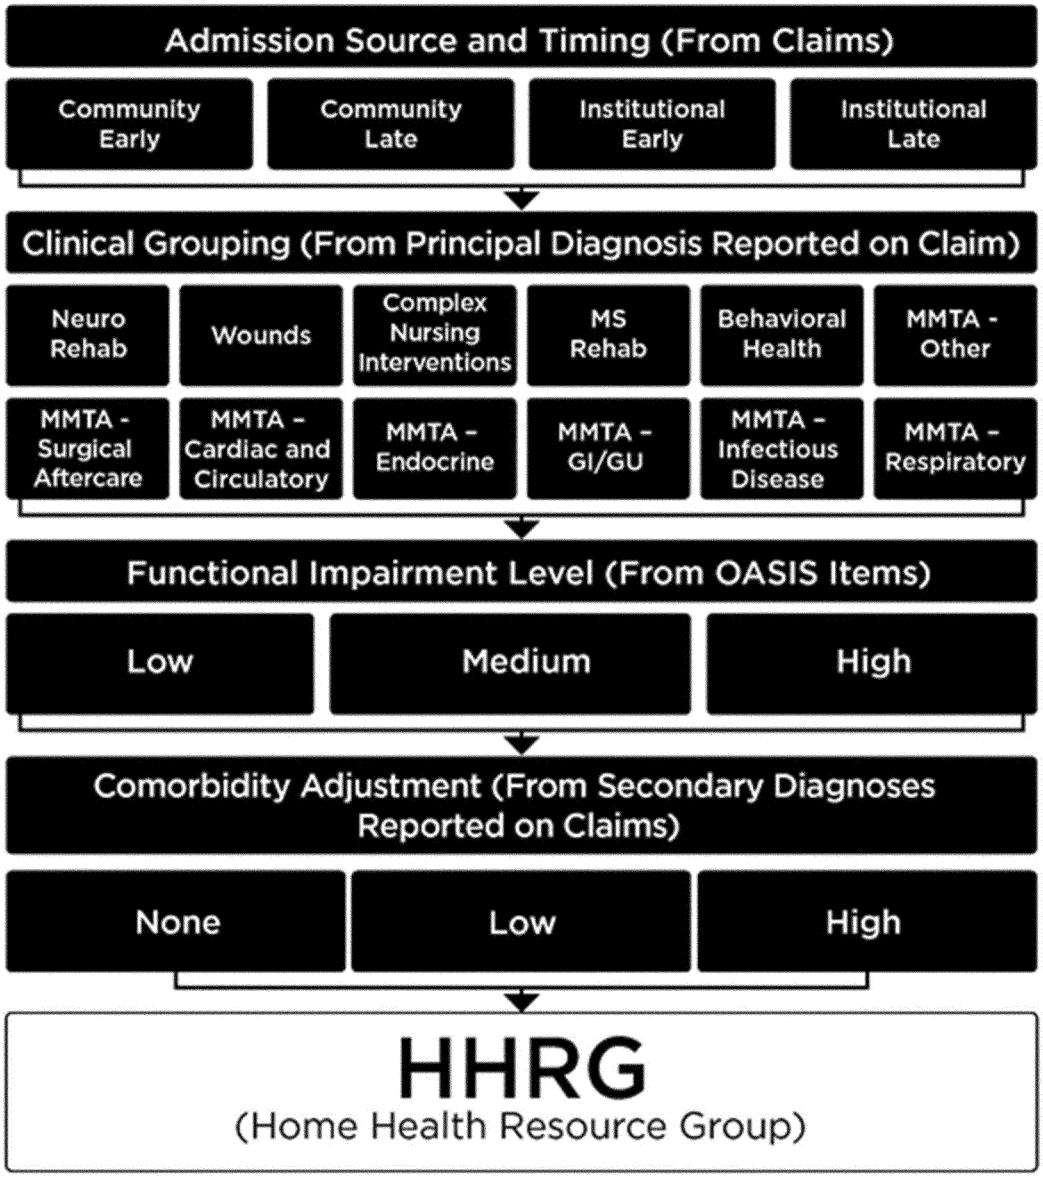
Section 51001(a)(1)(B) of the Bipartisan Budget Act of 2018 (BBA of 2018) (Pub. L. 115–123) amended section 1895(b) of the Act to require a change to the home health unit of payment to 30-day periods beginning January 1, 2020. Section 51001(a)(2)(A) of the BBA of 2018 added a new subclause (iv) under section 1895(b)(3)(A) of the Act, requiring the Secretary to calculate a standard prospective payment amount (or amounts) for 30-day units of service furnished that end during the 12-month period beginning January 1, 2020, in a budget neutral manner, such that estimated aggregate expenditures under the HH PPS during CY 2020 are equal to the estimated aggregate expenditures that otherwise would have been made under the HH PPS during CY 2020 in the absence of the change to a 30-day unit of service. Section 1895(b)(3)(A)(iv) of the Act requires that the calculation of the standard prospective payment amount (or amounts) for CY 2020 be made before the application of the annual update to the standard prospective payment amount as required by section 1895(b)(3)(B) of the Act.

Additionally, section 1895(b)(3)(A)(iv) of the Act requires that in calculating the standard prospective payment amount (or amounts), the Secretary must make assumptions about behavior changes that could occur as a result of the implementation of the 30-day unit of service under section 1895(b)(2)(B) of the Act and case-mix adjustment factors established under section 1895(b)(4)(B) of the Act. Section 1895(b)(3)(A)(iv) of the Act further requires the Secretary to provide a description of the behavior assumptions made in notice and comment rulemaking. CMS finalized these behavior assumptions in the CY 2019 HH PPS final rule with comment period (83 FR 56461).

Section 51001(a)(2)(B) of the BBA of 2018 also added a new subparagraph (D) to section 1895(b)(3) of the Act. Section 1895(b)(3)(D)(i) of the Act requires the Secretary annually to determine the impact of differences between assumed behavior changes, as described in section 1895(b)(3)(A)(iv) of the Act, and actual behavior changes on estimated aggregate expenditures under the HH PPS with respect to years beginning with 2020 and ending with 2026. Section 1895(b)(3)(D)(ii) of the Act requires the Secretary, at a time and in a manner determined appropriate, through notice and comment rulemaking, to provide for one or more permanent increases or decreases to the standard prospective payment amount (or amounts) for applicable years, on a prospective basis, to offset for such increases or decreases in estimated aggregate expenditures, as determined under section 1895(b)(3)(D)(i) of the Act. Additionally, section 1895(b)(3)(D)(iii) of the Act requires the Secretary, at a time and in a manner determined appropriate, through notice and comment rulemaking, to provide for one or more temporary increases or decreases to the payment amount for a unit of home health services for applicable years, on a prospective basis, to offset for such increases or decreases in estimated aggregate expenditures, as determined under section 1895(b)(3)(D)(i) of the Act. Such a temporary increase or decrease shall apply only with respect to the year for which such temporary increase or decrease is made, and the Secretary shall not take into account such a temporary increase or decrease in computing the payment amount for a unit of home health services for a subsequent year. Finally, section 51001(a)(3) of the BBA of 2018 amends section 1895(b)(4)(B) of the Act by adding a new clause (ii) to require the Secretary to eliminate the use of therapy thresholds in the case-mix system for CY 2020 and subsequent years.

Division FF, section 4136 of the Consolidated Appropriations Act, 2023 (CAA, 2023) (Pub. L. 117–328) amended section 1834(s)(3)(A) of the Act to require that, beginning with 2024, the separate payment for furnishing negative pressure wound therapy (NPWT) be for just the device and not for nursing and therapy services. Payments for nursing and therapy services are to be included as part of payments under the HH PPS. The separate payment for 2024 was required to be equal to the supply price used to determine the relative value for the service under the Medicare Physician Fee Schedule (as of January 1, 2022) for the applicable disposable device updated by the percentage increase in the Consumer Price Index for All Urban Consumers (CPI–U). The separate payment for 2025 and each subsequent year is to be the payment amount for the previous year updated by the percentage increase in the CPI–U (United States city average) for the 12-month period ending in June of the previous year reduced by the productivity adjustment as described in section 1886(b)(3)(B)(xi)(II) of the Act for such year. The CAA, 2023 also added section 1834(s)(4) of the Act to require that beginning with 2024, as part of submitting claims for the separate payment, the Secretary shall accept, and process claims submitted using the type of bill that is most commonly used by HHAs to bill services under a home health plan of care.

2. Current System for Payment of Home Health Services



For home health periods of care beginning on or after January 1, 2020, Medicare makes payment under the HH PPS on the basis of a national, standardized 30-day period payment rate that is adjusted for case-mix and area wage differences in accordance with section 51001(a)(1)(B) of the BBA of 2018. The national, standardized 30-day period payment rate includes

payment for the six home health disciplines (skilled nursing, home health aide, physical therapy, speech-language pathology, occupational therapy, and medical social services). Payment for non-routine supplies (NRS) is also part of the national, standardized 30-day period rate. Durable medical equipment (DME) provided as a home health service, as defined in section 1861(m)(5) of the Act, is paid the fee schedule amount or is paid through the competitive bidding program and such payment is not included in the national, standardized 30-day period payment amount. Additionally, the 30-day period payment rate does not include payment for certain injectable osteoporosis drugs and disposable negative pressure wound therapy (dNPWT) devices, but such drugs and devices must be billed by the HHA while a patient is under a home health plan of care, as the law requires separate consolidated billing of certain osteoporosis drugs and dNPWT devices.

To better align payment with patient care needs and to better ensure that clinically complex and ill beneficiaries have adequate access to home health care, in the CY 2019 HH PPS final rule with comment period (83 FR 56406), we finalized case-mix methodology refinements, including the removal of therapy thresholds, through the Patient-Driven Groupings Model (PDGM) for home health periods of care beginning on or after January 1, 2020. The PDGM did not change eligibility or coverage criteria for Medicare home health services, and if the individual meets the criteria for home health services as described at 42 CFR 409.42, the individual can receive Medicare home health services, including therapy services. For more information about the role of therapy services under the PDGM, we refer readers to the Medicare Learning Network (MLN) Matters article SE20005 available at *https://www.cms.gov/regulations-and-guidance guidancetransmittals2020-transmittals/se20005*. To adjust for case-mix for 30-day periods of care beginning on and after January 1, 2020, the HH PPS uses a 432-category case-mix classification system to assign patients to a home health resource group (HHRG) using patient characteristics and other clinical information from Medicare claims and the Outcome and Assessment Information Set (OASIS) instrument. These 432 HHRGs represent the different payment groups based on five main case-mix categories under the PDGM, as shown in figure 1. Each HHRG has an associated case-mix weight that is used in calculating the payment for a 30-day period of care. For periods of care with visits less than the low-utilization payment adjustment (LUPA) threshold for the HHRG, Medicare pays national per-visit rates based on the discipline(s) providing the services. Medicare also adjusts the national standardized 30-day period payment rate for certain intervening events that are subject to a partial payment adjustment. For certain cases that exceed a specific cost threshold, an outlier adjustment may also be available.

Under this case-mix methodology, case-mix weights are generated for each of the different PDGM payment groups by regressing resource use for each of the five categories (admission source, timing, clinical grouping, functional impairment level, and comorbidity adjustment) using a fixed effects model. A detailed description of each of the case-mix variables under the PDGM have been described previously, and we refer readers to the CY 2021 HH PPS final rule (85 FR 70303 through 70305) for further information.

FIGURE 1: CASE-MIX VARIABLES IN THE PDGM

Notes: MMTA (Medication Management, Teaching and Assessment), MS (Musculoskeletal), GI (Gastrointestinal tract), GU (Genitourinary system)

B. CY 2027 Payment Adjustments Under the HH PPS

1. Behavior Adjustments Under the HH PPS

a. Background

As discussed in section II.A.1. of this final rule, starting in CY 2020, the Secretary was required by section 1895(b)(2)(B) of the Act to change the unit of payment under the HH PPS from a 60-day episode of care to a 30-day period of care. CMS was also required to make assumptions about behavior changes that could occur as a result of the implementation of the 30-day unit of payment and the case-mix adjustment factors that eliminated the use of therapy thresholds. In the CY 2019 HH PPS final rule with comment period (83 FR 56455), we finalized three behavior change assumptions which were also described in the CY 2022 and 2023 HH PPS rules (86 FR 35890, 87 FR 37614, and 87 FR 66795 through 66796). In the CY 2020 HH PPS final rule with comment period (84 FR 60519), we included these behavior change assumptions in the calculation of the 30-day budget neutral payment amount for CY 2020, finalizing a negative 4.36 percent behavior change assumption adjustment (''assumed behaviors''). We did not propose any changes for CYs 2021 and 2022 related to the behavior change assumptions finalized in the CY 2019 HH PPS final rule with comment period, or to the negative 4.36 percent behavior change assumption adjustment, finalized in the CY 2020 HH PPS final rule with comment period.

In the CY 2023 HH PPS final rule (87 FR 66796), we stated that we had concluded, based on our annual monitoring at that time, that the three expected behavior changes did in fact occur as a result of the implementation of the PDGM and that other behaviors,

such as changes in the provision of therapy and changes in functional impairment levels, had also occurred. We also reminded readers that in the CY 2020 HH PPS final rule with comment period (84 FR 60513), we stated that we interpret actual behavior changes to encompass behavior changes that were previously outlined as assumed by CMS, and other behavior changes not identified at the time we established the budget-neutral 30-day payment rate for CY 2020. In the CY 2023 HH PPS final rule (87 FR 66796), we provided supporting evidence that indicated the number of therapy visits declined in CYs 2020 and 2021, as well as a slight decline in therapy visits beginning in CY 2019 after the finalization of the removal of therapy thresholds, but prior to implementation of the PDGM. In section II.B.1. of the CY 2025 HH PPS proposed rule (89 FR 55318), our analysis continued to show the actual 30-day periods are similar overall to the simulated 30-day periods as well as a continued decline in therapy visits, indicating that HHAs changed their behavior to reduce therapy visits. Although the analysis demonstrates evidence of individual behavior changes (for example, in the volume of visits for LUPAs, therapy sessions, etc.), we use the entirety of the behaviors to calculate estimated aggregate expenditures. The law instructs us to ensure that estimated aggregate expenditures under the PDGM are equal to the estimated aggregate expenditures that otherwise would have been made under the prior system.

Section 4142(a) of the CAA, 2023 required CMS to present, to the extent practicable, a description of the actual behavior changes occurring under the HH PPS from CYs 2020 through 2026. This subsection of the CAA, 2023 also required CMS to provide datasets underlying the simulated 60-day episodes and discuss and provide time for stakeholders to provide input on and ask questions about the payment rate development for CY 2023. CMS complied with these requirements by posting online both the supplemental limited data set (LDS) and descriptive files and the description of actual behavior changes that affected CY 2023 payment rate development. Additionally, on March 29, 2023, CMS conducted a webinar entitled ''Medicare Home Health Prospective Payment System (HH PPS) Calendar Year (CY) 2023 Behavior Change Recap, 60-Day Episode Construction Overview, and Payment Rate Development.'' The webinar was open to the public and discussed the actual behavior changes that occurred upon implementation of the PDGM; our approach used to construct simulated 60-day episodes using 30-day periods; payment rate development for CY 2023; and information on the supplemental data files containing information on the simulated 60-day episodes and actual 30-day periods used in calculating the permanent adjustment to the payment rate. Materials from the webinar, including the presentation and the CY 2023 descriptive statistics from the supplemental LDS files containing information on the number of simulated 60-day episodes and actual 30-day periods in CY 2021 that were used to construct the permanent adjustment to the payment rate, as well as information such as the number of episodes and periods by case-mix group, case-mix weights, and simulated payments, can be found on the Home Health Patient-Driven Groupings Model web page at *https://www.cms.gov/medicare/payment/prospective-payment-systems/home-health/home-health-patient-driven-groupings-model.*

b. Method To Annually Determine the Impact of Differences Between Assumed Behavior Changes and Actual Behavior Changes on Estimated Aggregate Expenditures

In the CY 2023 HH PPS final rule (87 FR 66804), we finalized the methodology to evaluate the impact of the differences between assumed and actual behavior changes on estimated aggregate expenditures. In the CY 2024 HH PPS final rule (88 FR 77687 through 77688), we provided an overview of the methodology with detailed instructions for each step of the calculation.

Under the prior 153-group system (and the first 3 years for assessments associated with the PDGM completed prior to CY 2023), HHAs submitted the Outcome and Assessment Information Set (OASIS) instrument version D. However, OMB approved an updated version of the OASIS instrument, OASIS–E, under OMB control number 0938–1279,[1] on November 30, 2022, effective January 1, 2023. Therefore, in the CY 2025 HH PPS final rule (89 FR 88364), we finalized two additional methodological assumptions related to mapping and imputation of OASIS–D responses from OASIS–E. We refer readers to the CY 2024 and CY 2025 HH PPS final rules for further information about the methodology.

[1] The current expiration date for this information collection request is December 31, 2027.

c. Calculating Permanent and Temporary Payment Adjustments

To adjust the base payment rate based on increases or decreases in estimated aggregate expenditures that result from differences between assumed behavior changes and actual behavior changes for 2020 through 2026, we calculate one or more permanent prospective adjustments by calculating the percent change between the actual 30-day base payment rate and the recalculated 30-day base payment rate. This percent change is converted into an adjustment factor and applied in the annual rate update process.

To account for increases or decreases in estimated aggregate expenditures that result from differences between assumed behavior changes and actual behavior changes from 2020 through 2026, we calculate one or more temporary prospective adjustments by calculating the dollar amount difference between the estimated aggregate expenditures from all 30-day periods using the recalculated 30-day base payment rate, and the aggregate expenditures for all 30-day periods using the actual 30-day base payment rate for each of those years once data is available (87 FR 66804). In other words, when determining the dollar amount of aggregate expenditures in prior years that we must offset in future years, we use the full dataset of actual 30-day periods using both the actual and recalculated 30-day base payment rates to ensure that the utilization and distribution of claims are the same. In accordance with section 1895(b)(3)(D)(iii) of the Act, each temporary adjustment is applied prospectively but, as its name suggests, only with respect to the year for which such temporary increase or decrease is made.

Therefore, after we determine the dollar amount we plan to reconcile in a given year, we calculate a temporary adjustment factor to be applied to the base payment rate for that year. The temporary adjustment factor is based on an estimated number of 30-day periods in the next year using historical data trends, and as applicable, controls for any permanent adjustment factor, case-mix weight recalibration neutrality factor, wage index budget neutrality factor, and the home health payment update. The temporary adjustment factor is applied last since the adjustment applies only to the respective year. That is, the temporary adjustment is not permanently fixed into future base payment rates. We refer readers to the CY 2024 HH PPS final rule (88 FR 77689 through 77694) for

analysis of CYs 2020 through 2022 claims, the CY 2025 HH PPS final rule (89 FR 88366 through 88369) for analysis of CY 2023 claims, and the CY 2026 HH PPS final rule (90 FR 55365 through 55367) for analysis of CY 2024 claims.

d. CY 2025 Final Claims Results

We stated in the CY 2026 HH PPS final rule (90 FR 55365) that we were exercising our authority expressly delegated under the statute to apply permanent adjustments ''at a time and in a manner appropriate'' not to apply any permanent adjustment for CY 2026 based on CY 2023 or 2024 data, as these years may contain data with behaviors attributable to factors beyond the implementation of the PDGM and a 30-day unit of payment. However, we also noted we will continue to annually analyze the data through CY 2026 claims, as required by law, to determine if any additional permanent adjustments would need to be made based on the impact of assumed versus actual behavior change on estimated aggregate expenditures resulting from the implementation of the PDGM and the 30-day unit of payment. While the law requires us to continue to evaluate the need for any additional permanent adjustments in future rulemaking, we reiterate that any additional permanent adjustment(s) would need to be related to actual behavior change resulting only from the implementation of the PDGM and the change in the unit of payment as required by law. Therefore, we will continue to compare estimated aggregate expenditures under the PDGM and the 153-group payment system, using the most recent complete home health claims data available at the time of rulemaking, as required by section 1895(b)(3)(D)(i) of the Act. The CY 2027 HH PPS final rule uses the complete CY 2025 data to determine any permanent and temporary adjustments needed to the CY 2027 payment rate. However, while the claims data and the permanent and temporary adjustments results are considered complete for CY 2027, any adjustments to future payment rates may be subject to additional considerations such as permanent adjustments taken in previous years.

The claims data used in rulemaking is released in the HH PPS LDS file twice each year, one with the proposed and one with the final rule. Accordingly, the HH PPS LDS file released with this final rule includes two files: the actual CY 2025 30-day periods and the CY 2025 simulated 60-day episodes.

We remind readers that a data use agreement (DUA) is required to purchase the CY 2027 final HH PPS LDS file using the CMS–R–0235A form under OMB control number 0938–0734. Access would be granted for both the 30-day periods and the simulated 60-day episodes under one DUA. Visit the HH PPS LDS web page for more information.[2] In addition, the final CY 2027 Home Health Descriptive Statistics from the LDS Files spreadsheet is available on the HH PPS Regulations and Notices web page,[3] does not require a DUA and is available at no cost to interested parties. The spreadsheet contains information on the number of simulated 60-day episodes and actual 30-day periods in CY 2025 that were used to determine the adjustments. The spreadsheet also provides information such as the number of episodes and periods by case-mix group, case-mix weights, and simulated payments.

e. Applying the Methodology to CY 2025 Data To Determine the CY 2027 Permanent and Temporary Adjustments

To comply with Section 1895(b)(3)(D)(ii) of the Act, we are required to annually analyze data from CY 2020 through CY 2026 and show the calculations to illustrate how the aggregate expenditures differ from actual and assumed behavior changes. We also continue to analyze differences in aggregate expenditures and calculate what the budget neutral rate would be to understand how the budget neutral rate differs from the actual finalized payment rate for CY 2025. We then determine whether the difference between the budget neutral rate and actual finalized payment rate can be directly attributed to behavior from PDGM implementation as discussed in CY 2026 HH PPS final rule.

Using the methodology finalized in the CY 2023 HH PPS final rule to apply for all the years in which an adjustment is appropriate, we continue to use actual CY 2025 30-day periods to determine what the final permanent and temporary payment adjustments should be to offset for such increases or decreases in estimated aggregate expenditures as a result of the impact of differences between assumed behavior changes and actual behavior changes. We provide tables 2 and 3 to illustrate the same information displayed in prior rules to show the permanent adjustment that would need to be applied if the comparison of the aggregate expenditures was a result of behavior change due to the implementation of the PDGM. However, similar to what was finalized in the CY 2026 HH PPS final rule (90 FR 55364 through 55365), we believe any behavior changes reflected in the final CY 2025 claims for this CY 2027 final rule are not directly attributable to the PDGM but other confounding factors related to policy changes that began in CY 2023 (that is, continued recalibration of case-mix weights, a change to the OASIS–E, and previous reductions to the home health payment rate). The permanent adjustment calculated will be illustrative as part of our analysis of CY 2025 claims; however, we did not propose to apply a permanent adjustment to the CY 2027 payment rate, as discussed previously. We provide table 4 as another illustrative example showing a calculated permanent adjustment, using CY 2025 aggregate expenditures if we were to determine that the behavior changes that occurred could be directly attributed to the implementation of the PDGM.

Using the final CY 2025 dataset, we began with 8,382,176 30-day periods of care and dropped 491,954 30-day periods of care that had a claim occurrence code 50 date after October 31, 2025. We also excluded 847,742 30-day periods of care that had a claim occurrence code 50 date before January 1, 2025, to ensure the 30-day period will not be part of a simulated 60-day episode that began in CY 2024. Applying the additional exclusions and assumptions as described in the finalized methodology (87 FR 66804), an additional 61,147 30-day periods were excluded. Additionally, we excluded 319,999 simulated 60-day episodes of care where no OASIS information was available in the Chronic Conditions Warehouse (CCW) Virtual Research Data Center (VRDC), a recent start of care/resumption of care (SOC/ROC) OASIS was not available, a wage index was not available, or the episode could not be grouped to a Health Insurance Prospective Payment System (HIPPS) code due to a missing primary diagnosis or other reason.

Using the final dataset for CY 2025 (6,661,334 actual 30-day periods which made up the 3,917,201 simulated 60-day episodes) we determined the estimated aggregate expenditures using the finalized CY 2025 HH PPS payment rate were lower than the actual estimated aggregate expenditures under the PDGM HH PPS. As shown in table 2, aggregate expenditures under the PDGM were higher than if the 153-group payment system were still in place in CY 2025

[2] *https://www.cms.gov/research-statistics-data-and-systems/files-for-order/limiteddatasets/home_health_pps_lds.*

[3] *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HomeHealthPPS/Home-Health-Prospective-Payment-System-Regulations-and-Notices.*

and therefore, we determined the CY 2025 30-day base payment rate should have been $1,959.08 based on actual behavior changes.

We determined that for CYs 2020 through CY 2022 a total of −9.480 percent permanent adjustment was needed (after accounting for the −3.925 percent applied to the CY 2023 payment rate, the −2.890 percent applied to the CY 2024 payment rate, and the −1.975 percent applied to the CY 2025 payment rate). The CY 2026 permanent adjustment was calculated using the permanent adjustments already applied to CYs 2023, 2024, and 2025 finalized payment rates and to reach the payment rate reduction needed for CYs 2020 through 2022.

In order to determine behavior changes only applicable to CY 2025, we simulated what the CY 2025 base payment rate would have been if the −1.023 percent adjustment that we determined using CY 2024 claims had been implemented and to compare PDGM claims with 153-group priced claims using 60-day simulated episodes.

To do so, we started with the budget neutral CY 2024 base payment of $1,914.73 generated by CY 2024 simulated 60-day episodes (as published in the CY 2026 HH PPS final rule (90 FR 55366)) and applied the CY 2025 case-mix weights recalibration neutrality factor (1.0039), the CY 2025 wage index budget neutrality factor (0.9988), the CY 2024 labor-related share budget neutrality factor (1.0), and the CY 2025 home health payment update factor (1.027). We determined the CY 2025 base payment rate for assumed behavior would have been $1,971.73.

For the CY 2025 annual permanent adjustment, we calculated the percent change between the two payment rates for only CY 2025. For the CY 2025 annual temporary adjustment we calculated the difference in aggregate expenditures in dollars for all CY 2025 PDGM 30-day claims using the two payment rates. This difference is shown as the retrospective dollar amount we would need to offset payment using one or more temporary adjustments in future years. Our results for the CY 2025 annual (single year) permanent and temporary adjustment calculations using CY 2025 final claims data are shown in table 2.

TABLE 2: ILLUSTRATIVE CY 2025 PERMANENT AND TEMPORARY ADJUSTMENT CALCULATIONS WHEN COMPARING PDGM CLAIMS USING SIMULATED 60-DAY EPISODES

	Budget-neutral 30-day Payment Rate with Assumed Behavior Changes	Budget-neutral 30-day Payment Rate with Actual Behavior Changes	CY 2025 Only Adjustment
Base Payment Rate	$1,971.73*	$1,959.08	**Permanent** -0.642%
Aggregate Expenditures	$ 16,957,268,010.43**	$ 16,237,591,241.69	**Temporary** -$ 719,676,768.74

Source: CY 2025 Home Health Claims Data, Periods that end in CY 2025 accessed from the CCW on July 14, 2026.

*The $1,971.73 (shown in table 2) is equal to the recalculated budget neutral 30-day base payment rate of $1,914.73 for CY 2024 multiplied by the CY 2025 recalibration factor (1.0039), CY 2025 wage index budget neutrality factor (0.9988), CY 2025 labor-related share budget neutrality factor (1.0), and the CY 2025 home health payment update factor (1.027).

** The estimated aggregate expenditures for assumed behavior ($16.6 billion), uses the actual CY 2025 payment rate of $2,057.35 as finalized in the CY 2025 HH PPS final rule (89 FR 88424).

Table 2 illustrates that a permanent prospective adjustment of −0.642 percent to the CY 2027 30-day payment rate (assuming all adjustments from prior years were applied) for CY 2025 would be required to offset for such increases in estimated aggregate expenditures. Again, table 2 is illustrative because we are continuing to limit the calculation of the permanent adjustments to only include data from CYs 2020 through 2022 as finalized in the CY 2026 HH PPS final rule (90 FR 55365 through 55367) and the calculated permanent adjustment does not include implemented permanent adjustments from prior years. We reiterate that any additional permanent adjustment(s) must be determined to be related to actual behavior change resulting only from the implementation of the PDGM and the change in the unit of payment as required by law.

f. CY 2027 Permanent Adjustment and Temporary Adjustment Calculations

In the preceding section we describe how we analyzed CY 2025 final claims data to determine the effects of actual behavior change on estimated aggregate expenditures. Again, that illustrative analysis included simulations that assumed the full permanent adjustments were already taken. We note that CMS implemented a payment adjustment of −1.975 percent for the CY 2025 payment rate, rather than the −3.95 percent we calculated (89 FR 88373), so the calculations set forth later in this section reflect the remaining adjustments that still needed to be recognized.

Therefore, the calculation in this section includes any of the remaining adjustments not applied in previous years (that is, CYs 2020 through 2024 claims data), as well as the adjustment needed to account for CY 2025 claims. In calculating the full permanent adjustment needed to the CY 2027 30-day payment rate, we compare estimated aggregate expenditures under the PDGM and the prior system. Unlike the annual adjustments described in

table 2, we do not assume we made the full adjustment from prior years. This section also includes calculation of a permanent adjustment using the actual CY 2025 payment rate and the budget neutral rate for CY 2025 using the method discussed in the CY 2026 HH PPS final rule.

As discussed in section II.B.1.e. of this final rule, using the final dataset for CY 2025 (6,661,334 actual 30-day periods which made up the 3,917,201 simulated 60-day episodes) we determined the CY 2025 30-day base payment rate should have been $1,959.08 based on actual behavior. We then compared the repriced 30-day base payment rate based on actual behavior to the CY 2025 30-day base payment rate of $2,057.35 we paid based on assumed behaviors. The percent change, as summarized in table 3, between the actual CY 2025 base payment rate of $2,057.35 (based on assumed behaviors) and the CY 2025 recalculated base payment rate of $1,959.08 (based on actual behaviors) illustrates the total permanent adjustment that would reflect CY 2020 through CY 2025 claims. We conduct this calculation to satisfy the requirements described in section 1895(b)(3)(D)(ii) of the Act to illustrate what the permanent adjustment would be. We consider table 3 illustrative because we are limiting the calculation of the permanent adjustments to only include data from CYs 2020 through 2022 as finalized in the CY 2026 HH PPS final rule (90 FR 55365 through 55367).

TABLE 3: ILLUSTRATIVE TOTAL PERMANENT ADJUSTMENT FOR CYs 2020 THROUGH 2025 CLAIMS

Actual CY 2025 Base Payment Rate (Assumed Behavior)	Recalculated CY 2025 Base Payment Rate (Actual Behavior)	Total Permanent Prospective Adjustment
$2,057.35	$1,959.08	-4.777%*

Source: CY 2025 Home Health Claims Data, Periods that end in CY 2025 accessed from the CCW on July 14, 2026.

* This is the total permanent adjustment based on CY 2025 data which includes the previous permanent adjustment of -1.975% applied. However, as described later, we recognized that for CY 2027 we must also account for adjustment made in CY 2026.

As shown in table 3, a permanent prospective adjustment of −4.777 percent to the CY 2027 30-day payment rate would be required to offset for such increases in estimated aggregate expenditures. To illustrate this calculation:

$$\frac{(\$1{,}959.08 - \$2{,}057.35)}{\$2{,}057.35} = -4.777\ \%$$

As we stated in the CY 2026 HH PPS final rule (90 FR 55357), applying a −1.975 percent (half of the proposed −3.95 percent) permanent adjustment to the CY 2025 30-day payment rate would not adjust the rate fully to account for differences in behavior changes on estimated aggregate expenditures in CYs 2020, 2021, 2022, and 2023. Using CY 2025 claims data, as shown in table 3, a permanent prospective adjustment of −4.777 percent to the CY 2027 30-day payment rate would offset for increases in estimated aggregate expenditures for CYs 2020 through 2025. We note that adjustment factors are multiplied in this payment system, and individual numbers (that is, percentages) cannot be added or subtracted together to determine the final adjustment. Therefore, we cannot determine the illustrative CY 2027 permanent adjustment, which would include estimated aggregate expenditures in CY 2025, by simply subtracting the −1.975 percent applied in CY 2025 and the −1.023 percent applied in CY 2026 from the total permanent adjustment of −4.777 percent as shown in table 3.

Instead, we account for the permanent adjustment applied in prior years when we calculate the CY 2027 permanent adjustment by solving the following equation

$(1 - 0.01023) \times (1 - x) = (1 - 0.04777)$

To illustrate this calculation we used the following approach.

$$x = 1 - \left(\frac{1-0.04777}{1-0.01023}\right)$$

$x = 1 - 0.96207$

$x = 0.03793$ (that is, 3.793 percent)

We note that the −3.793 percent is calculated as a permanent adjustment for CY 2027 illustrating what we would need if we were to offset the difference in aggregate expenditures between CY 2025 claims priced under the PDGM and the 153-group system and adjusting for the permanent adjustments applied in prior years.

We continue to apply the methodology finalized in the CY 2026 HH PPS final rule to determine what the permanent adjustment for CY 2025 claims would be even though we stopped comparing claims priced under the PDGM and the 153-group after CY 2022 claims for the purposes of applying a permanent adjustment in this final rule. As displayed in table 4, we

calculate the permanent adjustment for CY 2025 by determining the percent change between the actual CY 2025 30-day payment rate ($2,057.35) and the budget neutral rate for CY 2025 ($2,036.29). The budget neutral rate for CY 2025 is the finalized CY 2024 budget neutral rate discussed in CY 2026 final rule ($1,977.43) multiplied by the CY 2025 case-mix weights recalibration neutrality factor (1.0039), the CY 2025 wage index budget neutrality factor (0.9988), and the CY 2025 home health payment update factor (1.027).

TABLE B4: ILLUSTRATIVE CY 2025 PERMANENT AND FINAL TEMPORARY ADJUSTMENT CALCULATIONS

	CY 2025 Nationalized Standardized 30-day Period Payment	CY 2025 Budget Neutral Payment Rate	CY 2025 Only Adjustment
Base Payment Rate	$2,057.35*	$2,036.29	**Permanent** -1.024%
Aggregate Expenditures	$ 16,957,268,010.43**	$ 16,802,166,149.24	**Temporary** -$ 155,101,861.19

Source: CY 2025 Home Health Claims Data, Periods that end in CY 2025 accessed from the CCW on July 14, 2026.

* The $2,057.35 corresponds to the actual CY2025 payment rate. ** The estimated aggregate expenditures for assumed behavior ($16.6 billion), uses the actual CY 2025 payment rate of $2,057.35 as finalized in the CY 2025 HH PPS final rule.

In section II.C.1.d of CY 2027 HH PPS proposed rule, we discuss various trends that are part of monitoring changes related to the PDGM using analysis of CY 2025 claims. The data continues to show minimal changes that could be attributed to the PDGM implementation after CY 2022 by a large proportion of home health providers. We also continue to acknowledge the difficulty in attributing any behavior change occurring from CYs 2023 through 2025 directly to the PDGM implementation and its effects on expenditures from the other policy changes occurring in those years. As discussed in the CY 2026 HH PPS final rule, CMS introduced several policy changes that make isolating the effect of implementing a permanent adjustment, with claims data from CYs 2023 through 2025, for the PDGM difficult. These changes include recalibration of case-mix weights and LUPA visit thresholds finalized in the CY 2023, 2024, 2025, and 2026 final rules; reassignment of certain ICD–10–CM codes related to the PDGM clinical groups and comorbidity groups in the CY 2023 HH PPS final rule; finalized permanent adjustments in the CY 2023, 2024, and 2025 HH PPS final rules; the introduction of OASIS–E in 2023 and finalized mapping of OASIS–E to OASIS–D in the CY 2025 HH PPS final rule for calculating functional points for functional impairment levels during repricing; and the expanded HHVBP Model. For these reasons, we maintain that limiting the application of the permanent adjustment to analysis of data from CYs 2020 through 2022 continues to be the most accurate application of the law. However, as required by law, we will continue to analyze data through CY 2026 claims to determine if any additional permanent adjustments are needed to account for the impact of assumed versus actual behavior change related to the implementation of the PDGM and the change to a 30-day unit of payment on estimated aggregate expenditures.

The dollar amount that needs to be collected through the temporary adjustment increased when examining home health claims from CY 2025 because those claims were paid using the actual 30-day payment rate ($2,057.35) instead of the calculated budget neutral payment rate for CY 2025 ($2,036.29). That is, had the payment rate in CY 2025 been $2,036.29, there would not be an increase in what needs to be collected through the temporary adjustment when examining home health claims from CY 2025. Because the 30-day payment rate was not budget neutral until the CY 2026 payment rate with the application of the −1.023 percent permanent adjustment, the temporary adjustment continued to accrue.

As described previously in this final rule, to account for such increases or decreases in estimated aggregate expenditures as a result of the impact of differences between assumed behavior changes and actual behavior changes in any given year from CY 2020 to CY 2026, we calculate the temporary prospective adjustment by calculating the dollar amount difference between the estimated aggregate expenditures from all 30-day periods using the recalculated 30-day base payment rate, and the aggregate expenditures for all 30-day periods using the actual 30-day base payment rate for that year. In other words, when determining the temporary retrospective dollar amount, we used the full dataset of actual 30-day periods using both the actual and recalculated 30-day base payment rates to ensure that the utilization and distribution of claims are the same. We refer readers to the CY 2024 HH PPS final rule (88 FR 77689 through 77694) for analysis of CYs 2020 through 2022 claims, the CY 2026 HH PPS final rule (90 FR 55366 through 55367) for analysis of CY 2023 and CY 2024 claims, and section II.C.1.d. of this final rule for the analysis of CY 2025 claims. Table 5 provides a summary of the temporary adjustment dollar amount for CYs 2020 through 2026.

TABLE 5: SUMMARY OF TEMPORARY ADJUSTMENTS DOLLAR AMOUNTS FOR CYs 2020 – 2026

Claims Analysis Year	Dollar Amount
CY 2020	-$873,073,121
CY 2021	-$1,211,002,953
CY 2022	-$1,405,447,290
CY 2023	- $836,208,180
CY 2024	- $430,435,218
CY 2025 – This final rule	-$155,101,861
CY 2026	TBD
Total (through CY 2025)	-$4,911,268,623

Source: CY 2020 Home Health Claims Data, Periods that begin and end in CY 2020 accessed from the CCW on July 12, 2021. CY 2021 Home Health Claims Data, Periods that end in CY 2021 accessed from the CCW on July 15, 2022. CY 2022 Home Health Claims Data, Periods that end in CY 2022 accessed from the CCW on July 15, 2023. CY 2023 Home Health Claims Data, Periods that end in CY 2023 accessed from the CCW on July 11, 2024. CY 2024 Home Health Claims Data, Periods that end in CY 2024 accessed from the CCW on July 11, 2025. CY 2025 Home Health Claims Data, Periods that end in CY 2025 accessed from the CCW on July 14, 2026.
Note: The anticipated temporary adjustments of approximately $4.9 billion (through CY 2025) will require temporary adjustment(s) to the base payment rate to offset for such increases in estimated aggregate expenditures. The dollar amount will be converted to a factor when implemented in future rulemaking.

Therefore, we exercise our authority under section 1895(b)(3)(D)(iii) of the Act to apply ''one or more'' temporary adjustments to continue recoupment of the retrospective overpayments for CYs 2020 through 2025. Specifically, we proposed implementing a 3.0 percent reduction in CY 2027, that is equivalent to a 0.9700 temporary adjustment factor, to the CY 2027 national, standardized payment rate. Using historical trends, we estimated 7,680,775 30-day periods would occur in CY 2027. Using this estimated utilization, a 3.0 percent reduction to the CY 2027 30-day payment rate would begin to collect approximately $500 million of the total temporary adjustment dollar amount, equating to about 10 percent of the total $4.9 billion shown in table 6. In doing so; however, we noted we would need to account for the remaining temporary adjustment dollar amount for CYs 2020 through 2026, plus any possible adjustments for CY 2027 and 2028, in future years. It is important to note that the estimated $500 million dollar amount anticipated to be collected by the implementation of the temporary adjustment factor is based on an estimate of the number of 30-day periods that would occur in CY 2027. It may not reflect the actual dollar amount to be collected if the actual number of 30-day periods and other utilization trends in CY 2027 differ from what was estimated. In other words, as noted in the proposed rule, CMS will calculate the actual amount collected from the temporary adjustment in CY 2027 and credit it to the overall cumulative temporary dollar amount.

In accordance with section 1895(b)(3)(D)(iii) of the Act, the temporary adjustment is to be applied on a prospective basis and shall apply only with respect to the year for which such temporary increase or decrease is made. This means we would not include the −3.0 percent temporary adjustment applied for CY 2027 when calculating the CY 2028 base payment rates. However, to continue recoupment of the retrospective overpayments, we may propose additional temporary adjustments in future rulemaking and did not propose that the −3.0 percent temporary adjustment would be applied each year after CY 2027. Rather, as noted in the proposed rule, we will continue to analyze the data each year through CY 2026 claims as required by law, and in a time and manner deemed appropriate, we will propose one or more temporary adjustments to account for retrospective overpayments. We also note the $4.9 billion does not account for any monies recouped in CY 2026, as we do not have this dollar amount at the time of this CY 2027 rulemaking. In future rulemaking, we will show the remaining balance, accounting for the previous recoupment amount; however, there will be a lag. We refer readers to section II.E.3.b. for the CY 2027 base payment rates with and without the temporary adjustment.

We solicited comments on the proposals to not apply a permanent adjustment and to apply the −3.0 percent temporary adjustment to the CY 2027 home health base payment rate. The following is a summary of the comments we received and our responses.

Comment: One commenter, the Medicare Payment Advisory Commission (MedPAC), supported the proposed temporary payment adjustment for CY 2027. MedPAC stated that although the proposed payment update is larger than the Commission's recommendation for CY 2027, the proposed temporary behavioral adjustment would further align Medicare payments with providers' costs. They also stated that the home health base payment rate currently exceeds the estimated cost of a typical 30-day payment period by 34 percent.

Response: We thank MedPAC for their comment.

Comment: Several commenters recommended that CMS eliminate all permanent and temporary adjustments due to methodological flaws and data concerns, such as the inability to discern behavior related and unrelated to the PDGM. These commenters also recommended excluding anomalous data from areas with suspect billing patterns, similar to the policy finalized in The Medicare Program: Mitigating the Impact of Significant, Anomalous, and Highly Suspect Billing Activity on Medicare Shared Savings Program (MSSP) Financial Calculations in Calendar Year 2023 final rule. Commenters also raised concerns about the anomalous data having effects on

varying case-mix weights, outlier calculations, PEPs changes in LUPAs and number of episodes.

Response: The methodological and data concerns raised by commenters were addressed in the CY 2026 HH PPS final rule (90 FR 55360 through 55365). As required by law, our methodology (that is, the repricing methodology) compares aggregate expenditures between the actual 30-day periods and simulated 60-day episodes paid under the prior payment system within a single claims' year to determine what the payment rate should be to ensure that payments under the two systems would be equal. When using the repricing methodology, we create simulated 60-day episodes to reprice the claims for CYs 2020 through 2022 and use the same claims data sets to calculate both pre-PDGM and PDGM payments. Regardless of the magnitude and frequency of individual behavior changes (for example, number of episodes, changes in LUPAs, therapy, PEPs, visits, etc.), the occurrence of any behavior change is captured by the methodology to determine the impact on aggregate expenditures.

Furthermore, not all anomalous billing patterns indicate fraudulent practices, and we would need further evidence to determine which providers with anomalous billing patterns could be connected to fraud and abuse. Excluding data some commenters view as ''anomalous'' from the calculation of the national 30-day base payment rate would require CMS to develop a new policy, including developing thresholds for determining deviations excluded from the analytical sample. Regarding the suggestion from commenters on the policy under which CMS made adjustments to Medicare Shared Savings Program (MSSP) financial benchmark calculations to account for significant, anomalous, and highly suspect billing activity in CY 2023 (89 FR 79156 through 79165), we lack the same statutory authority to apply a similar policy for setting the national standardized 30-day payment rate for HHAs as required by section 1895(b)(3) of the Act. In finalizing this policy, MSSP relied on statutory authority undersection 1899(d)(1)(B)(ii) of the Act, which permits the Secretary to adjust benchmark expenditures for beneficiary characteristics and such other factors as the Secretary determines appropriate. MSSP relied on this authority to remove payments for the specified catheter codes from the determination of benchmark expenditures where CY 2023 serves as a benchmark year when establishing benchmarks for ACOs in agreement periods beginning in January 2024, January 2025, or January 2026. While we do not have similar statutory authority for the HH PPS, CMS continues to investigate anomalous providers and has made referrals to law enforcement and terminated certain suppliers and providers from the Medicare program. CMS also continues to work closely with the HHS–OIG and Department of Justice, as well as our Unified Program Integrity Contractors (UPIC), to investigate health care fraud activities.

Comment: Some commenters raised concerns regarding the way in which CMS was meeting the statutory requirements of section 1895(b)(3)(D) of the Act through the budget neutrality calculation methodology finalized in CY 2023 HH PPS final rule. Specifically, commenters raised concerns about repricing claims using simulated 60-day episodes stating that the methodology does not meet the statutory requirement, including how claims are excluded, structural LUPA differences between the pre-PDGM system and the PDGM, outlier assumptions for simulated 60-day episodes, and recalibrating pre-PDGM case-mix update factors. Commenters also raised concerns that recalibration did not control for the impact of COVID–19 and suggested these claims be excluded.

Response: The concerns raised by commenters were previously discussed in the CY 2023 HH PPS final rule (87 FR 66797 through 66804) and in the CY 2026 HH PPS final rule (90 FR 55362 through 55364). CMS continues to reiterate that the methodology is technically accurate in that it captures actual changes in behavior that have been explained in previous rulemaking, as well as this final rule. As required by law, our methodology compares aggregate expenditures between the actual 30-day periods and simulated 60-day episodes paid under the prior payment system within a single claims' year to determine what the payment rate should be to ensure that payments under the two systems would be equal. Regardless of the magnitude and frequency of individual behavior change (for example, changes in LUPAs, therapy, etc.), the occurrence of any behavior change is captured by the methodology to determine the impact on aggregate expenditures.

We previously explained that the exclusion criteria in the finalized methodology dropped 30-day periods of care that had a claim occurrence code 50 after October 31, and before January 1 of the claims year we are analyzing, to ensure the 30-day period will not be part of a simulated 60-day period that began in the prior year and to ensure a simulated 60-day episode (simulated from two 30-day periods) does not overlap years (90 FR 29129). Additional exclusions include 60-day periods where no OASIS information was available, a recent SOC/ROC OASIS was not available, a wage index was not available, or the episode cannot be grouped to a HIPPS code due to a missing primary diagnosis or other reason. All the exclusion criteria are applied because the criteria are needed to appropriately price the simulated 60-day episodes for within the year the claims would have been paid. It is immaterial whether the 30-day periods that are excluded have different case-mix characteristics or higher visits if the 30-day periods are not able to be repriced accordingly as a simulated 60-day period. As stated in previous rulemaking (87 FR 66804), without these exclusions, we would not be confident we were appropriately grouping 30-day periods into simulated 60-day episodes. The permanent adjustment is based on the percentage change between the payment rates (which utilizes the same claims), and the temporary adjustment is based on the aggregate expenditures of all claims (that is, no exclusions) using the two payment rates (that is, the actual payment rate and the budget neutral payment rate with the permanent adjustment applied). Therefore, we do not believe that the small portion of excluded claims significantly biased our results.

Excluding claims with COVID–19 as a diagnosis lacks a clear rationale. Simulated 60-day episodes with a primary diagnosis of COVID–19 would still be assigned a HIPPS under the V8219 Home Health Grouper and would not have been excluded from the repricing analysis unless there was another unrelated issue with the claim that prevented grouping. As described in the CY 2023 HH PPS final rule (87 FR 66800), our methodology includes the effect of the COVID–19 public health emergency (PHE) and ensures that any difference between the two calculated spending amounts for estimated budget-neutral amount and actual home health expenditures is not attributable to the PHE.

Recalibrating the pre-PDGM case-mix weights to reflect changes due to the COVID–19 PHE would not increase the aggregate payments estimated for simulated 60-day periods paid under the pre-PDGM case-mix system. Because we are comparing a single year of data priced under the PDGM and the 153-group case-mix system, the COVID–19 PHE would not bias the PDGM

payments differently than the 153-group or vice-versa. Our methodology ensured that we used actual claims with the same episodes, same diagnoses, same therapy and non-therapy visit counts, same clinical documentation, same LUPA patterns, all shaped by the COVID–19 PHE—and ran them through two different payment calculations: (1) actual payment under PDGM's case-mix methodology, and (2) a hypothetical repricing under the prior 153-group system's case-mix methodology. Because both calculations draw on the identical underlying utilization data, any COVID–19 PHE-driven change in the volume or intensity of care (fewer visits, shorter episodes, telehealth substitution, deferred admissions) shows up in both the actual and the counterfactual payment amount. If we were to implement recalibration of case-mix weights (including early vs. late visits or admission source) when determining aggregate payments under the 60-day payment system, the aggregate expenditures would not change because we would implement the recalibration of case-mix weights in a budget neutral manner.

There are several factors that contribute to how the case-mix weight is set for a particular case-mix group (such as the number of visits, length of visits, types of disciplines providing visits, and non-routine supplies) and the case-mix weight is derived by comparing the average resource use for the case-mix group relative to the average resource use across all groups. We continue to believe that the COVID–19 PHE would have impacted utilization within all case-mix groups similarly. We acknowledge that the COVID–19 PHE changed the underlying clinical picture in 2020 (more respiratory diagnoses, fewer therapy visits, more skilled nursing visits, altered LUPA thresholds, telehealth-driven changes in visit patterns, etc.). However the PHE would have affected care patterns regardless of whether payment was made under the 153-group system or the PDGM. However, the impact of the COVID–19 PHE contributes to case-mix changes and changes in utilization that will be reflected in the single year of claims that is priced as the simulated 60-day episodes in our repricing methodology. When we compare the aggregate expenditures between the two payment systems that are similarly affected by the COVID–19 PHE, we determine the difference in aggregate expenditures that can be attributed to the PDGM. In addition, when we create the case-mix weight for each 30-day period under PDGM, the predicted resource use is divided by the overall resource use of the 30-day periods used to estimate the regression model for recalibration. Therefore, the impact of any reduction in resource use caused by the COVID–19 PHE on the calculation of the case-mix weight would be minimal since the impact would be accounted for both in the numerator and denominator of the formula used to calculate the case-mix weight.

We previously explained the outlier assumptions for simulated 60-day episodes in the CY 2026 HH PPS final rule (90 FR 55363). If we were to implement an updated FDL instead of using the finalized CY 2020 FDL to determine outlier payments under the simulated episodes, it is unclear whether retrospectively assigning the necessary FDL to hit a 2.5 percent target for the years after CY 2020 would be an accurate representation of what would happen under the previous payment system as discussed previously in the CY 2026 HH PPS final rule (90 FR 55363). In addition, updating the FDL for the 153-group payment system would require an iterative process to adjust the PDGM FDL used in repricing to also hit the 2.5 percent target of total PDGM expenditures. We note that the 2.5 percent is only a target amount that is set prospectively and is never reconciled and adjusted for.

Comment: Some commenters reminded CMS of its legal responsibilities under the Administrative Procedure Act to exercise informed decision-making that includes public input and for the Agency to ensure that consideration is given to data and perspectives that the Agency may not have considered or overlooked. These same commenters referenced *Loper Bright Enterprises* v. *Raimondo,* 603 U.S. 369 (2024), which reinforced the principle that courts must exercise independent judgment to ensure Agency actions are lawful and within their statutory authority. These commenters noted that *Loper Bright* shifted the focus away from deference to Agency interpretations of statutes, and gaps in them, and solidified the requirement for agencies to engage in reasoned decision making, including considering and responding to public comments, as a foundational aspect of the regulatory process. Using these legal foundational principles, the commenters stated that their recommendations regarding flaws in CMS's approach related to the calculation of the permanent and temporary adjustments must be addressed.

Response: CMS has responded, in this and prior HH PPS final rules (for example, 90 FR 55342), to the substance of the commenters' recurring methodological objections, including through the previous detailed responses. The APA requires reasoned engagement with significant comments, not acceptance of a commenter's preferred outcome, and CMS's obligation to explain its reasoning is unchanged by *Loper Bright. Loper Bright* addresses the standard courts apply when reviewing an agency's interpretation of statutory text; it does not impose a new or heightened comment-response obligation beyond existing APA requirements. CMS maintains that its interpretation of section 1895(b)(3)(A)(iv) of the Act—which requires that the estimated aggregate amount of expenditures under the PDGM be equal to the estimated aggregate amount of expenditures under the previous 153-group payment system—reflects the best reading of the statutory text, which is the standard *Loper Bright* directs courts to apply independently.

Comment: Some commenters stated that simulating 60-day episodes may understate differences, including differences in clinical group assignments between the pre-PDGM and the PDGM systems. They stated that because CMS assigns the first period's diagnosis and clinical group to the entire episode, it may understate counterfactual case mix when the second period reflects greater acuity and does not capture mid-episode case-mix changes permitted under the former system.

Response: Any change in the average case-mix weight is counteracted through a corresponding change in the payment rate so that aggregate expenditures are budget neutral regardless of whether there are clinical group differences. Recalibration ensures that payment incentives for future utilization are aligned with the design of the payment system (for example, recalibration ensures roughly a third of periods and episodes are in a particular functional level grouping). Any differences, such as clinical group assignments, that are part of the changes attributed to the PDGM are accounted for when we compare the aggregate expenditures from pre-PDGM and PDGM claims.

Comment: Some commenters raised concerns about the assumptions CMS used to crosswalk the Outcome and Assessment Information (OASIS)-E to OASIS–D during repricing. They believe that mapping OASIS–E responses back to earlier OASIS–E specifications could understate severity or misclassify counterfactual case-mix groups.

Response: As discussed in the CY 2025 HH PPS final rule (89 FR 88361), in response to an update of the OASIS instrument, we updated two minor technical parts and added new assumptions in the first repricing step (creating simulated 60-day episodes from 30-day periods). However, in the CY 2026 HH PPS final rule (90 FR 55364), we acknowledged that because it is difficult to definitively isolate the behaviors directly related to the PDGM implementation after CY 2022, we were only finalizing a permanent adjustment based on data from CYs 2020 through 2022. Because of that decision, the finalized mapping of OASIS–E to OASIS–D is not used for calculations related to the proposed payment adjustments in this final rule. While we are not implementing a permanent adjustment in this final rule, we still follow this process to provide the calculation for the illustrative permanent adjustments presented in tables 2 and 3, in order to comply with statutory requirements.

Comment: Several commenters stated that data from CYs 2020 through 2022 should also not be used to isolate PDGM-related behavior change and that consequently, those years should not be used to calculate permanent or temporary adjustments. Other commenters suggested that CMS not use CY 2022 claims as part of the repricing methodology. Commenters stated that annual recalibration began in CY 2022, not CY 2023 using disrupted CY 2020 data and that CMS should recalculate the total permanent adjustments excluding 2022 claims. Commenters noted their belief that CMS should at a minimum, not finalize the proposed −3.0 percent temporary adjustment for CY 2027, exclude the data for CY 2022, and recalculate the total permanent adjustments determined based on only the data from CYs 2020 and 2021.

Response: We remind commenters that repricing compares expenditures paid under the PDGM and pre-PDGM systems to determine if we are paying differently under the PDGM than we otherwise would have absent the new payment system (that is, the 153-group system). In the CY 2023 HH PPS proposed rule (87 FR 37615), we described an analysis that showed the decline in the average case-mix weight for simulated 60-day episodes was largely driven by reductions in therapy utilization instead of the clinical score (which may be impacted by diagnoses).

We acknowledge that the CY 2022 HH PPS final rule included recalibration of case-mix weights using CY 2020 claims and reassignment of certain ICD–10–CM codes to PDGM clinical and comorbidity groups. It is important to note that these policy changes do not affect aggregate expenditures under the PDGM. In contrast, updating LUPA visit thresholds in the CY 2023 HH PPS final rule (87 FR 66815 through 66816) did affect aggregate expenditures. In the CY 2023 final rule, we finalized our proposal to recalibrate the PDGM case-mix weights, updated points for functional impairment levels, reassigned certain ICD–10–CM codes related to the PDGM clinical groups and comorbidity groups, and updated LUPA visit thresholds using CY 2021 data (87 FR 66815 through 66846). Our data analysis indicated that visits in CY 2021 were similar to visits in CY 2020. We believed that CY 2021 data would be more indicative of visit patterns in CY 2023 rather than continuing to use the LUPA thresholds derived from the CY 2018 data pre-PDGM. Therefore, we finalized updates to the LUPA thresholds for CY 2023 using data from CY 2021.

We also remind commenters that recalibration is done in a budget neutral manner, as we apply a case-mix weight recalibration budget neutrality factor to the national standardized 30-day payment rate. Regarding concerns from commenters about using claims data from CY 2022, we provided analysis in the CY 2026 HH PPS final rule (90 FR 55364 through 55366) that suggested that provider behavior changed more significantly in the years immediately following the implementation of the PDGM, but decreased in magnitude overall starting in CY 2023. These changes, that may indicate HHAs were adapting to the implementation of a new case-mix system, have decreased in magnitude (90 FR 29121 through 29125) to the extent that we believe the implementation of the PDGM is the reason for these changes through CY 2022.

We remind commenters when analyzing the overall home health trends, such as the distribution of 30-day periods of care by the twelve PDGM clinical groups, distribution of 30-day periods of care by admission source and timing, distribution of 30-day periods of care by functional impairment level, distribution of 30-day periods with therapy and non-therapy visits, and average therapy visits per 30-day period by clinical group (Tables 6, 8, 9, and 10 and Figure 3 in the CY 2026 HH PPS proposed rule (90 FR 29121 through 29125)), we see indicators that suggest provider behavior changed more significantly in the years immediately following the implementation of the PDGM, but has decreased in magnitude overall starting in CY 2023.

MedPAC's analysis of home health trends after implementation of the PDGM is consistent with our findings. In its March 2026 Report to Congress, MedPAC provided a mandated report on the impact of the implementation of the PDGM.[4] The report examined outcomes from home health care services regardless of whether they were preceded by a hospitalization. MedPAC stated that fewer therapy visits per episode were directionally consistent with the PDGM's exclusion of the number of therapy visits as a payment factor and referenced CMS's concern for how the prior payment system encouraged therapy provision through financial incentives rather than patient need. Overall, MedPAC found that the implementation of the PDGM did not substantially affect overall access to home health care and that the transition to the new case-mix system did not negatively affect beneficiaries. As presented in Figures 14–3 and 14–4 of the report, our conclusion regarding the majority of behavior change occurring in CYs 2020 through 2022 is supported by MedPAC's findings, with declining trends for the share of Medicare beneficiaries with at least one home health stay and reduction of average number of visits per stay during CYs 2020 through 2022. That is, the most substantial declines occurred in the first few years after the implementation of the PDGM (that is, CYs 2020–2022).

For the reasons discussed earlier, we continue to acknowledge the difficulty in attributing any behavior change occurring from CYs 2023 through 2025 directly to the PDGM implementation and its effects on expenditures from the other policy changes occurring in those years. As discussed in the CY 2026 final rule (90 FR 55365), our analysis supports that the observed behavior changes in CYs 2020 through 2022 are attributable to the implementation of the PDGM and the 30-day unit of payment. Therefore, since the observed behavior changes directly attributable to the implementation of the PDGM occurred in CYs 2020 through 2022, we will continue to calculate the permanent adjustment for CYs 2020 through 2022. In response to commenters' request that CMS not finalize the proposed −3 percent temporary adjustment in CY 2027, we decline to do so as we continue to believe that applying a temporary adjustment in CY 2027 mitigates the need for a larger temporary adjustment in the future. Finalizing a −3 percent temporary adjustment

[4] *https://www.medpac.gov/wp-content/uploads/2026/03/Mar26_Ch14_MedPAC_Report_To_Congress_SEC.pdf.*

ensures that CMS continues to recoup retrospective overpayments as required by law and ensures financial stewardship of the Medicare Trust Funds.

Final Decision: We continue to adhere to the methodology finalized in the CY 2026 HH PPS final rule (90 FR 55365 through 55367) and reiterate that it complies with the statutory requirement to evaluate and adjust payments based on actual behavior changes on estimated aggregate expenditures. In this final rule, we exercise our authority under section 1895(b)(3)(D)(iii) of the Act to apply ''one or more'' temporary adjustments to begin recoupment of the retrospective overpayments for CYs 2020 through 2025. We are finalizing a 3.0 percent temporary reduction in CY 2027, that is equivalent to a 0.9700 temporary adjustment factor, to the CY 2027 national, 30-day payment rate. By implementing a −3.0 percent temporary adjustment, we can begin recoupment of retrospective overpayments. We determined that the total temporary adjustment dollar amount is approximately $4.9 billion through CY 2025, and we estimate that implementing a −3.0 percent temporary adjustment will allow us to recoup $500 million of this total dollar amount.

C. CY 2027 Home Health Low Utilization Payment Adjustment (LUPA) Thresholds, Functional Impairment Levels, Comorbidity Sub-Groups, and Case-Mix Weights

1. Final CY 2027 PDGM LUPA Thresholds

Under the HH PPS, LUPAs are paid when a certain visit threshold for a payment group during a 30-day period of care is not met. In the CY 2019 HH PPS final rule with comment period (83 FR 56492), we finalized a policy setting the LUPA thresholds at the 10th percentile of visits or two visits, whichever is higher, for each PDGM payment group. This means the LUPA threshold for each 30-day period of care varies depending on the PDGM payment group to which it is assigned. If the LUPA threshold for the payment group is met under the PDGM, the 30-day period of care will be paid the full 30-day period case-mix adjusted payment amount (subject to any partial payment adjustment or outlier adjustments). If a 30-day period of care does not meet the PDGM LUPA visit threshold, then payment will be made using the per-visit payment amounts as described in section II.E.4.c. of this final rule. For example, if the LUPA visit threshold is four, and a 30-day period of care has four or more visits, it is paid the full 30-day period payment amount; if the period of care has three or fewer visits, payment is made using the per-visit payment amounts.

In the CY 2019 HH PPS final rule with comment period (83 FR 56492), we finalized our policy that the LUPA thresholds for each PDGM payment group will be reevaluated every year based on the most current utilization data available at the time of rulemaking. However, as CY 2020 was the first year of the new case-mix adjustment methodology, we stated in the CY 2021 HH PPS final rule (85 FR 70305, 70306) that we will maintain the LUPA thresholds that were finalized and shown in table 17 of the CY 2020 HH PPS final rule with comment period (84 FR 60522) for CY 2021 payment purposes. We stated that at that time, we did not have sufficient CY 2020 data to reevaluate the LUPA thresholds for CY 2021.

In the CY 2022 HH PPS final rule with comment period (86 FR 62249), we finalized the proposal to recalibrate the PDGM case-mix weights, functional impairment levels, and comorbidity subgroups while maintaining the LUPA thresholds for CY 2022. We stated that because there are several factors that contribute to how the case-mix weight is set for a particular case-mix group (such as the number of visits, length of visits, types of disciplines providing visits, and non-routine supplies) and the case-mix weight is derived by comparing the average resource use for the case-mix group relative to the average resource use across all groups, we believe the COVID–19 PHE would have impacted utilization within all case-mix groups similarly. Therefore, the impact of any reduction in resource use caused by the COVID–19 PHE on the calculation of the case-mix weight will be minimized since the impact will be accounted for both in the numerator and denominator of the formula used to calculate the case-mix weight. However, in contrast, the LUPA thresholds are based on the number of overall visits in a particular case-mix group (the threshold is the 10th percentile of visits or 2 visits, whichever is greater) instead of a relative value (like what is used to generate the case-mix weight) that will control for the impacts of the COVID–19 PHE. We noted that visit patterns and some of the decrease in overall visits in CY 2020 may not be representative of visit patterns in CY 2022. Therefore, to mitigate any potential future and significant short-term variability in the LUPA thresholds due to the COVID–19 PHE, we finalized the proposal to maintain the LUPA thresholds finalized and displayed in table 17 in the CY 2020 HH PPS final rule with comment period (84 FR 60522) for CY 2022 payment purposes.

For CY 2024, we proposed to update the LUPA thresholds using CY 2022 Medicare home health claims (as of March 17, 2023) linked to OASIS assessment data. We believed that CY 2022 data would be more indicative of visit patterns in CY 2024 rather than continuing to use the LUPA thresholds derived from the CY 2018 data pre-PDGM. Therefore, we finalized a policy to update the LUPA thresholds for CY 2024 using data from CY 2022.

For CY 2027, we proposed to update the LUPA thresholds using CY 2025 home health claims utilization data (using more complete CY 2025 claims data as of July 14, 2026), in accordance with our policy to annually recalibrate the case-mix weights and update the LUPA thresholds, functional impairment levels, and comorbidity subgroups. After reviewing the CY 2025 home health claims utilization data, we determined that LUPA visit patterns in 2025 were similar to visits in 2024 and a total of 10 case-mix groups had a decline in their LUPA threshold of a single visit and one case-mix group had their LUPA threshold increase by a single visit. The proposed LUPA thresholds for the CY 2027 PDGM payment groups with the corresponding Health Insurance Prospective Payment System (HIPPS) codes and the case-mix weights can be found in the CY 2027 HH PPS proposed rule (91 FR 41255).

We solicited public comment on the proposed updates to the LUPA thresholds for CY 2027. The following is a summary of the comments we received and our responses.

Comment: Most commenters expressed support for CMS's continued practice of annually recalibrating LUPA thresholds using the most recent complete claims data and characterized the proposed threshold reductions across 18 payment groups as ''modest but directionally favorable''. Two commenters identified a proposed LUPA threshold of 3.5 visits for HIPPS Code 4LC11 in the ''CY 2027 Proposed HH PDGM Case Mix Weights and LUPA Thresholds'' file (as posted on the HHA Center web page, located at *https://www.cms.gov/medicare/enrollment-renewal/providers-suppliers/home-health-agency-center*), and asked CMS to clarify whether this should be read as 3 visits, 4 visits, or whether it reflects a true partial threshold.

Response: We thank commenters for their support and feedback on the annual recalibration for LUPA thresholds. We calculated the proposed CY 2027 LUPA thresholds using CY

2025 home health claims utilization data as of March 15, 2026, which identified 18 case-mix groups with a one-visit decrease. We are finalizing CY 2027 LUPA thresholds using more complete CY 2025 home health claims utilization data as of July 14, 2026, which shifted the visit distribution for eight of the 18 proposed groups and reduced the final count to 10 case-mix groups with a one-visit decrease.

Additionally, we reviewed the case-mix weight and LUPA thresholds published in the CY 2027 HH PPS proposed rule (91 FR 41261) in response to these comments and can confirm that the value of 3.5 visits listed for HIPPS Code 4LC11 was the result of an inadvertent technical error. LUPA visit thresholds are calculated as whole numbers, consistent with all other case-mix groups. We are publishing the corrected, finalized whole number LUPA threshold for HIPPS Code 4LC11 of three for CY 2027 in this final rule and are correcting this error in the technical files accompanying the final rule. We are otherwise finalizing the LUPA thresholds contained in table 11 using more complete CY 2025 claims data as of July 14, 2026.

Comment: Some commenters raised concerns that CMS is basing updates to the proposed LUPA thresholds on potentially fraudulent data, pointing specifically to clinically complex, short duration episodes and what they describe as high fraud areas such as Los Angeles County. These commenters stated that this distortion disadvantages legitimate HHAs that serve genuinely high-cost patients as fraudulent, low-acuity, high-volume billing skews the ratio's underlying data.

Response: We appreciate commenters' concerns about potential fraudulent billing and its impact on the proposed LUPA thresholds. However, we remind commenters that outlier billing patterns do not necessarily indicate fraudulent practice. We did not propose, and are not adopting, a geographic exclusion or separate modeling approach for identified outliers in calculating the CY 2027 LUPA thresholds. As such, we include the most recent and complete claims data available when it updates the LUPA thresholds. Nevertheless, we thank commenters for sharing their insight on how CMS can address fraud concerns in the home health market. Depending on the circumstances, an anomalous pattern can prompt further review and may trigger an investigation into fraud, waste, and abuse. Specifically, cost report fraud and abusive billing behavior require action through the appropriate channels that hold enforcement authority and we encourage commenters to report suspected fraud at: *https://www.cms.gov/medicare/medicaid-coordination/center-program-integrity/reporting-fraud.*

Comment: One commenter recommended that when CMS adjusts clinical group assignments or comorbidity subgroups affecting LUPA thresholds, CMS should release revised grouper specifications and testing files at least 90–120 days prior to the January 1 effective date, to prevent claims disruption across clearinghouses and billing vendors.

Response: We thank the commenter for this feedback. The ICD–10–CM diagnosis code mappings used by the grouper (clinical groupings, comorbidity adjustments) and the LUPA thresholds are typically previewed in the proposed rule (published around late June/early July) so stakeholders can comment, and are then finalized in the final rule (published in early November). Each update of the Home Health Grouper software is available for beta testing approximately 6–8 weeks prior to the implementation date, and shortly before the final rule is published. To sign up to beta test the home health software release, stakeholders can email *hhppsgrouperemail@solventum.com* and provide their contact information. However, because we are still finalizing edits to diagnosis mapping based on comments received on the elements that make up the home health grouper that are previewed in the proposed rule, CMS cannot release the beta testing any sooner than 6–8 weeks prior to the implementation date.

Final Decision: We are finalizing the LUPA threshold updates as proposed for CY 2027 using CY 2025 home health claims utilization data (using more complete CY 2025 claims data as of July 14, 2026), including the one-visit decrease for ten case-mix groups and the one-visit increase for one case-mix group. The final LUPA thresholds for the CY 2027 PDGM payment groups with the corresponding Health Insurance Prospective Payment System (HIPPS) codes and the case-mix weights are listed in table 11 and are also available on the HHA Center web page, located at *https://www.cms.gov/medicare/enrollment-renewal/providers-suppliers/home-health-agency-center.* We will continue to monitor national LUPA rates and data indicators through routine program monitoring.

2. Final CY 2027 Functional Impairment Levels

Under the PDGM, the functional impairment level is determined by responses to certain OASIS items associated with activities of daily living and risk of hospitalization; that is, responses to OASIS items M1800–M1860 and M1033. A home health period of care receives points based on each of the responses associated with these functional OASIS items, which are then converted into a table of points corresponding to increased resource use. The sum of all these points results in a functional impairment score which is used to group home health periods into a functional level with similar resource use. That is, the higher the points, the more the response is associated with increased resource use, or increased impairment. The three functional impairment levels of low, medium, and high were designed so that approximately one-third of home health periods from each clinical group falls within each level. This means home health periods in the low impairment level have responses for the functional OASIS items that are associated with the lowest resource use, on average. Home health periods in the high impairment level have responses for the functional OASIS items that are associated with the highest resource use on average.

For CY 2027, we proposed using CY 2025 claims data to update the functional points and functional impairment levels by clinical group. The CY 2018 HH PPS proposed rule (82 FR 35320) and the technical report from December 2016, posted on the Home Health PPS Archive web page, located at *https://www.cms.gov/medicare/home-health-pps/home-health-pps-archive,* provide a more detailed explanation as to the construction of the functional impairment levels using the OASIS items. We proposed to use the same methodology previously finalized to update the functional impairment levels for CY 2027. The final updated OASIS functional points table and the table of functional impairment levels by clinical group for CY 2027 are listed in tables 6 and 7, respectively.

BILLING CODE 4169–69–P

TABLE 6: FINAL OASIS POINTS TABLE FOR CY 2027

	Responses	CY 2027 Points	Percent of Periods with this Response Category*
M1800: Grooming	0 or 1	**0**	**21.5%**
	2 or 3	**3**	**78.5%**
M1810: Current Ability to Dress Upper Body	0 or 1	**0**	**15.9%**
	2 or 3	**5**	**84.1%**
M1820: Current Ability to Dress Lower Body	0 or 1	**0**	**7.7%**
	2	**4**	**63.5%**
	3	**11**	**28.8%**
M1830: Bathing	0 or 1	**0**	**2.0%**
	2	**2**	**8.6%**
	3 or 4	**8**	**48.0%**
	5 or 6	**16**	**41.3%**
M1840: Toilet Transferring	0 or 1	**0**	**58.3%**
	2, 3 or 4	**6**	**41.7%**
M1850: Transferring	0	**0**	**1.0%**
	1	**3**	**16.4%**
	2, 3, 4 or 5	**5**	**82.6%**
M1860: Ambulation/Locomotion	0 or 1	**0**	**2.7%**
	2	**4**	**13.3%**
	3	**0**	**66.2%**
	4, 5 or 6	**19**	**17.8%**
M1033: Risk of Hospitalization	Three or fewer items marked (Excluding responses 8, 9 or 10)	**0**	**52.9%**
	Four or more items marked (Excluding responses 8, 9 or 10)	**11**	**47.1%**

Source: CY 2025 Home Health Claims Data, Periods that end in CY 2025 accessed from the CCW on July 14, 2026.
Note: *For item M1860, the point values for response 2 is worth more than the point values for response 3. There may be times in which the resource use for certain OASIS items associated with functional impairment will result in a seemingly inverse relationship to the response reported. However, this is the result of the direct association between the responses reported on the OASIS items and actual resource use. For item M1033, responses 8,9 and 10 represent "currently reports exhaustion", "other risk(s) not listed in 1-8", and "none of the above", respectively.*

TABLE 7: FINAL THRESHOLDS FOR FUNCTIONAL LEVELS BY CLINICAL GROUP, FOR CY 2027

Clinical Group	Level of Impairment	CY 2027 Points
MMTA - Other	Low	**0-30**
	Medium	**31-42**
	High	**43+**
Behavioral Health	Low	**0-31**
	Medium	**32-44**
	High	**45+**
Complex Nursing Interventions	Low	**0-31**
	Medium	**32-55**
	High	**56+**
Musculoskeletal Rehabilitation	Low	**0-31**
	Medium	**32-44**
	High	**45+**

BILLING CODE 4169–69–C

We solicited public comment on the proposed updates to the functional points and the functional impairment levels by clinical group. The following is a summary of the comments we received and our responses.

Comment: Several commenters opposed CMS's proposal to reduce the point value assigned to OASIS item M1860 response ''3'' (*for* ''*able to walk only with the supervision or assistance of another person at all times*'') to zero points for CY 2027, which is down from 1 point in CY 2026 and down from 6 points as recently as CY 2022. These commenters stated that M1860 response ''3'' covers a wide and clinically meaningful range of ambulation impairment (ranging from contact guard assistance to maximum assist) and that collapsing it to zero points equates it with no impairment at all and resultingly makes it appear progressively less resource intensive solely as a result of annual recalibration. Commenters requested that CMS explain the basis for the change and commit to a stable and anchored scoring approach for M1860 response ''3'' going forward. Other commenters raised similar concerns that the proposed functional impairment thresholds could shift a meaningful number of patient episodes from high to medium and medium to low functional impairment classifications, even though the underlying clinical needs of those patients have not changed. A few commenters identified specific proposed point reductions, including point values for M1830 (*bathing*) and for M1820 (*ability to dress lower body*) at low to moderate impairment levels, while severe impairment levels remain largely unchanged.

Commenters stated that this pattern in which response categories that encompass wide and clinically meaningful ranges of impairment are reduced in points, effectively equating those levels of impairment with no impairment at all and, consequently, making them appear progressively less resource intensive even though the underlying clinical needs of the patients have not changed concentrates payment recognition only on the most severely

dependent patients and undervalues resources devoted to patients with low to moderate limitations. To counter this, commenters recommended CMS implement greater stability in the functional scoring methodology by implementing fixed functional point values for a multiyear period, recalibrating only when CMS identifies statistically/clinically meaningful changes in patient needs rather than through full annual recalibration.

Response: We proposed the revised M1860, M1830 and M1820 point values based on updated regression analysis of CY 2025 claims and OASIS data reflecting the empirical association between OASIS responses and resource utilization, consistent with the same methodology CMS has applied in each annual PDGM recalibration cycle since implementation. CMS recognizes that HHAs whose patient populations differ from the national distribution may experience varied effects from the nationally calibrated set of functional impairment thresholds. However, functional impairment levels are calibrated using national data to ensure the methodology reflects resource use across the Medicare home health population as a whole, as we believe annual recalibration using the most recent complete data year is necessary to ensure functional impairment scoring continues to reflect current clinical and utilization patterns. As such CMS declines to propose or implement a floor or multiyear fix on point values for any individual OASIS response.

Comment: Several commenters recommended that CMS transition away from OASIS M items toward the exclusive use of GG functional items in order to determine functional impairment levels, highlighting that GG items would provide more clinically precise measurement and would better differentiate differences in resource use that the current OASIS M item categories collapse into a single data point.

Response: We appreciate commenters' interest in a potential transition to Section GG items for functional impairment scoring. We will continue to evaluate the feasibility of using the GG items for payment.

Comment: A few commenters challenged the structural basis of CMS's functional impairment methodology, under which point values and thresholds are calibrated so that approximately one third of periods within each clinical group fall into the low, medium, and high functional impairment categories, characterizing this as ''arbitrary''.

Response: We thank commenters for their feedback and note that the functional impairment levels are structured so that approximately one-third of periods within each clinical group are assigned to low, medium, and high categories, as this ensures that the case-mix system appropriately reflects differences in functional impairment. This classification of functional impairment has been a fundamental component of the HH PPS since its implementation and remains essential under the PDGM. Previously, the HH PPS grouped home health episodes using functional scores based on functional OASIS items with similar average resource use within the same functional level, with approximately a third of episodes classified as low, a third classified as medium, and a third classified as high functional impairment. Likewise, the PDGM groups home health periods of care using functional impairment scores based on functional OASIS items with similar resource use and has three levels of functional impairment severity: low, medium, and high. However, the PDGM differs from the previous HH PPS functional variable in that the three functional impairment level thresholds in the PDGM vary between the clinical groups. As such, the PDGM functional impairment structure accounts for patient characteristics within each clinical group that are associated with increased resource use due to functional impairment. This ensures that payment is more accurately aligned with patient characteristics, including beneficiaries who have greater need with activities of daily living (ADLs) and who are more functionally impaired. Updating the functional impairment levels based on the most current OASIS and claims data ensures that the payment system captures changes in functional impairment and the associated increases in resource use. Regardless of whether patients entering home health are more impaired due to shifts in the broader health care system or any other influence, the functional levels capture the relationship between functional status as indicated on the OASIS with resource use captured on claims. While we acknowledge commenters' concerns, we emphasize that the proposed recalibration is designed to strengthen the alignment between payment and patient characteristics, not to diminish access to medically necessary services. As such, updating the functional levels would specifically capture any changes in functional impairment and any changes in resource use associated with ADLs.

Final Decision: We are finalizing the functional points and functional impairment level updates for CY 2027 as proposed, using updated CY 2025 claims data (as of July 14, 2026).

3. Final CY 2027 Comorbidity Subgroups

Thirty-day periods of care receive a comorbidity adjustment category based on the presence of certain secondary diagnoses reported on home health claims. These diagnoses are based on a home-health specific list of clinically and statistically significant secondary diagnosis subgroups with similar resource use, meaning the diagnoses have at least as high as the median resource use and are reported in more than 0.1 percent of 30-day periods of care. Home health 30-day periods of care can receive a comorbidity adjustment under the following circumstances:

- *High comorbidity adjustment:* There are two or more secondary diagnoses on the home health-specific comorbidity subgroup interaction list that are associated with higher resource use when both are reported together compared to when they are reported separately. That is, the two diagnoses may interact with one another, resulting in higher resource use.
- *Low comorbidity adjustment:* There is a reported secondary diagnosis on the home health-specific comorbidity subgroup list that is associated with higher resource use.
- *No comorbidity adjustment:* A 30-day period of care receives no comorbidity adjustment if no secondary diagnoses exist or do not meet the criteria for a low or high comorbidity adjustment.

In the CY 2019 HH PPS final rule with comment period (83 FR 56406), we stated that we will continue to examine the relationship of reported comorbidities on resource utilization and make the appropriate payment refinements to help ensure that payment is in alignment with the actual costs of providing care. For CY 2027, we proposed to use the same methodology used to establish the comorbidity subgroups to update the comorbidity subgroups using CY 2025 home health data with linked OASIS data.

For CY 2027, we proposed to update the comorbidity subgroups to include 21 low comorbidity adjustment subgroups and 100 high comorbidity adjustment interaction subgroups. The proposed CY 2027 low comorbidity adjustment subgroups and the high comorbidity adjustment interaction subgroups including those diagnoses within each of these comorbidity adjustments were

included in tables 21 and 22 in the CY 2027 HH PPS proposed rule (91 FR 41245).

Using more updated claims data for this final rule, there are 22 low comorbidity subgroups, and 103 high comorbidity subgroups for CY 2027 as shown in tables 8 and 9.

BILLING CODE 4169–69–P

TABLE 8: LOW COMORBIDITY ADJUSTMENT SUBGROUPS FOR CY 2027

Low Comorbidity Subgroup	Description
Cerebral 4	Sequelae of Cerebrovascular Diseases, includes Cerebral Atherosclerosis and Stroke Sequelae
Circulatory 10	Varicose Veins and Lymphedema
Circulatory 2	Hemolytic, Aplastic, and Other Anemias
Circulatory 7	Atherosclerosis, includes Peripheral Vascular Disease, Aortic Aneurysms and Hypotension
Circulatory 9	Other Venous Embolism and Thrombosis
Endocrine 3	Type 1, Type 2, and Other Specified Diabetes
Endocrine 4	Other Combined Immunodeficiencies and Malnutrition, includes graft-versus-host-disease
Gastrointestinal 2	Intestinal Obstruction and Ileus
Heart 10	Dysrhythmias, includes Atrial Fibrillation and Atrial Flutter
Heart 11	Heart Failure
Heart 5	Atherosclerotic Heart Disease with Angina
Neoplasms 17	Secondary neoplasms of respiratory and GI systems.
Neoplasms 18	Secondary Neoplasms of Urinary and Reproductive Systems, Skin, Brain, and Bone
Neoplasms 2	Malignant Neoplasms of Digestive Organs, includes Gastrointestinal Cancers
Neurological 10	Diabetes with neuropathy
Neurological 5	Spinal Muscular Atrophy, Systemic atrophy and Motor Neuron Disease
Neurological 7	Paraplegia, Hemiplegia and Quadriplegia
Renal 3	Other disorders of the kidney and ureter, excluding chronic kidney disease and ESRD
Respiratory 10	2019 Novel Coronavirus
Skin 1	Cutaneous Abscess, Cellulitis, and Lymphangitis
Skin 3	Diseases of arteries, arterioles and capillaries with ulceration and non-pressure chronic ulcers
Skin 4	Stages Two-Four and unstageable pressure ulcers by site

BILLING CODE 4169–69–C

We invited comments on the proposed updates to the low comorbidity adjustment subgroups and the high comorbidity adjustment

interactions for CY 2027. The following is a summary of the comments we received and our responses.

Comment: Several commenters expressed general support for CMS's proposed CY 2027 comorbidity subgroup structure, agreeing the proposed changes generally align payment with the cost of caring for patients with multiple interacting diagnoses and recommended CMS continue evaluating the reimbursement impact of comorbidity revisions for diabetes and chronic wound patients.

Response: We appreciate commenters' support and comments regarding the reimbursement impacts of the proposed comorbidity revisions for patients with diabetes and chronic wounds. CMS will continue to evaluate the effects of these revisions through annual recalibration using the most recently available data.

Comment: Some commenters raised concerns regarding proposed modifications that would lower certain wound-related high comorbidity interactions and stated this may not fully account for the skilled nursing resources required to manage patients with chronic wounds who also have diabetes, peripheral vascular disease, or renal disease, since such conditions significantly influence wound healing/hospitalization risk and require frequent clinical assessment and medication management. These commenters noted this may disproportionately affect HHAs serving medically complex wound care populations if the final subgroup structure does not adequately capture such interactions.

Response: We appreciate commenters' concerns regarding resource needs of certain patient populations. However, we proposed the revised high comorbidity interaction subgroups based on updated analysis of CY 2025 claims data, which is most appropriate as it reflects the current empirical relationship between specific diagnosis combinations and resource utilization across the Medicare home health population. We also note that the Wounds clinical group still has some of the highest case-mix weights, which should account for the resource intensity of caring for patients with wounds. We will continue to annually analyze the reported comorbidities along with the associated resource use to determine if any policy changes are necessary and appropriate in the future.

Final Decision: We are finalizing the updated comorbidity adjustment subgroups and the high comorbidity adjustment interactions using CY 2025 home health data. For CY 2027, the final updated comorbidity adjustment subgroups include 22 low comorbidity adjustment subgroups as identified in table 8 and 103 high comorbidity adjustment interaction subgroups as identified in table 9. The final CY 2027 low comorbidity adjustment subgroups and the high comorbidity adjustment interaction subgroups including those diagnoses within each of these comorbidity adjustments will also be posted on the HHA Center web page at *https://www.cms.gov/Center/Provider-Type/Home-Health-Agency-HHA-Center.*

4. Final CY 2027 PDGM Case-Mix Weights

As finalized in the CY 2019 HH PPS final rule with comment period (83 FR 56502), the PDGM places patients into meaningful payment categories based on patient and other characteristics, such as timing, admission source, clinical grouping using the reported principal diagnosis, functional impairment level, and comorbid conditions. The PDGM case-mix methodology results in 432 unique case-mix groups called home health resource groups (HHRGs). We also finalized a policy in the CY 2019 HH PPS final rule with comment period (83 FR 56515) to annually recalibrate the PDGM case-mix weights using a fixed effects model with the most recent and complete utilization data available at the time of annual rulemaking. Annual recalibration of the PDGM case-mix weights ensures that the case-mix weights reflect, as accurately as possible, current home health resource use and changes in utilization patterns. To generate the proposed recalibrated CY 2027 case-mix weights, we used CY 2025 home health claims data with linked OASIS data (as of March 15, 2026). We included the proposed case-mix weights in table 11 of the proposed rule (91 FR 41255). In this final rule, we updated these case-mix weights with claims data as of July 14, 2026, as shown in table 11. These data are the most current and complete data available at the time of this rulemaking.

The claims data provide visit-level data and data on whether non-routine supplies (NRS) were provided during the period and the total charges of NRS. We determine the case-mix weight for each of the 432 different PDGM payment groups by regressing resource use on a series of indicator variables for each of the categories using a fixed effects model as described in the following steps:

Step 1: Estimate a regression model to assign a functional impairment level to each 30-day period. The regression model estimates the relationship between a 30-day period's resource use and the functional status and risk of hospitalization items included in the PDGM, which are obtained from certain OASIS items. We refer readers to table 12 of the proposed rule for further information on the OASIS items used for the functional impairment level under the PDGM. We measure resource use with the cost-per-minute + NRS approach that uses information from 2022 home health cost reports. Other variables in the regression model include the 30-day period's admission source, clinical group, and 30-day period timing. We also include home health agency level fixed effects in the regression model. After estimating the regression model using 30-day periods, we divide the coefficients that correspond to the functional status and risk of hospitalization items by 10 and round to the nearest whole number. Those rounded numbers are used to compute a functional score for each 30-day period by summing together the rounded numbers for the functional status and risk of hospitalization items that are applicable to each 30-day period. Next, each 30-day period is assigned to a functional impairment level (low, medium, or high) depending on the 30-day period's total functional score. Each clinical group has a separate set of functional thresholds used to assign 30-day periods into a low, medium, or high functional impairment level. We set those thresholds so that we assign roughly a third of 30-day periods within each clinical group to each functional impairment level (low, medium, or high).

Step 2: A second regression model estimates the relationship between a 30-day period's resource use and indicator variables for the presence of any of the comorbidities and comorbidity interactions that were originally examined for inclusion in the PDGM. Like the first regression model, this model also includes home health agency level fixed effects and includes control variables for each 30-day period's admission source, clinical group, timing, and functional impairment level. After we estimate the model, we assign comorbidities to the low comorbidity adjustment if any comorbidities have a coefficient that is statistically significant (p-value of 0.05 or less) and which have a coefficient that is larger than the 50th percentile of positive and statistically significant comorbidity coefficients. If two comorbidities in the model and their interaction term have coefficients that sum together to exceed $150 and the interaction term is statistically significant (p-value of 0.05 or less), we

assign the two comorbidities together to the high comorbidity adjustment.

Step 3: After Step 2, each 30-day period is assigned to a clinical group, admission source category, episode timing category, functional impairment level, and comorbidity adjustment category. For each combination of those variables (which represent the 432 different payment groups that comprise the PDGM), we then calculate the 10th percentile of visits across all 30-day periods within a particular payment group. If a 30-day period's number of visits is less than the 10th percentile for their payment group, the 30-day period is classified as a Low Utilization Payment Adjustment (LUPA). If a payment group has a 10th percentile of visits that is less than two, we set the LUPA threshold for that payment group to be equal to two. That means if a 30-day period has one visit, it is classified as a LUPA and if it has two or more visits, it is not classified as a LUPA.

Step 4: Take all non-LUPA 30-day periods and regress resource use on the 30-day period's clinical group, admission source category, episode timing category, functional impairment level, and comorbidity adjustment category. The regression includes fixed effects at the level of the home health agency. After we estimate the model, the model coefficients are used to predict each 30-day period's resource use. To create the case-mix weight for each 30-day period, the predicted resource use is divided by the overall resource use of the 30-day periods used to estimate the regression.

The case-mix weight is then used to adjust the base payment rate to determine each 30-day period's payment. Table 10 shows the coefficients of the payment regression used to generate the weights, and the coefficients divided by average resource use.

BILLING CODE 4169–69–P

TABLE 10: COEFFICIENT OF PAYMENT REGRESSION AND COEFFICIENT DIVIDED BY AVERAGE RESOURCE USE

Variable	Coefficient	Percentage of 30-Day Periods for this Model	Coefficient Divided by Average Resource Use

Source: *CY 2025 Home Health Claims Data, Periods that end in CY 2025 accessed from the CCW on July 14, 2026.*

BILLING CODE 4169–69–C

Changes to the PDGM case-mix weights are implemented in a budget neutral manner by multiplying the CY 2027 national standardized 30-day period payment rate by a case-mix budget neutrality factor. Typically, the case-mix weight budget neutrality factor is also calculated using the most recent, complete home health claims data available. For CY 2027, we will continue the practice of using the most

recent complete home health claims data at the time of rulemaking, which is CY 2025 data. The case-mix budget neutrality factor is calculated as the ratio of 30-day base payment rates such that total payments when the CY 2027 PDGM case-mix weights (developed using CY 2025 home health claims data) are applied to CY 2025 utilization (claims) data are equal to total payments when CY 2026 PDGM case-mix weights (developed using CY 2024 home health claims data) are applied to CY 2025 utilization data. This produces a case-mix budget neutrality factor for CY 2027 of 1.0045.

We invited public comments on the CY 2027 proposed case-mix weights and proposed case-mix weight budget neutrality factor. The following is a summary of the comments we received and our responses.

Comment: Most commenters expressed support for CMS's practice of annually recalibrating case-mix weights using the most recent complete claims and OASIS data and generally agreed this practice is necessary to keep payment aligned with current utilization and clinical patterns.

Response: CMS appreciates commenters' support for the annual recalibration methodology required to maintain payment accuracy under the PDGM.

Comment: Some commenters raised concerns that recalibration may systematically underpay for high complexity, caregiver intensive patients (Alzheimer's disease and related dementias, wound care, high-acuity/dual-eligible populations), potentially discouraging HHAs from accepting them. Specifically, a commenter stated that the Wound clinical group, a high-acuity home health population, appears to take the largest case-mix cut. While, by contrast, MMTA–Endocrine sees a comparatively favorable increase. This commenter expressed concern that this shifts care away from HHAs who accept more complex patients, while rewarding low-acuity billing patterns.

Commenters also suggested that historical claims data used for recalibration may be distorted by what they describe as fraud/outlier billing (particularly in Los Angeles County) and COVID–19 PHE anomalies, which results in annual volatility in thresholds that ultimately creates operational/planning challenges. Commenters stated that this is especially the case for those HHAs whose patients differ from national averages leading to disproportionate payment shifts unrelated to actual patient needs.

Response: CMS notes that case-mix weights are derived from resource use patterns reflected in the most recent complete claims and assessment data, consistent with the statutory requirement to base weights on actual utilization. CMS also reminds stakeholders that the use of percentile trimming methodologies currently applied to claims data are designed to limit the influence of individual outlier claims. That said, for CY 2027, the use of CY 2025 claims represents the most complete and current data available. Also, as it relates to stakeholders' concerns regarding fraudulent/anomalous claims, we note that the recalibration methodology finalized in the CY 2019 HH PPS rule (83 FR 56502) is applied nationally and is based on the aggregate relationship between patient characteristics and observed resource use. To add, the program integrity issues are addressed through separate oversight channels and do not alter the statutory requirement for recalibrations to be implemented in a budget-neutral manner, as required by section 1895(b)(3)(A)(i) of the Act. We acknowledge that annual recalibration may contribute to year-to-year variability, but the overarching intent is to align payments as closely as possible with actual resource use. Finally, we note that the case-mix weights for high-intensity clinical and functional groups such as complex nursing, wound care, and the rehabilitation groups remain among the highest weighted case-mix weight categories for the finalized CY 2027 Home Health recalibration update. For example, the Wound-High Functional Impairment-Early-Institutional-High Comorbidity carries a case-mix weight of 1.9221, and the MMTA-Endocrine-High Functional Impairment-Early-Institutional-High Comorbidity has a case-mix weight of 1.7469. This indicates that recalibrated weights continue to account for the increased resource needs and costs associated with providing care to high-acuity patients, helping to ensure the adequate provision of needed home health services. Moreover, fraud, waste and abuse cannot be determined through claims data analysis alone. Thus, targeted program integrity efforts (which may involve examining individual providers and claims via established processes) remain the appropriate mechanism to identify and address fraud, waste and abuse. When providers are removed from the Medicare program, their claims are no longer reflected in subsequent rate-setting data. However, removal from the Medicare program for fraud, waste and abuse requires adjudicatory process. CMS cannot presumptively exclude all claims from the recalibration data set based on geographic location (such as Los Angeles County, as raised by commenters) or general utilization patterns (such as anomalous or outlier claims), and deem them as fraudulent absent this adjudicatory process or simply because of stakeholders' assertions alone. Nevertheless, CMS will continue to evaluate ways to improve transparency while monitoring broader system trends such as rising acuity, workforce shortages, and operational costs, as appropriate.

Comment: One commenter raised a distinct case-mix-adjacent concern regarding the admission-source variable used in the HH PPS case-mix adjustment methodology. This commenter noted that the CY 2026 Hospital Outpatient Prospective Payment System final rule finalized a three-year phasing out of the inpatient only list with an expansion of procedures permitted in ambulatory surgical centers. The commenter stated that as care continues shifting from inpatient to outpatient settings, the admission source distribution used in case-mix adjustment will change in ways not fully captured by historical home health claims data, and asked CMS to continue monitoring and assessing whether refinements to the admission-source variable are warranted.

Response: We acknowledge this comment and reiterate our commitment to continue monitoring whether refinements to the admission-source variable are warranted for consideration in future rulemaking as appropriate.

Final Decision: We are finalizing the recalibrated case-mix weights for CY 2027, updated with claims data as of July 14, 2026. We did not receive any comments on the proposed case-mix weight budget neutrality factor. Therefore, we are finalizing the proposal to implement the changes to the PDGM case-mix weights in a budget neutral manner by applying a case-mix budget neutrality factor to the CY 2027 national, standardized 30-day period payment rate. As stated previously, the final case-mix budget neutrality factor for CY 2027 is 1.0047.

E. Final CY 2027 Home Health Payment Rate Updates

1. Final CY 2027 Home Health Market Basket Update for HHAs

Section 1895(b)(3)(B) of the Act requires that the standard prospective payment amounts for home health be increased by a factor equal to the applicable home health market basket update for those HHAs that submit

quality data as required by the Secretary. In the CY 2024 HH PPS final rule (88 FR 77726), we finalized a rebasing of the home health market basket to reflect 2021 cost report data. We also finalized a policy for CY 2024 and subsequent years that the labor-related share is 74.9 percent, and the non-labor-related share is 25.1 percent. A detailed description of how we rebased the home health market basket and labor-related share is available in the CY 2024 HH PPS final rule (88 FR 77726 through 77742).

In the CY 2015 HH PPS final rule (79 FR 38384), we finalized our methodology for calculating and applying the productivity adjustment. As we explained in that rule, section 1895(b)(3)(B)(vi) of the Act, requires that, in CY 2015 (and in subsequent calendar years, except CY 2018 (under section 411(c) of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, enacted April 16, 2015)) and CY 2020 (under section 53110 of the Balanced Budget Act of 2018)), the market basket percentage under the HH PPS as described in section 1895(b)(3)(B) of the Act be annually adjusted by changes in economy-wide productivity. Section 1886(b)(3)(B)(xi)(II) of the Act defines the productivity adjustment as equal to the 10-year moving average of change in annual economy-wide private nonfarm business multifactor productivity (as projected by the Secretary for the 10-year period ending with the applicable fiscal year, calendar year, cost reporting period, or other annual period). The Bureau of Labor Statistics (BLS) publishes the official measures of productivity for the United States economy. The productivity measure referenced in section 1886(b)(3)(B)(xi)(II) of the Act is published by BLS as private nonfarm business total factor productivity (TFP) (previously referred to as multifactor productivity).[5] We refer readers to *https://www.bls.gov/productivity* for the BLS historical published TFP data. A complete description of IHS Global Inc.'s (IGI) TFP projection methodology is available on the CMS website at *https://www.cms.gov/data-research/statistics-trends-and-reports/medicare-program-rates-statistics/market-basket-research-and-information.*

The proposed home health update percentage for CY 2027 was based on the estimated home health market basket percentage increase, specified at section 1895(b)(3)(B)(iii) of the Act, of 3.1 percent (based on IHS Global Inc.'s first quarter 2026 forecast with historical data through fourth quarter 2025). The estimated CY 2027 proposed home health market basket percentage increase of 3.1 percent was then reduced by a productivity adjustment, in accordance with section 1895(b)(3)(B)(vi) of the Act. Based on IGI's first quarter 2026 forecast, the proposed productivity adjustment was estimated to be 1.0 percentage point for CY 2027. Therefore, the proposed productivity-adjusted CY 2027 home health market basket update was 2.1 percent (proposed 3.1 percent market basket percentage increase, reduced by a proposed 1.0 percentage point productivity adjustment). Furthermore, we proposed that if more recent data became available (for example, a more recent estimate of the market basket percentage increase and/or productivity adjustment), we would use such data, if appropriate, to determine the CY 2027 market basket percentage increase and productivity adjustment in the final rule.

Section 1895(b)(3)(B)(v) of the Act requires that the home health percentage update be decreased by 2 percentage points for those HHAs that do not submit quality data as required by the Secretary. For HHAs that do not submit the required quality data for CY 2027, the proposed home health payment update percentage was 0.1 percent (2.1 percent minus 2 percentage points).

We invited public comments on the proposed CY 2027 home health market basket percentage increase and productivity adjustment.

We received public comments on the proposed home health update percentage. The following is a summary of the comments we received and our responses.

Comment: While several commenters expressed support for the proposed 2.1 percent market basket update, many expressed that the proposed market basket percentage increase is inadequate to offset actual growth in the cost of furnishing home health care. Commenters most frequently cited rising labor costs (including wages, benefits, and recruitment/retention expenses), transportation and fuel costs, medical supply and pharmaceutical costs, and technology, cybersecurity, and regulatory compliance costs as exceeding the rate of the proposed market basket update.

A few commenters noted that cumulative market basket updates from CY 2020 through CY 2027 have lagged behind overall inflation indices such as the Employer Cost Index for Total Compensation and the Producer Price Index for All Commodities over the same period.

A few commenters requested that CMS clarify its market basket forecasting methodology and publish underlying data supporting the update calculation.

Response: Section 1895(b)(3)(B) of the Act requires that the standard prospective payment amounts be increased by a factor equal to the applicable home health market basket update for those HHAs that submit quality data as required by the Secretary. The home health market basket is a fixed-weight, Laspeyres-type price index, which measures the change in price, over time, of the mix of goods and services included in home health services that were purchased in the base period. Therefore, the market basket is designed to measure price inflation for HHAs and does not reflect increases in costs associated with changes in the volume or intensity of input goods and services. The home health market basket was last rebased to reflect a 2021 base year effective for CY 2024. We refer commenters to the CY 2024 HH PPS final rule (88 FR 77726) for a detailed description of the methodology used to rebase the home health market basket.

CMS understands that the market basket updates may differ from other overall inflation indexes; however, we reiterate that these topline indexes are not comparable since they measure different mixes of products, services, or wages than the legislatively defined CMS home health market basket. CMS welcomes feedback on alternative data sources for the market basket price proxies that appropriately measure price inflation and not costs. Suggestions can be emailed to *cmsdnhs@cms.hhs.gov.*

We acknowledge commenters' requests for CMS to provide additional information on the assumptions and inputs that go into developing a market basket update. As previously noted, the detailed market basket cost weights (including the methodology) and price proxies used in the market baskets were set forth in the CY 2024 HH PPS final rule (88 FR 77726). Additionally, we continually make available on the CMS website (*https://www.cms.gov/data-research/statistics-trends-and-reports/medicare-program-rates-statistics/market-basket-data*) the detailed historical growth rates for the market baskets as well as price forecasts for the aggregated cost weights (such as compensation and utilities). We reiterate that the price proxy forecasts that underlie the home health market basket percentage increase (and all CMS market baskets) are derived from proprietary data produced by IHS

[5] *https://www.bls.gov/productivity/notices/2021/mfp-to-tfp-term-change.htm.*

Global Inc. (IGI), a nationally recognized economic and financial forecasting firm. Because these forecasts are proprietary to IGI, CMS cannot make the full underlying data publicly available. CMS uses independent, third-party forecasting services such as IGI specifically to ensure that the market basket projections reflect sound, objective economic analysis. We also note that when developing its forecast for the various price indexes used in the home health market basket, IGI considers industry-specific and overall macroeconomic factors that influence pricing trends. We strive for transparency regarding our methods and note that general inquiries on the forecasting methodology can be emailed to *cmsdnhs@cms.hhs.gov.*

Comment: Several commenters identified a cumulative home health market basket forecast error of approximately 7.3 to 7.6 percentage points for calendar years 2021 through 2025. Commenters assert that this forecast error has been permanently embedded in the home health payment rates contributing to the chronic underfunding of home health services relative to actual costs incurred.

Some commenters requested that CMS finalize a one-time forecast error correction of approximately 7.6 percentage points to remedy this cumulative underpayment.

Response: While the projected home health market basket updates have recently been underforecast (actual increases less forecasted increases were positive), over longer periods the forecasts have generally averaged close to the historical measures. The cumulative forecast error since HH PPS inception (fiscal year 2002 to CY 2025, excluding CY 2018 and CY 2020 when the market basket update was statutorily mandated) is 0.5 percent. CMS will continue to monitor the methods associated with the market basket forecasts as appropriate to ensure there are not underlying systematic issues in the forecasting approach.

We note that the recent underforecast of the home health market basket increase was largely due to unanticipated inflationary and labor market pressures as the economy emerged from the COVID–19 PHE. However, an analysis of the forecast error of the home health market basket over a longer period of time shows the forecast error has been both positive and negative. Only considering the forecast error for years when the final home health market basket update was lower than the actual market basket update does not consider the full experience and impact of forecast error, in particular the numerous years that providers benefited from the forecast error.

For these reasons, we continue to believe it is not appropriate to include adjustments to the market basket update for future years based on the difference between the actual and forecasted market basket increase in prior years.

Comment: Several commenters stated that the statutorily required 1.0 percentage point productivity adjustment does not reflect the operational realities of home health care delivery. These commenters characterized home health as a labor-intensive service delivered to one patient at a time in dispersed geographic settings, arguing that meaningful productivity gains of the magnitude assumed by the broader economy-wide total factor productivity measure are not achievable in this care setting.

A few commenters cited an analysis by the CMS Office of the Actuary suggesting that only approximately 0.1 percentage point of productivity gain is realistically achievable for home health, which is substantially less than the proposed 1.0 percentage point reduction.

A few commenters noted that the proposed 1.0 percent home health productivity adjustment is inconsistent with the 0.9 percent productivity adjustment applied to hospice payments, despite the similarity of the two programs' labor-intensive, in-home workforce models, and requested that CMS reconcile this discrepancy.

One commenter stated that the productivity adjustment has been applied asymmetrically over time, noting that CMS set the productivity adjustment to zero in FY 2021 a year when application of the standard methodology would have increased (not decreased) payments, and asserted that this asymmetry has widened the gap between home health payments and actual provider costs over time.

A few commenters suggested that CMS work with Congress or use its ''special exceptions and adjustments'' authority to reduce or waive the 1.0 percent productivity adjustment for CY 2027 in light of workforce shortages and rising patient acuity.

Response: Section 1895(b)(3)(B)(vi) of the Act requires the application of the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act to the HH PPS market basket increase factor. As required by statute, the CY 2027 productivity adjustment is derived based on the 10-year moving average growth in economy-wide nonfarm business TFP for the period ending in CY 2027. We recognize the concerns of commenters regarding the appropriateness of the productivity adjustment; however, we are required under section 1895(b)(3)(B)(vi) of the Act to apply the specific productivity adjustment described here.

We note that the differing productivity adjustments between home health and hospice that commenters identified are due to timing and data availability rather than industry characteristics. Both productivity adjustments use the most recent published BLS historical TFP data (*https://www.bls.gov/productivity*) at the time of rulemaking, and IGI's projection model (*https://www.cms.gov/research-statistics-data-and-systems/statistics-trends-and-reports/medicareprogramratesstats/downloads/tfp_methodology.pdf*) is used to derive annual TFP growth rates for 2026 and 2027. The annual index level derived from this method is then interpolated to quarterly levels, and the FY 2027, or hospice, productivity adjustment is equal to the percent change in the 40-quarter moving average projected level for the period ending September 30, 2027 relative to the 40-quarter moving average projected level for the period ending September 30, 2026. For more information on the FY 2027 productivity adjustment used to update hospice rates, refer to the FY 2027 Hospital Inpatient Prospective Payment System Final Rule (91 FR 49931). Similarly, the CY 2027, or home health, productivity adjustment is equal to the percent change in the 40-quarter moving average projected level for the period ending December 31, 2027 relative to the 40-quarter moving average projected level for the period ending December 31, 2026. We believe our methodology for the productivity adjustment is consistent with section 1886(b)(3)(B)(xi)(II) of the Act, which states that the productivity adjustment is equal to the 10-year moving average of changes in annual economy-wide private nonfarm business multi-factor productivity (as projected by the Secretary for the 10-year period ending with the applicable fiscal year, year, cost reporting period, or other annual period).

At the time of this final rule, the 2027 productivity adjustment reflects BLS historical TFP data through 2025 (released on March 19, 2026) and IGI's forecasted TFP growth for 2026 and 2027. The average annual growth rate of historical TFP published by BLS for 2018 through 2025 is currently 1.0 percent and IGI is projecting average TFP growth of about 0.9 percent for 2026 and 2027 based on IGI's third quarter 2026 forecast. Combining the

historical and projected TFP data over the entire 10-year time period and interpolating into quarterly index levels results in a 10-year moving average growth rate of TFP of 1.0 percent for CY 2027 (unchanged from the CY 2027 HH PPS proposed rule).

In response to commenters' concerns about the productivity adjustment only being applied if it reduces the payment update, we note that the productivity adjustment was established under the Affordable Care Act with a specific policy intent to encourage efficiency improvements in healthcare delivery by linking Medicare payment updates to economy-wide productivity gains. The statutory language in section 1895(b)(3)(B)(vi) of the Act requires that the Secretary reduce the market basket percentage increase by changes in economy-wide productivity; therefore, only productivity adjustments that reduce the market basket percentage increase in a given year are applied.

Furthermore, we appreciate the commenters' recommendations for CMS to work with Congress or use its ''special exceptions and adjustments'' authority to reduce or waive the 1.0 percent productivity adjustment for CY 2027 in light of workforce shortages and rising patient acuity. However, the productivity adjustment is required by statute and is not subject to the Secretary's discretion. Any change to how the productivity adjustment is calculated or applied would require a legislative change, not a regulatory one.

We thank the commenters for their comments. After consideration of the comments received and consistent with our proposal, we are finalizing, as proposed, to use more recent data to determine the CY 2027 productivity adjustment for the final rule.

Final Decision: Consistent with section 1895(b)(3)(B)(vi) of the Act, we are finalizing the home health payment update methodology. The market basket percentage increase for CY 2027 for the HH PPS is based on IGI's third quarter 2026 forecast of the home health market basket percentage increase, which is estimated to be 3.1 percent. As outlined earlier in this section, we are applying a 1.0 percentage point productivity adjustment to the CY 2027 home health market basket percentage increase. Therefore, the final CY 2027 home health market basket update is equal to 2.1 percent for HHAs that submit quality data and 0.1 percent for HHAs that do not submit quality data.

2. Final CY 2027 Home Health Wage Index

a. Background

Sections 1895(b)(4)(A)(ii) and (b)(4)(C) of the Act require the Secretary to provide appropriate adjustments to the proportion of the payment amount under the HH PPS that account for area wage differences, using adjustment factors that reflect the relative level of wages and wage-related costs applicable to the furnishing of home health services. Since the inception of the HH PPS, we have used inpatient hospital wage data in developing a wage index to be applied to home health payments. We proposed to continue this practice for CY 2027, as it is our belief that, in the absence of home health-specific wage data that accounts for area differences, using inpatient hospital wage data, including taking into account any changes made by the Office of Management and Budget (OMB) to Metropolitan Statistical Area (MSA) definitions, is appropriate and reasonable for the HH PPS.

In general, OMB issues major revisions to statistical areas every 10 years, based on the results of the decennial census. However, OMB occasionally issues minor updates and revisions to statistical areas in the years between the decennial censuses. On April 10, 2018, OMB issued OMB Bulletin No. 18–03, which superseded the August 15, 2017, OMB Bulletin No. 17–01. On September 14, 2018, OMB issued OMB Bulletin No. 18–04 which superseded the April 10, 2018, OMB Bulletin No. 18–03. These bulletins established revised delineations for Metropolitan Statistical Areas, Micropolitan Statistical Areas, and Combined Statistical Areas, and provided guidance on the use of the delineations of these statistical areas. A copy of OMB Bulletin No. 18–04 may be obtained at *https://www.whitehouse.gov/wp-content/uploads/2018/09/Bulletin-18-04.pdf.* In the CY 2021 HH PPS final rule (85 FR 70298), we finalized our proposal to adopt the revised OMB delineations with a 5 percent cap on wage index decreases in CY 2021.

On July 21, 2023, OMB issued Bulletin No. 23–01, which updates and supersedes OMB Bulletin No. 20–01, issued on March 6, 2020. OMB Bulletin No. 23–01 establishes revised delineations for the MSAs, Micropolitan Statistical Areas, Combined Statistical Areas, and Metropolitan Divisions, collectively referred to as Core Based Statistical Areas (CBSAs). A copy of OMB Bulletin No. 23–01 is available online at *https://www.whitehouse.gov/wp-content/uploads/2023/07/OMB-Bulletin-23-01.pdf.*

According to OMB, the delineations from OMB Bulletin 23–01 reflect the 2020 Standards for Delineating Core Based Statistical Areas (CBSAs) (the ''2020 Standards''), which appeared in the **Federal Register** (86 FR 37770 through 37778) on July 16, 2021, and application of those standards to Census Bureau population and journey-to-work data (for example, 2020 Decennial Census, American Community Survey, and Census Population Estimates Program data). The OMB ''2020 Standards'' define a ''Metropolitan Statistical Area'' as being associated with at least one Urban Area that has a population of at least 50,000 and a ''Micropolitan Statistical Area'' as being associated with at least one Urban Area that has a population of at least 10,000, but less than 50,000 (86 FR 37778).

In the CY 2025 HH PPS final rule (89 FR 88354), we finalized our proposal to adopt the revised OMB delineations from OMB Bulletin 23–01 with a 5 percent cap on wage index decreases at the CBSA level as well as at the county level. In that final rule we stated that we believe it is important for the HH PPS wage index to use the latest OMB delineations available in order to maintain a more accurate and up-to-date payment system that reflects the reality of population shifts and labor market conditions. We also stated that we believe using the most current OMB delineations will increase the integrity of the HH PPS wage index by creating a more accurate representation of geographic variation in wage levels. In conjunction with our implementation of the revised labor market delineations beginning in CY 2025, and consistent with the treatment of Micropolitan Statistical Areas under the Inpatient Prospective Payment System (IPPS), we also finalized continuing to treat Micropolitan Statistical Areas as ''rural'' and including Micropolitan Statistical Areas in the calculation of each state's statewide rural wage index. Therefore, the HH PPS statewide rural wage index is determined using IPPS hospital data from hospitals located in Micropolitan Statistical Areas and the HH PPS wage index for each CBSA is determined using IPPS hospital data from hospitals located in Metropolitan Statistical Areas.

b. Five Percent Cap on Wage Index Decreases

In the CY 2023 HH PPS final rule (87 FR 66851 through 66853), we finalized a policy that the CY HH PPS wage index will include a permanent 5 percent cap on wage index decreases for CY 2023

and each subsequent year. Specifically, we finalized, for CY 2023 and subsequent years, the application of a permanent 5 percent cap on any decrease to a geographic area's wage index from its wage index in the prior year, regardless of the circumstances causing the decline. That is, we finalized a policy requiring that a geographic area's wage index for CY 2023 will not be less than 95 percent of its final wage index for CY 2022, regardless of whether the geographic area is part of an updated CBSA, and that for subsequent years, a geographic area's wage index will not be less than 95 percent of its wage index calculated in the prior CY.

Previously this methodology was applied to all counties that make up a CBSA or statewide rural area. However, in the CY 2025 HH PPS final rule (89 FR 88418 through 88421), because of the adoption of the revised OMB delineations from OMB Bulletin 23–01, we finalized a policy applying this methodology to individual counties. Specifically, we finalized a policy applying the 5 percent cap to counties that moved from a CBSA or statewide rural area with a higher wage index value into a new CBSA or statewide rural area with a lower wage index value, so that the county's CY 2025 wage index would not be less than 95 percent of the county's CY 2024 wage index value under the old delineation despite moving into a new delineation with a lower wage index.

Due to the way that we proposed calculating the 5 percent cap for counties that experienced an OMB designation change, some CBSAs and statewide rural areas could have had more than one wage index value. Specifically, some counties that changed OMB designations had a wage index value that was different than the wage index value assigned to the other constituent counties that made up that CBSA or statewide rural area that they moved into after the application of the 5 percent cap. However, for home health claims processing, each CBSA or statewide rural area can have only one wage index value assigned to that CBSA or statewide rural area. Therefore, we finalized a policy, beginning in CY 2025, that counties that have a different wage index value than the CBSA or rural area into which they are designated after the application of the 5 percent cap will use a wage index transition code. These special codes are five digits in length and begin with ''50'' and the remaining digits are unique for that code. The 50XXX wage index transition codes are used only in specific counties; counties located in CBSAs and rural areas that do not correspond to a different transition wage index value will still use the CBSA number.

We also finalized a policy applying the 5 percent cap to these specific counties that correspond to a different wage index value due to a delineation change until the county's new wage index is more than 95 percent of the wage index from the previous calendar year. In order to capture the correct wage index value, an HHA will continue to use the assigned 50XXX transition code on home health claims for services in these counties until the county's wage index value calculated for that calendar year using the new OMB delineations is not less than 95 percent of the county's capped wage index from the previous calendar year.

For CY 2027, the 5 percent cap on wage index decreases will continue to be calculated at the county level as well as the CBSA and statewide rural area level. While some counties that required a transition code for CY 2025 and CY 2026 will continue to use the same transition code for CY 2027, other counties that required a transition code in CY 2025 and CY 2026 will no longer require a transition code in CY 2027. The counties that will no longer require a transition code beginning in CY 2027 have a CY 2027 wage index value in the CBSA or rural area that the county was redesignated into that is higher than 95 percent of the county's CY 2026 wage index. Therefore, these counties will use the CBSA or rural county code of the area into which they were redesignated based on OMB Bulletin No. 23–01.

While we did not propose any changes to the 5 percent cap policy for CY 2027, we did receive a few comments on the finalized policies. The following is a summary of the comments we received and our responses:

Comment: A few commenters expressed support for the finalized 5 percent cap policy.

Response: We thank the commenters for their support.

Comment: Some commenters recommended changes to the finalized cap percentage. Specifically, some commenters suggested reducing the cap percentage. These commenters suggested that even wage-index declines within the 5 percent cap can erase most of the annual payment update in competitive markets like Pennsylvania, Northern California, and Michigan, leaving providers with net increases of only 0.4 to 0.5 percent. Therefore, a commenter recommended lowering the cap percentage to 2 percent, while another commenter requested a provider-level floor limiting total revenue loss to 1 percent. Another commenter suggested that CMS could limit a provider's wage-index-related payment loss relative to the overall annual payment update or adopt another methodology that provides a more gradual transition where updated geographic data produce substantial reductions.

Response: We appreciate commenters' recommendations for changes to the finalized 5 percent cap policy. However, we did not propose to make changes to this policy in the CY 2027 HH PPS proposed rule. Therefore, these comments are outside the scope of the proposed rule. Any changes to the finalized 5 percent cap policy would need to go through notice and comment rulemaking. However, consistent with our finalized 5-percent cap policy outlined in the CY 2023 HH PPS final rule (66851 through 66853), we continue to believe that 5 percent is a reasonable level for the cap because it would more effectively mitigate any significant decreases in a geographic area's wage index for a calendar year, while still balancing the importance of ensuring that area wage index values accurately reflect relative differences in area wage levels. Furthermore, we believe that the 5 percent cap on wage index decreases provides a degree of predictability in payment changes for providers and allows providers time to adjust to any significant decreases they may face year to year.

Final Decision: We did not propose any changes to the finalized 5 percent cap policy in the proposed rule. Therefore, the CY 2027 HH PPS wage index will continue to include the 5 percent cap on wage index decreases. For CY 2027, the 5 percent cap on wage index decreases will also continue to be calculated at the county level. While some counties that required a transition code for CY 2025 and CY 2026 will continue to use the same transition code for CY 2027, other counties that previously required a transition code will no longer require a transition code in CY 2027. These counties will use the CBSA or rural county code of the area they were redesignated into based on OMB Bulletin No. 23–01. The complete list of counties and corresponding transition codes can be found as a separate tab in the calendar year's wage index file located on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/home-health-pps/home-health-pps-wage-index.*

c. Final CY 2027 HH PPS Wage Index

The appropriate wage index value is applied to the labor portion of the HH

PPS rates based on the site of service for the beneficiary (defined in section 1861(m) of the Act as the beneficiary's place of residence). For CY 2027, we proposed to base the HH PPS wage index on the FY 2027 hospital pre-floor, pre-reclassified wage index for hospital cost reporting periods beginning on or after October 1, 2022, and before October 1, 2023 (FY 2023 cost report data). The CY 2027 HH PPS wage index would not take into account any geographic reclassification of hospitals, including those in accordance with sections 1886(d)(8)(B) or 1886(d)(10) of the Act but would include the 5 percent cap on wage index decreases as discussed previously.

There exist some geographic areas where there are no hospitals, and thus, no hospital wage data on which to base the calculation of the HH PPS wage index. To address those geographic areas in which there are no inpatient hospitals, and thus, no hospital wage data on which to base the calculation of the CY 2027 HH PPS wage index, we proposed to continue to use the same methodology discussed in the CY 2007 HH PPS final rule (71 FR 65884) to address those geographic areas in which there are no inpatient hospitals.

For urban areas without inpatient hospitals, we use the average wage index of all urban areas within the State as a reasonable proxy for the wage index for that CBSA. For CY 2027, the only urban area without inpatient hospital wage data is Hinesville, GA (CBSA 25980). Using the average wage index of all urban areas in Georgia as a proxy, we proposed the CY 2027 wage index value for Hinesville, GA, would be 0.8797. With updated wage data, the final CY 2027 HH PPS wage index value for Hinesville, GA will be 0.8798.

For rural areas that do not have inpatient hospitals, we use the average wage index from all contiguous Core Based Statistical Areas (CBSAs) as a reasonable proxy. The term ''contiguous'' means sharing a border (72 FR 49859). In the CY 2025 HH PPS final rule (89 FR 88422), we finalized a policy that rural North Dakota would become a rural area without a hospital from which hospital wage data can be derived. Therefore, in order to calculate the wage index for rural area 99935, North Dakota, we finalized using as a proxy, the average pre-floor, pre-reclassified hospital wage data from the contiguous CBSAs: CBSA 13900-Bismark, ND, CBSA 22020-Fargo, ND–MN, CBSA 24220-Grand Forks, ND–MN, and CBSA 33500, Minot, ND. Using this methodology, we proposed that the CY 2027 HH PPS wage index for rural North Dakota would be 0.8210. With updated wage data, the final CY 2027 HH PPS wage index for rural North Dakota is 0.8209.

Previously, the only rural area without a hospital from which hospital wage data could be derived was rural Puerto Rico. However, for rural Puerto Rico, we did not apply this methodology due to the distinct economic circumstances that exist there (for example, due to the proximity of almost all of Puerto Rico's various urban and non-urban areas to one another, this methodology would produce a wage index for rural Puerto Rico that is higher than that in half of its urban areas). Instead, we used the most recent wage index previously available for that area, which was 0.4047. Beginning in CY 2025, due to the adoption of the revised OMB delineations, there is now a hospital in rural Puerto Rico from which hospital wage data can be derived. Therefore, we finalized a policy that the wage index for rural Puerto Rico would now be based on the hospital wage data for the area instead of the previously available wage index of 0.4047.

The unadjusted CY 2027 proposed wage index for rural Puerto Rico is 0.2577. However, because 0.2577 is more than a 5 percent decline in the CY 2026 wage index, we proposed that the CY 2027 5 percent cap adjusted wage index for rural Puerto Rico be set equal to 95 percent of the CY 2026 wage index of 0.3653, which resulted in a proposed wage index value of 0.3470. With updated wage data, the unadjusted CY 2027 final wage index for rural Puerto Rico is 0.2576. However, because 0.2576 is more than a 5 percent decline in the CY 2026 wage index, the CY 2027 5 percent cap adjusted wage index for rural Puerto Rico will be set equal to 95 percent of the CY 2026 wage index of 0.3653, which results in a final wage index value of 0.3470.

Additionally, due to the adoption of the revised OMB delineations in the CY 2025 HH PPS final rule, Delaware, which was previously an all-urban state, now has one rural area with a hospital from which hospital wage data can be derived. As such, we proposed that the CY 2027 wage index for rural Delaware would be 0.9590. With updated wage data, the final CY 2027 wage index for rural Delaware is 0.9590.

Finally, the Northern Mariana Islands and American Samoa are rural areas with no hospital data from which a wage index can be calculated. In the CY 2026 HH PPS final rule (90 FR 55405), using our established methodology for rural areas with no hospitals, we finalized that for CY 2026 and subsequent years, HHAs that provide services in the Northern Mariana Islands and American Samoa would use CBSA 99965 (Guam) and receive the wage index assigned to CBSA 99965 (Guam) of 0.9611. While we appreciate that the islands of the Pacific Rim are not actually contiguous, we believe that same principle applies here, and that Guam is a reasonable proxy for American Samoa and the Northern Mariana Islands. We believe that CBSA 99965 (Guam) represents a reasonable proxy because the islands are located within the Pacific Rim and share a common status as United States Territories.

The final HH PPS wage index file applicable for CY 2027 (January 1, 2027, through December 31, 2027) is available on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/home-health-pps/home-health-pps-wage-index.*

We received public comments on the proposed HH PPS wage index. The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed support for the proposed CY 2027 HH PPS wage index.

Response: We thank the commenters for their support.

Comment: Commenters broadly criticized the current methodology of using the inpatient hospital pre-floor, pre-reclassified wage index as an inaccurate proxy for home health labor costs. With respect to Maryland, several commenters stated that the current wage index methodology imports the effects of Maryland's hospital cost-containment incentives into Medicare payment for home health providers, which creates a policy spillover where hospital wage data affected by Maryland's Total Cost of Care Model is used to reduce payment to providers that are outside the hospital global budget system. These commenters recommended that CMS avoid exporting hospital-specific budget incentives into the payment methodology for independent home health and other post-acute providers.

Response: We continue to believe that in the absence of home health specific data, the pre-floor, pre-reclassified hospital wage index is appropriate for the geographic adjustment of home health claims. While we did not propose any changes to the CY 2027 HH PPS wage index methodology in the proposed rule, we did request information on changes to the home health wage index methodology and may consider these recommendations and the comments received on the RFI in future rulemaking as appropriate. A discussion of the comments received on the RFI for a new home health specific

wage index can be found in section III.F. of this final rule.

Comment: Several commenters expressed concern that home health providers are unable to benefit from IPPS hospital wage index policies such as reclassification and the rural floor. A commenter recommended that CMS modify the agency's wage index policy to use the final FY 2027 hospital wage index, including geographic reclassifications and rural floor adjustments.

Response: While we appreciate the commenters' concerns that HHAs are unable to benefit from IPPS hospital wage index policies, we continue to believe that the regulations and statutes that govern the HH PPS differ from the hospital regulations and statutes, such that there would be differences between how these payment systems apply wage index policies including geographic reclassification, or the rural floor. Section 4410(a) of the Balanced Budget Act of 1997 provides that the area wage index applicable to any hospital that is located in an urban area of a state may not be less than the area wage index applicable to hospitals located in rural areas in that State. This rural floor provision is specific to hospitals. The reclassification provision at section 1886(d)(10)(C)(i) of the Act states that the Medicare Geographic Classification Review Board shall consider the application of any subsection (d) hospital requesting the Secretary change the hospital's geographic classification for purposes of payment under the IPPS. This reclassification provision is only applicable to hospitals as defined in section 1886(d) of the Act. Therefore, we do not believe that using hospital reclassification data would be appropriate as these data are specific to the requesting hospitals.

Comment: Some commenters expressed concern that the current wage index methodology often fails to accurately capture the labor market realities experienced by rural HHAs. These commenters suggested that the current wage index ignores drive time, low population density, and travel expenses that increase rural care costs. One commenter noted that the wage index for Maine shows a 20 percent urban-rural wage gap when actual wages differ by less than 5 percent. Another commenter expressed concern that staff working for rural HHAs drive up to 600 miles a week without adequate mileage reimbursement. A commenter stated that due to the lower population density, more miles are driven between patients, increasing both direct costs and indirect costs through lower productivity.

Response: We appreciate commenters' concerns regarding the wage index values assigned to rural areas. As discussed in the CY 2022 HH PPS final rule (86 FR 62285), we do not believe that a population density adjustment is appropriate at this time. Rural HHAs continually cite the need for higher reimbursement due to the added cost of traveling from one patient to the next. However, urban HHAs cite the need for higher reimbursement due to the added costs associated with needed security measures and traffic congestion. The home health wage index values in rural areas are not necessarily lower than the home health wage index values in urban areas. The home health wage index reflects the wages that inpatient hospitals pay in their local geographic areas. Regarding the commenter's concern with the wage index values assigned to rural Maine versus the wage index values assigned to Maine's urban CBSAs, we believe that the wage index values are reflective of the labor costs in each geographic area as they reflect the costs included on the cost reports of hospitals in those specific labor market areas. The wage index values are based on data submitted on the inpatient hospital cost reports. Therefore, as previously stated, in the absence of home health specific data we believe that the pre-floor, pre-reclassified hospital wage index is an appropriate proxy for the home health wage index.

Comment: A commenter stated that although the aggregate effect of wage index changes may be budget neutral nationally, the distributional impact can create substantial financial challenges for providers operating in markets where reimbursement does not align with the costs of attracting and retaining qualified staff.

Response: We appreciate the commenter's concern that despite the wage index being budget neural nationally there may be distributional impacts to individual providers that can create substantial financial challenges. However, we reiterate that we believe the 5 percent cap on wage index decreases should provide a degree of predictability in payment changes for individual providers and allows providers time to adjust to any significant decreases they may face year to year.

Final Decision: After consideration of public comments, we are finalizing our proposal to base the HH PPS wage index on the FY 2027 hospital pre-floor, pre-reclassified wage index for hospital cost reporting periods beginning on or after October 1, 2022, and before October 1, 2023 (FY 2023 cost report data). The final CY 2027 HH PPS wage index will include the 5 percent cap on wage index decreases. The final HH PPS wage index file applicable for CY 2027 (January 1, 2027, through December 31, 2027) is available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/home-health-pps/home-health-pps-wage-index.*

3. Final CY 2027 Home Health Payment Update

a. Background

The HH PPS has been in effect since October 1, 2000. As set forth in the July 3, 2000, HH PPS final rule (65 FR 41128), the base unit of payment under the HH PPS was a national, standardized 60-day episode payment rate. As finalized in the CY 2019 HH PPS final rule with comment period (83 FR 56406), and as described in the CY 2020 HH PPS final rule with comment period (84 FR 60478), the unit of home health payment changed from a 60-day episode to a 30-day period effective for those 30-day periods beginning on or after January 1, 2020.

As set forth in § 484.220, we adjust the national, standardized prospective payment rates by a case-mix relative weight and a wage index value based on the site of service for the beneficiary. To provide appropriate adjustments to the proportion of the payment amount under the HH PPS to account for area wage differences, we apply the appropriate wage index value to the labor portion of the HH PPS rates. In the CY 2024 HH PPS final rule (88 FR 77676), we finalized the rebasing of the home health market basket to reflect 2021 Medicare cost report data. We also finalized a policy that, for CY 2024 and subsequent years, the labor-related share is 74.9 percent, and the non-labor-related share is 25.1 percent. The following are the steps we take to compute the case-mix and wage-adjusted 30-day period payment amount for CY 2027:

- Multiply the national, standardized 30-day period rate by the patient's applicable case-mix weight.
- Divide the case-mix adjusted amount into a labor (74.9 percent) and a non-labor portion (25.1 percent).
- Multiply the labor portion by the applicable wage index based on the site of service of the beneficiary.
- Add the wage-adjusted portion to the non-labor portion, yielding the case-mix and wage adjusted 30-day period payment amount, subject to any additional applicable adjustments.

We provide annual updates of the HH PPS rate in accordance with section 1895(b)(3)(B) of the Act. Section 484.225

sets forth the specific annual percentage update methodology. In accordance with section 1895(b)(3)(B)(v) of the Act and § 484.225(i), for an HHA that does not submit home health quality data, as specified by the Secretary, the unadjusted national prospective 30-day period rate is equal to the rate for the previous calendar year increased by the applicable home health payment update percentage, minus two percentage points. Any reduction of the percentage change will apply only to the calendar year involved and will not be considered in computing the prospective payment amount for a subsequent calendar year.

The final claim that the HHA submits for payment determines the total payment amount for the period and whether we make an applicable adjustment to the 30-day case-mix and wage-adjusted payment amount. The end date of the 30-day period, as reported on the claim, determines which calendar year rates Medicare would use to pay the claim.

We may adjust a 30-day case-mix and wage-adjusted payment based on the information submitted on the claim to reflect the following:

- A LUPA is provided on a per-visit basis as set forth in §§ 484.205(d)(1) and 484.230.
- A partial payment adjustment as set forth in §§ 484.205(d)(2) and 484.235.
- An outlier payment as set forth in §§ 484.205(d)(3) and 484.240.

b. Final CY 2027 National, Standardized 30-Day Period Payment Amount

Section 1895(b)(3)(A)(i) of the Act requires that the standard prospective payment rate and other applicable amounts be standardized in a manner that eliminates the effects of variations in relative case-mix and area wage adjustments among different HHAs in a budget-neutral manner. We stated in the proposed rule that to determine the CY 2027 national, standardized 30-day period payment rate, we would continue our practice of using the most recent, complete utilization data at the time of rulemaking; that is, we are using CY 2025 claims data for CY 2027 payment rate updates.

As discussed in section II.C.1. of the CY 2026 HH PPS final rule (90 FR 55406), we finalized the implementation of a temporary 3.0 percent reduction to the CY 2026 base payment rate that was equivalent to a final temporary adjustment factor of 0.97000. Per section 1895(b)(3)(D)(iii) of the Act, a temporary adjustment is to be applied for the applicable year and not included when computing a payment rate for a subsequent year. In other words, the temporary adjustment factor for CY 2026 will not be included in the starting payment rate for CY 2027. Therefore, we calculated the CY 2026 national, standardized 30-day period payment with and without the temporary adjustment factor.

To calculate the CY 2027 national, standardized 30-day period payment amount, we began with the actual CY 2026 national standardized 30-day period payment amount (with the temporary adjustment factor included) and applied an adjustment factor of 1.03093 (which is equal to 1 divided by the CY 2026 temporary adjustment factor of 0.97000) to remove the temporary adjustment factor as shown in table 12.

TABLE B12: CY 2026 NATIONAL, STANDARDIZED 30-DAY PERIOD PAYMENT AMOUNT (WITHOUT TEMPORARY ADJUSTMENT)

CY 2026 National Standardized 30-Day Period Payment (With Temporary Adjustment)	Removing CY 2026 Temporary Adjustment Factor	CY 2026 National, Standardized 30-Day Period Payment (Without Temporary Adjustment)
$2,038.22	1.03093	$2,101.26

We applied a case-mix weights recalibration budget neutrality factor, a wage index budget neutrality factor, the home health payment update percentage, and a temporary adjustment factor to update the CY 2027 payment rate. As discussed previously, to ensure the changes to the PDGM case-mix weights are implemented in a budget neutral manner, we applied a case-mix weight budget neutrality factor to the CY 2027 national, standardized 30-day period payment rate. The proposed case-mix weight budget neutrality factor for CY 2027 was 1.0045. Based on updated CY 2025 claims data as of July 14, 2026, the final case-mix weight budget neutrality factor for CY 2027 is 1.0047.

Additionally, we applied a wage index budget neutrality factor to ensure that wage index updates and revisions are implemented in a budget neutral manner. To calculate the wage index budget neutrality factor, we first determine the payment rate needed for non-LUPA 30-day periods using the CY 2027 wage index (with the 5 percent cap) so those total payments are equivalent to the total payments for non-LUPA 30-day periods using the CY 2026 wage index (with the 5 percent cap) and the CY 2026 national standardized 30-day period payment rate adjusted by the case-mix weights recalibration neutrality factor. Then, by dividing the payment rate for non-LUPA 30-day periods using the CY 2027 wage index with the 5 percent cap on wage index decreases) by the payment rate for non-LUPA 30-day periods using the CY 2026 wage index (with the 5 percent cap on wage index decreases), we obtain a wage index budget neutrality factor of 1.0009. We then apply the wage index budget neutrality factor of 1.0009 to the 30-day period payment rate.

Next, we update the 30-day period payment rate by the proposed CY 2027 home health payment update percentage of 2.1 percent. As discussed in section II.C.1. of this final rule, we are finalizing our proposal to apply the temporary 3.0 percent reduction to the CY 2027 base payment rate. The proposed temporary adjustment factor is 0.97000. As discussed previously, per section 1895(b)(3)(D)(iii) of the Act, the temporary adjustment is to be applied

for the applicable year and not included when computing a payment rate for a subsequent year. In other words, the temporary adjustment factor for CY 2027 should not be included in the starting payment rate for CY 2028. Therefore, we have calculated the CY 2027 national, standardized 30-day period payment with and without the temporary adjustment factor. The CY 2027 national standardized 30-day period payment rate without a temporary adjustment is only for illustrative purposes. The actual CY 2027 national standardized 30-day period payment rate includes the temporary adjustment and is calculated in table 13.

TABLE B13: FINAL CY 2027 NATIONAL, STANDARDIZED 30-DAY PERIOD PAYMENT AMOUNT

CY 2026 National Standardized 30-Day Period Payment Without Temporary Adjustment	CY 2027 Case-Mix Weights Recalibration Neutrality Factor	CY 2027 Wage Index Budget Neutrality Factor	CY 2027 HH Payment Update Factor	CY 2027 National, Standardized 30-Day Period Payment (Without Temporary Adjustment)	Temporary Adjustment Factor	CY 2027 National, Standardized 30-Day Period Payment (With Temporary Adjustment)
$2,101.26	1.0047	1.0009	1.0210	$2,157.41	0.9700	$2,092.69

The CY 2027 national standardized 30-day period payment rate for an HHA that does not submit the required quality data will be updated by 0.1 percent (the final CY 2027 home health payment update percentage of 2.1 percent minus 2 percentage points) and is shown in table 14.

TABLE B14: FINAL CY 2027 NATIONAL, STANDARDIZED 30-DAY PERIOD PAYMENT AMOUNT FOR HHAS THAT DO NOT SUBMIT THE QUALITY DATA

CY 2026 National Standardized 30-Day Period Payment Without Temporary Adjustment	CY 2027 Case-Mix Weights Recalibration Neutrality Factor	CY 2027 Wage Index Budget Neutrality Factor	CY 2027 HH Payment Update Factor Minus 2 Percentage Points	CY 2027 National, Standardized 30-Day Period Payment (Without Temporary Adjustment)	Temporary Adjustment Factor	CY 2027 National, Standardized 30-Day Period Payment (With Temporary Adjustment)
$2,101.26	1.0047	1.0009	1.0010	$2,115.15	0.9700	$2,051.70

c. Final CY 2027 National Per-Visit Rates for 30-Day Periods of Care

The national per-visit rates are used to pay LUPAs and are also used to compute imputed costs in outlier calculations. The per-visit rates are paid by type of visit or home health discipline. The six home health disciplines are as follows:

- Home health aide (HH aide).
- Medical Social Services (MSS).
- Occupational therapy (OT).
- Physical therapy (PT).
- Skilled nursing (SN).
- Speech-language pathology (SLP).

To calculate the final CY 2027 national per-visit rates, we started with the CY 2026 national per-visit rates. Then we applied a wage index budget neutrality factor to ensure budget neutrality for LUPA per-visit payments. We calculated the wage index budget neutrality factor by simulating total payments for LUPA 30-day periods of care using the CY 2027 wage index with the 5 percent cap on wage index decreases and comparing it to simulated total payments for LUPA 30-day periods of care using the CY 2026 wage index with the 5 percent cap. By dividing the total payments for LUPA 30-day periods of care using the CY 2027 wage index by the total payments for LUPA 30-day periods of care using the CY 2026 wage index, we obtain a wage index budget neutrality factor of 0.9999. As a reminder, the wage index budget neutrality factors for the national, standardized 30-day period amount and

the national LUPA per-visit rates are not equal because they are calculated differently. The wage index budget neutrality factor for the LUPA per-visit payments is calculated by simulating total payments for LUPA 30-day periods while the 30-day period budget neutrality factor is calculated by simulating payments for non-LUPA 30-day periods.

The LUPA per-visit rates are not calculated using case-mix weights. Therefore, no case-mix weight budget neutrality factor is needed to ensure budget neutrality for LUPA payments. Additionally, we are not applying the permanent adjustment or the temporary adjustment to the LUPA per-visit payment rates but only to the case-mix adjusted 30-day payment rate. Lastly, the per-visit rates for each discipline are updated by the CY 2027 home health payment update percentage of 2.1 percent. The national per-visit rates are adjusted by the wage index based on the site of service of the beneficiary. The per-visit payments for LUPAs are separate from the LUPA add-on payment amount, which is paid for periods that occur as the only period or initial period in a sequence of adjacent periods. The final CY 2027 national per-visit rates for HHAs that submit the required quality data are updated by the final CY 2027 home health payment update percentage of 2.1 percent and are shown in table 15.

TABLE 15: FINAL CY 2027 NATIONAL PER-VISIT PAYMENT AMOUNTS

HH Discipline	CY 2026 Per-Visit Payment Amount	CY 2027 Wage Index Budget Neutrality Factor	CY 2027 HH Payment Update Factor	CY 2027 Per-Visit Payment Amount
Home Health Aide	$80.12	0.9999	1.0210	$81.79
Medical Social Services	$283.64	0.9999	1.0210	$289.57
Occupational Therapy	$194.74	0.9999	1.0210	$198.81
Physical Therapy	$193.42	0.9999	1.0210	$197.46
Skilled Nursing	$176.96	0.9999	1.0210	$180.66
Speech-Language Pathology	$210.25	0.9999	1.0210	$214.64

The CY 2027 per-visit payment rates for HHAs that do not submit the required quality data will be updated by 0.1 percent, which is the final CY 2027 home health payment update percentage of 2.1 percent minus 2 percentage points and are shown in table 16.

TABLE 16: FINAL CY 2027 NATIONAL PER-VISIT PAYMENT AMOUNTS FOR HHAS THAT DO NOT SUBMIT THE REQUIRED QUALITY DATA

HH Discipline	CY 2026 Per-Visit Payment Amount	CY 2027 Wage Index Budget Neutrality Factor	CY 2027 HH Payment Update Factor Minus 2 Percentage Points	CY 2027 Per-Visit Payment Amount
Home Health Aide	$80.12	0.9999	1.0010	$80.19
Medical Social Services	$283.64	0.9999	1.0010	$283.90
Occupational Therapy	$194.74	0.9999	1.0010	$194.92
Physical Therapy	$193.42	0.9999	1.0010	$193.59
Skilled Nursing	$176.96	0.9999	1.0010	$177.12
Speech-Language Pathology	$210.25	0.9999	1.0010	$210.44

We solicited comments on the proposed CY 2027 30-day home health payment rates and the per-visit payment rates but did not receive comments on this proposal.

Final Decision: We are finalizing the updates to the CY 2027 national, standardized 30-day period payment rates and the CY 2027 national per-visit payment amounts as proposed, using the final CY 2027 market basket update.

d. LUPA Add-On Factors

Prior to the implementation of the 30-day unit of payment, LUPA episodes were eligible for a LUPA add-on payment if the episode of care was the first or only episode in a sequence of adjacent episodes. As described in the CY 2008 HH PPS final rule, the average visit lengths in these initial LUPAs are 16 to 18 percent higher than the average visit lengths in initial non-LUPA episodes (72 FR 49848). LUPA episodes that occur as the only episode or as an initial episode in a sequence of adjacent episodes are adjusted by applying an additional amount to the LUPA

payment before adjusting for area wage differences.

In the CY 2014 HH PPS final rule (78 FR 72305), we changed the methodology for calculating the LUPA add-on amount, whereby we finalized the approach of multiplying the per-visit payment amount for the first skilled nursing (SN), physical therapy (PT), or speech language pathology (SLP) visit in LUPA episodes that occur as the only episode or an initial episode in a sequence of adjacent episodes by 1 + the proportional increase in minutes for an initial visit over non-initial visits. Specifically, we updated the analysis using 100 percent of LUPA episodes and a 20 percent sample of non-LUPA first episodes from CY 2012 claims data. At that time, we finalized add-on factors: 1.8451 for SN; 1.6700 for PT; and 1.6266 for SLP. In the CY 2019 HH PPS final rule with comment period (83 FR 56440), in addition to finalizing a 30-day unit of payment, we finalized our policy of continuing to multiply the per-visit payment amount for the first SN, PT, or SLP visit in LUPA periods that occur as the only period of care or the initial 30-day period of care in a sequence of adjacent 30-day periods of care by the appropriate add-on factor (using the already established LUPA add-on factors of 1.8451 for SN, 1.6700 for PT, and 1.6266 for SLP) to determine the LUPA add-on payment amount for 30-day periods of care under the PDGM.

In the CY 2025 HH PPS final rule (89 FR 88426 through 88427), in an effort to enhance the accuracy and relevance of LUPA add-on factors to reflect current healthcare practices and costs, we finalized updates to the LUPA add-on factors for PT, SN, and SLP, which had not been revised since the CY 2014 HH PPS final rule (using CY 2012 claims data). We finalized using the same methodology to establish the LUPA add-on amount as used for CY 2014, using updated claims data.

Specifically, in CY 2025, we updated the LUPA add-on factors by using 100 percent of LUPA periods and a 100 percent sample of non-LUPA first periods from CY 2023 claims data (as of September 11, 2024). Our analysis found that the average excess of minutes for the first visit in LUPA periods that were the only period or an initial LUPA in a sequence of adjacent periods are 29.91 minutes for the first visit if SN, 28.08 minutes for the first visit if PT, and 31.57 minutes for the first visit if SLP. The average minutes for all non-first visits in non-LUPA episodes are 41.54 minutes for SN, 45.11 minutes for PT, and 47.15 minutes for SLP. To determine the LUPA add-on factors for each discipline, we calculated the ratio of the average excess minutes for the first visits in LUPA claims to the average minutes for all non-first visits in non-LUPA claims. We then added one to these ratios to obtain the final add on factors. Therefore, beginning in CY 2025 the final LUPA add on factors for SN, PT, and SLP are 1.7200 for SN; 1.6225 for PT; and 1.6696 for SLP.

Additionally, as outlined in the CY 2025 HH PPS proposed rule (89 FR 55378), in order to implement Division CC, section 115, of the Consolidation Appropriations Act (CAA), 2021, CMS finalized changes to the regulations at § 484.55(a)(2) and (b)(3) that allowed occupational therapists to conduct initial and comprehensive assessments for all Medicare beneficiaries under the home health benefit when the plan of care does not initially include skilled nursing care, but included OT, as well as either PT or SLP (86 FR 62351). This change necessitated the establishment of a LUPA add-on factor for calculating the LUPA add-on payment amount for the first skilled OT visit in LUPA periods that occur as the only period of care or the initial 30-day period of care in a sequence of adjacent 30-day periods of care. However, at the time of the implementation, we stated in the CY 2022 HH PPS final rule (86 FR 62289), there was not sufficient data regarding the average excess minutes for the first visit in LUPA periods when the initial and comprehensive assessments are conducted by occupational therapists. Therefore, we finalized a policy using the PT LUPA add-on factor as a proxy. We also stated in the CY 2022 final rule that we will use the PT LUPA add-on factor as a proxy until we have CY 2022 data to establish a more accurate OT add-on factor for the LUPA add-on payment amounts (86 FR 62289). Ultimately, we refrained from using CY 2022 data (and instead utilized the PT LUPA add-on factor as a proxy for the OT LUPA add-on factor), as we marked the first year that occupational therapists were permitted to conduct the initial assessment. We wanted to extend our analysis to ensure we had sufficient data to reflect OT time spent conducting initial assessments to establish a discrete OT LUPA add-on factor (86 FR 62240).

In the CY 2025 HH PPS final rule (89 FR 88427), we finalized discontinuing the use of the PT LUPA add-on factor as a proxy and established a definitive LUPA add-on factor for OT. We used the same methodology used to establish the LUPA add-on amount for CY 2014, as described previously for the SN, PT, and SLP add-on factors. Specifically, we updated the analysis using 100 percent of LUPA periods and a 100 percent sample of non-LUPA first periods from CY 2023 claims data. Using updated analysis (as of September 11, 2024), we found that the average excess of minutes for the first OT visit in LUPA periods that were the only period or an initial LUPA in a sequence of adjacent periods is 33.28 minutes for the first visit. The average number of minutes for all non-first visits in non-LUPA periods is 45.98 minutes for OT. To determine the LUPA add-on factor for OT to account for the excess minutes during the first visit in a LUPA period, we finalized calculating the ratio of the average excess minutes for the first visits in LUPA claims to the average minutes for all non-first visits in non-LUPA claims. We then added one to this ratio to obtain the final add on factor of 1.7238 for OT. Therefore, the OT LUPA factor of 1.7238 is used when occupational therapy is the first skilled visit in a LUPA period that occurs as the only period or an initial period in a sequence of adjacent periods.

TABLE B17: LUPA ADD-ON FACTORS

Discipline	LUPA Add-on Factors
SN	1.7200
PT	1.6225
SLP	1.6696
OT	1.7238

4. Payments for High-Cost Outliers Under the HH PPS

a. Background

Section 1895(b)(5) of the Act allows for the provision of an addition or adjustment to the home health payment amount otherwise made in the case of outliers because of unusual variations in the type or amount of medically necessary care. Under the HH PPS and the previous unit of payment (that is, 60-day episodes), outlier payments were made for 60-day episodes whose estimated costs exceed a threshold amount for each HHRG. The episode's estimated cost was established as the sum of the national wage-adjusted per-visit payment amounts delivered during the episode. The outlier threshold for each case-mix group or PEP adjustment is defined as the 60-day episode payment or PEP adjustment for that group plus a fixed-dollar loss (FDL) amount. For the purposes of the HH PPS, the FDL amount is calculated by multiplying the home health FDL ratio by a case's wage-adjusted national, standardized 60-day episode payment rate, which yields an FDL dollar amount for the case. The outlier threshold amount is the sum of the wage and case-mix adjusted PPS episode amount and wage-adjusted FDL amount. The outlier payment is defined as a proportion of the wage-adjusted estimated cost that surpasses the wage-adjusted threshold. The proportion of additional costs over the outlier threshold amount paid as outlier payments is referred to as the loss-sharing ratio.

As we noted in the CY 2011 HH PPS final rule (75 FR 70397 through 70399), section 3131(b)(1) of the Affordable Care Act amended section 1895(b)(3)(C) of the Act to require that the Secretary reduce the HH PPS payment rates such that aggregate HH PPS payments were reduced by 5 percent. In addition, section 3131(b)(2) of the Affordable Care Act amended section 1895(b)(5) of the Act by redesignating the existing language as section 1895(b)(5)(A) of the Act and revised the language to state that the total amount of the additional payments or payment adjustments for outlier episodes could not exceed 2.5 percent of the estimated total HH PPS payments for that year. Section 3131(b)(2)(C) of the Affordable Care Act also added section 1895(b)(5)(B) of the Act, which capped outlier payments as a percent of total payments for each HHA for each year at 10 percent.

As such, beginning in CY 2011, we reduced payment rates by 5 percent and targeted up to 2.5 percent of total estimated HH PPS payments to be paid as outliers. To do so, we first returned the 2.5 percent held for the target CY 2010 outlier pool to the national, standardized 60-day episode rates, the national per visit rates, the LUPA add-on payment amount, and the NRS conversion factor for CY 2010. We then reduced the rates by 5 percent as required by section 1895(b)(3)(C) of the Act, as amended by section 3131(b)(1) of the Affordable Care Act. For CY 2011 and subsequent calendar years we targeted up to 2.5 percent of estimated total payments to be paid as outlier payments, and apply a 10-percent agency-level outlier cap.

In the CY 2017 HH PPS proposed and final rules (81 FR 43737 through 43742 and 81 FR 76702), we described our concerns regarding patterns observed in home health outlier episodes. Specifically, we noted the methodology for calculating home health outlier payments may have created a financial incentive for providers to increase the number of visits during an episode of care in order to surpass the outlier threshold and simultaneously created a disincentive for providers to treat medically complex beneficiaries who require fewer but longer visits. Given these concerns, in the CY 2017 HH PPS final rule (81 FR 76702), we finalized changes to the methodology used to calculate outlier payments, using a cost-per-unit approach rather than a cost-per-visit approach. This change in methodology allows for more accurate payment for outlier episodes, accounting for both the number of visits during an episode of care and the length of the visits provided. Using this approach, we now convert the national per-visit rates into per 15-minute unit rates. These per 15-minute unit rates are used to calculate the estimated cost of an episode to determine whether the claim would receive an outlier payment and the amount of payment for an episode of care. In conjunction with our finalized policy to change to a cost-per-unit approach to estimate episode costs and determine whether an outlier episode should receive outlier payments, in the CY 2017 HH PPS final rule we also finalized the implementation of a cap on the amount of time per day that would be counted toward the estimation of an episode's costs for outlier calculation purposes (81 FR 76725). Specifically, we limit the amount of time per day (summed across the six disciplines of care) to 8 hours (32 units) per day when estimating the cost of an episode for outlier calculation purposes.

In the CY 2017 HH PPS final rule (81 FR 76724), we stated that we did not plan to re-estimate the average minutes per visit by discipline every year. Additionally, the per unit rates used to estimate an episode's cost were updated by the home health update percentage each year, meaning we would start with the national per visit amounts for the same calendar year when calculating the cost-per-unit used to determine the cost of an episode of care (81 FR 76727). We stated that we would continue to monitor the visit length by discipline as more recent data becomes available and may propose updating the rates as needed in the future.

In the CY 2019 HH PPS final rule with comment period (83 FR 56521), we finalized a policy to maintain the current methodology for payment of high-cost outliers upon implementation of PDGM beginning in CY 2020 and calculated payment for high-cost outliers based upon 30-day period of care. Upon implementation of the PDGM and 30-day unit of payment, we finalized the FDL ratio of 0.56 for 30-day periods of care in CY 2020.

In the CY 2021 HH PPS final rule (85 FR 70322), given that CY 2020 was the first year of the PDGM and the change to a 30-day unit of payment, we finalized maintaining the same FDL ratio of 0.56 for CY 2021 as we did not have sufficient CY 2020 data at the time of CY 2021 rulemaking to propose a change to the FDL ratio for CY 2021. In the CY 2022 HH PPS final rule with comment period (86 FR 62292), we estimated that outlier payments would be approximately 1.8 percent of total HH PPS payments in CY 2022 if we maintained an FDL of 0.56. Therefore, in order to pay up to, but no more than, 2.5 percent of total payments as outlier payments we finalized an FDL of 0.40 for CY 2022. In the CY 2023 HH PPS final rule (87 FR 66875), using CY 2021 claims utilization data, we finalized an FDL of 0.35 in order to pay up to, but no more than, 2.5 percent of the total payment as outlier payments in CY 2023. In the CY 2024 HH PPS final rule (88 FR 77749), using CY 2022 claims utilization data, we finalized an FDL of 0.27 for CY 2024. In the CY 2025 HH PPS final rule (89 FR 88354), using CY 2023 claims data (as of July 11, 2024) we finalized an FDL ratio of 0.35 for CY 2025. In the CY 2026 HH PPS final rule (90 FR 55411), using CY 2024 claims data (as of July 11, 2025) we finalized an FDL ratio of 0.37 for CY 2026.

b. Final FDL Ratio for CY 2027

For a given level of outlier payments, there is a trade-off between the values selected for the FDL ratio and the loss-sharing ratio. A high FDL ratio reduces the number of periods that can receive outlier payments but makes it possible to select a higher loss-sharing ratio, and

therefore, increase outlier payments for qualifying outlier periods. Alternatively, a lower FDL ratio means that more periods can qualify for outlier payments, but outlier payments per period must be lower.

The FDL ratio and the loss-sharing ratio are selected so that the estimated total outlier payments do not exceed the 2.5 percent aggregate level (as required by section 1895(b)(5)(A) of the Act). We use a value of 0.80 for the loss-sharing ratio, which we believe preserves incentives for HHAs to attempt to provide care efficiently for outlier cases. With a loss-sharing ratio of 0.80, Medicare pays 80 percent of the additional estimated costs that exceed the outlier threshold amount.

Using CY 2025 claims data (as of March 12, 2026) and given the statutory requirement that total outlier payments do not exceed 2.5 percent of the total payments estimated to be made under the HH PPS, we proposed an FDL ratio of 0.29 for CY 2027. We also proposed to update the FDL ratio in the final rule based on more complete CY 2025 claims data.

We solicited comments on the proposed CY 2027 FDL. The following is a summary of the comments we received and our responses:

Comment: Most commenters expressed support for CMS's proposal to lower the fixed-dollar loss ratio. These commenters stated that this proposed update to the FDL would appropriately expand access to outlier payments for high-cost, medically complex care.

Response: We thank the commenters for their support.

Comment: A few commenters opposed the proposed update to the CY 2027 FDL and requested more transparency with the data surrounding the FDL and home health outlier payments. A commenter suggested that successive FDL decreases correlate with declining visit volumes, suggesting HHAs may be reducing visits to avoid disqualifying themselves from outlier payments rather than accepting costly patients as intended. This commenter requested deeper analysis of the 10 percent agency-level outlier cap and its relationship to visit-intensity trends. Multiple commenters requested that CMS publish detailed year-by-year reconciliation data from CY 2011–2027 comparing the 5 percent outlier set-aside, the 2.5 percent statutory ceiling, and actual outlier payments made. These commenters stated that the persistent gap suggests systemic underfunding of the home health benefit and requested that CMS quantify this trade-off for Congress, with one commenter recommending Congress consider eliminating the outlier provision entirely. One commenter asked CMS to confirm that high-complexity, caregiver-intensive episodes with respect to ADRD (Alzheimer's disease and related dementia) retain meaningful outlier access as the FDL is recalibrated.

Response: We remind commenters that, as established in section 1895(b)(5) of the Act, both the 2.5 percent target of outlier payments to total home health payments and the 10-percent cap on outlier payments at the home health agency level are statutory requirements. Therefore, we do not have the authority to adjust or eliminate the 10-percent cap or the 2.5-percent target amount. We appreciate commenters' recommendation to provide a detailed analysis that compares the 2.5 percent statutory ceiling and the actual outlier payments made; however, we are not required by statute to reconcile the 2.5 percent target of outlier payments. Because the FDL is calculated prospectively such that outlier payments do not exceed 2.5 percent of total home health payments, there are some years we may reach the 2.5 percent target and some years we may not. However, we believe that our current methodology for calculating the FDL remains appropriate. A high FDL ratio reduces the number of episodes that can receive outlier payments but makes it possible to select a higher loss-sharing ratio, and therefore, increase outlier payments for qualifying outlier episodes. Alternatively, a lower FDL ratio means that more episodes can qualify for outlier payments, but outlier payments per episode must then be lower. In the CY 2019 HH PPS final rule with comment period (83 FR 56521), we finalized a policy to maintain the current methodology for payment of high-cost outliers upon implementation of the PDGM beginning in CY 2020 and calculated payment for high-cost outliers based upon 30-day periods of care. We have used the most recent claims data to calculate the FDL ratio since that time. In the CY 2027 HH PPS proposed rule, we stated that we would use the most recent claims data available, which is CY 2025 claims data. Using CY 2025 claims data (as of July 14, 2026), we found that the FDL ratio would need to be lowered from the final CY 2026 FDL of 0.37 to 0.29.

We appreciate the commenters' concerns regarding the successive decreases in the FDL and the impact that it may have on visit patterns and the impact to high intensity periods of care and recommendations to provide more transparency regarding the data used to calculate the FDL. We believe that outlier payments are beneficial in helping to mitigate the incentive for HHAs to avoid patients that need higher levels of medical care. We will continue to evaluate changes to the FDL, analyze patterns in home health outlier payments, and monitor for any impacts, particularly for those beneficiaries with clinically complex conditions, and may include the results of such efforts in future rulemaking as appropriate.

Comment: Some commenters expressed concern that CMS is updating the FDL based on potentially fraudulent data, specifically in what they describe as high fraud areas such as Los Angeles County. These commenters stated that fraudulent, low-acuity, high-volume billing distorts the ratio's underlying math and disadvantages legitimate HHAs serving genuinely high-cost patients. Some commenters requested that CMS withhold finalizing the update to the FDL until this fraudulent data is removed.

Response: We appreciate the commenters' concerns regarding potential fraudulent billing and its potential impact on the proposed FDL. However, as discussed previously, outlier billing patterns are not always indicative of fraudulent practice. Further evidence would be required to determine definitively whether their activities can be connected to fraudulent practices. Depending on the circumstance, anomalous patterns can prompt further review and initiate investigation for evidence of fraud, waste, and abuse. CMS currently includes the most recent and complete claims data when updating the FDL. If CMS excluded the claims the commenters view as outliers from the calculation of the FDL, CMS would need to make thresholds for determining what qualifies as an outlier to be excluded from the analytical sample; and the available aggregate data do not establish that these outlier claims are in fact improper and should be excluded. In addition, dropping providers with anomalous billing patterns can cause the sample to be much smaller relative to the most recent and complete claims for that given year. LA County is not the only area with unusual utilization patterns, and a blanket geographic exclusion for any geographic area showing varying utilization patterns would potentially remove a large number of legitimate claims with any potentially improper claims. CMS will continue to analyze utilization patterns due to commenter concern regarding fraudulent data; however, thus far these patterns do not establish fraud or the necessity to remove claims from rulemaking analysis.

We appreciate commenters sharing insight into how we can address concerns about potential fraud in the home health market. Cost report fraud and abusive billing behavior are concerns that need to be addressed through the appropriate channels with the authority to pursue enforcement action, such as the hotline for reporting fraud at the following website: *https://www.cms.gov/medicare/medicaid-coordination/center-program-integrity/reporting-fraud.*

Final Decision: With updated CY 2025 claims data (as of July 14, 2026) and given the statutory requirement that total outlier payments do not exceed 2.5 percent of the total payments estimated to be made under the HH PPS, we are finalizing an FDL ratio of 0.29 for CY 2027.

F. Palliative Care Services as Home Health Services

In the proposed rule, CMS noted that it is seeking to advance its broader goal of promoting access to and utilization of palliative care services, with a particular focus on expanding opportunities for beneficiaries to receive these services under the Medicare home health benefit. As part of this effort, CMS included a Request for Information (RFI) in the FY 2027 Hospice Wage Index and Payment Rate Update proposed rule (91 FR 17359) to solicit public input on potential policy, operational, and payment approaches to strengthen and enhance the delivery of palliative care services outside of the hospice benefit. We were especially interested in hearing more about how Medicare practitioners and post-acute care providers furnish community-based palliative care, well as opportunities for improvement. We stated we believe that, as palliative care is a method of care delivery that is provided throughout the continuum of illness, it can be furnished under various Medicare benefits. We also stated that the home is an ideal environment for individuals to receive palliative care services, as remaining in the home during a serious illness may help alleviate psychological and mental distress and allow for more intimate caregiving to be provided by family members. As such, we believe the Medicare home health benefit can be an important step in the care continuum when a patient needs palliative care, either during episodes of serious illness or near end of life, before choosing hospice care.

In accordance with § 409.42(c), to qualify for Medicare coverage of home health services, a beneficiary must need skilled services as set out at § 409.32. Section 409.32(a) states that ''[t]o be considered a skilled service, the service must be so inherently complex that it can be safely and effectively performed only by, or under the supervision of, professional or technical personnel.'' Under the home health benefit, a beneficiary's unique condition and individual needs should be considered in deciding whether skilled nursing care is reasonable and necessary, without regard to whether the illness or injury is acute, chronic, terminal, or expected to extend over a long period of time. There are no expectations that life-prolonging therapies will be avoided or that the patient must be considered terminally ill, and the restoration potential of a patient is not the deciding factor in determining whether skilled services are needed. Even if full recovery or medical improvement is not possible, a patient may need skilled services to prevent further deterioration or preserve current capabilities. Further, as discussed in chapter seven of the Medicare Benefit Policy Manual (BPM),[6] it is a physician or an allowed practitioner, as defined at *§ 484.2,* who is familiar with the patient who determines whether a skilled service is reasonable and necessary based on the patient's individual care needs and goals, and accepted standards of medical and nursing practice. Therefore, if the beneficiary meets the qualifications for coverage of services as set out at § 409.42, he or she could receive palliative care services under the home health benefit, if ordered by a physician or an allowed practitioner.

Often skilled services are determined to be reasonable and necessary when a patient has multiple medications and comorbidities, with resultant functional impairments, that leave them homebound with a need for skilled observation of the patient's condition and medication management. A discussion on palliative care delivery in the home emphasizes the importance of home-based care for patients with multiple morbidities and limited mobility.[7] The structure of the PDGM allows, in general, for palliative care services to be most appropriately grouped into the medication, management, teaching, and assessment (MMTA) clinical group. As discussed in the CY 2019 HH PPS proposed rule (83 FR 32402), health teaching; guidance and counseling; case management, treatments and procedures; and surveillance are integral to the care of most home health patients. Palliative care is defined at § 418.3 to mean ''patient and family-centered care that optimizes quality of life by anticipating, preventing, and treating suffering. Palliative care throughout the continuum of illness involves addressing physical, intellectual, emotional, social, and spiritual needs and to facilitate patient autonomy, access to information, and choice.'' We noted that we believe this definition encompasses all the services provided under the Medicare home health benefit. Additionally, these important interventions are often the primary reason for home health services. Section 1861(m) of the Act requires the 30-day period to include all covered home health services: skilled nursing; home health aide; physical therapy; speech-language pathology; occupational therapy; medical social services, and medical supplies. Skilled nursing services can address advanced symptom management, including specialized care to manage pain, nausea and vomiting, depression and anxiety, and respiratory distress. This may also include medication management to monitor therapeutic and adverse effects and review and adjust medications in coordination with allowed practitioners. Medical social services can help address advance care planning needs (including discussion on transition to hospice) as well as offer referrals for social and emotional support for families and caregivers. Physical therapists (PTs), occupational therapists (OTs), and speech language pathologists (SLPs) enhance patient quality of life, comfort, and dignity by maximizing functional independence and managing symptoms. PTs focus on mobility, pain management, and safe transfers, while OTs specialize in adapting activities of daily living (ADLs) and environments to maintain independence for as long as possible. SLPs support safe eating and drinking and help facilitate communication and decision making for those patients with deficits.

We reiterated that, like other skilled services, comprehensive home health clinical notes are expected to substantiate the need for palliative care necessitating medication management, teaching, and assessment through documentation of the patient's achievement of care needs and goals as

[7] National Academies of Sciences, Engineering, and Medicine; Health and Medicine Division; Board on Health Sciences Policy; Board on Health Care Services; Roundtable on Quality Care for People with Serious Illness. Models and Strategies to Integrate Palliative Care Principles into Care for People with Serious Illness: Proceedings of a Workshop. Washington (DC): National Academies Press (US); 2017 Oct 24. Proceedings of a Workshop. Available from: *https://www.ncbi.nlm.nih.gov/books/NBK538355/.*

outlined in the plan of care. Accordingly, we pointed to chapter seven of the BPM that includes an example of a patient with malignant melanoma who is terminally ill and requires skilled observation, assessment, teaching, and treatment, and who has not elected hospice care. This example explains that the documentation should describe the goal of the skilled nursing intervention, and at each visit the services provided should support that goal. The skilled nursing care that the patient requires would be covered, notwithstanding that the condition is terminal, because the documentation and description must support that the needed services required the skills of a nurse. We stated that a palliative care plan for this type of patient would likely include medication and symptom management, including expected treatment responses for pain, anxiety, constipation, nausea, or dyspnea; education and caregiver training on managing symptoms at home; assessing social risk factors including caregiver burden and emotional and psychosocial distress; and skilled therapy for non-pharmacologic pain management strategies and interventions to maximize functional status and independence.

We noted in the proposed rule that we plan on adding additional palliative care examples of skilled care to the BPM following publication of this final rule to support our goal of encouraging community-based palliative care services, particularly under the Medicare home health benefit.

We solicited public comments on any concerns or suggestions reaching this goal. The following is a summary of the comments received and our responses:

Comment: The majority of commenters expressed support for CMS's goal of expanding community-based palliative care under the existing Medicare home health benefit, recognizing its potential to improve symptom management, caregiver support, and quality of life for seriously ill beneficiaries. Most of these commenters affirmed that skilled palliative services, including pain and symptom control, caregiver education, medication management, and care coordination are already authorized under chapter seven of the Medicare Benefit Policy Manual (BPM).[8]

However, many raised significant concerns regarding the disincentives created by current quality measurement and reimbursement frameworks that may penalize HHAs for serving patients who primarily require palliative care services. Specifically, commenters stated outcome measures tied to hospitalization and functional improvement in mobility and self-care may systematically disadvantage HHAs that appropriately prioritize comfort and quality of life over curative or rehabilitative goals. Commenters emphasized that for palliative care patients, a decline in these areas is often expected due to the natural progression of advanced disease and should not be interpreted as poor quality of care. Commenters expressed concern that as a result, HHAs that appropriately accept and manage these patients may receive lower performance scores and lower Star Ratings despite delivering high-quality, patient-centered care. Some commenters suggested CMS consider excluding palliative care patients from outcome measures that are based on functional improvement, discharge to community, and potentially preventable hospitalizations, or alternatively, implementing additional risk adjustment methodologies that account for the expected decline associated with serious progressive illness. Other commenters suggested a palliative track within the Home Health Quality Reporting Program, updating quality measures to distinguish between traditional home health patients and those receiving palliative care services.

Other commenters expressed concern regarding audit denials without specific, clinically realistic sub-regulatory guidance. Commenters consistently urged CMS to act quickly to update chapter seven of the BPM with concrete palliative care examples to avoid a scenario where policy encouragement exists in theory but is undermined in practice by audit risk, payment penalties, or lack of interdisciplinary infrastructure. Some commenters asked CMS to clarify how the homebound requirement applies to seriously ill patients who leave home for palliative-intent outpatient treatment (for example, palliative radiation or infusions), where leaving the home requires a considerable and taxing effort. These commenters also encouraged CMS to ensure Medicare Administrative Contractor (MAC) medical review aligns with new guidance.

Several commenters raised regulatory concerns that the homebound requirement is a barrier to earlier palliative intervention and suggested a potential non-homebound pathway to home-based palliative care; the need for nurse and nurse practitioner (NP) reimbursement integration within the home health interdisciplinary team; distinct Part B payment pathways for a community-based palliative care benefit, including the possibility of an add-on payment or development of specific CPT codes; and revising the regulations to explicitly include palliative care among covered home health services. Additionally, we received some comments indicating confusion regarding whether this discussion on palliative care was indicative of a new benefit or distinct service model under Medicare. Other commenters emphasized that CMS should avoid establishing separate palliative care eligibility criteria, duplicative assessments, or additional documentation standards that could discourage providers from furnishing these services. Additionally, a commenter asked whether the clarification of the provision of palliative care services under the home health benefit would require other providers or suppliers to enroll or be certified as an HHA in order to furnish palliative care.

One commenter cautioned that expanding palliative care without competency standards risks diluting specialty palliative care and further delays appropriate hospice referrals. A commenter specifically noted that HHAs do not have the resources to furnish these services at scale to beneficiaries with such complex and serious illness; that these patients require much more comprehensive, longitudinal, and coordinated care than can be provided by HHAs. This commenter pointed to the Home-Based Primary Care (HBPC) model as the standard for which palliative care should be provided in the community and stated that CMS discussing palliative care provision under the home health benefit understates the complex nature of palliative care and the importance of home-based primary care clinicians as the primary coordinators of palliative care services in the home. Several commenters urged CMS to maintain a clear boundary between the home health and hospice benefits, recognizing that the home health benefit is not a substitute for hospice, but may be a bridge for those seriously ill beneficiaries who are not ready to elect hospice. These commenters stressed that home health does not support the same intensity of interdisciplinary care that the hospice benefit provides.

And finally, some commenters requested that CMS clarify that palliative care can be provided across all disciplines and all PDGM clinical groups and is not only limited to the MMTA clinical group, and that we study the resource use of palliative and

[8] *https://www.cms.gov/files/document/bp102c07pdf.*

maintenance periods of care and pay commensurately.

Response: CMS thanks all commenters for their thoughtful and detailed input on the provision of community-based palliative care under the Medicare home health benefit. The breadth and quality of these comments reflect the deep commitment of clinicians, advocates, caregivers, and health systems to improving care for seriously ill beneficiaries, and CMS acknowledges the broad commenter support for its goal of expanding access to community-based palliative care by acknowledging its provision under the existing home health benefit. We agree that seriously ill beneficiaries stand to benefit significantly from improved pain and symptom management, caregiver support, and enhanced quality of life when palliative care principles are integrated into home health services. CMS remains committed to advancing this goal in a manner that is clinically sound, operationally feasible, and equitable across the beneficiary population.

We recognize concerns regarding current quality measures including improvement standards, which are less likely to occur in palliative care patients. We agree this would not indicate poor quality of care but rather could be expected in this population as a result of the natural progression of serious illness. With current discussions about opportunities for potential alignment between the expanded Home Health Value-Based Purchasing (HHVBP) Model and the Home Health Quality Reporting Program (HH QRP), the home health measure sets used for both the HH QRP and the expanded HHVBP Model will emphasize measures that address expected functional outcomes instead of an emphasis on functional improvement. For example, the Discharge Function measure used in the HH QRP and the expanded HHVBP Model assesses each patient's expected functional status at discharge based on the patient's clinical profile and then evaluates management of functional status based on whether the patient is expected to improve, maintain or decline in function. Over time, the functional status measures used in the expanded HHVBP Model and HH QRP measure sets will focus more on a patient's expected outcome and not simply assess functional improvement.

CMS recognizes commenter concerns that palliative requires specialized clinical skills, including advanced symptom assessment, goals-of-care communication, and interdisciplinary coordination; however, we believe that HHAs are well-positioned to provide these services given their existing infrastructure for interdisciplinary care planning, skilled nursing and therapy, and coordination with physicians, as part of comprehensive, home-based care. CMS will explore the development of minimum competency expectations for HHA staff providing palliative care services, in consultation with relevant clinical and professional organizations. Any future guidance will seek to preserve the integrity of specialized clinical skills in palliative care while enabling broader access to these services at the community level. Further, CMS recognizes the critical role NPs play in expanding access to care, particularly in underserved communities, and we note that ''allowed practitioners'' include NPs, physician assistants (PAs), and clinical nurse specialists (CNSs). These types of providers are allowed to certify patients for Medicare home health services and establish the plan of care, affording them the ability to participate in and manage community-based palliative care delivery under the home health benefit. CMS disagrees, however, that supporting home-based primary care and strengthening HHAs palliative care capacity are competing strategies. The regulatory framework already governing Medicare-certified HHAs makes them a well-suited, and readily scalable, environment for furnishing palliative care, consistent with the goals underlying this rule. The Conditions of Participation (CoPs) at CFR 42 part 484 require HHAs to conduct a comprehensive patient assessment, develop an individualized plan of care, and deliver services through an interdisciplinary group encompassing skilled nursing, therapy, medical social services, and aide support. These same requirements, symptom management, psychosocial and caregiver support, and coordinated interdisciplinary planning are the operational building blocks of palliative care.

CMS is not proposing a new service delivery model or a new benefit in this rule; rather, this clarification is intended to confirm that HHAs may furnish palliative care as a component of a skilled service already covered under the home health benefit, such as skilled nursing visits for pain and symptom management, patient and caregiver education, or care planning. It does not create a new, distinct benefit category or service type, and it does not modify the existing HH PPS payment methodology. Accordingly, CMS is not establishing a separate payment, add-on payment, or billing code specific to palliative care furnished under the home health benefit. HHAs should continue to bill for these services consistent with existing home health billing and coverage requirements, and any palliative care activities performed by home health staff must fit within the scope of a covered skilled service and be included in the individualized plan of care.

Additionally, this rule does not modify the eligibility requirements for the home health benefit or require any provider or supplier to enroll or be certified as an HHA in order to furnish palliative care. All home health eligibility requirements (homebound status, a qualifying skilled need, an allowed-practitioner order, a plan of care, and a face-to-face encounter) all still apply to palliative care patients. Regarding homebound status, the same criteria exist for determining whether a patient is confined to the home, meaning a patient can still be considered homebound if absences from the home are infrequent or for periods of relatively short duration, or are attributable to the need to receive health care treatment. Additionally, nothing in this rule alters the requirement that home health services be furnished under a physician or allowed practitioner established plan of care. These clinicians, often the patient's primary care provider, retain full authority over diagnosis, treatment planning, and goals-of-care decisions. Enhancing HHAs' palliative care role would extend that plan of care into more frequent, hands-on interdisciplinary contact, complementing, not substituting for, the clinician relationship present in the HBPC model. Further, while we stated in the proposed rule that MMTA would likely be the most appropriate grouping for palliative care services, we recognize that these services can be applied across all home health disciplines and as outlined in the care plan.

Regarding concerns that CMS may be indicating these services are substitutes for hospice care, we agree that the home health and hospice benefits, while complementary, serve distinct purposes and beneficiary populations. We recognized in the proposed rule that the home health benefit can be an important step in the care continuum when a patient needs palliative care, either during episodes of serious illness or near end of life, before choosing hospice care. However, we do not intend for this clarification to blur the distinction between home health and hospice care, and we will continue to monitor program data and beneficiary experience to ensure that beneficiaries are directed to the benefit that best matches their care needs.

And finally, CMS agrees that consistent review and implementation across MACs is essential to the success of any palliative care policy initiative. CMS will work with MACs to ensure that medical review criteria, documentation expectations, and coverage determinations reflect updated guidance. We will issue specific MAC instructions and education materials in conjunction with BPM updates to promote national consistency and reduce audit-related and claims denial deterrents to palliative care delivery. We also thank commenters for submitting suggested examples for the BPM and will update this sub-regulatory guidance promptly to represent the various palliative care services we believe HHAs can provide under the home health benefit.

G. Request for Information on the Construction of a Home Health Specific Wage Index

For CY 2027, we are finalizing our proposal to continue to use the concurrent pre-floor, pre-reclassified IPPS hospital wage index as the basis for the HH PPS wage index. We continue to believe that this is the best available Medicare data to estimate costs per day, in accordance with our longstanding wage index policy at § 412.424(a)(2). The purpose of this comment solicitation was to gain information from the public regarding the appropriateness of alternative data sources consistent with our statutory authority and regulatory requirements. We noted that other payment systems have explored and are exploring alternative wage index methodologies under their specific programmatic and statutory circumstances. For example, CMS finalized changes to the ESRD PPS wage index using Bureau of Labor Statistics (BLS) occupation-level wage data in the CY 2025 ESRD PPS final rule (89 FR 89116). We noted that while this approach was developed under the specific programmatic and statutory circumstances of the ESRD PPS and may not be directly transferable to the HH PPS, CMS is interested in exploring whether similar methodologies using publicly available wage data could be used to better reflect the geographic variation in labor costs for HHAs. In addition, we noted that we are also considering the potential use of alternative data sources in other payment systems, including with respect to hospices (91 FR 17361 through 17363), the Inpatient Rehabilitation Facilities PPS (91 FR 17206 and 17207), and the Skilled Nursing Facilities PPS (91 FR 17692).

Furthermore, in its 2023 Report to the Congress,[9] MedPAC discussed various conceptual approaches to Medicare wage indexes, including the use of county-level wage data from BLS with an occupational mix to construct wage indexes that are more specific to the payment setting. MedPAC has previously written about using all-employer, occupation-level wage data to establish different weights for setting-specific occupational labor mixes as one approach to geographic adjustments.

We solicited public comments on whether we should consider using alternative data sources to construct an HHA specific wage index for potential use in future years. CMS sought feedback to understand the potential advantages and limitations of using alternative data sources, such as BLS data and home health Medicare cost reports, as well as other methodologies that stakeholders believe could appropriately reflect the geographic variation in labor costs for HHAs. We also sought feedback on the unique considerations applicable to HHAs that should inform how CMS considers the potential use of alternative data sources.

The following is a summary of the comments we received and our responses.

Comment: Overall, commenters expressed support for an approach that would more closely represent the geographic variation of wages related to occupations used in home health. Commenters requested that CMS provide more information on the potential methodology to calculate a home health specific wage index using alternate data sources and home health specific occupational mix, and recommended CMS convene a Technical Expert Panel to seek broader input based on presented analysis. Many commenters stated that any occupational mix must extend beyond RNs and therapists to include home health aides, medical social workers, LPNs, and community health workers. Commenters were split on data sources: many favored BLS Occupational Employment and Wage Statistics as independent and more current, while others raised concerns that BLS data is not home-health-specific, excludes benefits, dilutes the labor pool with non-Medicare providers, and relies on unverifiable survey samples. Some commenters stated that home health cost reports have serious data-quality problems, such as inconsistent contract-labor reporting, lack of audits, and distortion from what they describe as high-fraud cohorts such as Los Angeles County. All commenters supported publishing a detailed prototype/RFI with methodology, occupational weights, and provider/county-level impact files before implementation; convening a Technical Expert Panel; multi-year phase-in with continuation of the 5 percent cap on decreases; and robust stakeholder/industry engagement.

Response: We thank commenters for their feedback. While we will not be responding to specific comments submitted in response to this RFI in this final rule, we intend to use this information to inform future development of a home health specific wage index and for potential future rulemaking as appropriate.

III. Home Health Quality Reporting Program (HH QRP)

A. Background and Statutory Authority

The HH QRP is authorized by section 1895(b)(3)(B)(v) of the Act. Section 1895(b)(3)(B)(v)(II) of the Act requires that, for 2007 and subsequent years, each home health agency (HHA) submit to the Secretary in a form and manner, and at a time, specified by the Secretary, such data that the Secretary determines are appropriate for the measurement of health care quality. To the extent that an HHA does not submit data in accordance with this clause, the Secretary shall reduce the home health market basket percentage increase applicable to the HHA for such year by 2 percentage points pursuant to section 1895(b)(3)(B)(v)(I) of the Act. As provided at section 1895(b)(3)(B)(vi) of the Act, depending on the market basket percentage increase applicable for a particular year, as further reduced by the productivity adjustment (except in 2018 and 2020) described in section 1886(b)(3)(B)(xi)(II) of the Act, the reduction of that increase by 2 percentage points for failure to comply with the requirements of the HH QRP may result in the home health market basket percentage increase being less than 0.0 percent for a year, and may result in payment rates under the HH PPS for a year being less than payment rates for the preceding year. Section 1890A of the Act requires that the Secretary establish and follow a pre-rulemaking process, in coordination with the consensus-based entity (CBE) with a contract under section 1890 of the Act, to solicit input from certain groups regarding the selection of quality and efficiency measures for the HH QRP. The HH QRP regulations can be found at 42 CFR 484.245 and 484.250.

[9] *https://www.medpac.gov/document/chapter-9-reforming-medicares-wage-index-systems-june-2023-report/.*

B. Summary of the Proposed Rule and Responses to Public Comments

In accordance with the statutory authority at section 1895(b)(3)(B)(v) of the Act, we proposed the following policies in the proposed rule:

First, we summarized potential initiatives to improve alignment between the HH QRP and expanded HHVBP Model. We also proposed to revise the HH QRP data submission deadlines beginning with the CY 2027 HH QRP. In addition, we proposed to revise the HH QRP OASIS and HHCAHPs annual payment update (APU) reporting timeframe to report a calendar year of data (January 1 through December 31). We proposed some revisions to regulatory text in support of rule proposals and to improve digital transfer of information during the reconsiderations process. Finally, we solicited public comments on one Request for Information (RFI) on future measure concepts for the HH QRP.

For a detailed discussion of the considerations that we historically have used for measure selection for the HH QRP quality, resource use, and other measures, we refer readers to the CY 2016 HH PPS final rule (80 FR 68695 through 68696). In the CY 2019 HH PPS final rule with comment period (83 FR 56548 through 56550), we finalized the factors we consider for removing previously adopted HH QRP measures.

C. Quality Measures Currently Adopted for the CY 2026 HH QRP

The HH QRP currently includes 18 measures for the CY 2027 program year. As finalized in the CY 2026 HH PPS final rule, the HH QRP currently uses thirteen OASIS-based measures, four claims-based measures, and a HHCAHPS Survey-based composite measure (see table 18).

D. Opportunities for Potential Alignment Between the HH QRP and the Expanded HHVBP Model

As discussed in the proposed rule, CMS has identified substantial opportunities to better align the HH QRP and the expanded HHVBP Model. While the HH QRP and expanded HHVBP Model share similar goals and measures, differences in measure sets, reporting periods, and performance assessment processes may create unnecessary complexity and administrative burden for HHAs. For example, misalignment between HH QRP APU reporting periods and the expanded HHVBP Model's annual performance period may contribute to confusion. Greater alignment would support more consistent evaluation of HHA quality performance and advance CMS quality priorities. Greater alignment is also consistent with CMS's priority of reducing provider burden and creating efficiencies across CMS programs. Opportunities for potential alignment between the HH QRP and expanded HHVBP Model include the following:

- Increasing alignment in expanded HHVBP Model and HH QRP Quality of Patient Care (QoPC) Star Ratings measure sets.
- Aligning HH QRP and expanded HHVBP Model measure reporting periods.
- Aligning HH QRP APU and expanded HHVBP Model annual payment reporting periods.
- Aligning expanded HHVBP Model Interim Performance and HH QRP QoPC Star Rating Reports.
- Aligning timeframe of appeals/suppression review processes for the expanded HHVBP Model and HH QRP.
- Updating scoring methodology to incorporate HH QRP APU penalties in expanded HHVBP Model payment adjustments and factoring HH QRP Quality Assessments Only (QAO) values into QoPC Star Ratings scoring.

We convened a Technical Expert Panel (TEP) meeting addressing HH QRP and expanded HHVBP Model alignment in December 2025. Please see the 2025 TEP Summary Report for more information (*www.cms.gov/priorities/innovation/files/hhvbp-tep-summary-report.pdf*).

Table 18 reflects current and expected usage of measures for both the expanded HHVBP Model and the HH QRP.

TABLE 18: QUALITY MEASURE USAGE IN HHVBP AND HH QRP COMPONENTS

Measures	Included in HHVBP Performance Measures	Used in HHQRP QoPC/ Patient Survey Star Ratings	Expected Inclusion in both HHVBP and HHQRP Star Ratings	HHQRP Non-QoPC Star Ratings QMs
OASIS-based Measures				
Discharge Function Score*^	Yes	No	Yes	Yes
Improvement in Bathing**	Yes	Yes	Yes	No
Improvement in Upper Body Dressing**	Yes	No	No	Yes
Improvement in Lower Body Dressing**	Yes	No	No	Yes
Improvement in Bed Transferring	No	Yes	No	No
Improvement in Ambulation/Locomotion	No	Yes	No	No
Improvement in Dyspnea	Yes	Yes	Yes	No
Improvement in Management of Oral Medications	Yes	Yes	Yes	No
Timely Initiation of Care	No	Yes	No	No
Changes in Skin Integrity Post-Acute Care: Pressure Ulcer/Injury - HH	No	No	No	Yes
Falls with Major Injury	No	No	No	Yes
Transfer of Health Information to Provider	No	No	No	Yes
Transfer of Health Information to Patient	No	No	No	Yes
Influenza Immunization Received	No	No	No	Yes
Drug Regimen Review	No	No	No	Yes
Claims-based Measures				
Potentially Preventable Hospitalizations (PPH)*	Yes	Yes	Yes	No
Discharge to Community – Post Acute Care (DTC-PAC)* ^	Yes	Yes	Yes	Yes
Medicare Spending per Beneficiary- Post Acute Care (MSPB-PAC) **	Yes	No	No	Yes
Potentially Preventable Readmission	No	No	No	Yes
HHCAHPS Survey-based Measures				
Care of Patients***	Yes	Yes	No	Yes
Communication Between Providers and Patients***	Yes	Yes	No	Yes
Talk About Home Safety****	No	No	No	Yes
Review Medicines****	No	No	No	Yes
Talk About Medicine Side Effects****	No	No	No	Yes
Overall Rating of Care Provided by the Home Health Agency	Yes	Yes	Yes	Yes
Willingness to Recommend the Home Health Agency	Yes	No	No	Yes

^ Measures expected to be added to QoPC Star Ratings in the near future.
* Measure added to the expanded HHVBP Model starting with the CY 2025 applicable measure set.
** Measure added to the expanded HHVBP Model starting with the CY 2026 applicable measure set.
*** Measure removed from the expanded HHVBP Model starting with the CY 2026 applicable measure set.
****Measure added to HH QRP Non-QoPC CY 2026 measure set to replace the Specific Care Issues measure.

Though we did not seek comments on the list of opportunities for potential alignment between the HH QRP and the expanded HHVBP Model, numerous commenters offered feedback. The following is a summary of the comments we received and our responses.

Comment: Commenters broadly supported potential efforts to align the HH QRP with the expanded HHVBP Model, emphasizing the potential to reduce duplicative reporting, administrative complexity, and provider burden. Many commenters urged CMS to ensure that potential alignment efforts account for the unique needs of high-acuity and palliative-intent patients, recommending mechanisms such as palliative-status exclusions, refined risk adjustment, and the development of outcome measures appropriate for patients with declining trajectories to prevent HHAs from being unfairly penalized. Several commenters advocated for greater transparency, public engagement, and adequate lead time in implementing any potential future changes, as well as the inclusion of functional, caregiver-facing, and clinically relevant measures—particularly for populations with dementia, neurological diseases, or serious illness.

Response: We thank commenters for their input and will take this feedback into consideration as appropriate.

E. Form, Manner, and Timing of Data Submission Under the HH QRP

1. Revise HH QRP Data Submission Deadlines Beginning With the CY 2027 HH QRP

a. Background

Section 1899B(f)(1) of the Act also requires the Secretary to provide confidential feedback reports to PAC providers on the performance of such PAC providers for quality, resource use, and other measures required under sections 1899B(c)(1) and (d)(1) of the Act beginning 1 year after the applicable specified application date. Further, section 1899B(g) of the Act requires the Secretary to establish procedures for making available to the public information regarding the performance

of individual PAC providers for quality, resource use, and other measures required under sections 1899B(c)(1) and (d)(1) of the Act beginning not later than 2 years after the applicable specified application date. The procedures must ensure, including through a process consistent with the process applied under section 1886(b)(3)(B)(viii)(VII) of the Act for similar purposes, that each PAC provider has the opportunity to review and submit corrections to the data and information that are to be made public for the PAC provider prior to such data being made public.

Although assessment data submission, quarterly performance reports, and public reporting are required by statute, timing of data submission under the HH QRP was not initially specified. Thus, in the CY 2017 HHS PPS final rule (81 FR 76784) we finalized our proposal to comply with the requirements of section 1899B(g) of the Act, that HHAs would have approximately 4.5 months after the reporting quarter to correct any errors of their assessment-based data to calculate the measures. During the time of data submission for a given quarterly reporting period and up until the quarterly submission deadline, HHAs could review and perform corrections to errors in the assessment data used to calculate the measures.

Public reporting of data collected under our quality reporting programs, such as the HH QRP, is designed to provide consumers and their families with the most current information to empower them to make quality-informed decisions about where to receive their care. We have identified that the time between when data on measures is submitted to us and when those data are publicly reported (approximately nine months) may be too long to provide the most accurate and up to date information for the public. We have received feedback from the provider community and TEPs that the aged data used in publicly reported quality measures diminishes their value to consumers. Furthermore, we have heard from HHAs that the HH QRP measure results they receive prior to public reporting are less useful for their quality improvement efforts due to the aged data and the delay in when they receive these reports.

Currently, the largest contributing factor to the 9-month lag between the end of the data collection period and when measures are publicly reported is the 4.5-month timeframe for data submission. Reducing the data submission timeframe from 4.5 months to the 15th day of the second month after the end of the calendar quarter could reduce this lag by up to 3 months, resulting in more timely public reporting of data for consumers and increasing the value of publicly reported data. Additionally, this timeframe provides HHAs with more recent data in support of their quality improvement activities.

In the CY 2026 HH PPS proposed rule, we included a request for information (RFI) on reducing the OASIS assessment data submission deadline from 4.5 months to 45 days (90 FR 29182). We refer readers to the CY 2026 HH PPS final rule (90 FR 55429 and 55430) for a full summary of the public comments received.

b. Revise the HH QRP Assessment Data Submission Deadline

Beginning with the CY 2027 HH QRP, we proposed that HHAs be required to complete their data submissions and make corrections to their OASIS assessment data where necessary no later than the 15th day of the second month after the end of the calendar quarter. However, if the 15th day of the second month fell on a Friday, weekend, or Federal holiday, the date would be delayed until 11:59 p.m. EST on the next business day. We proposed that HHAs follow the deadlines presented in Table 19 for the CY 2027 HH QRP. We also proposed that similar calendar year data submission deadlines apply to future years' payment determinations.

TABLE 19: DATA COLLECTION TIMEFRAME AND DATA SUBMISSION DEADLINES FOR OASIS ASSESSMENT DATA AFFECTING THE CY 2029 PAYMENT DETERMINATION

Calendar Year (CY) Quarter	Data Collection Timeframe	Final Data Submission Deadlines for CY 2029 Payment Determination*
CY 2027 Quarter 1	January 1–March 31, 2027	May 17, 2027
CY 2027 Quarter 2	April 1–June 30, 2027	August 16, 2027
CY 2027 Quarter 3	July 1–September 30, 2027	November 15, 2027
CY 2027 Quarter 4	October 1–December 31, 2027	February 15, 2028

* Data submission deadlines will follow a similar quarterly schedule for subsequent CYs.

We believe that requiring HHAs to submit OASIS assessment data by the 15th day of the second month after the end of the calendar quarter is reasonable. We conducted an analysis on the potential impact of reducing the timeframe by determining how many assessments are currently being submitted by this deadline, which is approximately within 45 days of the end of the quarter. Using 2024 data, we determined that 99.27 percent of all OASIS assessments were submitted to CMS within a 45-day timeframe. Of the remaining 0.73 percent submitted beyond 45 days, 0.24 percent of the total (that is, about one third of the post-45 day timeframe) were submitted after the current 4.5-month data submission deadline and would not be further impacted by a change in the data submission deadline. Therefore, only 0.49 percent of OASIS assessments will be impacted by changing the data submission deadline from 4.5 months to require data submission by the 15th day of the second month after the end of the calendar quarter.

We received public comments on the proposal to require that HHAs complete their data submissions and make corrections to their OASIS assessment data where necessary no later than the 15th day of the second month after the end of the calendar quarter beginning with the CY 2027 HH QRP. The following is a summary of the comments we received and our responses.

Comment: A majority of commenters supported CMS' proposal to revise the OASIS data submission deadline, stating that more timely reporting of

HHQRP data could help HHAs implement quality improvement initiatives and beneficiaries and their caregivers make better-informed decisions when selecting HHAs. Several commenters supported the proposal based on data showing that most HHAs are already meeting the 45-day submission requirement. Many commenters who supported the proposal urged CMS to ensure clear guidance and training is in place to support the implementation of this proposal.

Response: We thank commenters for their support and agree that this proposal would give patients and consumers more timely access to quality data and give HHAs better data for quality improvement. Clear guidance around the new submission deadline will be available through the range of communication channels used to reach HHAs.

Comment: Some commenters supported the proposal and the goal of improving the timeliness of publicly reported data, but had concerns about operational and staffing challenges, administrative burden, and data validation, especially for small or rural HHAs that may struggle with staffing challenges and operational issues. A few commenters expressed concerns that providers continue to experience staffing shortages and turnover of HH staff. Some commenters that supported the proposal noted the current clinical and administrative burden around implementing OASIS all-payer submissions and changing payment requirements. Several commenters encouraged CMS to establish a phased implementation or grace period to meet submission requirements, to provide flexibility for the first several data submission cycles. A few other commenters cited recent implementation of the HOPE tool to stress the benefits of a phased implementation.

Response: We appreciate the commenters' concerns about operational and staffing challenges, especially for small or rural HHAs. However, we do not believe that the proposal adds burden for HHA staff by changing the data submission deadline; rather, it shifts the existing workflow from 4.5 months after each quarterly data collection period to the 15th day of the second month after the end of the calendar quarter. Since workflows are in place for the necessary processes, we do not believe a phased implementation approach is necessary. As previously stated in the CY 2027 HH PPS proposed rule, our internal analysis showed that 99.27 percent of all OASIS assessments are already being submitted within a 45-day timeframe, which suggests that data submission within this timeframe is the current practice for most HHAs. Further, we believe a phased implementation approach would add operational complexity, as providers would have to update workflows and modify staffing numerous times over the implementation period. We will continue to monitor data submission compliance rates as part of already implemented program monitoring.

Comment: Some commenters were concerned that the proposed timeline may not provide adequate time for agencies to validate data to identify and correct errors, particularly for new admissions near the end of a reporting quarter. They raised concerns that review processes are critical to ensuring high-quality data but may no longer be feasible within a 45-day submission window.

Response: We believe that we are providing HHAs sufficient time to adjust staffing and workflow operations that will allow them to validate data and make any corrections needed by the new deadline. In general, we believe data validation and quality checks to be complete with the initial data submission, with better proximity to the patient. We would also like to note that this proposal will benefit HHAs by allowing them to have access to more timely data for quality improvement efforts.

Comment: A few commenters supported the proposal but recommended allowing HHAs to request an extension if there are circumstances out of the HHA's control impacted the HHA's ability to submit data in a timely manner.

Response: Currently, in the event they were unable to submit quality data due to extraordinary circumstances beyond their control, we provide HHAs with the opportunity to request an exception or extension from the program's reporting requirements. HHAs affected by a natural or man-made disaster or other extraordinary circumstances may request an exception or extension using instructions provided on the HH QRP website: *https://www.cms.gov/medicare/quality/home-health/home-health-quality-reporting-reconsideration-and-exception-extension.*

Comment: Some commenters recommended that CMS provide enhanced technical assistance and support as part of the transition to the new reporting timeframe. Several commenters suggested updated training resources and outreach to HHAs to ensure providers have sufficient support to implement this proposal. A few commenters requested the ability for vendors to have a test period for submissions.

Response: We appreciate commenters' input and recommendations for implementation of this proposal. We would like to note that we currently conduct national outreach (such as email communications) about upcoming data submission deadlines. We also provide guidance and technical manuals, data submission deadline documents, and training resources. We intend to make updates to our outreach processes, manuals, data submission deadline documents and training resources related to this change. Regarding technical assistance and support, we list resources and on our website: *https://www.cms.gov/medicare/quality/home-health/home-health-quality-reporting-training.* We do not anticipate that the new submission timeframe will require data processing since the submission processes have not been changed with this proposal.

After consideration of public comments, we are finalizing as proposed to require that HHAs submit their OASIS assessments and make corrections to their OASIS assessment data where necessary no later than the 15th day of the second month after the end of the calendar quarter beginning with the CY 2027 HHQRP.

2. Revise the OASIS Annual Payment Update Reporting Timeframe

a. Background

HHAs are required to submit OASIS data in a timely manner as outlined under section 1895(b)(3)(B)(v) of the Act, as amended by the Deficit Reduction Act (Pub. L. 109–117). Failure to submit OASIS data in a timely manner with respect to a HH QRP year will result in the reduction of the annual home health market basket percentage increase otherwise applicable to an HHA for the corresponding calendar year by 2 percentage points. This annual payment update (APU) was initiated for the HH QRP on January 1, 2007. The HH QRP APU requirements were finalized in the CY 2007 HH PPS Final Rule (71 FR 44087 through 44088) outlining data collection of 12 months of data beginning July 1, 2005 and running through July 1, 2026. This timeframe allowed a full 12 months of data and provided CMS the time necessary to analyze and make any necessary payment adjustments to the CY 2007 payment rates (71 FR 44087 through 44088). The timing for APU reporting

has remained on this data calculation cadence since this update.

The current OASIS APU reporting timeframe differs from that used by other major CMS payment updates. Notably, the expanded HHVBP Model annual payment adjustment and the HH PPS updates are both based on a calendar year timeline. To improve alignment between HH payment policies and OASIS QRP reporting requirements, CMS proposed to revise the OASIS APU data reporting timeframe to reflect a January 1 through December 31 reporting timeframe, or the calendar year. We believe this update would provide clarity to HH payment updates and facilitate the alignment of the HH pay-for-reporting policies with other HH payment policies.

b. Revise the OASIS Annual Payment Update Reporting Timeframe

The revision of the OASIS APU data reporting to a calendar year timeframe would require a transition year in which the current reporting timeframe was moved to the new proposed reporting timeframe. We proposed the transition occur with the 2028 APU and further proposed that the 6 months data collected from July 1, 2026 through December 31, 2026 would serve as the OASIS APU data reporting timeframe to determine the HH QRP 2028 OASIS APU. We also proposed that the 2029 OASIS APU would be the first iteration in which the OASIS APU data reporting timeframe will be based on the calendar year, from January 1, 2027 through December 31, 2027. We would continue this new pattern for each subsequent OASIS APU with effective dates for data reporting of January 1 through December 31. OASIS assessments will be considered complete if they comply with the HH Conditions for Payment (COPs) that apply to the applicable year. Please see table 20 that outlines the current OASIS APU data reporting timeframe, the proposed transition reporting timeframe, and the revised OASIS APU timeframe used for the CY 2029 APU and later.

TABLE 20: DATA REPORTING TIMEFRAMES ASSOCIATED WITH UPCOMING HHQRP OASIS APU

OASIS APU Issued	Data Reporting Timeframe
January 2027	July 1, 2025 – June 30, 2026
January 2028 transition	July 1, 2026 - December 31, 2026
January 2029	January 1, 2027 – December 31, 2027

In the CY 2024 HH PPS final rule, CMS finalized adding the following language to the regulatory text at § 484.245(b)(2)(ii)(A): ''A home health agency must meet or exceed the data submission threshold for each submission year (July 1–June 30) set at 90 percent of all required OASIS or successor instrument records and submitted through the CMS designated data submission systems'' (88 FR 77676). With the proposed change to a calendar year reporting timeframe, CMS proposed to revise the language in § 484.245(b)(2)(ii)(A) that currently states ''(July 1–June 30)'' to state ''(January 1 through December 31)''.

We received public comment on the proposal to revise the OASIS APU reporting timeframes to a calendar year period beginning with the CY 2027 HH QRP. The following is a summary of the comments we received and our responses.

Comment: Most commenters expressed strong support for CMS's proposal to align the OASIS Annual Payment Update (APU) reporting period with the calendar year, citing anticipated benefits such as improved administrative efficiency, consistency across payment and quality reporting programs, and reduced confusion for providers.

Response: We thank commenters for their support for our proposal to revise the OASIS APU reporting period to calendar year. We seek to align reporting periods, where possible, to provide clearer reporting processes across HH programs.

Comment: Several commenters who supported the CMS proposal also emphasized the importance of clear and timely guidance regarding the new reporting timeframe, standardized reporting specifications, and transition support to ensure HHAs can comply with the new requirements and avoid unintended payment penalties. Some commenters highlighted concerns about a potential increase in operational burden, particularly regarding the inclusion of all-payer OASIS data and the risks associated with a shortened reporting period during the transition year. They recommended either an extended transition period or additional compliance resources. Several expressed concerns that there may be an increase in APU failure during the transition to the new calendar reporting timeframe.

Response: We thank commenters for their support of this proposal and for sharing criteria that would assist with implementation of revised calendar proposal. We will ensure that clear guidance around the implementation of revisions of the reporting timeframe for the OASIS APU will be shared via multiple means of communication, including the official HHQRP website. We will also work to ensure training materials related to the HHQRP APU addresses OASIS all-payer data submission. Our goal is to limit burden associated with a transition to calendar year reporting of the OASIS APU.

After consideration of public comments, we are finalizing as proposed to revise the OASIS APU reporting timeframe to a calendar year period effective January 1, 2027. We are also finalizing the transition period in which the six months of data collected from July 1, 2026 through December 31, 2026 would serve as the OASIS APU data reporting timeframe to determine the HHQRP 2028 APU. We are finalizing the 2029 OASIS APU data reporting timeframe would be the first iteration in which the OASIS APU data reporting timeframe would be for a calendar year, from January 1, 2027 through December 31, 2027.

3. Revise the HHCAHPS Annual Payment Update Reporting Timeframe

a. Background

HHAs are required to submit quality data in a timely manner as outlined under section 1895(b)(3)(B)(v) of the Act. Failure to submit HHCAHPS data in a timely manner with respect to a HH QRP year could result in the reduction of the annual home health market basket percentage increase otherwise applicable to an HHA for the corresponding calendar year by 2 percentage points. HHCAHPS data

inclusion in the HH QRP was finalized with the CY 2010 HH PPS Final Rule (FR 74 58098 through 58104). Adding a HHCAHPS annual payment update (APU) to the current HH QRP requirements was also finalized with the CY 2010 HH PPS Final Rule where CMS finalized the policy that HHCAHPS will be included in the APU reporting for the CY 2012 APU based on 6 months of data from October 2010 to March 2011 (FR 74 58103). In the CY 2011 HH PPS final rule, CMS finalized a policy that HHCAHPS APU calculations would require four quarters of data collection from April 1, 2011 to March 31, 2012 for the CY 2013 HHCAHPS APU (FR 75 70406). The timing for HHCAHPS APU reporting has remained on this cadence since this update.

The current HHCAHPS APU reporting timeframe differs from that used by other annual HH CMS payment updates. The expanded HHVBP Model payment adjustment percentage and the HH PPS updates are both based on a calendar year timeline. The OASIS APU data reporting timeframe is also different from a calendar year timeline and we are also proposing an update to a calendar year timeframe in a previous proposal. To improve alignment between home health payment policies and HH QRP pay-for-reporting requirements, we proposed to revise the HHCAHPS APU data reporting timeframe to reflect a January 1 through December 31 reporting timeframe, or the calendar year. We believe this update would provide clarity related to HH payment updates and facilitate the alignment of CMS HH pay-for-reporting policies with other HH payment policies.

b. Revise the HHCAHPS Annual Payment Update Reporting Timeframe

The proposed revision of the HHCAHPS APU data reporting to a calendar year timeframe would require a transition year in which the current reporting timeframe was moved to the new proposed reporting timeframe. We proposed the transition occur with the 2028 HHCAHPS APU and further proposed that the nine months of data collected from April 1, 2026 through December 31, 2026 would serve as the HHCAHPS APU data reporting timeframe to determine the HHQRP 2028 APU. We also proposed that the 2029 HHCAHPS APU data reporting timeframe would be the first iteration in which the HHCAHPS APU data reporting timeframe would be for a calendar year, from January 1, 2027 through December 31, 2027. We would continue this new pattern for each subsequent HHCAHPS APU with effective dates for data reporting of January 1 through December 31. HHA OASIS assessments would be considered complete if they complied with the HH CoPs and Conditions for Payment that apply to the applicable year. Please see Table 21 that outlines the HHCAHPS current APU data reporting timeframe, the proposed transition reporting timeframe, and the revised APU timeframe used for the CY 2029 APU and later.

TABLE 21: DATA REPORTING TIMEFRAMES ASSOCIATED WITH UPCOMING HHQRP HHCAHPS APU

HHCAHPS APU Issued	Data Reporting Timeframe
January 2027	April 1, 2025 – March 31, 2026
January 2028 transition	April 1, 2026 - December 31, 2026
January 2029	January 1, 2027 – December 31, 2027

We received public comment on the proposal to revise the HHCAHPS APU reporting timeframes to a calendar year period beginning with the CY 2027 HH QRP. The following is a summary of the comments we received and our responses.

Comment: Most commenters supported CMS's proposal to align the HHCAHPS APU reporting period with the calendar year. Commenters noted that this proposal could reduce confusion, improve compliance, and align the timing of HHQRP APU and the expanded HHVBP Model APR determinations. Commenters also shared the importance of clear implementation guidance and safeguards to ensure providers are not penalized for technical or vendor-related issues beyond their control during the transition from the current reporting schedule to a new reporting periods for the HHCAHPS APU.

Response: We thank commenters for their support for the proposal to revise the reporting timeframe for the HHCAHPS APU. We are working to improve alignment for HH program reporting requirements and simplifying program policies.

Comment: Some commenters who supported the HHCAHPS APU calendar update proposal raised the issue of burden associated moving to a new HHCAHPS calendar. They noted that to ensure an effective transition would require investments in quality assurance resources, data analytics, clinical education, software systems, and compliance oversight. One commenter supported the CMS proposal but requested that CMS clarify whether any scoring methodologies for HHQRP or the expanded HHVBP Model would change.

Response: We thank commenters for outlining potential burden issues related to this proposal. We will provide clear guidance around the implementation of this issue that we believe will limit undue costs associated with the transition and implementation of calendar year HHCAHPS APU reporting. Since no new processes are required and only a shift in the submission workflow, we do not anticipate the requirement for new investment of processing or validations systems. We also do not anticipate changes for the HH QRP or expanded HHVBP Model scoring methodologies associated with this transition to calendar year reporting of HHCAHPS APU calculations.

After consideration of public comments, we are finalizing as proposed to revise the HHCAHPS APU reporting timeframes to a calendar year period effective January 1, 2027. We are also finalizing the transition period in which the nine months of data collected from April 1, 2026 through December 31, 2026 would serve as the HHCAHPS APU data reporting timeframe to determine the HHQRP 2028 APU. We are finalizing the 2029 HHCAHPS APU data reporting timeframe would be the first iteration in which the HHCAHPS APU data reporting timeframe would be for a calendar year, from January 1, 2027 through December 31, 2027.

4. Updates To Regulation Text Related to Reconsiderations

In the CY2026 HH PPS final rule, CMS updated regulation text language to codify how a provider may request an

extension to file a request for reconsideration (90 FR 55342). We proposed to further clarify aspects of the reconsideration process to facilitate more timely, digital transmission of information. Specifically, § 484.245(d)(1)(i) currently states that HHAs that do not meet the quality reporting requirements under this section for a program year will receive a letter of noncompliance via the United States Postal Service and the CMS-designated data submission system. We proposed to revise this language to specify that HHAs that do not meet the quality reporting requirements under this section for a program year would receive a notification of noncompliance via the CMS-designated data submission system. Section 484.245(d)(1)(ii) currently states that an HHA may request reconsideration no later than 30 calendar days after the date identified on the letter of non-compliance. We proposed to revise this language to state that an HHA may request reconsideration no later than 30 calendar days after the date identified on the notification of non-compliance. Section 484.245(d)(2)(v) currently states that CMS identified reason(s) for non-compliance as stated in the non-compliance letter. We proposed to revise this language to state, that CMS identified reason(s) for non-compliance as stated in the non-compliance notification.

Section 484.245(d)(4)(i) currently states that CMS notifies the HHA, in writing, of its final decision regarding any reconsideration request through at least one of the following methods:

- CMS designated data submission system.
- The United States Postal Service.
- Email from the CMS Medicare Administrative Contractor (MAC).

We proposed to revise this language to state that CMS would notify the HHA of its final decision regarding any reconsideration request through a CMS designated data submission system.

We received comments on the proposed updates to the regulations text related to the reconsideration process. The following is a summary of the comments we received and our responses.

Comment: Most commenters supported CMS modernization and digital communications efforts but expressed concern that relying on a single portal could cause providers to miss important notices due to staff turnover, account-access issues, technical failures, emergencies, or system outages. They stressed that missing a notice could have significant financial consequences, including payment reductions.

Response: We thank commenters for their support of the proposed updates. Communication with providers via the CMS electronic systems has been in place for numerous years and has been effectively utilized across numerous CMS programs including the expanded HHVBP Model.

Comment: Several commenters recommended maintaining redundant notification methods. They proposed safeguards including sending email alerts to multiple designated contacts whenever a notice is posted, allowing optional text-message notifications, continuing mailed notices or allowing agencies to opt into them, maintaining auditable records of notice availability and retrieval, and ensuring appeal deadlines begin only after providers have been alerted that a notification is available. Commenters also urged CMS to account for outages or access failures that could prevent timely review of notices.

Response: The processes that will remain in place after this update has been implemented will continue to include multiple forms of outreach. These include electronic distribution to multiple designated contacts and through multiple distribution channels for HHA contacts.

Comment: Several commenters further emphasized the need for due-process protections and operational safeguards as the electronic system is implemented. They suggested allowing agencies to designate multiple authorized users, ensuring system accessibility and compliance with Section 508 standards, providing machine-readable notice formats, issuing receipts and timestamps for submissions, and retaining records throughout the appeal period.

Response: We appreciate these comments and agree that there is a need to have operational safeguards related to these important reconsideration processes. We believe that our current safeguards address the concerns raised by the commenters. HHAs can have confidence that their reconsideration requests will be processed effectively.

Comment: Commenters also raised concerns related to scenarios in which there was some CMS system failure. Commenters suggested extending deadlines during system downtime, offering alternative submission methods when technical issues occur, and providing a clear human point of contact for reconsideration-related questions. Overall, commenters support digital modernization but believe additional protections are necessary to ensure fairness and prevent avoidable payment penalties.

Response: We appreciate commenters addressing concerns when technical issues may occur during the reconsideration process. We have established policies and procedures to allow HHAs to receive timely communication about their compliance status and to expect consistent communication during reconsideration follow-up. Should technical issues arise, our policies in place to reach providers when contingencies are necessary.

After consideration of public comments, we are finalizing revising this language to state that we will notify the HHA of its final decision regarding any reconsideration request through a CMS designated data submission system.

F. HH QRP Measure Concepts Under Consideration for Future Years—Request for Information (RFI)

In the CY 2024 HH PPS proposed rule (88 FR 43738 through 43740), we included an RFI on a set of principles for selecting and prioritizing HH QRP measures, identifying measurement gaps, and suitable measures for filling these gaps. We refer readers to the CY 2024 HH PPS final rule (88 FR 77773 through 77774) for a summary of the public comments received in response to the RFI.

We sought input on the importance, relevance, appropriateness, and applicability of the quality measure concepts related to advance care planning (ACP). Advance care planning is a continuous process that supports people in understanding and communicating their goals, values, and preferences regarding future medical decisions.[10] The Patient Self Determination Act of 1990[11] supports this process by requiring healthcare facilities to inform patients of their rights regarding medical decisions, including advance directives and end of life care.[12] In post-acute care (PAC) settings, where patients recover from acute illness, injury, or major procedures, their needs and goals may evolve as their condition changes. Factors such as clinical stability, functional status, therapy tolerance, cognition function, prognosis, and

[10] McMahan, R. D., Tellez, I., & Sudore, R. L. (2021). Deconstructing the Complexities of Advance Care Planning Outcomes: What Do We Know and Where Do We Go? A Scoping Review.Journal of the American Geriatrics Society,69(1), 234–244. *https://doi.org/10.1111/jgs.16801.*

[11] Public Law 101–508, 4206, 4751.

[12] *https://www.congress.gov/bill/101st-congress/house-bill/4449https://www.congress.gov/bill/101st-congress/house-bill/5835.*

personal preferences can all shift during recovery. Regular reassessment and transparent communication are essential to maintaining person-centered care, while advance care planning facilitates shared decision-making by documenting patient preferences and ensuring goal-concordant care throughout care transitions.[13]

As we review new measure concepts, we will prioritize evidence-based outcome measures that promote person-centered care practices. We sought input on the relevant aspects of advance care planning and measures appropriate for the HH setting. We received public comments on this request for information, and the following is a summary of the comments we received.

Comment: Many commenters expressed support for CMS's exploration of an ACP quality measure within the HH QRP while emphasizing the need for a patient-centered, practical, and clinically meaningful approach. Most commenters agreed that ACP is an important component of quality home health care, particularly for individuals with serious illness, chronic conditions, cognitive impairment, or complex care needs. Commenters who supported an ACP measure emphasized that home health clinicians are uniquely positioned to facilitate discussions about goals of care because they work directly with patients and families in the home environment and often develop trusted relationships that provide insight into patient preferences, caregiver capacity, safety concerns, and evolving care needs.

Some commenters who supported the ACP concept for HH shared that ACP should be understood as an ongoing process rather than a one-time documentation exercise. They cautioned CMS against creating a measure that simply rewards the presence of an advance directive or other legal document. Instead, commenters recommended focusing on meaningful conversations, shared decision-making, identification of patient goals and values, and documentation that reflects patient preferences over time. Several commenters stressed that success should be measured by whether care is aligned with patient wishes rather than whether a specific form has been completed. They also suggested that patients must retain the right to decline ACP discussions or defer decisions without providers being penalized.

Some commenters who support an ACP QM linked ACP closely with palliative care and serious illness management. Organizations representing patients, providers, and palliative care advocates noted that ACP plays a critical role in helping individuals understand treatment options, manage symptoms, plan for future care needs, and make informed decisions throughout the course of illness. Commenters highlighted that home health agencies increasingly serve older, frail, and medically complex beneficiaries whose primary goals may include symptom management, quality of life maintenance, caregiver support, avoiding hospitalizations, and remaining at home.

Several commenters argued that current home health quality measures primarily reward functional improvement, which may not accurately reflect quality care for patients with progressive or terminal illnesses. They encouraged CMS to develop measures that recognize goal-concordant care, symptom management, stabilization, caregiver preparedness, and successful transitions to hospice when appropriate.

Other commenters linked the palliative care RFI in a separate section of the proposed rule with the ACP RFI. These commenters generally supported CMS's efforts to expand awareness and accessibility of palliative care and appreciate clarification that beneficiaries do not need to be terminally ill or forgo curative treatment to receive these services. They suggested that increased access to palliative care can improve symptom management, pain control, patient and caregiver support, care coordination, and overall quality of life. They also noted that earlier integration of palliative care may help patients better understand their treatment options and align care with individual goals and preferences.

Some commenters who expressed support for measuring ACP warned against creating additional documentation requirements that duplicate existing OASIS assessments, care planning processes, or regulatory obligations. Commenters recommended leveraging existing workflows and data whenever possible and ensuring that any new measure is operationally feasible for agencies of all sizes. Several organizations also noted that home health agencies currently lack reimbursement mechanisms akin to those available to physicians for conducting ACP conversations. They argued that meaningful ACP discussions require significant clinician time, training, and interdisciplinary collaboration and that CMS should consider payment pathways that support these activities in HH.

Several commenters emphasized that ACP information is most valuable when it can travel with patients across settings, including hospitals, rehabilitation facilities, home health agencies, palliative care programs, and hospice. Commenters urged CMS to align future ACP measures with national interoperability standards and structured electronic data exchange rather than relying solely on OASIS items or scanned documents. They argued that standardized, machine-readable ACP information would improve care transitions and increase the likelihood that patient preferences are known and honored across the continuum of care.

Despite this support, several commenters requested additional guidance regarding how palliative care should be operationalized within home health settings. Commenters sought clearer distinctions between palliative care and hospice services, more detailed eligibility criteria, clarification regarding documentation and reporting requirements, and practical examples illustrating when palliative care interventions would be appropriate. Concerns were also raised about potential confusion among providers, patients, and caregivers if definitions and expectations are not clearly communicated.

Several commenters also highlighted the importance of health equity, communication access, and caregiver engagement. Recommendations included accommodating individuals with communication disorders, cognitive impairment, limited English proficiency, low health literacy, cultural differences, and varying levels of caregiver support. Commenters stressed that family caregivers often play an essential role in decision-making, care coordination, and implementation of patient preferences and should be included in future quality measurement efforts. Some commenters recommended risk adjustment, stratification, and appropriate exclusions to ensure providers caring for complex or vulnerable populations are not unfairly disadvantaged. Commenters also consistently encouraged comprehensive testing, technical expert review, and ongoing collaboration before implementing any ACP measure in the HH QRP.

Commenters that supported ACP measure concept for HH also shared concerns regarding accountability and quality measurement. Commenters

[13] McMahan RD, Tellez I, Sudore RL. Deconstructing the Complexities of Advance Care Planning Outcomes: What Do We Know and Where Do We Go? A Scoping Review. J Am Geriatr Soc. 2021 Jan;69(1):234–244. doi: 10.1111/jgs.16801. Epub 2020 Sep 7. PMID: 32894787; PMCID: PMC7856112.

caution against measures that hold home health agencies' responsibility for outcomes outside their control, such as whether a patient completes an advanced care directive or changes previously established preferences. Commenters recommend that CMS develop measures that assess whether agencies offered information, facilitated discussions, and appropriately documented patient choices. Such an approach would more accurately reflect the quality of care provided while protecting patient choice and reducing unnecessary administrative burden.

Commenters who did not support an ACP concept in HH contend that home health agencies (HHAs) are not the most appropriate setting or provider type to lead ACP discussions. They also argue that home health services are typically short-term and intermittent, agency staff often lack the long-term relationship, clinical authority, and comprehensive knowledge of a patient's medical history needed to guide complex decisions regarding prognosis, treatment options, and end-of-life preferences. Commenters suggest that primary care physicians and other long-term care providers are better positioned to lead these conversations.

Commenters who do not support an ACP QM expressed concerns about proposed ACP measures that would require documentation of an advance care directive or a completed decision. They argued that such measures could create inappropriate pressure on vulnerable patients, raise privacy concerns, duplicate existing documentation requirements, and unfairly hold agencies accountable for outcomes beyond their control. Many recommend that CMS instead measure whether a goals-of-care discussion was offered, documented, and conducted, regardless of whether a formal directive or final decision resulted.

Several commenters emphasized the importance of correct reimbursement, training, and quality measurement infrastructure that does not exist in HH for an ACP QM. They note that meaningful ACP and palliative care require significant clinician time, expertise, and care coordination. They urge CMS to first develop appropriate payment and reporting mechanisms that appropriately recognize these activities before looking to develop a measure.

Response: We thank all the commenters for responding to this RFI. While we are not responding to specific comments in response to the RFI in this final rule, we will take this feedback into consideration for our future measure development efforts for the HH QRP.

IV. The Expanded Home Health Value-Based Purchasing (HHVBP) Model

As authorized by section 1115A of the Act and finalized in the CY 2016 HH PPS final rule (80 FR 68624), the Center for Medicare and Medicaid Innovation (Innovation Center) implemented the Home Health Value-Based Purchasing (HHVBP) Model (''original Model'') in nine states on January 1, 2016. The design of the original Model leveraged the successes and lessons learned from other CMS value-based purchasing programs and demonstrations to shift from volume-based payments to a model designed to promote the delivery of higher quality care to Medicare beneficiaries. The specific goals of the original Model were to—

- Provide higher incentives for better quality care with greater efficiency;
- Study new potential quality and efficiency measures for appropriateness in the home health setting; and
- Enhance the current public reporting process.

On January 8, 2021, CMS announced the certification of the HHVBP Model for expansion nationwide, as well as the intent to expand the Model through notice and comment rulemaking.[14] In the CY 2022 HH PPS final rule (86 FR 62292 through 62336), we finalized the decision to expand the HHVBP Model to all Medicare certified HHAs in the 50 States, territories, and District of Columbia beginning January 1, 2022. CY 2022 was a pre-implementation year. Payment adjustments under the Model are calculated in the year after each performance year and applied 2 years following each performance year. Therefore, payment adjustments for the first performance year of CY 2023 were implemented in CY 2025. Our codified policies for the expanded HHVBP Model can be found in our regulations at 42 CFR part 484, subpart F, §§ 484.300 through 484.375. The following description of existing HHVBP performance feedback reports is included for background and to provide context for the discussion of potential alignment between the HH QRP and the expanded HHVBP Model in section III. of this final rule.

CMS publishes two types of routine performance feedback reports that provide HHAs with information on their measure performance:

- The first report type is the Interim Performance Report (IPR), which is issued quarterly. The information in the IPR reflects calculation of the TPS based on rolling data periods that are updated each quarter. CMS issues two versions of the IPR—a preliminary version and a final version that reflects any changes made as a result of the recalculation request process. The IPRs provide interim performance scores, achievement and improvement points, and TPS.
- The second report is the Annual Performance Report (APR). The APR provides HHAs with information on their measure performance using data from the prior calendar year. Like the IPR, the APR provides feedback to HHAs about performance relative to quality measure achievement thresholds, benchmarks, and improvement thresholds. Additionally, the APR includes the HHA's payment adjustment percentage for the upcoming CY, an explanation of when the adjustment will apply, and how CMS determined the adjustment.

For more information on the policies we have adopted previously for the expanded HHVBP Model, we refer readers to the following:

- CY 2022 HH PPS final rule (86 FR 62240).
- CY 2023 HH PPS final rule (87 FR 66790).
- CY 2024 HH PPS final rule (88 FR 77676).
- CY 2025 HH PPS final rule (89 FR 88354).
- CY 2026 HH PPS final rule (90 FR 55342).

CY 2027 will be the fifth performance year for the expanded HHVBP Model. As finalized in the CY 2026 HH PPS final rule, the expanded HHVBP Model currently uses six OASIS-based measures, three claims-based measures, and two HHCAHPS Survey-based measures (see Table 31 in section III. (HH QRP) of this final rule). We continue to address the number of measures needed to maximize the number of HHAs in each cohort eligible for a payment adjustment.

CMS has identified substantial opportunities to better align the HH QRP and the expanded HHVBP Model, including measure-set alignment. Table 31 in section III. of this final rule reflects current and expected usage of measures for both the expanded HHVBP Model and the HH QRP. For more details on the potential alignment between the HH QRP and expanded HHVBP Model, see section III.D. of this final rule.

Though we did not propose any changes specific to the expanded HHVBP Model in the proposed rule, we did receive several public comments. The following is a summary of the

[14] *https://www.cms.gov/newsroom/press-releases/cms-takes-action-improve-home-health-care-seniors-announces-intent-expand-home-health-value-based.*

comments we received and our responses.

Comment: Some commenters noted their appreciation that the proposed rule did not include new proposals related to the expanded HHVBP Model outside of outlining potential efforts to align the HH QRP and the expanded HHVBP Model. Several commenters submitted comments regarding potential updates to the expanded HHVBP Model's applicable measure set, cohort assignment, and the impact that HH QRP proposals and concepts discussed in HH QRP RFIs could have on the expanded HHVBP Model. Several commenters raised concerns about how additional emphasis on patients receiving palliative care via home health care could reflect negatively on HHA performance on HHVBP scores. Some commenters suggested that these patients should not be included in the expanded HHVBP Model if CMS further emphasizes palliative care in home health. Some commenters also suggested specific changes to the expanded HHVBP Model applicable measure set such as stratifying results by a patient's dual eligibility status for Medicare and Medicaid coverage. Other commenters noted that the expanded HHVBP Model should consider measures that do not only focus on functional improvement. A few commenters suggested that CMS should consider additional cohorts to better account for the differences in HHA characteristics.

Response: We thank commenters for their input. Since we did not propose any changes specific to the expanded HHVBP Model in the proposed rule, we are not responding to specific comments received in this final rule and will take this feedback into consideration as appropriate.

V. Durable Medical Equipment and Provider Enrollment Provisions

A. Overview

In this section of the final rule, we proposed changes and sought comment on the following DME and provider enrollment provisions:

- In section V.B. of the final rule, we will clarify the application of the DMEPOS face-to-face encounter requirements and the related documentation necessary to support the replacement of DMEPOS items.
- In section V.C. of the final rule, we proposed a number of Medicare provider enrollment provisions to strengthen and clarify certain aspects of the provider enrollment process.
- In section V.D. of the final rule, we proposed to make changes to the Medicare Part B definition of DME regulations in accordance with the statutory changes implemented via section 6222(a) of the CAA, 2026.
- In section V.E. of the final rule, we discussed requesting revisions to the information collection requirements that will require DMEPOS CBP contract suppliers to report the country of origin for the lead items furnished during the contract's period of performance.

B. DMEPOS Encounter Requirements for Identical Replacement Items

1. Background

Section 1834(a)(11)(B)(ii) of the Social Security Act, as amended by section 504 of MACRA and codified in the Code of Federal Regulation (CFR) at 42 CFR 410.38, outlines a condition of payment for certain items of durable medical equipment, prosthetics, orthotics, and supplies (DMEPOS). Specifically, it requires a physician, physician assistant (PA), nurse practitioner (NP), or clinical nurse specialist (CNS) (as these four terms are defined in section 1861 of the Act) to write an order that is communicated to the supplier prior to delivery and document that the physician, PA, practitioner, or specialist has had a face-to-face encounter (including through use of telehealth under section 1834(m) of the Act) with the individual involved, during the 6-month period preceding such written order.

On November 8, 2019 (84 FR 60648), we published a process whereby items identified as potential vulnerabilities to the Trust Fund may be placed on the *Master List of DMEPOS Items Potentially Subject to Face-to-Face Encounter and Written Orders Prior to Delivery and/or Prior Authorization Requirements* (''Master List''). We analyze the Master List and select items from the Master List to be placed on the *Required Face-to-Face Encounter and Written Orders Prior to Delivery List* (''Required F2F/WOPD List'') via **Federal Register** notice. The face-to-face encounter requirements outlined in 42 CFR 410.38 are only applicable to items that are selected and placed on the Required F2F/WOPD List via **Federal Register** notice.

For the identified items, the treating practitioner must document and communicate to the DMEPOS supplier that the treating practitioner has had a face-to-face encounter with the beneficiary within the 6 months preceding the date of the written order/prescription. The regulation requires supporting documentation to include the subjective and objective beneficiary specific information used for diagnosing, treating, or managing a clinical condition for which the DMEPOS is ordered.

Separately, in our Medicare Benefit Policy Manual (100–02) (Chapter 15, Section 110.2—Repairs, Maintenance, Replacement, and Delivery) we define replacement as the provision of an identical or nearly identical item. Replacements may occur as a result of loss, theft, or irreparable damage, which may be due to a specific incident or event, or irreparable wear, in consideration of the reasonable useful lifetime of the equipment.

Section 414.210(f) discusses payment for replacement of equipment. As specified at 42 CFR 414.210(f)(1), the reasonable useful lifetime of durable medical equipment is generally determined through program instructions, or in the absence of program instructions, may be determined by the Medicare Administrative Contractors and be no less than 5 years. If the item of equipment has been in continuous use by the beneficiary for the equipment's useful lifetime or if the contractor determines that the item is lost, stolen, or irreparably damaged, the beneficiary may elect to obtain a new piece of equipment. Replacement may be paid when the practitioner reaffirms the medical necessity of the item through a new order.

2. Provisions of the Regulation and Responses to Public Comments

CMS proposed to clarify that while an order would continue to be required for replacement DMEPOS items, a new face-to-face encounter would not need to occur to support payment for these DMEPOS items. We further proposed to clarify that, for purposes of 42 CFR 410.38(d)(2)(iii), a ''replacement'' refers to the provision of an item that replaces an item falling under the same Healthcare Common Procedure Coding System (HCPCS) code; it does not include those situations involving the provision of a different item, for example, because of a change in medical condition. In other words, for paragraph(d) the replacement would be the same type of item (that is, the same HCPCS code as that originally ordered and rendered) with no change to the type of item ordered and rendered. When an order is written to replace an item falling under the same HCPCS code, requiring a new face-to-face examination to document subjective and objective beneficiary specific information regarding how the DMEPOS item will continue to be used in relation to the beneficiary's clinical condition seems burdensome and redundant. If

the item is not a replacement item identified by the same HCPCS code, then a new face-to-face encounter would continue to be required, as described in existing 42 CFR 410.38. This clarification does not eliminate the need for a new order, nor does it supersede or eliminate any other coverage instruction–including those iterated in national or local coverage determinations. In addition, we note that such claims may nonetheless be subject to medical review to ensure the appropriateness of claims billed for payment; particularly when there is concern for aberrant billing behaviors or potential fraud.

We received public comments on these proposals. In addition to the comments outlined below, CMS received some comments outside the scope of this regulation which will not be addressed. The following is a summary of the comments we received and our responses.

Comment: Commenters supported and encouraged finalization of CMS' proposal that a new face-to-face encounter would not need to occur to support payment for replacement DMEPOS items. Commenters acknowledged that the updates would prevent potential delays in the provision of replacement items, avoid unnecessary burdens and protect beneficiary access.

Response: We thank the commenters for their review and support of the proposed clarification.

Comment: A commenter suggested that CMS should consider establishing a reasonable timeframe after which a new face-to-face encounter would again be required to support continued use of the item. For example, if a replacement occurs many years after the original order, they shared their belief that a new clinical assessment may be appropriate to confirm that the beneficiary's condition, functional needs, and prescribed equipment remain consistent with current medical necessity requirements.

Response: We thank the commenter for their suggestion. We note that this clarification does not remove the need for the practitioner order, nor the need for the initial assessment to be provided, upon request, to support compliance with coverage requirements. We believe that these program integrity protections, coupled with regular clinical practice, will help ensure ongoing practitioner oversight of our beneficiary population.

Comment: Commenters requested that CMS look outside of the face-to-face requirements for evidence to support the item was initially medically necessary when such documentation is unavailable due to the lapse in time or other third-party documentation constraints.

Response: We appreciate the commenter's suggestion. We are finalizing the clarification that a face-to-face encounter does not need to be repeated for the sole purpose of ordering replacement items. However, we note that the regulation at 42 CFR 410.38 requires a face-to-face encounter for certain DMEPOS items. As such, documentation to support that the face-to-face encounter occurred when the item was initially furnished continues to be required.

Comment: A commenter requested CMS provide claim examples that define 'identical replacement' by HCPCS code, explain what documentation suppliers and treating practitioners should retain, and confirm that payment will not be denied solely because no new encounter occurred when the original encounter documentation remains valid and available.

Response: We do not believe that providing claim examples is necessary. The definition of 'identical replacement' is defined in this regulation as the same HCPCS code. In this regulation we clarify that when an identical DMEPOS item is being replaced, such claim will not be denied because a new encounter did not occur. However, we also clarify that the provider is expected to retain documentation to support that the original encounter occurred, as appropriate, when the item is initially furnished and that such documentation demonstrates compliance with our coverage requirements.

Comment: Commenters asked CMS to clarify that updated technologies, successor products, and newer device generations remain eligible for the replacement-item framework when they fall within the same HCPCS code and serve the same medical purpose.

Response: We agree. As stated in our proposal, it is our intent that this clarification would apply to the provision of an item that replaces an item falling under the same HCPCS code; it does not include those situations involving the provision of a different item, for example, because of a change in medical condition.

Comment: Commenters asked that CMS expand our current definition of an identical item as being the same HCPCS code to include any transitions within the same clinical product family, such as a beneficiary moving from a standard intermittent catheter to a hydrophilic-coated intermittent catheter. Likewise, commenters asked us to expand the definition to allow the provision of new accessory items, rendered with the replacement item, without a new face-to-face encounter being required.

Response: We thank the commenters for their feedback but are electing to retain our original language. As previously stated, we think that it is most appropriate to conduct a new face-to-face encounter when there is a change in or addition of HCPCS items, as such deviations may indicate a change in condition.

Comment: A commenter expressed their concern that this regulatory clarification created misalignment amongst DMEPOS items. Specifically, they shared their concern that certain replacement items would not require a face-to-face encounter, while continuous glucose monitors require ongoing practitioner oversight, as a condition of payment, for continued coverage. Likewise, another commenter asked for our clarification that this provision would not impact the item-specific coverage requirements for wheelchairs (such as specialty evaluations for wheelchairs). Relatedly, a commenter asked CMS to remind contractors that they have the flexibility to revise local coverage determination requirements that may necessitate additional provider visits when furnishing identical replacement items.

Response: We are emphasizing our prior statement that this clarification does not eliminate the need for a new order, nor does it supersede or eliminate any other coverage instruction—including those iterated in national or local coverage determinations. If the item specific coverage policies include practitioner oversight requirements, such requirements would continue to apply. This provision only clarifies the intent of the regulatory text at 42 CFR 410.38.

Comment: Commenters requested CMS confirmation that the regulatory clarification would specifically apply to speech generating devices.

Response: This clarification applies for all DMEPOS items that require a face-to-face encounter per 42 CFR 410.38. Commenters can review those items that are currently included on the Required Face-To-Face Encounter and Written Order Prior To Delivery List, available at: *https://www.cms.gov/files/document/required-face-face-encounter-written-order-prior-delivery-list.pdf.*

Final Decision: After consideration of the public comments, we are finalizing our regulation as proposed to clarify that a new face-to-face encounter would not need to occur to support payment for these DMEPOS replacement items.

C. Provider Enrollment

1. Background and Applicability

a. Enrollment Process

Section 1866(j)(1)(A) of the Act requires the Secretary to establish a process for the enrollment of providers and suppliers into the Medicare program. The overarching purpose of the enrollment process is to help confirm that providers and suppliers (hereafter collectively ''providers'' unless otherwise noted) seeking to bill Medicare for services and items furnished to Medicare beneficiaries meet all applicable Federal and State requirements to do so. The process is, to an extent, a ''gatekeeper'' that prevents unqualified and potentially fraudulent individuals and entities from entering and inappropriately billing Medicare. Since 2006, we have undertaken rulemaking efforts to outline our enrollment procedures. These regulations are generally codified in 42 CFR part 424, subpart P (currently §§ 424.500 through 424.575 and hereafter occasionally referenced as subpart P). They address, among other things, requirements that providers must meet to obtain and maintain Medicare billing privileges.

As outlined in § 424.510, one such requirement is that the provider must complete, sign, and submit to its assigned Medicare Administrative Contractor (MAC) the appropriate enrollment form, typically the Form CMS–855 (OMB Control No.: 0938–0685). The Form CMS–855, which can be submitted via paper or electronically through the internet-based Provider Enrollment, Chain, and Ownership System (PECOS) process (SORN: 09–70–0532, PECOS), collects important information about the provider. Such data include, but are not limited to, general identifying information (for example, legal business name), licensure and certification data, and practice locations. The application is used for a variety of provider enrollment transactions, including the following:

- Initial enrollment—The provider is—(1) enrolling in Medicare for the first time; (2) enrolling in another Medicare contractor's jurisdiction; or (3) seeking to enroll in Medicare after having previously been enrolled.
- Change of ownership—The provider is reporting a change in its ownership.
- Revalidation—The provider is revalidating its Medicare enrollment information in accordance with § 424.515. (Suppliers of durable medical equipment, prosthetics, orthotics, and supplies (DMEPOS) must revalidate their enrollment every 3 years; all other providers and suppliers must do so every 5 years.)
- Reactivation—The provider is seeking to reactivate its Medicare billing privileges after it was deactivated in accordance with § 424.540.
- Change of information—The provider is reporting a change in its existing enrollment information in accordance with § 424.516.

After receiving the provider's initial enrollment application, CMS or the MAC reviews and confirms the information thereon and determines whether the provider meets all applicable Medicare requirements. We believe this screening process has greatly assisted CMS in executing its responsibility to prevent Medicare fraud, waste, and abuse.

As previously mentioned, over the years we have issued various final rules pertaining to provider enrollment. These rules were intended not only to clarify or strengthen certain components of the enrollment process but also to enable us to take further action against providers: (1) engaging (or potentially engaging) in fraudulent or abusive behavior; (2) presenting a risk of harm to Medicare beneficiaries or the Medicare Trust Funds; or (3) that are otherwise unqualified to furnish Medicare services or items. Consistent therewith, and as we discuss in this section V.C. of this final rule, we proposed several changes to our existing Medicare provider enrollment regulations.

b. Legal Authorities

There are two principal categories of legal authorities for our proposed Medicare provider enrollment provisions:

- Section 1866(j) of the Act furnishes specific authority regarding the enrollment process for providers and suppliers; and
- Sections 1102 and 1871 of the Act provide general authority for the Secretary to prescribe regulations for the efficient administration of the Medicare program.

c. Applicable Provider and Supplier Types

The provisions in section V.C. of this final rule apply to all Medicare provider and supplier types except as specifically indicated otherwise. The most prominent proposed provisions that would apply only to certain types of providers or suppliers include the following:

- New § 424.530(a)(20), which would permit denial of a hospice's enrollment application for the reasons specified therein.
- New §§ 424.530(a)(22) and 424.535(a)(25), which would allow denial or revocation of a hospice's, home health agency's, or DMEPOS supplier's enrollment for failing to comply with the change in majority ownership provisions in §§ 424.550(b) or 424.551.
- Revised § 424.540(b)(3)(i), which would require reactivating hospices to undergo a State survey or accreditation prior to reactivation.
- Revisions to our DMEPOS accreditation requirements in § 424.58.

d. Comment Solicitation

We solicited and welcomed comments on all of the proposed provider enrollment provisions that follow. We received approximately 375 sets of comments from stakeholders. We thoroughly and carefully read, reviewed, and considered all of them in full. Most comments will be addressed within the subject-matter section to which the comment pertained. More general comments, as well as comments that seemingly pertained to multiple topics, will be addressed at the end of this section (V.C.) (For instance, sets of comments that expressed the same concerns across several provisions.) This will reduce repetition and facilitate both clarity and brevity.

We also note that in some cases, it was difficult to determine whether the stakeholder's comment referenced a particular enrollment proposal or our current enrollment process as a whole; for example, some commenters were unclear as to whether they were requesting changes to: (1) a proposed enrollment revocation reason; (2) how providers are currently revoked; or (3) both. We interpreted these comments as best we could based on their plain language.

2. Revocations and Denials of Enrollment

Under § 424.535(a), CMS may revoke a Medicare provider's enrollment for any of the reasons specified in that paragraph. These reasons include, for example, the provider's: (1) failure to adhere to Medicare enrollment requirements; (2) exclusion by the HHS Office of Inspector General (OIG); (3) felony conviction within the previous 10 years; (4) pattern of improper or abusive billing; and (5) termination by another Federal health care program. A revocation helps safeguard the Medicare program, the Trust Funds, and beneficiaries by removing from (and preventing payment to) Medicare providers that have engaged in

problematic or otherwise non-compliant behavior. When a provider is revoked, it is generally barred from reenrolling in Medicare for a period of 1 to 10 years.

CMS also has numerous reasons in § 424.530(a) for which it can deny a provider's enrollment application, some of which duplicate our revocation grounds in § 424.535(a) (for instance, OIG exclusion). The general rationale for a denial is akin to that for a revocation: to protect the Medicare program and its beneficiaries from potentially fraudulent or abusive activity.

We have previously finalized a number of regulations adding or revising revocation and denial reasons in subpart P to address particular program integrity vulnerabilities and types of provider conduct. We have also used rulemaking to refine other revocation and denial policies, such as the effective dates of revocations. With our continuing obligation to establish strong payment safeguards, we proposed several changes to our revocation and denial policies in subpart P.

a. Modifications of Current Revocation Provisions

(1) Abuse of Billing Privileges (§ 424.535(a)(8)(ii))

Section 424.535(a)(8) permits revocation based on the provider's abuse of billing privileges. Per § 424.535(a)(8)(ii), this includes situations where CMS determines that the provider has a pattern or practice of submitting claims that fail to meet Medicare requirements. In making this determination, CMS considers, as appropriate or applicable, the following factors (outlined in § 424.535(a)(8)(ii)(A) through (D)):

- The percentage of submitted claims that were denied during the period under consideration (paragraph (a)(8)(ii)(A)).
- Whether the provider or supplier has any history of final adverse actions and the nature of any such actions (paragraph (a)(8)(ii)(B)).
- The type of billing non-compliance and the specific facts surrounding said non-compliance (to the extent this can be determined) (paragraph (a)(8)(ii)(C)).
- Any other information regarding the provider or supplier's specific circumstances that CMS deems relevant to its determination (paragraph (a)(8)(ii)(D)).

As we stated in the December 5, 2014, final rule that promulgated § 424.535(a)(8)(ii), a provider ''should be responsible for submitting valid claims at all times and that the provider or supplier's repeated failure to do so poses a risk to the Medicare Trust Funds.'' [15]

We proposed the following two revisions to § 424.535(a)(8)(ii):

- Removing all the factors in § 424.535(a)(8)(ii)(A) through (D).
- Removing the second sentence of § 424.535(a)(8)(ii) that reads ''In making this determination, CMS considers, as appropriate or applicable, the following''.

We have seen a wide variety of potential § 424.535(a)(8)(ii) cases over the years. However, our existing factors often constrain our ability to effectively address all these factual scenarios. We noted the following in the proposed rule:

- Final Adverse Actions—Most aberrant billing we have seen is done by providers with no history of adverse actions (for example, Medicare revocations or OIG exclusions). Yet the adverse action factor in § 424.535(a)(8)(ii) essentially requires us to weigh against a finding of improper billing for such providers. That is, this factor assists non-compliant providers so long as the provider lacks an adverse history, which it often will; this hinders our efforts to invoke § 424.535(a)(8)(ii) against the provider.
- Percentage of Claims Denied—This factor, too, is problematic. Non-compliant billing often occurs notwithstanding a low percentage of denied claims, especially with providers that submit many claims. Similar to the adverse history factor, the claim denial criterion thus makes it more difficult to use § 424.535(a)(8)(ii) even if a pattern of abusive billing exists. Moreover, the factor is limited to claim denials and does not consider other types of non-compliant claims (such as rejected claims). In our view, it is the lack of compliance itself, rather than the type of claim involved, that is pertinent.

In sum—and given our responsibility to protect the Trust Funds and taxpayers from improper billing—we must have the ability to address all possible § 424.535(a)(8)(ii) scenarios without the rigid constraints of our existing factors. Even with the ''as appropriate or applicable'' qualifier in the opening paragraph of § 424.535(a)(8)(ii), there could still be an implication that we must consider all the factors in our determinations, which, as indicated, hampers the usefulness of § 424.535(a)(8)(ii).

The following is a summary of the comments we received on this proposal and our responses.

[15] ''Medicare Program; Requirements for the Medicare Incentive Reward Program and Provider Enrollment'' (79 FR 72500).

Comment: Many commenters opposed our removal of factors from § 424.535(a)(8)(ii). They stated that clear criteria and thresholds (such as a minimum number of claims needed to constitute a ''pattern or practice'') are needed to foster transparency and certainty for providers. Some commenters stated that CMS should not only retain the current factors but also include new ones such as (though not limited to): (1) the statistical validity and representativeness of any claim sample that CMS reviews; (2) the dollar amount, frequency, nature, severity, and materiality of the alleged errors; (3) whether the provider knew or reasonably should have known of the noncompliance; (4) whether CMS or the MAC previously notified or educated the provider; (5) whether the provider promptly refunded overpayments and implemented corrective action; (6) the provider's compliance history and prompt rectification of errors; (7) the presence or absence of fraud, waste, abuse, or beneficiary harm; and (8) whether the pattern or practice involved final adjudicated claims rather than initial denials.

Response: We appreciate the commenters' concerns and suggestions. Yet as previously explained, specifically delineated and mandatory factors have inhibited our ability to effectively utilize § 424.535(a)(8)(ii). This said, we emphasize strongly that CMS will take into account the facts and circumstances of every evaluation under § 424.535(a)(8)(ii) and, as we currently do, will only revoke under this ground when genuinely warranted and not as a matter of course. Moreover, stakeholders should not assume that our removal of § 424.535(a)(8)(ii)'s factors means that we will never again consider matters such as the percentage of claims denied or the type of billing non-compliance in our § 424.535(a)(8)(ii) determinations. Our change to § 424.535(a)(8)(ii) simply reflects the program integrity need to move away from explicit factors and towards a broader, more flexible ''facts and circumstances'' approach. This is also partly why we have not established a fixed, regulatory definition of ''pattern or practice'' with numerical and time thresholds.

We stress that up through 2014, none of CMS' denial or revocation grounds contained enumerated, mandatory factors—and even today, a number of our grounds do not. Both then and now, a lack of factors does not mean providers will be treated unfairly. We have for decades reviewed every case with the utmost care and consideration, recognized the heavy consequences of a

revocation, and only taken this measure when necessary.

Comment: Commenters expressed concern about our statement in the proposed rule that § 424.535(a)(8)(ii) could be invoked if ''several of the provider's claims do not meet Medicare requirements.'' They contended that this represents an expansion of § 424.535(a)(8)(ii). They stated that occasional claim submission errors do not establish abusive billing and are largely unavoidable given, for example: (1) the complexity of Medicare billing; (2) that some providers submit thousands of claims; and (3) that small, independent practices do not have the billing staff and resources of larger providers. Several commenters requested that the final rule expressly state that isolated, inadvertent, immaterial, clerical, or promptly corrected claim errors—standing alone—do not constitute a pattern or practice of abusive billing. Others sought a CMS statement that a finding based only on ''several'' non-compliant claims should not invoke § 424.535(a)(8)(ii) unless the provider engaged in material and repeated non-compliance.

Response: We respectfully disagree that the quoted ''several'' statement is an expansion of § 424.535(a)(8)(ii). To the contrary, it represents CMS' position since the provision's inception in 2014. We have always had the authority to invoke § 424.535(a)(8)(ii) in such circumstances. For both this reason and the need to address many different factual scenarios, the unequivocal statements the commenters request are overbroad. On the other hand, we recognize and understand the commenters' concerns and, as we always have, will only use § 424.535(a)(8)(ii) when the facts and circumstances warrant it. The previously quoted statement and the removal of factors will not change this.

Comment: Commenters stated that instead of revoking a provider under § 424.535(a)(8)(ii), CMS should first: (1) use provider education and corrective action programs, including ''Targeted Probe and Educate''; and (2) allow providers to explain the erroneous claim submissions and to resubmit said claims.

Response: We again appreciate the commenters' concerns about § 424.535(a)(8)(ii)'s potential application. However, we have consistently maintained that providers are responsible for always submitting accurate and compliant claims. If we routinely allowed providers to simply resubmit non-compliant claims without any invocation of § 424.535(a)(8)(ii), we believe providers would have less incentive to initially submit correct claims, knowing that CMS will not take action against them.

This concept is especially true regarding pre-revocation opportunities to be heard, which we believe these commenters were requesting. (As addressed later, other commenters requested such a process for several of our other proposals.) We discussed this issue in the CY 2026 HH PPS final rule, published in the December 2, 2025, **Federal Register** (90 FR 55342).[16] We stated therein: ''We have always maintained that establishing an informal pre-revocation appeals process could encourage providers to disregard compliance with Medicare requirements until they are notified of the non-adherence, upon which they will remedy the issue and remain enrolled but then perhaps resume their prior behavior. In other words, allowing providers to always take corrective action and resume compliance before revocation gives them no incentive to remain adherent in the first place, which leaves the Medicare program at risk of billions of dollars in payments to non-compliant providers.'' [17] We hold this same position regarding § 424.535(a)(8)(ii).

Comment: A commenter suggested that if CMS views the § 424.535(a)(8)(ii) factors as constraining, it could make them optional by replacing the language ''CMS considers'' in § 424.535(a)(8)(ii)'s opening paragraph with ''CMS may consider''.

Response: While we appreciate this suggestion, we remain concerned that even the optional nature of public, regulatorily specified factors could convey the impression that CMS should still consider them. This would present largely the same previously discussed problem we have seen with mandatory criteria.

Comment: Several commenters requested that CMS clarify the following: (1) whether initial claim denials, technical denials, documentation deficiencies, or coding disagreements are considered claims that fail to meet Medicare requirements; (2) whether claims that are subsequently overturned on appeal remain part of the analysis; (3) whether CMS intends to establish numerical thresholds or materiality standards before revocation; and (4) how CMS will distinguish isolated operational errors from systemic abusive conduct.

Response: Concerning the first two requests, we did not propose to interpret or clarify either the phrase ''fails to meet Medicare requirements'' or the types of claims that fall within our analysis. Thus, we believe these requests are outside the scope of this final rule. The answer to the third question is no for reasons already indicated. Regarding the fourth, CMS, as it long has, will carefully evaluate the facts and circumstances of every § 424.535(a)(8)(ii) case and only taken revocation action when justified.

After considering the comments received, we are finalizing proposed revised § 424.535(a)(8)(ii) without modification.

(2) False or Misleading Information (§ 424.535(a)(4))

Section 424.535(a)(4) permits revocation if the provider or supplier certified as ''true'' misleading or false information on the enrollment application to be enrolled or maintain enrollment in the Medicare program. We proposed to revise § 424.535(a)(4) to allow revocation based on the submission of false or misleading information on or associated with any CMS or Medicare enrollment-related form. This would include but not be limited to: (1) enrollment-related forms created by and/or submitted to CMS contractors; (2) false or misleading documentation furnished as part of the completion or submission of the CMS or Medicare enrollment-related form; (3) the Form CMS–588 (Electronic Funds Transfer (EFT) Authorization Agreement; OMB Control Number 0938–0626), which must be submitted with the enrollment application; (4) documents required to demonstrate compliance with HHA capitalization requirements in § 489.28; (5) opt-out affidavits under 42 CFR part 405, subpart D; (6) letters from a provider demonstrating that a particular provider official qualifies as an authorized or delegated official under § 424.502; and (7) any other required or requested enrollment-related documentation.

We stated that providers and suppliers must always submit truthful enrollment and enrollment-related information to CMS and its contractors regardless of the form or document involved. Any false or misleading information could lead to serious doubts about the provider's veracity, a non-compliant provider being inadvertently enrolled in Medicare, or improper

[16] ''Medicare and Medicaid Programs; Calendar Year 2026 Home Health Prospective Payment System (HH PPS) Rate Update; Requirements for the HH Quality Reporting Program and the HH Value-Based Purchasing Expanded Model; Durable Medical Equipment, Prosthetics, Orthotics, and Supplies (DMEPOS) Competitive Bidding Program Updates; DMEPOS Accreditation Requirements; Provider Enrollment; and Other Medicare and Medicaid Policies''.

[17] Ibid.

payments based on inaccurately submitted data. With this in mind, we also stressed that under revised § 424.535(a)(4):

- The submission need not be intended to gain or maintain Medicare enrollment. For § 424.535(a)(4) purposes, the ultimate aim of the submission—be it to enroll, revalidate enrollment, reactivate enrollment, voluntarily terminate enrollment, report changed EFT data, etc.—is not as crucial as the truthfulness of the submission. If we continued to limit § 424.535(a)(4) to ''gain or maintain enrollment'' situations, providers might believe they can submit false information on other enrollment-related documents without concern about possible revocation.
- The information need not have been certified as ''true'' for § 424.535(a)(4) to apply. The correctness of the information is the salient point and not whether it was certified as ''true.''

We believe that our § 424.535(a)(4) expansion would help ensure that providers furnish truthful and accurate enrollment-related data to Medicare.

The following is a summary of the comments we received on this proposal and our responses. Note that some of these comments and responses also pertain to proposed revised § 424.530(a)(4), which would permit denial based on the same grounds identified in proposed § 424.535(a)(4). Our final decision regarding § 424.530(a)(4) will be addressed later.

Comment: Numerous commenters stated that our proposed expansion of §§ 424.530(a)(4) and 424.535(a)(4) could result in denials and revocations based on inadvertent or immaterial administrative errors. They stated that CMS should distinguish between intentional fraud and technical or minor mistakes that are promptly corrected. They added that CMS should: (1) include a materiality-based standard—like ''knowing and material misrepresentation''—and other factors in §§ 424.530(a)(4) and 424.535(a)(4) (for example, whether the information is relevant to program integrity); (2) permit providers to cure any unintentional or clerical errors before revocation (such as a 30-day correction timeframe); and (3) always consider mitigating circumstances in its paragraph (a)(4) determinations.

Response: We appreciate these comments and address them as follows.

First, our proposal was not intended to change the standard we always apply when reviewing potential §§ 424.530(a)(4) and 424.535(a)(4) situations. We will continue to carefully consider the facts and circumstances of each case and only deny or revoke when truly justified.

Second, we respectfully decline to establish knowledge, materiality, or other regulatorily specified criteria or thresholds. Sections 424.530(a)(4) and 424.535(a)(4) have never had a knowledge or intent standard or required the data to be material, and we did not propose in this rule to establish such requirements. If we required knowledge or intent, providers might submit false data believing they could later simply disavow awareness thereof to avoid denial or revocation. A materiality threshold, meanwhile, would enable providers to, knowingly or unknowingly, submit incorrect information without fear of consequences so long as it is not deemed material. As for establishing new factors, we reiterate our previously noted concerns about required criteria that constrain our ability to take denial or revocation action when necessary. We also stress that it has long been CMS policy that the enrolling or enrolled provider bears ultimate legal responsibility for the accuracy and thoroughness of all submitted data, a point we reiterated in the CY 2026 HH PPS final rule.

Third, and consistent with our aforementioned quoted statement from the CY 2026 HH PPS final rule, we believe that permitting a pre-revocation correction period and/or quasi-appeals process could disincentivize providers to submit correct and truthful information in their initial submission.

Comment: Some commenters were concerned that the increased number of documents and communications covered by § 424.535(a)(4) could concomitantly increase the chances of a revocation based on an innocent error. This could prove especially problematic for large providers that submit many such documents.

Response: While we appreciate these concerns, the central issue is the submission of the false or misleading information itself and not the number of potential documents on which it could be furnished. All enrollment-related data provided to CMS and the MACs—irrespective of the volume of documents involved—must be truthful and accurate. To restate, though, CMS will evaluate the facts and circumstances of every situation and only deny or revoke when genuinely warranted.

Comment: Several commenters requested clarification on which types of forms and communications are ''associated with'' a provider's enrollment.

Response: We identify in revised § 424.535(a)(4) various types of forms and documents that fall within this category. We will, if needed, issue guidance to further elucidate this term.

Comment: Several commenters recommended that CMS define ''false or misleading information.''

Response: We respectfully believe this comment is outside the scope of this final rule because we did not propose to define this term, which already appears in the current versions of §§ 424.530(a)(4) and 424.535(a)(4). Nonetheless, we can state that the terms ''false'' and ''misleading'' in the context of §§ 424.530(a)(4) and 424.535(a)(4) have—and have always had—their plain meanings.

Comment: A commenter requested that CMS ensure that any technical or automated mechanism used by CMS to detect false information be configured so as not to flag providers that use different acronyms, abbreviations, or spellings for addresses or other demographic information.

Response: We appreciate this comment and stress that CMS in its §§ 424.530(a)(4) and 424.535(a)(4) determinations takes into account the facts and circumstances of the situation.

Comment: A commenter sought confirmation that claims corrected through routine adjustments, self-audits, or voluntary refunds will not independently be treated as evidence of providing false or misleading information.

Response: Sections 424.530(a)(4) and 424.535(a)(4) only apply to enrollment-related submissions.

After considering the comments received, we are finalizing proposed revised § 424.535(a)(4) without modification.

(3) Extension of Revocation (§ 424.535(i))

Section 424.535(i) states that if a provider's enrollment is revoked under § 424.535(a), CMS may revoke any and all of the provider's other enrollments. This provision is designed to ensure that, if circumstances warrant, individuals and entities revoked for inappropriate behavior do not remain enrolled in Medicare—and, hence, potentially able to continue their conduct via their other Medicare enrollments—in any capacity. We proposed to expand § 424.535(i) such that we could also revoke a provider's other enrollments if the provider's triggering enrollment is denied under § 424.530(a).

Numerous commenters opposed our proposal. Their principal contention was that enrollment denials can sometimes be for purely innocuous reasons and should therefore not trigger

revocations of the provider's other enrollments.

After reviewing the comments received, we are not finalizing our proposed revision to § 424.535(i).

(4) Expansion and Reorganization of Retroactive Revocation Grounds (§ 424.535(g))

Section 424.535(g) addresses revocation effective dates. Current paragraph (g)(1) states that except as described in paragraphs (g)(2) and (g)(3), a revocation becomes effective 30 days after CMS or the CMS contractor mails notice of its determination to the provider; the revocation is thus prospective. Existing paragraphs (g)(2)(i) through (xv) list situations where the revocation effective date is retroactive. This generally means that the revocation's effective date is retroactive back to the date on which the provider's non-adherence to Medicare requirements commenced.

The purpose of paragraph (g)(2) is to prevent payments to a provider while it is out of compliance. Using an example we included in the proposed rule, assume a provider's medical license is revoked by the State on March 1. CMS learns of this and sends a revocation notice to the provider on March 15. If we applied the prospective ''30 days after mailing'' timeframe in paragraph (g)(1), the provider could bill and be paid for services furnished between March 1 and April 15 while unlicensed, resulting in potentially thousands of dollars in improper Medicare payments. Preventing improper payments is a cornerstone of provider enrollment, and retroactive revocation effective dates are vital mechanisms for ensuring that taxpayer monies are paid only to compliant providers. As § 424.500 makes clear: ''Providers and suppliers must meet and maintain [part 424, subpart P's] enrollment requirements to bill either the Medicare program or its beneficiaries for Medicare-covered services or supplies.'' This means, by extension, that if said requirements are not met, the provider cannot bill—or, in turn, receive payment—for Medicare services or supplies.

Our concerns about paying non-adherent providers are why we have increased the number of retroactive revocation grounds over the years. In the CY 2026 HH PPS final rule, we finalized numerous revisions to § 424.535(g) such that many of our existing revocation reasons are now retroactive.[18] So critical is it to make payments only to qualified providers and to be consistent with §§ 424.500 and 424.505 that we proposed in the CY 2027 HH PPS final rule to make the remainder of current prospective revocation grounds retroactive. We also believe that the prospect of a retroactive revocation no matter the § 424.535(a) reason could help spur providers to ensure constant compliance with Medicare requirements.

We proposed two sets of changes to § 424.535(g). First, we would add new retroactive revocation bases. Second, we proposed to restructure § 424.535(g) to remove current § 424.535(g)(1) (which addresses prospective revocations) and realign the existing retroactive grounds to correspond to the numerical order of our § 424.535(a) revocation reasons. The following summarizes our proposed provisions in revised § 424.535(g)(1).

(a) General Non-Compliance, Licensure, and Provider Agreements

CMS may revoke a provider under § 424.535(a)(1) if the provider is not in compliance with the enrollment requirements in Title 42 of the Act or in the enrollment application applicable to its provider type. We proposed in new § 424.535(g)(1)(i)(A) that said revocation would be effective on the date the non-compliance began (per CMS' or the CMS contractor's determination). This comports with several other current retroactive grounds for which the commencement of non-compliance is the effective date; for said current grounds—as well as proposed § 424.535(g)(1)(i)(A)—the rationale is that payments should not be made to non-adherent providers.

State licensure revocations, suspensions, and surrenders (in lieu of further disciplinary action) are also grounds for revocation. As stated in existing § 424.535(g)(2)(iii) and (v), these revocation effective dates are the dates of the revocation, suspension, or surrender. We proposed to consolidate paragraphs (g)(2)(iii) and (v) within new § 424.535(g)(1)(i)(B), retaining their current effective dates.

Current § 424.535(g)(2)(vii) addresses effective dates for revocations based on a provider agreement termination under part 489. We proposed to retain these dates and incorporate them into new § 424.535(g)(1)(i)(C).

(b) Exclusions/Debarments, Felony Convictions, False Information, and Non-Operational Status

These revocation grounds are addressed in § 424.535(a)(2), (3), (4), and (5)(i), with their concomitant effective dates outlined in existing § 424.535(g)(2)(i), (ii), (ix), and (iv), respectively. Per § 424.535(g)'s proposed reorganization, § 424.535(g)(2)(i), (ii), (ix), and (iv) would become new § 424.535(g)(1)(ii), (iii), (iv), and (v)(A), respectively.

(Due to our aforementioned expansion of § 424.535(a)(4), we proposed that new § 424.535(g)(1)(iv) would include an additional effective date for paragraph (a)(4) revocations based on the submission of false or misleading data not involving the signature of a provider enrollment application certification statement. For these other false/misleading communications, the revocation effective date would be the date the false/misleading information was submitted.)

(c) Failure To Satisfy Enrollment Requirements

Section 424.535(a)(5)(ii) permits revocation if the provider fails to satisfy any Medicare enrollment requirement. We proposed in new § 424.535(g)(1)(v)(B) that a § 424.535(a)(5)(ii) revocation becomes effective on the date the Medicare enrollment requirement was not satisfied.

(d) Application Fee Payment

CMS can revoke a provider's enrollment under § 424.535(a)(6) in various situations concerning the required payment of a provider application fee under § 424.514. We proposed in new § 424.535(g)(1)(vi) that a § 424.535(a)(6) revocation is effective on the date on which CMS or its contractor determines that the provider or supplier should be revoked under this paragraph.

(e) Misuse of Billing Number

CMS may revoke a provider's enrollment under § 424.535(a)(7) if the provider knowingly sells to or allows another individual or entity to use its billing number. (This excludes providers who enter into a valid reassignment of benefits under § 424.80 or a § 489.18 change of ownership.) Given the seriousness of this conduct—with its significant potential for fraud—we proposed in new § 424.535(g)(1)(vii) that the revocation effective date should be the date on which the conduct resulting in the revocation occurred.

(f) Abuse of Billing Privileges

The effective dates for revocations under § 424.535(a)(8)(i) and (ii) are addressed in § 424.535(a)(8)(iii). So that all revocation effective dates can be located in one paragraph, we proposed to move and redesignate § 424.535(a)(8)(iii) as new § 424.535(g)(1)(viii). Paragraph (iii) would be deleted from § 424.535(a)(8).

[18] Ibid.

(g) Reporting Enrollment Data Changes

Section 424.535(a)(9) permits revocation if the provider failed to comply with the change of information reporting requirements in §§ 424.516(d) or (e), 410.33(g)(2), or 424.57(c)(2). These four paragraphs collectively address all Medicare provider and supplier types (except Medicare Diabetes Prevention Programs (MDPPs), which are dealt with in § 424.205)) and all types of enrollment data changes. Current § 424.535(g)(2)(x) partially addresses the effective date of a § 424.535(a)(9) revocation. For revocations based on the provider's failure to timely report a change of ownership or adverse legal action (or a change, addition, or deletion of a practice location), the effective date under § 424.535(g)(2)(x) is the day following the date by which the provider was required to report the change, addition, or deletion. All other changes are prospective under current § 424.535(g)(1).

We proposed in new § 424.535(g)(1)(ix) to make all § 424.535(a)(9) revocations retroactive to the day following the due date for reporting the change. While ownership, adverse legal action, and practice location changes are important (hence their inclusion in existing § 424.535(g)(2)(x)), other data changes are as well. A failure to timely report a new managing employee or corporate officer, for example, could result in CMS unknowingly paying a provider with a high-level official who poses a program integrity risk based on past or current conduct. If we do not timely learn of a provider's new bank, billing agency, or correspondence address, CMS risks sending funds or information to—or receiving claims from—the wrong entity or individual; this could lead to incorrect payments or the inadvertent release of confidential data. As we emphasized in the proposed rule: (1) outdated or erroneous enrollment information of any type—not simply ownership, adverse action, or location data—can threaten the Trust Funds; and (2) any failure to timely report such changes means the provider is non-compliant with enrollment requirements. For these reasons—and because the prospect of a retroactive revocation could encourage providers to timely report all enrollment changes—we believed that § 424.535(g)(1)(ix) is warranted.

Although the provider is ultimately responsible for ensuring that its enrollment data is timely updated and always accurate, we solicited stakeholder comment on any administrative difficulties in reporting changes in enrollment information and how they could be addressed.

(h) Failure To Document or Furnish Documentation

CMS can revoke a provider under § 424.535(a)(10) if the provider fails to comply with the documentation or CMS access requirements in § 424.516(f). In general, § 424.516(f) requires providers (including physicians and eligible professionals) to: (1) retain for 7 years all documents regarding written orders, certifications, referrals, prescriptions and requests for payments for Part A or B services, items, or drugs; and (2) furnish access to that documentation upon CMS or CMS contractor request.

We proposed in new § 424.535(g)(1)(x)(A) and (B) that a § 424.535(a)(10) effective date is as follows:

- For revocations based on a failure to retain documentation, the date on which CMS or the CMS contractor determines that the provider has not complied with this retention requirement.
- For revocations based on a failure to provide access to that documentation, the day after the date by which the provider was required to give access.

We believed that proposed § 424.535(g)(1)(x)(A) and (B) balance the need for retroactivity—due to, for instance, the provider's non-compliance and our inability to make payment to non-adherent providers—and the need for a clear effective date. To illustrate, suppose CMS discovered several years after a particular service was ordered or certified that the provider lacks documentation thereof. CMS would have no means of knowing whether the documentation was never kept, discarded after 2 years or 4 years, etc. Therefore, it is difficult to establish an effective date in this scenario, hence the need to use the proposed—and much more precise—§ 424.535(g)(1)(x)(A) date. Regarding § 424.535(g)(1)(x)(B), the provider's failure to provide the documentation constitutes non-compliance, similar to a provider's failure to timely report changes of information. Thus, we believe that the day after the due date for furnishing access is an appropriate effective date.

(i) Initial Reserve Operating Funds (IROF)

Under 42 CFR 489.28, HHAs must demonstrate that they have sufficient available funds upon application submission and for the 3-month period following the conveyance of Medicare billing privileges to operate the HHA for this 3-month timeframe. CMS can revoke the HHA under § 424.535(a)(11) if, within 30 days of a CMS or Medicare contractor request, the HHA cannot furnish supporting documentation verifying that it meets the IROF requirement. For the same reasons behind proposed § 424.535(g)(1)(x)(B)—specifically, the provider's non-compliance with § 489.28 based on its failure to demonstrate adequate funds—we proposed in new § 424.535(g)(1)(xi) that the § 424.535(a)(11) revocation effective date is the day after the date by which the HHA was required to submit the requested documentation.

(j) Other Program Termination

CMS under § 424.535(a)(12) may revoke a provider's Medicare enrollment if the provider is terminated, revoked, or otherwise barred from participation in a State Medicaid program or any other Federal health care program. The effective date of a § 424.535(a)(12) revocation is, consistent with existing § 424.535(g)(2)(vi), the date of the termination, revocation, or bar (from the other program). As part of our restructuring of § 424.535(g), we proposed to redesignate § 424.535(g)(2)(vi) as new § 424.535(g)(1)(xii); however, we would include the terms ''revocation'' and ''bar'' within the latter to correspond to § 424.535(a)(12). (Current § 424.535(g)(1)(vi) only references terminations.)

(k) Drug Enforcement Administration (DEA) Certificates

Section 424.535(a)(13)(i) and (ii) permit revocation if—

- A physician or other eligible professional's DEA Certificate of Registration to dispense a controlled substance is currently suspended or revoked or is surrendered in response to a show cause order; or
- The applicable licensing or administrative body for any State in which the physician or eligible professional practices suspends or revokes the individual's ability to prescribe one or more drugs.

Existing § 424.535(g)(2)(xi) permits retroactive revocation based on the surrender of the provider's DEA certificate of registration in response to a show cause order. (The revocation effective date is the date the certificate was surrendered.) We proposed to include DEA certificate revocations and suspensions within this paragraph, with the date of the revocation or suspension as the effective date. It is the permanent or temporary loss of the certificate itself—rather than the form of loss (for example, revocation or surrender)—that is important for program integrity

purposes; it would be illogical for certificate surrenders to be part of paragraph (g)(2)(xi) but not revocations or suspensions. As we stated in the CY 2026 HH PPS final rule that promulgated paragraph (g)(2)(xi), meeting all applicable Federal and State requirements is necessary for enrollment.[19] If a provider is prescribing or dispensing drugs while non-compliant, we believe the risk this presents to beneficiaries after the certificate loss warrants a revocation back to the date said loss occurred.

Per current § 424.535(g)(2)(xii), the effective date of a revocation based on a State's suspension or revocation of the physician's or practitioner's ability to prescribe one or more drugs is the date of the suspension or revocation. We proposed to redesignate this paragraph without change as new paragraph (g)(1)(xiii)(B), with existing (g)(2)(xi) redesignated as new paragraph (g)(1)(xiii)(A).

(l) Improper Prescribing Practices

Section 424.535(a)(14) permits revocation if the physician or practitioner has a pattern or practice of prescribing Medicare-covered drugs that is abusive, represents a threat to the health and safety of Medicare beneficiaries, or fails to meet Medicare requirements. We proposed in new § 424.535(g)(1)(xiv) that the effective date of a § 424.535(a)(14) revocation would be the last date of the prescription(s) in question. (This approach mirrors that for § 424.535(a)(8)(ii)'s revocation effective date, which, as noted, is the last date of service on the claims in question.) Applying a prospective effective date to a § 424.535(a)(14) would essentially allow the individual to continue prescribing for at least another 30 days, during which time additional beneficiaries might be placed as risk.

(m) False Claims Act (FCA)

Revocation is permissible under § 424.535(a)(15) if the provider (or owner, managing employee or organization, officer, or director thereof) has had an FCA civil judgment against them within the previous 10 years. We proposed in new paragraph (g)(1)(xv) a retroactive revocation effective date back to the date of the judgment.

(Proposed new § 424.535(g)(1)(xvi) is addressed later in this section V.C. of this final rule.)

(n) Debts Referred to Treasury

Section 424.535(a)(17) permits revocation if the provider failed to repay a debt that CMS appropriately referred to the United States Department of Treasury. (Paragraph (a)(17) does not apply if: (1) the debt has been discharged by a bankruptcy court; or (2) the administrative appeals process regarding the debt has not been exhausted or the timeframe for filing the appeal (at the appropriate appeal level) has not expired.)

All providers are responsible for satisfying their financial obligations to Medicare. Consistent with our rationale for the original promulgation of § 424.535(a)(17), we believe that referral to the Department of Treasury may indicate the provider's unwillingness to repay a debt, which raises doubts regarding whether the provider is a reliable participant in the Medicare program.

With the need to protect the Medicare program's financial integrity, we proposed in new § 424.535(g)(1)(xvii) that the effective date of a § 424.535(a)(17) revocation would be retroactive back to the date on which CMS referred the debt to Treasury. As we explained in the proposed rule, a prospective effective date would give the provider more time to incur additional debts that it also might not repay, placing the taxpayers at considerable financial risk. We also believe that the prospect of a retroactive revocation under § 424.535(g)(1)(xvii) could spur providers to ensure that they repay all debts before the latter are sent to Treasury.

(o) Revoked Under Different Name or Identity

CMS under § 424.535(a)(18) may revoke a provider that is currently revoked under a different name, numerical identifier, or business identity, and the applicable reenrollment bar period under § 424.535(c) has not expired. The objective is to prevent situations where a revoked provider changes its identity in order to re-enter Medicare and thus circumvent its existing bar on reenrollment. In light of such improper conduct, we proposed in new § 424.535(g)(1)(xviii) that a § 424.535(a)(18) revocation effective date would be the same as the effective date of the provider's current enrollment.

(p) Undue Risk

Per § 424.535(a)(19), CMS may revoke a provider or supplier that has or has had an affiliation under § 424.519 that poses an undue risk of fraud, waste, or abuse to the Medicare program. Due to the many different scenarios that could fall within § 424.535(a)(19)'s purview, we proposed in new § 424.535(g)(1)(xix) that a revocation under § 424.535(a)(19) is effective on the date on which CMS or its contractor determines that the provider or supplier should be revoked under this paragraph.

(q) Billing From Non-Compliant Location

CMS may revoke enrollment under § 424.535(a)(20) if the provider billed for services performed at or items furnished from a location that it knew or should have known did not comply with Medicare enrollment requirements. Given the importance of maintaining constant compliance with enrollment requirements, we proposed that a § 424.535(a)(20) revocation's effective date would be the earliest date on the claims for the non-compliant location that are triggering the revocation.

(r) Abusive Ordering, Certifying, Referring, or Prescribing

Section 424.535(a)(21) permits revocation if the physician or eligible professional has a pattern or practice of ordering, certifying, referring, or prescribing Part A or B services, items, or drugs that is abusive, represents a threat to the health and safety of Medicare beneficiaries, or otherwise fails to meet Medicare requirements. As with proposed § 424.535(g)(1)(xiv) regarding § 424.535(a)(14), the seriousness of the conduct described in § 424.535(a)(21) and the threats it can present to Medicare patients and the Trust Funds (for instance, ordering unnecessary tests) warrants a retroactive effective date. This date under proposed § 424.535(g)(1)(xxi) would be the date of the last order, certification, referral, or prescription in the applicable pattern or practice, akin to the proposed § 424.535(a)(14) effective date.

(s) Patient Harm

Revocation under § 424.535(a)(22) is permissible if the physician or other eligible professional has been subject to prior action from a State oversight board, Federal or State health care program, Independent Review Organization (IRO) determination(s), or any other equivalent governmental body or program that oversees, regulates, or administers the provision of health care with underlying facts reflecting improper conduct that led to patient harm. Considering the need to protect Medicare beneficiaries from potential harm, we proposed that this effective date per new § 424.535(g)(1)(xxii) would be the date of the prior action that resulted in the revocation.

[19] 90 FR 55342.

(t) Supplier Standard and Condition Violation

Several provider and supplier types have certain standards and conditions they must meet in addition to all other enrollment requirements. These types—and their corresponding standard/condition regulatory sections—include independent diagnostic testing facilities (IDTFs) (§ 410.33(g)), DMEPOS suppliers (§ 424.57(b) and (c)), opioid treatment programs (OTP) (§ 424.67(b) and (e)), home infusion therapy suppliers (§ 424.68(c) and (e)), and MDPPs (§ 424.205(b) and (c)). Except for § 424.57(b) violations, CMS under § 424.535(a)(23) may revoke the provider or supplier for non-compliance with any of the standards or conditions applicable to their provider/supplier type. (Revocation is permissible for § 424.57(b) violations (as well as § 424.57(c) non-compliance) under § 424.57(e)(1).) The current § 424.535(a)(23) revocation effective dates (outlined in § 424.535(g)(2)(xv)(A) through (D), respectively) are as follows:

- For standard or condition violations involving the suspension, revocation, or termination (or surrender in lieu of further disciplinary action) of the provider's Federal or State license, certification, accreditation, or MDPP recognition, the date of the suspension, revocation, termination, or surrender.
- For standard or condition violations involving a non-operational practice location, the date the non-operational status began.
- For OTP standard violations involving a felony conviction of a party described in § 424.67(b)(6)(i), the date of the felony conviction.
- For all standard violations not addressed in existing paragraph (g)(2) (which, as discussed, would be incorporated within revised (g)(1)), the prospective effective date in current paragraph (g)(1) applies if the effective date in existing paragraph (g)(3) (discussed shortly) does not.

We proposed to retain the dates in § 424.535(g)(2)(xv)(A) through (C), though we would re-designate them as new § 424.535(g)(1)(xxiii)(A)(*1*) through (*3*). In new § 424.535(g)(1)(xxiii)(B)—and consistent with the foregoing concerns about paying non-compliant providers—we proposed that the effective date of all other revocations based on a condition or standard violation would be the date of non-compliance with the condition or standard.

We proposed three other organizational changes. First, existing § 424.535(g)(2)(viii) states that the effective date of a revocation based on a lapse in the IDTF's comprehensive liability insurance under § 410.33(g)(6) is the date the insurance lapsed. We did not propose to include a separate effective date for this revocation in revised § 424.535(g)(1) because we believe it would fall within new § 424.535(g)(1)(xxiii)(B), with the lapse date being the standard violation date. Second, existing § 424.535(g)(2)(xiv) states that the effective date of a revocation based on a DMEPOS supplier's non-compliance with a condition or standard in § 424.57(b) or (c) is the date on which the non-compliance began. This provision would not be included in revised § 424.535(g)(1), for new § 424.535(g)(1)(xxiii) would cover § 424.57(b) or (c) violations. Third, existing paragraph (g)(3) would be re-designated as revised § 424.535(g)(2).

(u) Extension of Revocation

As already noted, § 424.535(i) states that if a provider's Medicare enrollment is revoked, CMS may revoke any and all of the provider's Medicare enrollments, including those under different names, numerical identifiers or business identities and those under different types. The effective date of the revocation(s) of the other enrollment(s) is—per existing § 424.535(g)(2)(xiii)—the effective date of the revocation that triggered the other revocation(s). We proposed to retain this effective date provision but would redesignate it as new § 424.535(g)(2)(xxvi).

(Proposed new § 424.535(g)(1)(xxiv) and (xxv) will be addressed later.)

The following is a summary of the comments we received on our retroactive revocation proposals and our responses.

Comment: Many commenters opposed CMS' proposal to extend its retroactive revocation authority to all revocations and recommended that it not be finalized. They stated that retroactive revocations can impose severe and disproportionate financial consequences on otherwise legitimate providers and suppliers.

Response: We appreciate and understand the concerns expressed. We respond as follows.

First, and as previously noted, in past years we have gradually expanded the reasons for which we may retroactively revoke providers. In last year's CY 2026 HH PPS final rule, we added roughly 10 new retroactive grounds. Accordingly, retroactive revocations are not a novel concept but have been used to a considerable degree for some time. Our retroactive revocation proposals in this year's rule are consistent with current practice.

Second, we explained to commenters in last year's CY 2026 HH PPS final rule that retroactive revocations are intended to recoup payments to which the provider is not entitled due to its non-compliance. Generally, once the provider is non-adherent to Medicare enrollment requirements, it cannot receive payment for services furnished beginning on or after the point the non-compliance began. We especially emphasized in that rule that: (1) our allowance of prospective dates for certain revocation grounds has resulted in hundreds of millions of dollars in payments to non-compliant providers; and (2) we have an obligation to the American taxpayers to halt this.[20] We maintain this position in the present final rule; taxpayer monies must be protected against improper payments.

Third, retroactive liability under § 424.535(g) does not occur without a revocation. This may seem obvious, but it is critical for stakeholders to understand that revocations are actually quite rare when weighed against the universe of well over 2 million Medicare providers and suppliers. In fact, only about 3 percent of providers are ever revoked. It is never a step we wish to take—partly because, like the commenters, we fully recognize its consequences and the potential retroactive financial liability—and in many cases we instead apply more modest actions such as deactivations under § 424.540 and stays of enrollment under § 424.541; indeed, we promulgated the latter action in the CY 2024 Physician Fee Schedule final rule (88 FR 78818)[21] to give us greater flexibility to address certain instances of comparatively minor non-compliance without having to pursue revocation.

In sum, despite our recognition of the commenters' concerns, we are unable to make payment to providers that are not compliant with Medicare enrollment requirements. This is consistent with the requirements of §§ 424.500 and 424.505 and underlies the need for our proposed expansion of retroactive revocation grounds. Yet because we recognize the consequences of a retroactive revocation, we seek to assure providers that revocations are not only infrequent but also are only imposed when genuinely warranted. This will not change under revised § 424.535(g).

[20] Ibid.

[21] "Medicare and Medicaid Programs; CY 2024 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment and Coverage Policies; Medicare Shared Savings Program Requirements; Medicare Advantage; Medicare and Medicaid Provider and Supplier Enrollment Policies; and Basic Health Program".

Comment: Several commenters stated that retroactive revocations can impair or interrupt beneficiary access to care.

Response: Our expansion of retroactive revocation grounds in past years has not, to our knowledge, resulted in the material prevention or disruption of beneficiary care. Thus, we have no reason to believe said hindrances will occur with our revisions to § 424.535(g); this is especially true given, again, the infrequency of revocations. Nonetheless, we will, as we always have, remain watchful for any access to care issues.

Comment: Numerous commenters expressed concern that CMS' proposal would, in essence, unfairly convert technical or minor provider errors into a finding that every covered service during the period in question is unpayable. They stated that such deficiencies should not trigger a retroactive revocation, the current prospective dates for these reasons should remain (for example, reporting a change of information), and retroactive revocations should be reserved for serious misconduct, such as, but not limited to: (1) criminal activity; (2) intentional or systemic provider fraud, waste, or abuse; (3) material non-compliance; or (4) patient harm.

Response: While we appreciate these comments, they appear to presume that every minor error does or will automatically result in a revocation. This has never been the case. As explained earlier, we frequently use other actions (for example, stays) to address such situations. On the other hand, we reiterate that non-compliance with enrollment requirements—even if the provider believes it is a mere technical or inconsequential violation—should result in non-payment. The current prospective effective date in § 424.535(g) for certain revocations is directly antithetical to this, which is why: (1) a retroactive date is needed if we believe the non-compliance warrants a revocation; and (2) we cannot restrict retroactive revocations to matters such as criminal or fraudulent behavior or beneficiary harm. Non-compliance at any level and to any degree remains non-compliance.

Comment: A few commenters stated that CMS' retroactive revocation proposals lack clear, explicit congressional authorization and fail the independent statutory interpretation standard.

Response: We respectfully disagree. We previously stated that sections 1102 and 1871 of the Act give the Secretary discretion to promulgate regulations that are necessary for the efficient administration of the Medicare program; section 1866(j), meanwhile, states in paragraph (1) that the Secretary shall establish by regulation a process for the enrollment of providers of services and suppliers under this title. In our view, establishing revocation effective dates and ensuring that Medicare payments are made correctly and only to compliant providers and suppliers—which is the central purpose of retroactive revocations—clearly falls within the scopes of sections 1102, 1871, and 1866(j) of the Act. Hence, we believe—as we have with our prior regulatory expansions of retroactive revocations—that sections 1102, 1871, and 1866(j) of the Act furnish sufficient authority for our § 424.535(g) proposal.

Comment: Several commenters stated that CMS' proposed expansion of § 424.535(g) is inconsistent with certain aspects of section 1866(b)(2) of the Act. Under section 1866(b)(2)(i) and (ii), CMS may refuse to enter into a provider agreement or—upon such reasonable notice to the provider and the public—may refuse to renew or may terminate such an agreement if CMS determines that the provider fails to: (1) comply substantially with the provisions of the agreement, with the provisions of Title XVIII and regulations thereunder, or with a corrective action required under section 1886(f)(2)(B); or (2) substantially meet the applicable provisions of section 1861 of the Act. The commenters appeared to contend that a provider that is retroactively revoked has not been given ''reasonable notice'' of its non-compliance because, in effect, the provider: (1) might not have realized it is non-compliant; (2) had thus been furnishing legitimate services in good-faith; (3) only belatedly learned of its non-adherence; and (4) is now responsible for repaying Medicare. Accordingly, they concluded that the revocation's retroactive nature violates section 1866(b)(2) of the Act. Another contention seemingly was that so long as the provider ''substantially'' (as that term is used in section 1866(b)(2) of the Act) complies with enrollment requirements, a retroactive revocation is impermissible.

Other commenters stated that section 1866(b)(2) would be violated if CMS applied one of its proposed retroactive revocation grounds to a time period prior to January 1, 2027. This is because, the commenters contended, the section 1866(b)(2) of the Act requirement of ''reasonable notice'' to the provider will not have been met—particularly if the revocation effective date goes back several years.

Response: Provider enrollment and provider agreements are different concepts operating under different authorities and requirements. In general, Medicare provider enrollment is the process by which providers and suppliers seek to obtain and maintain Medicare billing privileges; it is largely governed by section 1866(j) of the Act and 42 CFR 424.500 through 424.575. A provider agreement, as defined in 42 CFR 489.3, is an agreement between CMS and a provider identified in § 489.2(b) to furnish services to Medicare beneficiaries and to comply with the requirements of section 1866 of the Act. Subparts A and B of part 489 address provider agreements. The provisions and parameters of section 1866(b)(2) of the Act, in short, do not apply to provider enrollment, and we emphasize that complete compliance with enrollment provisions—rather than merely ''substantial'' compliance—is required to obtain and maintain billing privileges.

Comment: Several commenters stated that retroactive revocations under § 424.535(a)(8)(ii) and any associated recoupment could violate section 1879(a)(2) of the Act whereby, the commenters contended, a provider need not reimburse any overpayment if it ''did not know, and could not reasonably have been expected to know, that payment would not be made.''

Response: We respectfully disagree with this comment. Section 1879(a)(2) of the Act is only one of two requirements needed for section 1879(a) of the Act to apply. The other, section 1879(a)(1) of the Act, requires a CMS determination that—based on section 1862(a)(1) or (9) of the Act or by reason of a coverage denial described in section 1862(g) of the Act—Part A or Part B payment may not be made for any expenses incurred for items or services furnished by a provider of services or by another person pursuant to an assignment under section 1842(b)(3)(B)(ii) of the Act. Section 1879(a)(1) of the Act does not apply to retroactive revocations because, among other things, the specific denial reasons listed in that section are not applicable to the overpayment determination.

Comment: A commenter stated that retroactive revocations could disincentivize providers from self-disclosure and prompt remediation of non-compliance out of concern that CMS will revoke the provider based on said non-adherence.

Response: We respectfully disagree. We saw no evidence of this following previous expansions of retroactive revocation grounds. In fact, we believe it will encourage providers to be more vigilant in their reporting responsibilities.

Comment: A few commenters maintained that our retroactive revocation provisions would violate section 1866(b)(3) of the Act. Section 1866(b)(3) of the Act states that the effective date of a termination or refusal to renew a provider agreement shall become effective on the same date and in the same manner as an exclusion from participation under section 1128(c) of the Act. Section 1128(c)(1) of the Act conditions such an exclusion on ''reasonable notice,'' and section 1128(c)(2)(A) of the Act limits this exclusion to services furnished to an individual on or after the effective date. Moreover, section 1128(c)(2)(B)(ii) of the Act provides that—absent a health and safety determination—an exclusion does not apply to payment for home health services and hospice care furnished to an individual under a plan of care established before the date of the exclusion. It follows, the commenters concluded, that: (1) under these statutes, a provider must first receive adequate notice prior to the effective date of any such termination action, including revocation; and (2) proposed § 424.535(g) would violate this requirement because the termination effective date would precede notice and apply retroactively to services already provided.

Response: We respectfully disagree with these contentions for two reasons. First, section 1866(b)(3) of the Act, like section 1866(b)(2) of the Act, is inapplicable to provider enrollment. As discussed earlier, provider enrollment and provider agreements are different concepts operating under different authorities and requirements, and termination of a provider agreement is distinct from a denial or revocation of enrollment in Medicare. Second, section 1128(c) does not apply to Medicare denials and revocations but only to OIG exclusions. Consequently, these retroactive revocation provisions do not violate section 1866(b)(3) of the Act.

Comment: Commenters recommended that in its retroactive revocation determinations, CMS should consider whether: (1) the provider reasonably believed it was compliant with enrollment requirements when it provided the services; and (2) the services were medically necessary, documented, and otherwise covered (including whether CMS or its contractor possessed the relevant information while continuing to process claims).

Response: We appreciate these suggestions but decline to commit to them. As we stated in the CY 2026 HH PPS final rule and have noted in other provider enrollment rules, it is ultimately the provider's responsibility to ensure constant adherence to Medicare enrollment requirements.[22] While we say this most respectfully, simply having a reasonable or good-faith belief that is it compliant with these requirements does not exempt the provider from the obligation to actually be compliant. Payments to a non-adherent provider are inappropriate irrespective of: (1) the provider's belief in its compliance; or (2) whether the furnished services were otherwise proper.

Comment: Several commenters stated that CMS should limit recoupment to claims causally related to the identified noncompliance. Another commenter requested that accredited Complex Rehabilitation Technology suppliers be exempt from retroactive revocation effective dates.

Response: We respectfully refer these commenters to our previous response. The issue is the submission of claims for services furnished while the provider is non-compliant, irrespective of whether the claim is related to the non-compliance or to the type of provider or supplier involved; it is partly for this latter reason that we cannot exempt certain provider or supplier types from retroactive revocation application.

Comment: A commenter supported our retroactive revocation proposals. The commenter stated that prospective revocations create a window during which noncompliant providers can continue billing Medicare after the basis for revocation has been identified; retroactive revocations close this gap. The commenter also recommended that CMS supplement this provision with standardized documentation requirements that establish what evidence must be collected and maintained before a retroactive revocation decision is made.

Response: We appreciate the commenter's support and entirely concur with the concerns expressed about prospective revocation effective dates. However, we respectfully decline the commenter's documentation recommendation because we must retain the operational flexibility to address all types of potential retroactive revocations; given the very different facts of each case, a fixed, required form of documentation might not fit all scenarios.

Comment: A few commenters stated that providers should not be retroactively revoked based on requirements that were ambiguous, newly articulated, or not reasonably understood at the time services were furnished. They stated that before enforcing any expanded retroactive revocation authority, CMS should, among other things: (1) issue detailed guidance and practical examples; and (2) furnish education to providers and the MACs.

Response: We are respectfully uncertain as to which specific requirements the commenters believe are unclear or the matters on which the commenters seek guidance. We note that CMS cannot automatically exempt providers from retroactive revocations simply because the provider states that it did not understand certain requirements. If we granted such exceptions in all cases, each potentially revoked provider might claim said misunderstanding to avoid revocation. It is also each provider's responsibility to ensure that it comprehends all requirements. That said, and as later discussed, we expect—to the extent needed—to issue additional guidance regarding our new provisions following the publication of this final rule.

Comment: Numerous commenters stated that CMS should: (1) furnish a reasonable opportunity to cure technical deficiencies before CMS retroactively revokes a provider and begins recoupment; and (2) ensure that the consequence is proportionate to the conduct.

Response: Regarding cure opportunities, we respectfully refer the commenters to our earlier statements—both in the CY 2026 HH PPS final rule and the present rule—about informal pre-revocation appeals processes and our inability to make payment for services furnished while the provider is non-compliant, even if the issue is later corrected. As for the second comment, we reiterate that we: (1) often apply more modest actions (for instance, deactivations and stays) to help ensure proportionality; and (2) only undertake revocation when genuinely justified.

Comment: Numerous commenters stated that CMS should not commence retroactive revocation recoupment until after provider has exhausted its appeal rights or otherwise has had an opportunity for administrative review. Some commenters also questioned whether recouped payments would be returned to the provider if the revocation is reversed on appeal.

[22] ''Medicare and Medicaid Programs; Calendar Year 2026 Home Health Prospective Payment System (HH PPS) Rate Update; Requirements for the HH Quality Reporting Program and the HH Value-Based Purchasing Expanded Model; Durable Medical Equipment, Prosthetics, Orthotics, and Supplies (DMEPOS) Competitive Bidding Program Updates; DMEPOS Accreditation Requirements; Provider Enrollment; and Other Medicare and Medicaid Policies''.

Response: We thank the commenters for their feedback and note that we addressed these same issues in the CY 2026 HH PPS final rule. In response to comments, we stated that we historically have not delayed implementing retroactive revocations or commencing collections while appeals are pending.[23] We explained that because the appeals process can take some time, delayed revocation and recoupment implementation could result in many millions of dollars in continued payments to non-compliant providers as well as postponed repayment of monies to which Medicare and the taxpayers are entitled.[24] We stressed, though, that if the revocation is reversed is appeal, repayment of any collected monies to the provider can be facilitated.[25] These remain our stances with respect to our § 424.535(g) proposal in the current final rule.

Comment: A commenter stated that CMS should not have a retroactive effective date for § 424.535(a)(17) until it clarifies: (1) the circumstances under which a provider is treated as having failed to repay a debt referred to the Department of the Treasury; (2) the period a provider has before that determination is made; and (3) the number of contacts CMS will attempt beforehand.

Response: We refer the commenter to CMS Publication 100–06 (Financial Management Manual), Chapter 4 for information on these three issues.[26]

Comment: Commenters stated that retroactive revocations should require an individualized CMS determination of the provider's relative risk or non-compliance.

Response: With each potential revocation, CMS carefully reviews the facts and circumstances of the case. We view this as an individualized finding regarding the provider's conduct.

Comment: Several commenters recommended a maximum lookback period for retroactive recoupment, with a few commenters suggesting 3 years.

Response: We respectfully disagree. When a provider furnishes services while non-compliant, it is largely immaterial whether, for instance, the service was provided two weeks before the provider received the revocation letter, one year prior, or even three years prior. Payments cannot be made to non-adherent providers.

Comment: Commenters stated that all retroactive revocation notices to providers should explain: (1) the factual and legal basis for—and identify the evidence behind—any retroactive effective date; (2) the available rebuttal, corrective-action, and appeal options; (3) why the provider was noncompliant as of that date; (4) why retroactivity, rather than prospective revocation or a corrective action, is warranted; and (5) the timeframe for (and details of) recoupment.

Response: We appreciate these comments. CMS does not make a separate, individualized determination as to whether a revocation should or should not be retroactive. Retroactivity or prospectivity is determined by the applicable regulatory provision. For example, existing § 424.535(g)(2)(xii) requires that a revocation based on a State's suspension of a physician's prescribing ability be retroactive to the date of the suspension; the date cannot be made prospective. However, each revocation letter always identifies: (1) the factual and legal basis for the revocation; (2) the effective date as specified in § 424.535(g); and (3) appeal rights and procedures. We also separately notify providers of the recoupment process and its timing. Such will remain so under revised § 424.535(g).

Comment: A commenter requested that CMS not apply retroactive revocation effective dates to: (1) reporting-only State deficiencies absent intentional concealment; or (2) condition- or standard-level findings that the provider corrects through an accepted plan of correction.

Response: We believe the commenter is referencing State survey findings and deficiencies. There is no existing ground in § 424.535(a) (nor did we propose one in this rule) under which CMS takes revocation action based solely and exclusively on such findings or deficiencies.

Comment: Commenters recommended that CMS define and provide examples and objective standards of ''non-compliance'' in this rule for cases where the revocation effective date is the date of non-compliance; several commenters requested the same for retroactive effective dates such as, but not limited to, ''the date a Medicare enrollment requirement was no longer met'' and the last date of improper billing. Second, commenters requested that CMS document (and provide evidence for) the factual basis for any CMS conclusion that the provider was noncompliant as of a particular date.

Response: Given the very large number of factual scenarios that can involve non-compliance, no longer meeting Medicare requirements, etc., and our need to have the flexibility to address them all based on their individual circumstances, we are unable to accommodate the commenters' first request.

We note that we currently have various revocation grounds and effective dates in § 424.535 based on non-compliance. The concept is not new. When revoking on this basis (such as non-compliance with a DMEPOS supplier standard under § 424.57(c)), we explain the reason for the action and how we determined the effective date. This will continue under revised § 424.535(g).

Comment: Several commenters stated that a retroactive revocation effective date based on the date that CMS determines that the provider should be revoked is overly vague.

Response: We respectfully disagree. To the contrary, we believe that the date on which CMS decides that the provider should be revoked is the clearest, most definitive date we can utilize given, as explained, the challenge of establishing precisely when the event generating the revocation occurred.

Comment: A commenter expressed concern about retroactive effective dates for § 424.535(a)(22) revocations. Since a State's investigation of patient harm could take considerable time, the commenter stated that the physician or practitioner—though furnishing legitimate services while licensed and reasonably believing that no adverse State finding would occur—may ultimately be responsible for substantial overpayments. The commenter added that the physician or practitioner, concerned about retroactive liability, might even cease treating patients pending the State's decision.

Response: We appreciate the commenter's concerns. However, patient harm is a serious matter that we believe warrants an effective date that coincides with the date of the prior action from the State oversight board, Federal or State health care program, Independent Review Organization (IRO) determination(s), or any other equivalent governmental body or program.

While the issue of whether a physician or practitioner may continue treating patients pending a State investigation for patient harm is outside the scope of this final rule, we again do not anticipate an impact on access to care; this is based on what we have seen after previous establishments of new retroactive revocation grounds.

After reviewing the comments received, we are finalizing our proposed revisions to § 424.535(g) without modification.

(5) Claim Submissions After Revocation (§ 424.535(h))

Under § 424.535(h)(1)(i) (and excluding HHAs), a revoked provider must—within 60 calendar days after the revocation's effective date—submit all claims for items and services furnished before the date of the revocation letter. For revoked HHAs, § 424.535(h)(1)(ii) states that claims must be submitted within 60 days after the later of the following: (1) the revocation effective date; and (2) the date that the HHA's last payable episode ends.

Prior to 2009, the post-revocation claim submittal period was up to 27 months. It was changed to 60 days for certain provider and supplier types in the CY 2009 Physician Fee Schedule final rule (73 FR 69726).[27] It was later made applicable to all provider and supplier types in a December 5, 2014, final rule (79 FR 72500).[28] In both rules, we explained that the reduction to 60 days was necessary because the prior 27-month period posed significant risk to the Medicare program; it gave problematic providers over 2 years to potentially continue their conduct via the submission of inappropriate claims.

Although the current 60-day period is far less than the prior 27-month timeframe, we have long remained concerned about possible fraudulent, improper, or other non-compliant activity by revoked providers. If a provider engaged in such conduct before the revocation, it may continue it afterwards—and 2 months is still an extensive timeframe in which to do so. Indeed, a revoked provider could submit hundreds of improper claims for hundreds of thousands of dollars during this period. If other providers did the same after their revocations, many millions of Trust Fund dollars would be threatened. With the need to protect taxpayer monies from such parties, we believe that further reducing the submission timeframe could correspondingly lessen the program integrity risk, for providers would have less time to engage in inappropriate billing. For these reasons, we proposed to change the 60-day timeframe referenced in § 424.535(h) to 15 days. While we recognized in the proposed rule that this would be a substantial time reduction, we believed the risk warrants it.

We proposed an additional change to § 424.535(h). We previously explained our proposal to make the remainder of our prospective revocation reasons retrospective. Under existing § 424.535(h), though, if a provider had 60 days from the revocation effective date to submit its claims but the effective date was more than 60 days retroactive, the submission period might well have expired before the provider even received the revocation letter. To ensure that the provider actually has an opportunity to submit its claims, we proposed to change:

- Section 424.535(h)(1)(i) to state that a revoked provider must—within 15 calendar days of the date of the revocation letter—submit all claims for items and services furnished before the revocation effective date.
- Section 424.535(h)(1)(ii) to state that a revoked HHA must—within 15 calendar days of the date of the revocation letter—submit all claims for items and services furnished before the later of the following:

(We did not propose to change §§ 424.535(h)(1)(i)(A) and (B) or (h)(2) (which references the timely filing requirements of § 424.44).)

The following is a summary of the comments we received on this proposal and our responses.

Comment: Numerous commenters opposed the reduction to 15 days, citing two principal concerns. First, larger and moderate-sized providers would need more than 15 days to submit all outstanding claims given the amount of time it would take to identify and prepare potentially many claims. Second, certain provider types are subject to monthly billing cycles, notices of admission, minimum data sets (MDS), and other provider-specific requirements that would make it very difficult (if not impossible) to submit within 15 days all claims for all the services they furnished before the revocation effective date. They stated that CMS should retain the 60-day period or at least give providers and suppliers 30 days or 45 days with extensions for good cause or other special circumstances. Examples of the latter could include (but not be limited to): (1) when billing data cannot be completed and accepted by CMS systems within the filing window; and (2) claims cannot be finalized for periods of care already in progress. A few commenters suggested that if CMS wants to use a 15-day period, it should be 15 business days instead of calendar days.

Response: While we appreciate and understand these concerns, we believe that the seriousness of a revocation—and the program integrity risks that revoked providers pose—require a submission period of much less than 60 days. The risk of continued inappropriate conduct for a 2-month period and the potential loss of many thousands of taxpayer dollars is simply too great to permit a timeframe greater than 15 days, which is why we are also unable to grant the commenters' requested extensions and a change to business days.

Comment: Commenters stated that the 60-day period should be retained for: (1) certain provider types (such as SNFs and HHAs) based on their billing cycles; or (2) providers not revoked for fraud, beneficiary harm, intentional misrepresentation, billing for services not rendered, or similar conduct.

Response: Excluding § 424.535(h)'s longstanding provision regarding HHAs' last payable episodes (previously noted), we do not believe that certain providers—either by type or based on the revocation reason—should be exempt from the ''15-day after the revocation letter date'' requirement. This is because any revocation of any provider presents a heightened program integrity risk [29]—and with it, the potential for improper post-revocation claims to be submitted, even if fraud, patient harm, etc., did not trigger the revocation.

Comment: Several commenters stated that CMS should toll any post-revocation claims submission deadline: (1) pending completion of the revocation appeals process; and (2) for system outages and disasters.

Response: We respectfully disagree. This could result in a delay of many months—far beyond 15 and even 60 days—due to the stoppage of the submission period clock; it would give revoked providers much more opportunity to potentially submit inappropriate claims. This would be contrary to our need to protect the American taxpayers and the Medicare program at large against improper activity.

Comment: Several commenters stated that the 15-day period should begin when the revocation notice is received rather than on the date of the notice.

Response: We respectfully disagree. Using the date of the notice adds far

[27] ''Medicare Program; Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2009; E-Prescribing Exemption for Computer-Generated Facsimile Transmissions; and Payment for Certain Durable Medical Equipment, Prosthetics, Orthotics, and Supplies (DMEPOS)'', published in the **Federal Register** on November 19, 2008.

[28] ''Medicare Program; Requirements for the Medicare Incentive Reward Program and Provider Enrollment''.

[29] To illustrate this risk, revoked providers—irrespective of their type or the conduct underlying the revocation—are subject to: (1) a minimum 1-year minimum reenrollment bar; and (2) the strictest level of enrollment screening under § 424.518 should they seek to reenroll once their bar expires.

more certainty to when the timeframe actually began than the receipt date; the latter can depend on a variety of factors and be subject to different interpretations. (For this same reason, the 15-day timeframe for submitting stay of enrollment and deactivation rebuttals under §§ 424.541 and 424.546, respectively, is based on the notification letter date, not the receipt date.)

Comment: Multiple commenters questioned whether a provider may resubmit pre-revocation claims without being impacted by the reduced filing period if the revocation is reversed on appeal.

Response: Although it was unclear to us, it appeared the commenters were asking whether any 15-day deadline applies for the resubmission of any pre-revocation claims after a reversal occurs. If so, the answer is no.

Comment: A commenter requested that CMS: (1) explain how rejected claims submitted within § 424.535(h)'s timeframe are treated and whether providers can resubmit those claims; and (2) establish a minimum claims submission period rather than permit retroactive revocations.

Response: Regarding the second comment, merely adjusting the claim submission period in lieu of retroactive revocation would fail to address the aforementioned need to recoup payments that were made to non-compliant providers. For the first, rejected claims would be handled in the same manner they are under existing § 424.535(h).

Comment: Several commenters requested that CMS explain how the 15-day period would apply to SNFs, HHAs, and other provider types with specific billing requirements such as minimum data sets and monthly billing.

Response: We will, as appropriate, issue guidance on this matter.

Comment: A few commenters expressed concern that the provider may not receive the revocation letter, in which case the 15-day period might expire before the provider learns of the revocation.

Response: While we appreciate this concern, CMS and the MACs strive to take appropriate steps for affected providers to receive revocation letters timely.

Comment: A commenter expressed support for our proposed change to § 424.535(h).

Response: We appreciate the commenter's support.

After considering the comments received, we are finalizing our revisions to § 424.535(h) without modification.

(6) New Revocation Reasons

We also proposed to add several new grounds for revocation in § 424.535(a).

(a) High-Risk Enrollments (§ 424.535(a)(24))

As explained in the proposed rule, we have seen an alarming increase in situations where an unusually and disproportionately large number of providers and suppliers—sometimes of the same type—are simultaneously operating within a very small geographic area (for instance, a multi-block sector), the same complex or building, or even the same suite. Examples include: (1) several dozen hospices within a four-block area of Los Angeles County; (2) 18 HHAs within the same building in Columbus, Ohio; (3) at least nine cases in Ohio where at least five HHAs have the same practice location address, with four of these nine situations involving at least nine HHAs in one location; and (4) similar situations with several certified providers of the same type operating out of one building in Michigan, Nevada, North Carolina, and Texas. Per CMS data, the number of HHAs in Los Angeles County between 2019 and 2023 rose over 45 percent, and at least 1,400 new HHAs have enrolled in the county since 2019. There was no medical need for such an enormous rise, which was entirely out of proportion with any increase in the county's beneficiary population and can be a strong indicator of widespread fraud. Others share our concerns about this, including the Medicare Payment Advisory Commission,[30] members of Congress,[31] and even several national HHA and hospice organizations.[32]

We recognize that many medical facilities, complexes, and geographic areas have large numbers of providers and suppliers located therein. To illustrate, a medical building on a hospital campus may have seven physician practices with different specialties, two laboratories, etc. Also, some areas may have several types of providers and suppliers within a particular neighborhood. The vast preponderance of these situations do not, in and of themselves, necessarily mean that fraud, waste, and abuse exists or that program integrity risks are otherwise present. Yet we believe those cases mentioned in the previous paragraph—as well as other situations—can and do. Fraud schemes can indeed involve problematic (or potentially problematic) providers operating in same general vicinity, as shown in the Los Angeles County and Columbus situations. Although having, for example, four organizational providers/suppliers of the same type (such as ambulance companies) in a seven-block area does not automatically signify fraud, waste, and abuse, it does—based on our experience—raise questions as to whether there is a patient need for all these providers or whether other considerations, such as fraud, are involved.

With tens of millions of Medicare dollars at risk in any fraud scheme, our role in safeguarding the Trust Funds requires the ability to take revocation action—if circumstances warrant—to address such situations. This is especially important because we currently lack authority under § 424.535(a) to revoke providers/suppliers based on program integrity threats stemming from an excessive number of enrolled providers/suppliers within a particular area. We accordingly proposed in new § 424.535(a)(24) that CMS may revoke a provider's or supplier's enrollment if it deems the enrollment as presenting a high risk of fraud, waste, or abuse due to the provider's or supplier's location within a limited geographic area that has an excessive number of providers and suppliers. We noted the following regarding § 424.535(a)(24) in the proposed rule.

First, the term ''high risk'' for purposes of § 424.535(a)(24) does not mean the provider must be in: (1) the ''high'' screening level under § 424.518(c); or (2) a region that has traditionally posed a high risk of fraud, waste, and abuse, such as south Florida. To be sure, § 424.518(c) providers—as well as providers in known program integrity hotspots—pose elevated risks, a matter we may consider in § 424.535(a)(24) determinations. Yet other provider types in other areas can present threats as well. The risk that a particular provider poses based on its proximity to other providers—somewhat more so than the provider type and historic geographic risk—is the main consideration under proposed § 424.535(a)(24).

[32] Letter from LeadingAge and the National Alliance for Care at Home Letter to Dr. Mehmet Oz, CMS Administrator, December 22, 2025, *https://allianceforcareathome.org/wp-content/uploads/Final-Alliance-and-LeadingAge-Home-Health-and-Hospice-Program-Integrity-Recommendations.pdf.*

Second, a potential fraud scheme can involve multiple provider and supplier types; for example, several HHAs, hospices, DMEPOS suppliers, physicians, etc., might be participating in a single operation. A § 424.535(a)(24) revocation therefore would not require the provider in question and the other providers/suppliers in the area to be of the same type.

Third, the terms ''limited geographic area'' or ''excessive number'' in the context of § 424.535(a)(24) will have their ordinary, plain-language meanings. This is due to the many factual situations that could arise and our need to address them—something that thresholds such as minimum/maximum distance or numbers of providers would obstruct. Moreover, such thresholds would alert potentially problematic providers as to how to circumvent a § 424.535(a)(24) revocation. If, to illustrate, we stated that § 424.535(a)(24) only applies if there are at least X number of providers within a radius of Y miles, providers seeking to engage in fraud might enroll immediately outside said radius and/or within an area with fewer providers. This would defeat the purpose of § 424.535(a)(24). That said, our primary focus is on providers in smaller areas—common buildings and complexes, city and town blocks, neighborhoods, etc. Although we reserve the right to apply § 424.535(a)(24) to providers in larger areas (especially if there is an abnormally high number of providers therein), § 424.535(a)(24)'s application would typically be relatively narrow in scope.

Fourth, an actual finding of fraud, waste, or abuse by the provider or another provider in the area would not be required for a § 424.535(a)(24) revocation. This is akin to section 1866(j)(5) of the Act (codified in § 424.519), which permits denial or revocation if (1) the provider has or has had a certain type of affiliation with another provider or supplier, and (2) the affiliation poses an undue risk of fraud, waste, or abuse; no determination of actual fraud, waste, or abuse is needed. Section 424.535(a)(24) revocations would be based on the assessed risk and not whether the provider or nearby providers have actually engaged in fraudulent conduct.

Fifth, while several existing revocation reasons in § 424.535(a) require CMS to consider specified factors in its revocation decisions, we are not proposing the same for § 424.535(a)(24). Consistent with our prior discussion regarding § 424.535(a)(8)(ii), we must be able to address all potential § 424.535(a)(24) scenarios without the rigid restrictions of required criteria and based solely on the unique facts and circumstances of each case.

Sixth, some interested parties may detect certain similarities between § 424.535(a)(24) and our authority under section 1866(j)(7) of the Act (codified in § 424.570) to impose a temporary enrollment moratorium. Although we address temporary moratoria in greater detail later in section V.C.1.f.(2).(b). of this final rule, we state here that a moratorium differs from § 424.535(a)(24) in many ways. The latter, for instance: (1) is a revocation reason rather a prohibition on new enrollments; and (2) takes into account the provider's proximity to other providers of all types, not simply the number of (or risk posed by) providers of the same type.

As much as anything else, though, we emphasized that proposed § 424.535(a)(24) was not principally designed to revoke good-faith providers who otherwise present no apparent risks even though they might, for example, be in an area with numerous other providers. Providers should not at all assume they would be revoked under § 424.535(a)(24) merely because they operate near other providers. Indeed, the overwhelming preponderance would not be. Section 424.535(a)(24) would only be applied in exceptional instances where, based on the facts and circumstances, the risk genuinely justifies it.

The following is a summary of the comments we received on this proposal and our responses.

Comment: Many commenters opposed our proposal. They noted that providers—urban and rural, large and small—are frequently located near other providers for reasons such as: (1) administrative and financial efficiency (for example, sharing a building to reduce costs); and (2) the facilitation of patient care as part of multi-provider, comprehensive treatment. A provider's mere presence among other providers, they contended, does not by itself indicate program integrity risk. While, in certain instances, they stated that proximity might be a basis for closer CMS review or investigation, it should never be grounds for revocation. They urged CMS to withdraw proposed § 424.535(a)(24) and instead use other means of addressing geographic concentration, such as enhanced screening and oversight.

Response: We appreciate these comments and respond as follows.

First, and as we have stated, we acknowledge that hospitals, medical complexes, office buildings, densely populated communities, etc., frequently have numerous providers and provider types operating within and around them. Many of these situations by themselves do not involve fraud, waste, or abuse, or risks thereof, and we do not believe the proposed rule stated otherwise. Our principal focus is instead on isolated cases we have seen where, for instance, there are obvious, extremely heavy, and highly aberrant clusters of providers—frequently of the same provider type—operating within a very small area similar to that we saw in our aforementioned Los Angeles and Columbus examples. Established health care systems, hospital campuses, medical complexes, etc., are not the targets of § 424.535(a)(24). We fully understand the concerns that commenters expressed about § 424.535(a)(24). We wish to again reassure providers and suppliers that, by and large, we are not seeking to target legitimate, common, and standard concentrations of providers in places such as hospital medical centers and health system complexes that would normally have a greater number of providers and suppliers therein. It is the unusual situations that we seek to address—and even in some of these cases, revocation might not occur.

Second, and on the other hand, we disagree that concentration must never be a reason for revocation. Such a position, in our view, disregards the crucial concept of risk. While, as stated, concentration does not automatically mean that a program integrity risk exists—it very frequently will not—this does not mean that said risk can never exist. Consider the Columbus situation, where, inexplicably, there were 18 HHAs operating within one building and the program integrity risk was accordingly very high. If we took the stance that no action could be taken because concentration never means risk, we effectively must wait until we learn that fraud has actually occurred before taking measures—by which point millions of dollars in taxpayer monies may have been lost. This would reflect the pay-and-chase formula that has proven far less effective in halting fraud, waste, and abuse than the approach of stopping fraud before it begins. We believe that our duty to the American people to protect the Trust Funds and beneficiaries requires us be preventive and proactive—not reactive—in response to program integrity risks, hence the need for § 424.535(a)(24). Hence we respectfully decline to withdraw our proposal and maintain that it would be the most effective way—more so than other potential

program integrity mechanisms—to address this particular vulnerability.

Comment: Commenters requested that CMS establish regulatory factors or standards that CMS must consider in determining risk and, in turn, whether to revoke a provider under § 424.535(a)(24). Criteria and parameters that commenters suggested included (but were not limited to): (1) the provider's ownership, billing patterns, adverse legal history, compliance history, history of timely responses to CMS inquiries, operational status, physical capacity, and specific conduct; (2) whether the provider furnished services inconsistent with beneficiary diagnoses; (3) the provider's relationships (if any) with other providers within the concentrated area; (4) beneficiary complaints against the provider; (5) beneficiary demand and market access needs; (6) whether the provider engaged in patient harm; (7) numerical thresholds for a revocation to occur—such as a certain number of providers of a particular type within a regulatorily specified geographic area (for instance, within X number of square miles or neighborhood blocks; X square feet of a building or medical center size; (8) defining ''limited area'' and ''excessive number'' (potentially after consulting with the applicable State agency regarding provider need and market saturation); (9) referral sources and beneficiary overlap; and (10) the degree of concentration, including sub-factors CMS should consider in determining this. The commenters stated that having required factors will ensure objectivity and transparency and, a commenter contended, facilitate a ''totality of the circumstances'' approach.

Response: We appreciate these recommendations and reiterate that we will consider the facts and circumstances of every potential § 424.535(a)(24) case. This could, if warranted, include some of the data the commenters recommended. Yet as previously explained, we must have flexibility in potential denial and revocation determinations under §§ 424.530 424.535 in light of the wide range of factual situations that can and do arise. Having explicit, inflexible factors and numerical thresholds that we must consider in every case significantly hinders this ability. It can also, as already noted, alert dishonest providers as to what CMS contemplates in its denial and revocation decisions, hence enabling them to adjust their behavior to circumvent these criteria and thresholds; to illustrate, if we defined ''excessive number'' as meaning the particular cluster must have at least X number of providers within less than X square miles for § 424.535(a)(24) to apply, providers in a fraud scheme could position their locations so as to avoid this threshold. For all these reasons, § 424.535(a)(24) will not contain regulatorily-specified factors, parameters, or definitions.

Comment: Several commenters requested that CMS clarify a number of operational considerations regarding § 424.535(a)(24). These included, but were not limited to: (1) the data CMS will use in its determination and whether the provider may review it; (2) whether CMS' methodology and the criteria CMS used will be made public; (3) the frequency with which CMS will re-review and, if needed, update said determination; and (4) whether a provider that is revoked under § 424.535(a)(24) based strictly on saturation may enroll in a different but non-saturated area.

Response: We will explain the basis for each revocation in our revocation letter to the provider. However, consistent with our decades-long revocation processes, we do not plan to disclose to the public the specific facts, data, and methodology used in each case. Furthermore, except as specified in the appeal process described in 42 CFR part 498, CMS also will not re-review § 424.535(a)(24) revocations. As for the fourth issue, we respectfully cannot pre-determine a particular situation based on hypothetical facts.

Comment: Commenters stated that § 424.535(a)(24) raises due process concerns because an otherwise compliant and legitimate provider could be revoked simply because of its location. They stated that in any § 424.535(a)(24) case, CMS should: (1) require clear evidence and an individualized finding of the provider's specific conduct (rather than mere location within a certain area), with several commenters requesting a formal finding of fraud, waste, or abuse; and (2) allow the provider to challenge and submit evidence to rebut CMS' decision—and to cure any deficiencies—before the revocation occurs.

We appreciate these comments, understand the concerns expressed, and state as follows.

First, we respectfully disagree with the apparent assertion that a § 424.535(a)(24) revocation is based entirely on the provider's location per se. The basis, rather, is the fraud, waste, and abuse risk the enrollment poses within the context of the area in question. Explained otherwise, risk, not location, is the central issue. This distinction is important. For purposes of § 424.535(a)(24), a provider and its physical location—standing alone—typically do not raise concerns. When viewed in conjunction with other providers' nearby locations, though, a program integrity risk can arise, and this risk is what triggers the revocation. As noted, this situation is not considerably different from that addressed in section 1866(j)(5) of the Act and § 424.519, whereby denial or revocation can occur if the provider has or has had a certain type of affiliation that poses an undue risk of fraud, waste, or abuse. In both cases, the provider in question need not have engaged in fraud, waste, abuse, or other misconduct. The focus instead is the risk that either the affiliation or, with § 424.535(a)(24), the enrollment (based on proximity and concentration) poses. Likewise, we disagree that an actual fraud, waste, or abuse finding should be required since this would involve reverting to a ''pay-and-chase'' formula. We must take measures when risk arises instead of only doing so after the improper conduct occurs.

Second, in considering the facts and circumstances in a § 424.535(a)(24) situation, the provider's conduct may, if CMS deems it warranted, be a consideration in its decision. Yet because the issue is risk and because we are not establishing mandatory factors, we respectfully decline to require an assessment or individualized finding of the provider's behavior. Our finding will involve determining the risk described in § 424.535(a)(24).

Third, we are unable to establish the requested pre-revocation appeals process or cure opportunity for reasons previously stated. We believe that our current appeals process under 42 CFR part 489 affords providers adequate due process for revocations and denials.

Comment: Several commenters maintained that in any § 424.535(a)(24) revocation, CMS should: (1) furnish specific written findings (including, for example, (i) methodology, (ii) the legal basis for the action, (iii) the reasons why CMS believes a high risk exists, and (iv) the time period, comparator group, provider density, claims, locations, individuals, ownership relationships, etc. on which CMS relies); (2) give the provider access to the supporting evidence; (3) grant expedited review if the action threatens beneficiary access; (4) ensure that any review is performed by a CMS official who did not make the original decision; (5) stay any revocation and recoupment during a timely administrative appeal; and (6) explain, if applicable, the recoupment and repayment period and schedule.

Response: CMS in every revocation sends a letter to the provider explaining,

among other things, the basis for revocation (including the legal basis) and the provider's appeal rights; the latter includes a statement that the appeals/reconsideration review is performed by a CMS official who did not make the original decision. We also separately inform providers of the process and timing of recoupment.

We previously explained why we do not postpone revocations or recoupment pending the completion of appeals. In addition, the appeals process in 42 CFR part 498 does not provide for expedited provider enrollment appeals for certain types of providers or situations. To do so, we believe, would be unfair to those without expedited appeal rights. All providers and suppliers are, and should be, subject to the same appeals procedures and timeframes.

Comment: Commenters recommended that CMS establish a safe harbor or rebuttable presumption of ''no high risk'' under § 424.535(a)(24) for legitimate providers that, for example, maintain bona fide locations, appropriate personnel, no problematic ownership relationships, etc. Some commenters went further and stated that providers with a passed site visit, an active State license and accreditation, and no adverse history should be explicitly excluded from (a)(24)'s purview. Other commenters urged CMS to explicitly state in the rule (including in the regulatory text) that: (1) provider concentration can be an investigative factor but cannot alone be grounds for revocation; and (2) § 424.535(a)(24) requires documented and individualized evidence that the provider presents a material and specific risk of fraud, waste, abuse, or beneficiary harm.

Response: We thank the commenters for these recommendations but must respectfully decline them. Formally establishing the requested presumption in the rule would hamstring our efforts to address the Los Angeles and Columbus-type situations heretofore mentioned. We would be stating at the outset of any potential § 424.535(a)(24) situation that the provider very likely presents no risk if the criteria the commenters reference (for example, operational locations) are met. We cannot make such pre-judgments before the facts and circumstances are reviewed, and we again remind commenters that the central question is not the risk the individual provider actually presents but the risk posed by the scenario in § 424.535(a)(24). Merely because we earlier recognized that provider proximity often does not present material program integrity concerns does not mean we must or should create an official presumption in this rule that this is so. Furthermore, we have seen instances where a licensed or accredited provider's location, ownership, management, services, background, etc., appeared legitimate, but the provider later engaged in fraud, waste, or abuse as part of a larger scheme. In brief, we are unable to establish formal carve-outs or suppositions with respect to § 424.535(a)(24) since every situation will be different and will require an objective analysis of the facts and circumstances without preexisting assumptions.

Concerning the last comment regarding individualized findings, we refer the commenters to our earlier statements on this topic.

Comment: Several commenters believed that CMS' reference in the proposed rule to section 1866(j)(5) of the Act when explaining proposed § 424.535(a)(24) is erroneous. They contended that: (1) under section 1866(j)(5) of the act, the provider has an affiliation with an entity that had previously been suspended or excluded, whereas § 424.535(a)(24) permits revocation absent an affiliation or a prior adverse finding; and (2) neither section 1866(j)(5) nor any other statute allows the action that § 424.535(a)(24) contemplates.

Response: We stated in the proposed rule that a § 424.535(a)(24) situation ''is not considerably different from'' that addressed in section 1866(j)(5) of the Act and § 424.519. This is correct, for in both cases, the provider in question need not have engaged in fraud, waste, abuse, or other misconduct. The focus instead is the risk that either the affiliation or, with § 424.535(a)(24), the enrollment (based on proximity and concentration) poses.'' [33] The quoted statement merely aimed to show that § 424.535(a)(24)'s concept of revocation based on risk is not new. Respectfully, it neither stated nor implied that we were relying upon section 1866(j)(5) as authority for § 424.535(a)(24); the relevant authorities for this provision are sections 1102, 1871, and 1866(j) of the Act.

Comment: Several commenters stated that § 424.535(a)(24) could: (1) restrict beneficiaries' access to care and limit their choice of providers; (2) discourage providers from locating in certain areas or associating with other providers; and (3) make it more difficult for smaller, independent providers to compete with larger health care organizations that have greater resources, thus leading the former to be acquired by the latter.

Response: We respectfully disagree with these contentions. We reiterate that we always carefully examine the facts of the case before undertaking revocation action, and that § 424.535(a)(24) revocations would largely be limited to exceptional situations. Accordingly, we do not believe patient care or choice will be impacted. Second, we have over the years increased the number and scopes of our revocation reasons; this included expanding the types of provider relationships and affiliations that could result in revocations. To our knowledge, none of these regulatory revisions led to the second and third events the commenters cited, and there is no evidence to suggest they will with respect to § 424.535(a)(24).

Comment: A few commenters questioned how § 424.535(a)(24) would apply to fixed-site institutional providers, with other commenters requesting that they be formally exempted from § 424.535(a)(24).

Response: The provision will apply to all providers in the same manner irrespective of provider size and type, and for reasons already noted we cannot establish carve-outs or exceptions to § 424.535(a)(24).

Comment: Some commenters contended that § 424.535(a)(24) inappropriately amounts to: (1) a certificate of need program (whereby, within some States and territories, certain new or expanding providers must demonstrate a need for their services); (2) a § 424.570-type temporary moratorium on the enrollment of specific new provider types within a particular area; and (3) a CMS-enforced limit on the number of providers an area may have, with revocations of all providers that exceed that threshold.

Response: We respectfully disagree. Section 424.535(a)(24) does not prohibit enrollment, require a demonstration of need, or impose strict numerical limits. It is solely limited to the isolated and very individualized situations previously described involving a provider excess in a limited area leading to a high risk of fraud, waste, or abuse.

Comment: A few commenters stated that the scenario described in § 424.535(a)(24) is not among the grounds in section 1866(b)(2) of the Act for provider agreements terminations. Hence, § 424.535(a)(24) violates this statutory provision.

Response: We disagree because, as previously explained, section 1866(b)(2) of the Act pertains to provider agreements. It does not apply to provider enrollment.

After considering the comments received, we are finalizing § 424.535(a)(24) without modification.

[33] 91 FR 41216.

(b) Certain Misdemeanor Convictions (§ 424.535(a)(16))

In the CY 2024 PFS proposed rule (88 FR 52262), we proposed in new §§ 424.530(a)(16) and 424.535(a)(16) to deny or revoke enrollment if the provider—or any owner, managing employee or organization, officer, or director thereof—was convicted of a Federal or State misdemeanor within the past 10 years that CMS deems detrimental to the best interests of the Medicare program and its beneficiaries. We stated that offenses would include (but not be limited in scope or severity) to the following:

- Fraud or other criminal misconduct involving the provider's participation in a Federal or State health care program or the delivery of services or items thereunder.
- Assault, battery, neglect, or abuse of a patient (including sexual offenses).
- Any other misdemeanor that places the Medicare program or its beneficiaries at immediate risk, such as a malpractice suit that results in a conviction of criminal neglect or misconduct.[34]

We outlined in that CY 2024 proposed rule our increasing concern about providers convicted of misdemeanors for conduct that could endanger the Trust Funds and beneficiaries. We stated that our oversight of the Medicare program requires that we be able to take protective action in such instances.

We also noted that while some States may designate a particular crime as a misdemeanor while others deem it a felony, this does not lessen the risk that the former can pose to Medicare and its beneficiaries.[35] It is the conduct itself, not its classification under State law, that concerns us. This is particularly true since restricting our revocation authority for criminal convictions to felonies could leave us unable to address situations where a felony charge results in a misdemeanor plea.

We did not finalize this proposal in the CY 2024 PFS final rule (88 FR 78818).[36] However, we emphasized in that final rule that: (1) we would continue to monitor cases of misdemeanor convictions involving significant misconduct; (2) we might pursue future rulemaking to address them; and (3) many misdemeanors—especially those involving assault, battery, neglect, or abuse of a patient (including sexual offenses)—can involve disturbing activity.[37]

As explained in the CY 2027 HH PPS proposed rule, two particularly disconcerting categories of misdemeanor convictions we have recently seen involve sexual assault and financial misconduct. The former can endanger Medicare beneficiaries while the latter can threaten the Trust Funds—both of which we must safeguard. In line with our aforementioned willingness to pursue future rulemaking if warranted, we proposed in § 424.535(a)(16) (currently designated as ''Reserved'') to revoke enrollment if the provider or supplier—or any owner, managing employee or organization, officer, or director thereof—was convicted of a Federal or State misdemeanor related to sexual assault or financial misconduct within the past 10 years that CMS deems detrimental to the best interests of the Medicare program and its beneficiaries.

While parts of this proposal duplicate those in the CY 2024 proposed rule (for example, the 10-year period, the applicability to owners, directors, etc.), there is one critical difference: it is much narrower in scope. Whereas the CY 2024 proposal was rather open-ended in terms of potential misdemeanors, the present one is limited to sexual assault and financial misconduct. We believe this would reduce stakeholders' possible concerns that proposed § 424.535(a)(16) is too broad. In addition, we stress that: (1) terms such as ''financial misconduct'' would be based on their plain meanings; and (2) the misdemeanor convictions described in this paragraph must be detrimental to Medicare's (and Medicare beneficiaries') best interests, meaning that not every such conviction would result in revocation.

The following is a summary of the comments we received on this proposal and our responses. Some of these comments and responses also reference proposed revised § 424.530(a)(16), which would permit denial based on the same grounds identified in proposed § 424.535(a)(16). Our final decision regarding § 424.530(a)(16) will be addressed later.

Comment: Commenters requested guidance on how CMS will determine whether a misdemeanor: (1) is detrimental to the best interests of the Medicare program; and (2) constitutes ''financial misconduct.'' The commenters also requested that CMS define this latter term (as well as ''sexual assault'') and outline all offenses that could fall within either category.

Response: As we do with the same ''detrimental to the best interests standard'' in §§ 424.530(a) and 424.535(a) for felony convictions, CMS considers the facts and circumstances of the case. Also, and as previously indicated, ''financial misconduct'' and ''sexual assault'' will have their plain meanings. Considering that the scope of offenses that fit within these two categories can vary by state, we are unable to list all of them.

Comment: Commenters requested that CMS establish regulatory factors and criteria it must consider in every potential §§ 424.530(a)(16) and 424.535(a)(16) case. Among commenters' suggested standards were: (1) whether any evidence of rehabilitation exists; (2) whether there is a connection between the provider and the behavior leading to the revocation; (3) whether a nexus exists between the criminal conviction on the one hand and either the Trust Funds or the provider's health care operations on the other; (4) how long ago the conviction occurred; (5) the nature of the offense; (6) the convicted party's current role within the organization; and (7) whether the underlying conduct leading to the misdemeanor has already been reviewed by the applicable State licensing or regulatory authority.

Response: We appreciate this request but reiterate our previously explained concerns about the restraints that factors pose. These concerns apply to §§ 424.530(a)(16) and 424.535(a)(16), too. Thus, we respectfully decline to include specific criteria in these two regulatory provisions.

Comment: Several commenters supported this proposed revocation and denial reason.

Response: We appreciate the commenters' support.

Comment: A commenter recommended that CMS confirm that the actions of an unpaid board member would not invoke §§ 424.530(a)(16) or 424.535(a)(16).

Response: Although it is somewhat unclear, we believe the commenter is referencing ''directors'' as that term is defined in § 424.502. A person can qualify as a director regardless of whether they are paid or unpaid. Sexual assault and financial misconduct misdemeanors by unpaid board

[34] ''Medicare and Medicaid Programs; CY 2024 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment and Coverage Policies; Medicare Shared Savings Program Requirements; Medicare Advantage; Medicare and Medicaid Provider and Supplier Enrollment Policies; and Basic Health Program'', published in the **Federal Register** on August 7, 2023.

[36] ''Medicare and Medicaid Programs; CY 2024 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment and Coverage Policies; Medicare Shared Savings Program Requirements; Medicare Advantage; Medicare and Medicaid Provider and Supplier Enrollment Policies; and Basic Health Program'', published in the **Federal Register** on November 16, 2023.

[37] Ibid.

members consequently fall within the scope of §§ 424.530(a)(16) and 424.535(a)(16).

Comment: Some commenters stated that CMS should: (1) explain how providers are expected to identify potentially qualifying convictions; (2) identify the safeguards that would apply before an individual's conduct results in the organization's revocation; (3) establish reasonable due diligence expectations, provider notification procedures, and clear responsibilities when a potentially qualifying conviction becomes known but CMS has not yet determined whether it is detrimental to Medicare; and (4) explain what a provider must do upon discovering a potentially disqualifying misdemeanor conviction.

Response: We were unclear as to certain aspects of these comments. Based on our best reading, we address them as follows. First, this provision (like §§ 424.530(a)(3) and 424.535(a)(3)) does not require providers to review their personnel for potential convictions as part of the provider enrollment process. Whether they choose to do so is the provider's internal, independent business decision. Second, the principal safeguard is that CMS will, as always, consider the facts and circumstances of the case before taking action. (We are uncertain as to which other ''safeguards'' the commenters were referencing or seeking.) Third, if, as we suspect, the commenters are asking how much research they must perform regarding their employees' backgrounds, we refer them to our response to the first comment. Fourth, providers are notified by letter of any denial or revocation (regardless of the specific denial or revocation reason). Fifth, we believe the commenters are asking whether the provider must take certain action if CMS is reviewing a potential §§ 424.530(a)(16) or 424.535(a)(16) situation. If so, the answer is no—assuming the question's context is limited to the mere fact that the case is under CMS review. Sixth, CMS cannot direct providers on a particular course of action in the scenario described in the fourth comment. That, too, is an internal provider decision. We can only state that CMS would have the ability to utilize §§ 424.530(a)(16) or 424.535(a)(16) as circumstances warrant.

We wish to expound upon our responses to the first and third comments because, as discussed later, additional commenters raised similar issues concerning other provider enrollment proposals. Although the provider is not required under subpart P of part 424 to conduct these personnel reviews, this does not absolve the provider of ultimate responsibility if one of its owners, managing employees, etc., engages in conduct that could generate a revocation or denial. In addition, CMS cannot establish a ''due diligence'' standard that prohibits CMS from denying or revoking the provider so long as the provider conducted a certain degree of review and did not find any prior adverse history, but CMS later found that the owner, director, etc., has such history. This has for decades been CMS' position for every denial or revocation reason that involves conduct by an owning or managing party. Applying a due diligence standard would mean that a provider could always avoid denial or revocation by simply stating that it examined the owner's or manager's background but found nothing. This would leave the Medicare program, the Trust Funds, and beneficiaries at tremendous risk; under this scenario, program integrity would be based strictly on the provider's actual or purported review of its affiliated parties rather than actual or potential threats to the program and its patients. Put otherwise, while we understand commenters' concerns about unknown adverse actions, we cannot predicate our payment safeguard efforts on the extent of providers' internal investigative activities (should they wish to perform them).

Comment: Some commenters requested that the proposed 10-year lookback period be reduced to, for example, 5 years.

Response: We believe the proposed 10-year period is appropriate. It achieves consistency the 10-year period in §§ 424.530(a)(3) or 424.535(a)(3), and convictions from as long as 10 years ago can still raise program integrity concerns.

Comment: A few commenters stated that ''financial misconduct'' misdemeanors should be limited to those involving the delivery of a health care item or service as described in section 1128 of the Act.

Response: We respectfully disagree. Considering our need to protect the Trust Funds against fraud, waste, and abuse, it is the conviction itself—and the financial misconduct behind it—that must take precedence over the precise forum in which the behavior occurred.

Comment: Several commenters questioned whether §§ 424.530(a)(16) and 424.535(a)(16) will be applied prospectively or retroactively in terms of when the conviction occurred.

Response: The interpretation of the terms ''within the preceding 10 years'' will generally be similar to the identical language appearing in §§ 424.530(a)(3) and 424.535(a)(3)(i). CMS, as appropriate, may issue public guidance on this issue.

Comment: A few commenters stated that CMS in proposed §§ 424.530(a)(16) and 424.535(a)(16) is effectively requiring providers to research their organizations for parties with financial misconduct and sexual assault misdemeanor convictions without providing a mechanism for providers to obtain this data.

Response: Consistent with our earlier statements—as well as with prior rulemaking efforts where we expanded the scope of various denial and revocation reasons to include additional parties—§§ 424.530(a)(16) and 424.535(a)(16) do not require providers to perform the research the commenters indicate.

Comment: Several commenters supported proposed §§ 424.530(a)(16) and 424.535(a)(16).

Response: We appreciate the commenters' support.

After considering the comments received, we are finalizing §§ 424.5355(a)(16) without modification.

(c) Effective Dates of New Revocation Reasons

Consistent with our proposed retroactive effective dates for all revocation reasons, we proposed the following effective dates for proposed § 424.535(a)(16) and (24). The § 424.535(a)(16) effective date would be the date of the conviction; this date would be referenced in new § 424.535(g)(1)(xvi). For § 424.535(a)(24), we proposed in new § 424.535(g)(1)(xxiv) an effective date that is the date on which CMS or its contractor determines that the provider should be revoked under § 424.535(a)(24); this is due to the difficulty in establishing a concrete date as to when the risk addressed in § 424.535(g)(1)(xxiv) commenced.

The following is a summary of the comments we received on this proposal and our responses.

Comment: Numerous commenters opposed these proposed retroactive effective dates. They maintained that a misdemeanor conviction occurring some time ago should not require the provider to repay potentially years of Medicare payments. Regarding § 424.535(a)(24), they believed it would be unfair to recoup payments simply because the provider's location is near other providers. The commenters, in short, believed these retroactive dates could financially harm providers and cause beneficiary access issues.

Response: We appreciate this feedback. Concerning § 424.535(a)(16), the proposed effective date is the same as that for felony convictions § 424.535(a)(3). In both cases, the conviction presents a risk regardless of when it occurred. Hence, we believe it is appropriate to use the date it occurred as the revocation effective date. With respect to § 424.535(a)(24), we reiterate that: (1) as with § 424.535(a)(19), the issue is the risk presented and not the provider's location per se; and (2) § 424.535(a)(24) will only be used in exceptional situations. We add that even if the risk under § 424.535(a)(24) began years ago, the revocation effective date only goes back to the date on which CMS determines that the provider should be revoked. Given that the provider in most cases would receive the revocation letter comparatively soon after this determination is made, the recoupment period could be rather short.

Our prior responses to comments on revised § 424.535(g) also apply to those regarding § 424.535(a)(16) and (a)(24).

After considering the comments received, we are finalizing §§ 424.535(g)(xvi) and (xxiv) without modification.

(7) Revised and New Denial Reasons (§ 424.530(a))

We also proposed a number of revised and new denial reasons in § 424.530(a).

(a) Changes to Existing Denial Reasons

Some of the following proposed denial reasons would be expanded to include actions by managing employees and managing organizations. We received comments from stakeholders: (1) regarding the meaning of ''managing employee'' in the context of these denial reasons; and (2) expressing concern that a broad interpretation of ''managing employee'' could result in an increased number of denials. These comments will be addressed in our later discussion of our proposed revision to § 424.502's ''managing employee'' definition.

(i) Debt (§ 424.530(a)(6))

Current § 424.530(a)(6)(i) and (ii) permit denial if the enrolling provider or owner (as defined in § 424.502) thereof—

- Has an existing Medicare debt; or
- Was previously the owner of a provider that had a Medicare debt when the latter provider's enrollment was voluntarily terminated, involuntarily terminated, or revoked (and additional criteria in § 424.530(a)(6)(ii)(A) through (C) are met).

We proposed to include within the scope of § 424.530(a)(6) the provider's managing employees, managing organizations, and individuals and entities with any other form of business or financial relationship with the provider.

As noted in prior rulemaking efforts, managing employees and managing organizations (as defined in § 424.502) often have as much or more influence over a provider's day-to-day operations as an owner. Yet § 424.530(a)(6) only references the provider itself and its owners. Section 424.530(a)(6) thus cannot prevent enrollment if, for instance, a managing employee or organization of the prior provider ran its daily operations, was responsible for its accumulation of large debts, and now seeks to re-enter Medicare through their ownership of the new provider. Too, we have seen instances where parties other than owners and managing employees and organizations were involved with the former provider in some capacity. Therefore, the central issue is not the precise form or label of the relationship with the former provider—that is, whether it was ownership, financial, etc. It is instead the relationship itself and the party's effort to enroll new locations or reenter Medicare through the new provider.

We received a number of comments on our proposal.

Comment: Some commenters stated that before denying a provider under § 424.530(a)(6)(i) or (ii) based on the debt of another party (for instance, managing employee), CMS should add required factors to both paragraphs. Other commenters maintained that CMS's proposed § 424.530(a)(6) expansion could deny enrollment to providers based on financial obligations of parties that might only be minimally involved with the provider.

Response: After reviewing the comments received, we are not finalizing our proposed revisions to § 424.530(a)(6).

(ii) Payment Suspension (§ 424.530(a)(7))

Denial is permitted under § 424.530(a)(7) if the provider, or any owning or managing employee or organization of the provider, is currently under a Medicare or Medicaid payment suspension (as defined in §§ 405.370 through 405.372 or in § 455.23). We proposed to expand § 424.530(a)(7) to include individuals and entities with any other form of business or financial relationship with the provider. We explained that because a payment suspension is a serious matter, relationships other than those involving ownership and management should be considered under § 424.530(a)(7).

As with proposed § 424.530(a)(6), commenters expressed concern that the ''any other form of business or financial relationship'' category is unclear and potentially very wide in applicability. After reviewing these and other comments, we have decided not to finalize our proposed revisions to § 424.530(a)(7).

(iii) Program Terminations/Suspensions (§ 424.530(a)(14))

CMS may deny enrollment under current § 424.530(a)(14)(i) if—

- The provider is currently terminated or suspended (or otherwise barred) from participation in a State Medicaid program or any other Federal health care program; or
- The provider's license is currently revoked or suspended in a State other than that in which the provider is enrolling.

We proposed two changes to § 424.530(a)(14)(i). One would include the provider's owners, managing employees, and managing organizations within its scope. This aligns with several other denial reasons—such as existing § 424.530(a)(3) and, as noted, (a)(7)—that include actions against owners and managing employees/organizations. Similar to these other denial grounds, revised § 424.530(a)(14)(i) would help prevent situations where the owning/managing party's conduct that led to the licensure action or the other program termination/suspension could be repeated with the prospective Medicare provider, especially considering the influence such parties typically have over a provider's operations. Furthermore, it could keep such parties from entering Medicare via a new provider, hoping to shield themselves from § 424.530(a)(14)(i)'s application due to the provision's current limitation to providers.

The other change would expand licenses to include those voluntarily surrendered in lieu of further disciplinary action. We have provisions in §§ 424.530 and 424.535 whose purview includes voluntary surrenders, and we believe the same approach for § 424.530(a)(14)(i) is needed because our overriding concern is the loss of the license rather than the type of loss. Voluntary surrenders in lieu of further disciplinary action, in our view, are as much a threat to the Trust Funds and beneficiaries as revocations and suspensions, since they all involve problematic conduct.

The following is a summary of the comments we received on this proposal and our responses.

Comment: Commenters questioned how CMS would apply § 424.530(a)(14)(i) in light of our proposed expansion of § 424.502's ''managing employee'' definition. They believed that a § 424.530(a)(14)(i) denial could stem from situations where: (1) the managing employee with the termination or suspension does not have close involvement with the provider's operations; and (2) there is little nexus between the managing employee's action and the provider. They stated that CMS should require a substantial connection between the provider, the managing employee, and the employee's action. Others stated that the proposed expansion of § 424.530(a)(14)(i) is too broad and should not be finalized.

Response: As already stated, we consider the facts and circumstances of the case before denying a provider's enrollment. We note that there is no requirement that the managing employee's action be substantially connected to the provider's operations. This has long been our position for all denial and revocation grounds that can be based on an owner's or managing employee's conduct. For § 424.530(a)(14)(i) situations, the managing employee's program or license termination, suspension, or voluntary surrender alone poses considerable risk regardless of: (1) the relative degree of the person's involvement with the provider; or (2) the termination's, suspension's, or surrender's potential impact on the provider.

We also disagree that revised § 424.530(a)(14)(i) would be too broad. The addition of managing employee and organizations to its scope is consistent with other denial and revocation grounds pertaining to such parties.

Comment: Several commenters stated that providers should be able to remove a managing employee from their organization prior to any § 424.530(a)(14)(i) denial.

Response: Section 424.530(c) addresses the situation the commenters describe.

Comment: A commenter stated that because voluntary surrenders are not necessarily indicative of fraud, waste, or abuse, CMS should evaluate the circumstances and risk involving the surrender in § 424.530(a)(14)(i) determinations.

Response: CMS evaluates the facts and circumstances of the case in every potential denial or revocation situation.

Comment: A few commenters stated that if CMS revokes a provider under § 424.530(a)(14)(i) and the State reverses or overturns the Medicaid revocation, termination, or bar, CMS should reverse its § 424.530(a)(14)(i) revocation.

Response: As this comment appears to concern the general application of § 424.530(a)(14)(i) in the Medicaid context as opposed to the specifics of our proposed change, we respectfully believe it is outside the scope of this final rule.

After reviewing the comments received, we are finalizing our proposed revision to § 424.530(a)(14)(i) without modification.

(iv) False or Misleading Data (§ 424.530(a)(4))

Section 424.530(a)(4) allows denial based on the provider's/supplier's submission of false or misleading information on the enrollment application to gain enrollment in the Medicare program. We proposed to expand § 424.530(a)(4) in the same manner as with proposed § 424.535(a)(4) and for the same reasons. (The parenthetical concerning OIG referral would be retained in revised § 424.530(a)(4).)

The comments we received on this proposal were generally the same as those regarding § 424.535(a)(4), discussed previously. Our responses are likewise the same. We are accordingly finalizing proposed § 424.530(a)(4) without modification.

(b) New Denial Reasons

(i) Misdemeanor Convictions (§ 424.530(a)(16))

(A) New § 424.530(a)(16)

As previously noted, w proposed to duplicate proposed § 424.535(a)(16) in § 424.530(a)(16) (also presently designated as ''Reserved'') as a new denial ground. The same rationale is involved: the need to protect beneficiaries and the Trust Funds against parties convicted of sexual assault or financial misconduct misdemeanors.

The comments we received on this proposal mirrored those concerning § 424.535(a)(16), discussed earlier. Our responses are also the same. Thus, we are finalizing proposed § 424.530(a)(16) without modification.

(B) ''Final Adverse Action'' Definition

Section 424.502 defines ''final adverse action'' as any of the following: (1) Medicare revocation; (2) State health care license suspension or revocation; (3) revocation or suspension by an accreditation organization; (4) felony conviction; or (5) exclusion or debarment. Given our proposed denial and revocation reasons based on a misdemeanor conviction for sexual assault or financial misconduct, we proposed to add such misdemeanors as new paragraph (6) in the ''final adverse action'' definition. (As with felony convictions in paragraph (4), the 10-year period would be that preceding enrollment, revalidation, or reenrollment.)

The following is a summary of the comments we received on this proposal and our responses.

Comment: A commenter stated that CMS should delay this change (suggesting 2 years of non-enforcement) to enable providers to evaluate applicable individuals, obtain updated disclosures, and take corrective action where necessary.

Response: We respectfully are unable to delay the implementation or enforcement of this or any of our finalized provisions considering the important program safeguard issues they address.

Comment: A commenter requested that CMS explain the practical implications of our revision to the ''final adverse action'' definition.

Response: The principal implication is that under § 424.518(c)(3)(ii)(E), providers with a final adverse action within the past 10 years are screened at the ''high'' level. We believe providers with the misdemeanors in question would warrant this elevated screening.

After reviewing the comments received, we are finalizing our proposed revision to the ''final adverse action'' definition without modification.

(ii) Same Suite (§ 424.530(a)(19))

We proposed a new denial ground in § 424.530(a)(19) based on the provider having its practice location in the same suite or office as another provider whose Medicare enrollment has been revoked or denied. Sharing a suite or office with a provider who has been deemed non-compliant with Medicare requirements could spur concerns about the newly enrolling provider's own willingness to retain compliance if enrolled. This is particularly true when—in situations we have seen—several providers in the same suite engage (or seek to engage) in a fraud scheme, have their Medicare enrollments revoked or denied, and another provider aims to enroll in that same office. Considering the risks posed by the revoked or denied provider, we believe we must be able to prevent the new enrollment if circumstances justify it.

We explained in the proposed rule that § 424.530(a)(19) would differ from proposed § 424.535(a)(24). The latter is a revocation reason and not a denial ground; it is also partly based on the

number of nearby providers, whereas § 424.530(a)(19) is based on shared suites and offices. Sections 424.530(a)(19) and 424.535(a)(24) therefore complement but do not duplicate each other.

We recognize that, for example, physicians that are part of a group frequently share the same suite. If 10 physicians are in the group and one (Dr. X) has their enrollment revoked, this does not automatically mean that a prospective (and Medicare enrolling) 11th group member will be denied enrollment based on Dr X's revocation. Every situation is different, and CMS will only invoke § 424.530(a)(19) when proper.

The following is a summary of the comments we received on this proposal and our responses.

Comment: Numerous commenters opposed our proposal. They stated that space and office sharing is extremely common—especially for purposes of cost-savings and strengthening of patient care—and not indicative of fraud, waste, or abuse. It would be improper, they added, to deny a provider on this ground, especially when the provider may have no knowledge of, connection to, or control over a neighboring provider's enrollment status.

Response: We appreciate and understand this feedback. As stated, we acknowledge that space-sharing (particularly involving physician practices) is very common and does not by itself raise serious program integrity concerns. Yet we reiterate that there have been situations where providers in a shared office or suite have engaged—or, based on the facts and circumstances of the case, may engage in—improper activity. The need to protect Medicare beneficiaries and the Trust Funds requires that we have the ability to address these situations. We believe that § 424.530(a)(19) could assist in this by enabling denial of an enrollment that might exacerbate the problem.

Comment: Commenters stated that CMS should establish regulatory factors, criteria, standards, and thresholds for potential § 424.530(a)(19) cases. These should include, for example, requiring: (1) a clear connection between the enrolling provider and the other provider's denied or revoked enrollment (and the conduct behind (or basis for) that other denial or revocation); (2) the enrolling provider's knowledge of the other denial or revocation; (3) common ownership, control, or coordination between the two providers; and (4) a lookback period, whereby § 424.530(a)(19) would not apply if the other provider's revocation or denial occurred more than a certain number of years ago.

Response: For reasons mentioned previously, we respectfully decline to add said criteria and thresholds to § 424.530(a)(19). As mentioned, though, CMS will only invoke § 424.530(a)(19) when warranted by the facts and circumstances of the case.

Comment: Commenters stated that instead of § 424.530(a)(19), CMS should concentrate on the individual behavior of each provider rather than tie the latter to a co-tenant's improper conduct. Additional commenters recommended that any § 424.530(a)(19) denial require a documented, individualized finding connecting the enrolling provider to fraud, waste, or abuse.

Response: While we appreciate the commenters' feedback, we have explained in this rule, the proposed rule, and prior rules that certain relationships and affiliations—whether organizational, managerial, business-based, geographic, etc.—can present significant risks to Medicare. This by no stretch means that all (or even most) of them do, but some can in certain circumstances. If we simply disregarded all potentially problematic relationships and arrangements and only took action after an individual provider engaged in fraud or misconduct, this would—as previously noted with respect to § 424.535(a)(24)—revert to a ''pay-and-chase'' model. In other words, we must: (1) proactively prevent improper activity before it happens; (2) treat the risk of misconduct as seriously as we do actual misconduct; and (3) deter possible wrongdoing involving relationships, multiple providers, and multiples parties as much as that involving a single provider. This is the basic reason for § 424.530(a)(19), § 424.535(a)(24), and certain other provisions promulgated in this and past rules. Even if the enrolling provider was not directly involved in its co-tenant's activities, we must have to ability to take action as needed to protect the Medicare program against potential threats.

Comment: Commenters stated that CMS should establish a safe harbor for providers that can demonstrate a legitimate, documented clinical or business rationale for co-location.

Response: While we appreciate this recommendation, the issue is not the need or rationale for the co-location; many such arrangements are for entirely legitimate purposes. Rather, it is the risk associated with the co-location due to the other provider's denial or revocation, which is why we must respectfully decline the commenters' safe-harbor request.

Comment: A commenter stated that because existing § 424.57(c)(29) prohibits DMEPOS suppliers from co-locating with another provider or supplier, § 424.530(a)(19) is unnecessary and duplicative.

Response: We respectfully disagree because the two provisions address different situations. Section 424.57(c)(29) is restricted to DMEPOS suppliers and prohibits co-location. Proposed § 424.530(a)(19) is not provider-type specific, does not itself bar space-sharing, and involves sharing an office or suite with a denied or revoked provider.

Comment: A few commenters contended that § 424.530(a)(19) should not apply if the enrolling provider has no ownership, management, financial, or operational relationship with the revoked or denied provider.

Response: We respectfully disagree. As stated elsewhere in this final rule section V.C., we cannot regulatorily exclude potential scenarios from our proposed denial and revocation provisions, for the facts of each case will vary. Indeed, such exemptions could impair program integrity if, to illustrate, the circumstances of a particular exempted situation warranted denial or revocation but the exception prohibited action on our part.

Comment: Some commenters stated that § 424.530(a)(19) could discourage physicians and practitioners from joining and co-locating with group practices out of concern that their enrollments may be denied if the group has a denied or revoked provider.

Response: We respectfully disagree for two reasons. First, denials on this ground will be the exception, not the norm. They will only occur when genuinely justified. Second, we have added and expanded numerous denial and revocation grounds over the past two decades to include certain relationships and affiliations. We are unaware of large numbers of providers and other parties avoiding such arrangements as a result. We believe this will hold true with § 424.530(a)(19), too.

Comment: A few commenters urged CMS to state in the regulatory text that § 424.530(a)(19) would not apply to situations where a physician is: (1) joining an established group practice; or (2) otherwise enrolling at a location where the revoked or denied provider is no longer present.

Response: For reasons already stated, we cannot exempt certain arrangements from § 424.530(a)(19)'s scope. Regarding the second comment, CMS will issue guidance on this matter.

Comment: Several commenters recommended that CMS define what constitutes the ''same suite or office''.

Response: We respectfully believe that this phrase's meaning is plain on its face.

Comment: Noting our earlier scenario of a 10-physician group, a commenter—seemingly believing this constituted an exception to § 424.530(a)(19)—requested that it be included in the regulatory text.

Response: While we appreciate this request, our scenario was not an exemption. It merely stated that § 424.530(a)(19) ''does not automatically mean that a prospective (and Medicare enrolling) 11th group member will be denied enrollment'' based on another group member's revocation. The purpose was to make clear that every case is different and will be evaluated on its own facts and circumstances.

After reviewing the comments received, we are finalizing proposed § 424.530(a)(19) without modification.

(iii) Hospice Medical Directors and Administrators (§ 424.530(a)(20))

We explained at length in the proposed rule the serious program integrity issues involving hospices. CMS in recent years has taken numerous steps to address them, including, for example:

- Under § 424.518(c), requiring persons who directly or indirectly own 5 percent or more of a newly enrolling hospice (or a hospice undergoing any ownership change) to submit fingerprints for a criminal background check.
- Requiring hospice medical directors who certify a patient's terminal illness under § 418.22(c) to be enrolled in or opted out of Medicare, which enables CMS to screen the medical director.
- Clarifying that hospice medical directors and administrators are ''managing employees'' (as that term is defined in § 424.502) and thus must be reported on the hospice's Form CMS–855A enrollment application (OMB Control No. 0938–0685). This helps ensure that CMS knows the identities of these parties and can vet them for potential issues.

In light of medical directors' and administrators' managing control over hospices, we believed that closer oversight of these individuals was necessary—particularly considering: (1) the criminal and False Claims Act cases we have seen involving hospice operators; [38] and (2) reports of physicians falsely certifying patients' terminal statuses.[39] Despite the aforementioned steps, we continue to have program integrity concerns about hospice operators. We still see instances of false physician certifications, kickbacks to certifying physicians, criminal cases involving administrators, hospices billing Medicare while non-compliant with enrollment requirements, etc. On a more specific level, we outlined in the proposed rule three particularly problematic issues.

First, there are individuals who serve as medical director or administrator of numerous hospices. Ensuring—(1) quality care to hospice patients; (2) the efficiency of the hospice's operations; (3) compliance with Medicare requirements; and (4) hospice program integrity requires the full attention and oversight of the medical director and administrator. We believe that having these roles at numerous facilities limits the time the individual can spend on each facility's operations and raises questions about the person's commitment to oversight. This places hospice beneficiaries and program integrity at risk.

Second, we have seen cases where the medical director or administrator is very far from the physical hospice facility; several instances, in fact, involved the hospice and medical director being on opposite sides of the country (for instance, the medical director is in New York, and the hospice is in California). This, too, generates significant concerns about the individual's oversight of the hospice.

Third, certain hospices have been using medical directors with inactive licenses. Section 418.22(c), as noted, requires the medical director who initially certifies the beneficiary's terminal status to be enrolled in or opted-out of Medicare. However, if the medical director is not certifying Medicare beneficiaries' terminal status—and said physician is neither billing Medicare nor ordering/certifying the services/items outlined in § 424.507—enrollment is not required. Therefore, CMS might not know whether the medical director's license is active and only learn of the inactive status later. Since the medical director Conditions of Participation (CoPs) at § 418.102 and personnel requirements for physicians at § 418.114(b)(1) require hospice medical directors to be physicians (and thus licensed), hospices that have medical directors with inactive licenses are not compliant with the CoP Medicare requirements.

To further address hospice medial director and administrator program integrity issues and to protect beneficiaries, we proposed new § 424.530(a)(20). This would permit denial of a hospice's enrollment application if any of the following apply:

- The enrolling hospice's medical director is—

++ The medical director of multiple other hospices, or

++ Practices at such a distance (for example, in a different state) from the enrolling hospice that the medical director cannot realistically perform all medical director functions required under 42 CFR part 418.

- The enrolling hospice's administrator is—

++ The administrator of multiple other hospices; or

++ Located at such a distance from the enrolling hospice that the administrator cannot realistically perform all administrator functions required under 42 CFR part 418.

- The hospice's medical director does not have an active physician medical license in the State in which they are practicing.

Section 424.530(a)(20) would not: (1) formally prohibit medical directors and administrators from serving at more than one hospice; or (2) change hospice CoPs or other hospice policies in 42 CFR part 418. It would simply help us address situations where the hospice's prospective enrollment raises the program integrity concerns outlined in this section V.C. of this final rule.

The following is a summary of the comments we received on this proposal and our responses.

Comment: Commenters opposed the multiple hospice and distance provisions in § 424.530(a)(20). Some stated that rural and small hospices—as well as larger health systems—occasionally hire medical directors and administrators to provide consistent leadership and continuity of care across their service areas, partly because qualified candidates can be scarce. They believed our proposal could harm the ability of these hospices (particularly rural ones) to attract such officials. A

[38] See, for example, the proposed rule titled, ''Medicare Program; Calendar Year (CY) 2024 Home Health (HH) Prospective Payment System Rate Update; HH Quality Reporting Program Requirements; HH Value-Based Purchasing Expanded Model Requirements; Home Intravenous Immune Globulin Items and Services; Hospice Informal Dispute Resolution and Special Focus Program Requirements, Certain Requirements for Durable Medical Equipment Prosthetics and Orthotics Supplies; and Provider and Supplier Enrollment Requirements'' (88 FR 43654), published in the **Federal Register** on July, 10, 2023.

[39] See, for example, the proposed rule titled, ''Medicare Program; FY 2024 Hospice Wage Index and Payment Rate Update, Hospice Conditions of Participation Updates, Hospice Quality Reporting Program Requirements, and Hospice Certifying Physician Provider Enrollment Requirements'' (88 FR 20022), published in the **Federal Register** on April 4, 2023.

commenter requested a specific exemption from § 424.530(a)(20) for hospices in a designated Health Professional Shortage Area (HPSA) by the Health Resources and Services Administration (HRSA).

Response: We thank the commenters for this feedback. As earlier stated, this provision establishes no actual or implied limits on the number of hospices a medical director or administrator can oversee. It also does not create mileage or other distance thresholds. We recognize the existence of the situations the commenters' raised, and our proposal is not intended to halt all arrangements involving either the direction of multiple hospices or direction from a considerable distance. It is instead aimed at isolated but highly disconcerting situations we have seen that involve, for instance, potential program integrity or beneficiary safety issues. We seek to assure hospices that—as with other denial and revocation grounds—we would only apply § 424.530(a)(20) in limited instances and after a careful review of the facts and circumstances involved. This said, we are respectfully unable to establish § 424.530(a)(20) carve-outs for certain hospices in this final rule (such as hospices in HPSAs), for we must be able to address a broad range of situations.

Comment: Commenters expressed concern that CMS did not define or establish thresholds for ''multiple other hospices.''

Response: As indicated in our previous response, we did not define ''multiple other hospices'' so we could retain the ability to address a wide range of factual scenarios. We also believed that requiring numerical thresholds would effectively place limits on how many hospices a medical director or administrator could oversee, something we were not seeking to do in this rule.

Comment: Commenters stated that CMS should evaluate whether required functions are actually being performed rather than presume inadequacy based principally on mileage or the number of hospices served. They urged CMS: (1) to define objective, evidence-based criteria for determining whether a medical director or administrator can fulfill required responsibilities; (2) not to use oversight of multiple hospices or geographic distance alone as a basis for denial; (3) to provide a reasonable cure period for a temporary or administrative licensure lapse when appropriate; (4) to phase in any new requirements and consider protections for existing, disclosed arrangements that comply with 42 CFR part 418; (5) to identify the process CMS will use and the data and factors it will consider—such as (but not limited to) the individual's regular availability, the scope of their role within the hospice, and the approximate number of patients the hospices in question have—in determining whether a § 424.530(a)(20) denial is warranted; and (6) allow hospices to demonstrate how their operations ensure compliance.

Response: We appreciate these suggestions. Regarding the first, second, and fifth, we reiterate that while we decline to include specific criteria within § 424.530(a)(20), we will thoroughly examine the facts and circumstances of every case and will not automatically assume either inadequacy or sufficiency. For the third, we refer commenters to our earlier statements regarding cure periods and the need for constant compliance with Medicare enrollment regulations; allowing the former could disincentivize hospice physicians from maintaining the latter. We respectfully decline the commenters' fourth request regarding staged implementation. Arrangements of significant concern to us might warrant a possible § 424.530(a)(20) denial of an enrolling hospice soon after the January 1, 2027, effective date. (We note that § 424.530(a)(20) only applies to denials and not revocations, which we believe addresses the comments regarding existing, disclosed arrangements.) We view the sixth recommendation as a request that CMS's § 424.530(a)(20) investigation include discussions with the hospice about its medical director and administrator operations. While we appreciate the suggestion, CMS cannot pre-commit to an official, mandatory means of investigation in a particular enrollment case.

Comment: Several commenters stated that physical distance is an imperfect proxy for effective oversight.

Response: Again, we recognize that distance does not necessarily equate to a lack of oversight. Yet we have seen cases where it has. These include instances where the medical director or administrator is part of a wider scheme where the person only superficially monitors the hospice—or, in some situations, has no involvement at all but is listed as the medical director or administrator merely for appearances' sake. Such cases require us to take steps to protect the Medicare program and beneficiaries and, if the facts warrant it, deny enrollment.

Comment: Several commenters appeared to question the need for § 424.530(a)(20) because the CoPs already establish responsibilities for hospice medical directors and administrators. Another commenter stated that proposed § 424.530(a)(20) should be withdrawn from this rule and addressed in the hospice CoPs after CMS meets with stakeholders to better understand: (1) the needs of rural hospices; and (2) how to develop CoPs that address key personnel working at multiple providers.

Response: We appreciate this feedback but note that CoPs are separate from the question of risk in the context of provider enrollment. Even if a CoP is met, this does not mean that the facility, medical director, or administrator can never present a program integrity or enrollment risk—especially considering the situations we have seen. We accordingly believe our provision is necessary.

Comment: A few commenters questioned whether CMS whether § 424.530(a)(20)'s licensure provision pertains to the State in which the medical director practices or the State in which the hospice is located.

Response: It pertains to the former.

Comment: A commenter stated that CMS should publish de-identified implementation data as well as the grounds for denials and their disposition.

Response: Although we respectfully are unclear as to the type of ''implementation data'' the commenter suggests, CMS does not publish the specific facts, evidence, and reasons behind individual denial cases.

Comment: A commenter questioned how § 424.530(a)(20) would apply to system-level chief medical officers, regional medical directors, alternate administrators, and other leadership models used by multi-site hospice organizations.

Response: We believe the commenter is requesting clarity on whether § 424.530(a)(20) would apply not only to medical directors and administrators but also to the other officials the commenter cited. Assuming so, the provision only pertains to the activities of medical directors and administrators.

After reviewing the comments received, we are finalizing proposed § 424.530(a)(20) without modification.

(iv) Misuse of Identity (§ 424.530(a)(21))

We noted previously that § 424.535(a)(7) permits revocation if the provider knowingly sells to or allows another individual or entity to use its billing number. (This does not include providers or suppliers who enter into a valid § 424.80 reassignment of benefits or a § 489.18 change of ownership.) Yet there is no denial reason that specifically addresses misuse of identifiers. This is troubling given situations that have occurred where a

party (X) steals the identity of another party (Y) (for example, another physician or practitioner) and enrolls Y without Y's knowledge and using Y's credentials and identifiers; X then bills and receives payment from Medicare under Y's name. To address this and other situations involving prospective enrollees using compromised identities, we proposed in new § 424.530(a)(21) that CMS can deny enrollment if the prospective provider or supplier is attempting to enroll under another party's identity.

The comments we received on this proposal were supportive. No opposition was expressed. Thus, we are finalizing § 424.530(a)(21) without modification.

(8) Reapplication Bar (§ 424.530(f))

Under § 424.530(f), CMS may prohibit a prospective provider from enrolling in Medicare for up to 10 years if its enrollment application is denied because the provider submitted false or misleading information on or with (or omitted information from) its application to gain enrollment in Medicare. The goal is to prevent dishonest providers from submitting false information on their initial application and, after being denied enrollment on this ground under § 424.530(a)(4), simply submitting a new application with correct data.

We believe that restricting § 424.530(f) to instances involving false information limits its potential effectiveness, for there are other § 424.530(a) denial reasons that could involve similarly inappropriate provider behavior. Assume a prospective provider's enrollment is denied because the provider is: (1) unlicensed; (2) OIG excluded or has a recent felony conviction; (3) using a false storefront as its practice location; (4) under a current Medicare and Medicaid payment suspension based on a credible allegation of fraud; (5) terminated from another Federal health care program; or (6) revoked from Medicare and attempting to enroll under a different identity. This casts serious doubt as to the provider's honesty and trustworthiness, since the provider likely knows it cannot enroll but is nonetheless hoping to somehow ''sneak into'' the program; indeed, without a reapplication bar in these and similar situations, the provider might routinely submit more such applications with this nefarious objective in mind.

Accordingly, and to safeguard the Medicare program, we proposed to revise the introductory text of § 424.530(f) to allow CMS to impose a reapplication bar for up to 10 years based on any § 424.530(a) denial reason (not merely § 424.530(a)(4)). We also proposed to delete factors at § 424.530(f)(2) that CMS currently must consider in determining whether to impose a reapplication bar (and the length thereof) for a § 424.530(a)(4) denial. There are two related reasons for this latter proposal. First, the current § 424.530(a)(4) factors pertain strictly to false or misleading data situations and would thus be inapplicable to other denial grounds. Second, proposing different § 424.530(a)(4) criteria would essentially present the same problem mentioned in the previous sentence—specifically, a single set of § 424.530(f) factors could not possibly apply to all § 424.530(a) denial reasons considering the varying facts of each.

Unlike reenrollment bars under § 424.535(c), reapplication bars are discretionary. CMS need not impose them, and we are not proposing to change this. We recognize that less serious denial situations—such as, but not limited to, failure to pay an application fee—might not warrant a reapplication bar. Our focus is mostly on providers whose conduct raises significant program integrity concerns.

We would retain current § 424.530(f)(1) and (f)(3), which address, respectively, the bar's: (1) applicability to the provider's other names, identities, etc.; and (2) impact on the ordering, referral, certification, or prescription of services, items, or drugs. Paragraph (f)(3), though, would be re-designated as revised paragraph (f)(2).

The following is a summary of the comments we received on this proposal and our responses.

Comment: Many commenters opposed our expansion of § 424.530(f) to include all denial grounds. They stated that 10 years is much too long a bar for what may be a comparatively modest reason for the denial and could effectively force the provider to cease operations.

Response: While we appreciate these concerns, we reiterate that a reapplication bar is completely discretionary; a bar may not be imposed in every case. Moreover, the 10-year period is a maximum, not a mandatory timeframe. It is not as though any bar we impose must be for 10 years. In fact, many bars will not be anywhere near this length. Only if a 10-year bar is truly necessary will it be imposed, and we will carefully consider the facts and circumstances in every reapplication bar case.

Comment: Commenters stated that when considering a reapplication bar and its length, CMS should distinguish between denials: (1) involving fraud, abuse, intentional misrepresentation, or patient safety concerns; and (2) arising from technical, administrative, or similar issues. They maintained that this would allow CMS to concentrate on more serious conduct without harming providers whose enrollments were denied for less significant reasons. They believed longer bars should be reserved for more serious conduct.

Response: We thank commenters for this recommendation. We recognize that not all denials are the same and that the facts and circumstances of each situation will differ. We seek to assure providers that every reapplication bar case will be carefully evaluated, and we will only impose longer bars when warranted.

Comment: Commenters recommended that CMS retain and add mandatory reapplication bar factors (including data that CMS must review in every case) in § 424.530(f) so that stakeholders understand the bases for CMS' determinations. Suggested additional factors included, but were not limited to, the severity of the conduct and whether there was any beneficiary harm.

Response: As previously explained, regulatorily specified criteria has at times inhibited our ability to take necessary program integrity measures. Therefore, we believe that our proposed removal of factors from § 424.530(f)—and our declination to add new ones—is necessary.

Comment: A commenter requested that CMS: (1) identify denials that are considered less serious than others; and (2) not apply a reapplication bar to providers that are denied enrollment under § 424.530(a)(1) based on a failure to respond timely to a revalidation request or other request for information.

Response: We respectfully decline these requests because they both effectively require CMS to make certain reapplication bar decisions before we have reviewed the facts of a particular case. For instance, if we stated in this final rule that Denial Reason X generally might not involve the misconduct that Denial Reason Y does, this could—as with having factors within our denial and revocation reasons—obstruct our efforts to apply a reapplication bar (and an extended one if needed) in Denial X cases. Likewise, we cannot formally exclude the § 424.530(a)(1) situation the commenter references because there could indeed be instances where a bar is warranted.

Comment: A commenter requested that CMS confirm that it will not issue a reapplication bar for a denial that has been reversed on appeal.

Response: No reapplication bar will be applied in this instance.

Comment: A commenter stated that: (1) providers must be able to challenge the imposition and length of a reapplication bar; and (2) the denial notice must explain why the selected duration is proportionate to the underlying conduct.

Response: The imposition of a reapplication bar and its length are not appealable matters because neither is an initial determination under 42 CFR 498.3. The denial letter describes the basis for the bar's length.

After reviewing the comments received, we are finalizing our proposed changes to § 424.530(f) without modification.

(9) Changes in Majority Ownership (CIMOs)

We previously mentioned § 424.550(b) and § 424.551, the former pertaining to HHAs and hospices and the latter to DMEPOS suppliers (hereafter collectively ''providers''). Under these provisions, if the provider undergoes a CIMO within 36 months of its initial enrollment—or within 36 months of its most recent CIMO—and no exception applies, the provider's enrollment is terminated. (For HHAs and hospices, the provider agreement is also terminated and does not transfer to the new owner.) The provider under its new majority ownership must enroll as a new provider and undergo a State survey or accreditation. (DMEPOS suppliers must obtain a new accreditation.)

There are two main purposes of this ''36-month rule''. First, it enables CMS to perform a complete screening and vetting of the provider under its new ownership. This is vital for ensuring that the provider is compliant with all Medicare enrollment requirements. Second, it helps prevent ''flipping''. This involves a party enrolling a provider for the sole purpose of quickly selling it to another party without the latter having to newly enroll or undergo a survey/accreditation. The seller's exclusive objective is profit and not patient care, which places beneficiaries and the Trust Funds at risk.

While the 36-month rule has helped to stem flipping and facilitate closer scrutiny of new owners, we have seen provider efforts to circumvent or ignore it. These include, but are not limited to:

- Failing to notify CMS of the ownership change—meaning the sale occurs and the buyer assumes ownership under the existing enrollment without enrolling the entity as a new provider with a new survey/accreditation. Only later does CMS learn of the sale.
- Using a management (or similar) agreement in lieu of a formal sales agreement. Here, the management agreement states that: (1) managerial (and effectively all other) authority over the provider is transferred to Party X; and (2) X intends to later purchase the provider. Once the 36-month period expires, the sale occurs. In essence, Party X is purchasing the provider within the 36-month period but under the guise of a ''management agreement''.

Such inappropriate attempts to avoid the 36-month rule undercut the rule's overriding objective of protecting beneficiaries and the Trust Funds from unvetted and potentially problematic entities. To deter these efforts, we proposed in new §§ 424.530(a)(22) and 424.535(a)(25) that we may deny or revoke enrollment if CMS determines that the HHA, hospice, or DMEPOS supplier failed to comply with the provisions and requirements of, as applicable, §§ 424.550(b) or 424.551. The § 424.535(a)(25) revocation effective date under new § 424.535(g)(1)(xxv) would be the date on which CMS or its contractor determined that the provider should be revoked.

The following is a summary of the comments we received on this proposal and our responses.

Comment: Several commenters supported proposed §§ 424.530(a)(22) and 424.535(a)(25). A commenter stated that the strengthening of oversight of ownership changes via these provisions is well targeted, adding that ownership changes are a documented vehicle for fraud scheme expansion in home health and other high-risk provider categories.

Response: We appreciate the commenters' support.

Comment: Commenters recommended that CMS add factors and criteria (including, potentially, a materiality standard) for §§ 424.530(a)(22) and 424.535(a)(25) determinations. They believed this would retain the provision's focus on inappropriate behaviors without chilling legitimate transactions.

Response: We thank commenters for this suggestion but restate our earlier position on required factors and the need to be able to address a multitude of situations. Thus, we respectfully decline the commenters' recommendation.

Comment: Commenters stated that CMS should implement §§ 424.530(a)(22) and 424.535(a)(25) with safeguards for bona fide transactions.

Response: Our proposed grounds are not designed to deter or discourage CIMOs, and we do not believe providers will be disincentivized from engaging in them. We recognize that many such transactions are legitimate. Yet this does not mean we should ignore instances where compliance is not maintained, circumvention has been attempted, etc., for we must ensure that parties comply with our provider enrollment requirements. All this said, and as with our other denial and revocation grounds, we will take action under §§ 424.530(a)(22) and 424.535(a)(25) only when justified and after a thorough review of the case's facts and circumstances; this, in itself, is an important safeguard for providers.

Comment: Commenters stated that provider confusion about whether a transaction constitutes a CIMO should not result in revocation where the entity acted in good faith and promptly corrects a reporting or procedural deficiency.

Response: We repeat our prior response regarding our careful review of the facts and circumstances of every case. We note, though, that: (1) providers are ultimately responsible for understanding and adhering to the CIMO requirements; and (2) a provider's claimed misinterpretation of §§ 424.550(b) and 424.551 is not, by itself, sufficient basis for avoiding a denial or revocation under §§ 424.530(a)(22) and 424.535(a)(25).

Comment: Commenters stated that CMS should not apply §§ 424.530(a)(22) and 424.535(a)(25) except in cases of fraud, misconduct, deliberate circumvention, or other serious activity. Technical or minor errors—or when there was no purposeful circumvention—should be excluded, with a few commenters requesting a specific intent requirement for §§ 424.530(a)(22) and 424.535(a)(25) to be applicable. A commenter stated that no reapplication or reenrollment bar should be applied in §§ 424.530(a)(22) and 424.535(a)(25) situations if the CIMO was conducted in good faith but later found to be non-compliant.

Response: We respectfully disagree with these comments. Even if a provider believes its non-compliance is immaterial or was unintentional, it remains non-compliance. While we will, again, review every case on its own facts and circumstances, we are unable to promulgate a blanket exemption for situations not involving fraud, serious misbehavior, intentional circumvention, etc. This also applies to reenrollment bars, which are mandatory under § 424.535(c) (though the length of the bar is a matter of CMS discretion). Reapplication bars are discretionary, but CMS cannot exclude certain situations from § 424.530(f) given the need to

address various types of factual situations.

Comment: Several commenters expressed concern that our proposals appear to prohibit management agreements in CIMO situations. They stated that such arrangements are common and legitimate.

Response: Sections 424.530(a)(22) and 424.535(a)(25) do not prohibit such agreements *per se.* However, and depending on the situation's circumstances, they can involve improper efforts to sidestep the 36-month rule and its important protections—hence our citing it as an example of §§ 424.530(a)(22) and 424.535(a)(25)'s potential applicability.

Comment: A commenter requested that CMS identify which types of ownership arrangements it deems ''abusive'' under the 36-month rule.

Response: We respectfully decline the commenter's request because: (1) neither §§ 424.530(a)(22) nor 424.535(a)(25) use the term ''abusive'', nor did we do so in the proposed rule's preamble discussion of these two provisions; and (2) we cannot deem certain transactions as abusive or not abusive without assessing the case's specific and unique facts.

Comment: A commenter urged CMS to: (1) remove the reference to § 424.550(b) in § 424.535(a)(25); and (2) state that revocation is permissible if an HHA or hospice failed to report material ownership-related information within 30 days as required in § 424.516(e)(1). While it was somewhat unclear, the commenter appeared to contend that so long as the provider reported material data about the CIMO within 30 days, this should satisfy CMS' concerns about CIMO compliance.

Response: We respectfully disagree for two reasons. First, neither § 424.516(e)(1) nor § 424.550(b) contains a materiality standard. Required data must be reported regardless of its materiality. Second, and as explained in the proposed rule, our concerns go beyond the mere timely reporting of the change to include, for instance, non-compliance with other requirements as well as circumvention.

Comment: A few commenters stated that CMS should: (1) furnish additional guidance on what constitutes a CIMO and outline the facts that demonstrate a compliant CIMO; and (2) allow providers to obtain formal, pre-sale determinations directly from CMS or the MAC regarding whether their transaction (or potential transaction) triggers the 36-month rule's requirements.

Response: We appreciate the comments but believe they are outside the scope of this final rule.

Comment: A commenter recommended that CMS establish a risk-based ''Trusted Provider'' CIMO voluntary registration and recognition mechanism. Under this approach, vetted, good-faith HHAs and hospices—such as, the commenter believed, those with no adverse history or that are currently accredited—may complete a CIMO via expedited screening, with the provider agreement and billing privileges remaining intact; no new enrollment and survey would be required. The commenter maintained that this would be consistent with CMS' existing risk-based screening process under § 424.518.

Response: We appreciate this suggestion but believe it is outside the scope of this final rule.

Comment: A commenter opposed proposed § 424.535(g)(1)(xxv)'s revocation effective date of ''the date on which CMS or its contractor determined that the provider should be revoked.'' The commenter believed this: (1) is inconsistent with the more fixed effective dates in § 424.535(g); and (2) would give CMS complete discretion to make the effective date retroactive to the provider's initial enrollment date. The commenter stated that the effective date should instead be that of the management agreement or other event that triggered the § 424.550(b) violation.

Response: Most respectfully, we believe the commenter may be misinterpreting this effective date. The § 424.535(g)(1)(xxv) date is the date of CMS's decision to revoke, not any random date back to which CMS believes the revocation should be made retroactive. The decision date is, in fact, a fixed date—and as previously explained, it is necessary due to (1) the variety of situations that can arise under § 424.535(a)(25); and(2) the consequent difficulty of assigning a single effective date to cover all of them.

Comment: A commenter stated that a DMEPOS supplier should not be required to enroll as a new supplier and obtain a new accreditation after a CIMO.

Response: While we appreciate this comment, it appeared to relate to the CY 2026 HH PPS final rule wherein we finalized §§ 424.551. Hence, we believe it is outside the scope of the present final rule.

Comment: A few commenters stated that the following parties and situations should be exempt from §§ 424.530(a)(22) and 424.535(a)(25): (1) management or operating arrangements in connection with a bona fide joint venture—regardless of which joint venture participant holds the provider agreement or State license during the transition; (2) within-window providers as part of a bona fide package transaction not involving circumvention of § 424.550(b); and (3) management arrangements used to bridge CHOW processing for such packages.

Response: While we appreciate these requests, we are unable to formally exempt these and other transactions from the purview of §§ 424.530(a)(22) and 424.535(a)(25) because: (1) such situations can still involve §§ 424.550(b) and 424.551 non-compliance; and (2) doing so would involve CMS making determinations before reviewing the facts of a particular case.

After reviewing the comments received, we are finalizing proposed §§ 424.530(a)(22) and 424.535(a)(25) without modification.

3. Preclusion List (42 CFR 422.2 and 423.100)

Addressed primarily in 42 CFR 422.222 and 423.120, the preclusion list is a compilation of providers and prescribers who are prohibited from receiving payment for furnished, ordered, or prescribed MA items/services and Part D drugs. The list's objective is to effectively bar from the MA and Part D programs various entities and persons that pose program integrity risks. Per the definition of ''preclusion list'' in §§ 422.2 and 423.100, a party may be placed on said list if they fall into any of the following three categories:

- Currently revoked under Medicare for a reason other than that in § 424.535(a)(3) (which addresses felony convictions), the reenrollment bar has not expired, and CMS determines that the underlying conduct that led to the revocation is detrimental to the Medicare program's best interests.
- Engaged in behavior, other than that described in § 424.535(a)(3): (1) for which CMS could have revoked the provider/prescriber to the extent applicable had they been enrolled in Medicare; and (2) that CMS determines is detrimental to the Medicare program's best interests.
- Regardless of whether the provider/prescriber is or was enrolled in Medicare, has been convicted of a felony under Federal or State law within the previous 10 years that CMS deems detrimental to the Medicare program's best interests.

We proposed to expand this third category to include felony convictions against the provider/prescriber's owner, managing employee, managing organization, corporate director, or corporate officer. As already stated,

these parties typically exercise considerable influence over a provider/prescriber's operations, and a felony conviction against said party greatly concerns us; indeed, this is precisely why §§ 424.530(a)(3) and 424.535(a)(3) permit denial or revocation based on felony convictions against owners, managing employees/organizations, and corporate officers/directors. Our proposed change would not only ensure greater consistency with §§ 424.530(a)(3) and 424.535(a)(3) but also help protect the MA and Part D programs from program integrity risks.

The specific regulatory revisions would be to paragraph (3) of the ''preclusion list'' definitions in §§ 422.2 and 423.100. The language therein stating that the prescriber/provider, ''regardless of whether they are or were enrolled in Medicare, has been convicted of a felony. . . '' would be changed to the prescriber/provider, ''regardless of whether they are or were enrolled in Medicare—or an owner, managing employee, managing organization, director, or officer (as those terms are defined in § 424.502) thereof—has been convicted of a felony . . .''.

The following is a summary of the comments we received on this proposal and our responses.

Comment: Commenters disagreed with our proposed preclusion list expansion. They stated that providers could have difficulty identifying and verifying information regarding individuals associated with the provider. They requested that CMS: (1) establish reasonable due diligence expectations; and (2) ensure that providers are not penalized for information they could not reasonably have known or verified. Commenters further recommended that CMS promulgate factors for determining whether the provider should be added to the preclusion list. Recommended criteria included (but were not limited to) a nexus between the provider and the owning or managing party's action, the nature of the conviction, the risk posed to Medicare, when the conviction occurred, and the convicted party's role within the provider organization.

Response: Consistent with §§ 424.530(a)(3) and 424.535(a)(3)'s application to felony convictions of parties other than the provider, the primary consideration must always be the party's felony conviction itself and not: (1) the provider's efforts in screening personnel or associated parties; or (2) whether the provider knew of (or was involved in) the conduct. Similar to our earlier statements, we cannot base preclusion decisions under revised paragraph (3) on a knowledge or due diligence standard. If we did, providers could consistently avoid denial or revocation by simply asserting that they knew nothing of the conduct; this obviously would hamper our program integrity efforts, harm the Trust Funds, and potentially endanger beneficiaries. Hence, we respectfully decline to establish the requested knowledge or diligence standard.

Insofar as promulgating factors, we maintain our position that regulatorily-specified criteria hamstring our efforts to take required action against problematic providers. Therefore, we must decline to establish them with respect to revised paragraph (3) of the ''preclusion list'' definition.

Comment: Several commenters stated that it would be unfair to place a provider on the preclusion list based on a felony conviction of a party who may not have close, constant involvement with the provider's operations. They believed that CMS should not finalize its proposed expansion or, at a minimum, remove managing employees and organizations from the proposal.

Response: We disagree. Felony convictions are very serious matters, and the parties we propose to include within the preclusion list definition are sufficiently linked to the provider to—if warranted under the facts and circumstances—trigger the preclusion list's application.

Comment: A few commenters questioned whether a provider whose managing employee has a felony conviction would be added to or removed (as applicable) from the preclusion list if the provider terminated the person's employment. They requested that CMS allow providers to avoid the preclusion list by severing such relationships upon CMS notice of the issue.

Response: Section 424.535(e), in certain instances, affords a revoked provider a 15-day opportunity to remove from their organization the entity or individual whose action (for example, a managing employee's felony conviction) generated the provider's revocation. While there is no concomitant provision in our preclusion list regulations, we will consider this issue for future rulemaking.

Comment: A commenter requested that CMS explain why: (1) this preclusion list expansion is necessary; and (2) the problem cannot be addressed via existing means such as screening, denial, or revocation. The commenter added that a provider should only be included on the preclusion list per our proposal if a clear and ongoing program integrity risk exists.

Response: As we explained in the proposed rule, in this final rule, and when we promulgated (and later expanded) §§ 424.530(a)(3) and 424.535(a)(3), providers with owners and managing employees that have felony convictions have always generated serious and justifiable program integrity concerns. This is partly, but by no means exclusively, due to the possibility that the person's conduct may be replicated in the provider setting. Since there are no other statutory or regulatory means of addressing this vulnerability with respect to Medicare programs other than Parts A and B, our proposal is necessary.

Regarding the commenter's last statement, CMS: (1) reviews the facts and circumstances of every potential preclusion list case under current paragraph (3) of the ''preclusion list'' definition; (2) will do the same with our proposed change; and (3) takes action only when justified.

Comment: A comment stated that in light of the ''preclusion list'' definition expansion, CMS should—

- Explain how qualifying convictions will be identified and verified;
- Clarify how and when providers, prescribers, and MA and Part D plans will be notified;
- Identify when preclusion list updates and associated payment consequences will take effect;
- Identify w responsibilities plans will have before payment is affected;
- Ensure that affected providers receive timely notice and a meaningful opportunity to—

++ Correct erroneous information;

++ Demonstrate that the provision does not apply; or

++ Otherwise challenge the proposed placement on the preclusion; and

- Clarify how MA and Part D plans should proceed while a determination is disputed or under review so that payment is not improperly disrupted based on unresolved information.

Response: Our proposed expansion does not change any procedures regarding the six issues the commenter raised, though we note there is no pre-preclusion quasi-appeals system. Should the commenter have questions regarding the preclusion list process, we respectfully recommend visiting CMS' preclusion list website at *https://www.cms.gov/medicare/enrollment-renewal/providers-suppliers/chain-ownership-system-pecos/preclusion-list.*

After reviewing the comments received, we are finalizing our proposed changes to the preclusion list

definitions in §§ 422.2 and 423.100 without modification.

4. Temporary Moratoria (§ 424.570)

Pursuant to section 1866(j)(7) of the Act and § 424.570, we imposed several temporary enrollment moratoria between 2013 and 2019, and—as of May 13, 2026—there are national moratoria on the enrollment of new HHAs and hospices.[40] All moratoria (including a moratorium extension) are announced via a notice published in the **Federal Register**. Under § 424.570(a)(1)(iii)(A) through (C), a temporary moratorium does not apply to any of the following:

- Changes in practice location (except if the location is changing from a location outside the moratorium area to a location inside the moratorium area).
- Changes in provider or supplier information, such as phone numbers.
- Changes in ownership (except changes in ownership of HHAs that would require an initial enrollment).

Since restarting the moratorium process in 2026 after more than 6 years, we have seen several issues that we believe must be addressed in regulation.

a. Effective Date

Per § 424.570(a)(1)(iv), a temporary moratorium does not apply to any enrollment application received by the Medicare contractor prior to the date the moratorium is imposed. We proposed to revise § 424.570(a)(1)(iv) as follows:

- Existing § 424.570(a)(1)(iv) would be redesignated as new § 424.570(a)(1)(iv)(A).
- New § 424.570(a)(1)(iv)(B) would state that the date the moratorium is imposed is the moratorium's effective date, which is the date on which the moratorium notice was filed for public inspection at the Office of the Federal Register (OFR).

There are often gaps between when a document (such as a proposed rule) is filed for OFR public inspection and when it is published in the **Federal Register**. If we used the latter as the moratorium's imposition/effective date, the affected providers/suppliers might have several days to submit their initial applications in order to ''beat the deadline.'' This would partly obstruct the moratorium's goal of halting all new enrollments and could lead to a rush of new applicants during this gap, some of whom may present program integrity threats. Using the OFR filing date would prevent this scenario, for the moratorium's imposition would be immediate.

b. Ownership Changes

We proposed to change the aforementioned parenthetical in § 424.570(a)(1)(iii)(C) from ''(except changes in ownership of home health agencies that would require an initial enrollment)'' to ''(except changes in ownership that require an initial enrollment, such as, but not limited to, an HHA, hospice, or DMEPOS supplier change in majority ownership under §§ 424.550(b) or 424.551)''. This update would codify existing CMS policy that—like HHAs—hospices and DMEPOS suppliers that undergo a non-exempt CIMO under §§ 424.550(b) or 424.551 must enroll as a new provider/supplier and are thus subject to the moratorium.

c. Other Applicability

Section 424.570(a)(1)(i) states that CMS may impose a moratorium on the enrollment of new Medicare providers and suppliers of a particular type or the establishment of new practice locations of a particular type in a particular geographic area. To clarify what qualifies as a ''new'' provider/supplier or practice location under the moratorium, we proposed to outline in new § 424.570(a)(1)(i)(A) through (E) the application types that—solely for purposes of § 424.570(a)—are considered ''new'' and to which a moratorium applies:

- Initial enrollment applications.
- Change of ownership applications that require an initial enrollment per § 424.570(a)(1)(iii)(C).
- Enrollment applications from revoked providers/suppliers whose reenrollment bars under § 424.535(c) have expired and are seeking to enroll again in the Medicare program.
- Reactivation applications.
- Enrollment applications from voluntarily terminated providers/suppliers seeking to enroll again in the Medicare program.

The following is a summary of the comments we received on this proposal and our responses.

Comment: Commenters opposed making the moratorium effective date the date of filing at the OFR instead of the publication date. They stated that providers may not receive adequate notice of the moratorium when the notice is placed on display. They also disagreed with our statement that providers could quickly submit applications between the display and publication dates to get ahead of an effective date based on publication. They believed that using the latter date would be fairer and would give providers more time to prepare.

Response: We thank the commenters for their thoughts. Commenters can access the **Federal Register** website for newly displayed documents no less than for newly published ones; in both cases, the information is public and retrievable. Regarding application submission, providers can indeed attempt to send in applications before the notice is published—even if the application might be incomplete due to the abbreviated timeframe to prepare and submit it. Given the important program integrity aspects of a moratorium and the consequent need for immediate implementation, we cannot afford to assume that no providers will be able to submit applications during this period. We believe the OFR filing date is appropriate notwithstanding commenters' concerns about reasonable advance notice.

Comment: Commenters disagreed with including reactivations within § 424.570's purview. They maintained that deactivations can sometimes occur for what commenters stated were minor reasons—such as a failure to timely report certain information or 6 consecutive months of Medicare non-billing—or on grounds unrelated to fraud, waste, abuse, or other misconduct. They believed it would be unfair to prevent these providers from reactivating their enrollment based on the moratorium. In addition, they contended that reactivations do not involve the enrollment of a ''new'' provider because: (1) the provider remains enrolled during the deactivation period; and (2) the reactivation process is less onerous than initial enrollment. Another commenter stated that including reactivations within § 424.570 violates section 1866(j)(7) of the Act.

Response: We thank stakeholders for these comments. We addressed the reactivation matter in the proposed rule and restate our position here.

Deactivation means the provider's billing privileges are stopped but can be restored (or ''reactivated'') upon the submission of information required under § 424.540. While a deactivated provider is not revoked from Medicare, the provider's: (1) ability to bill Medicare is halted pending its reactivation; (2) enrollment is effectively shut down; and (3) participation in

[40] We also implemented a nationwide moratorium on DMEPOS medical supply companies in a notice placed on display at the **Federal Register** on February 25, 2026, and published in the **Federal Register** notice on February 27, 2026. (''Medicare, Medicaid, and Children's Health Insurance Programs: Announcement of Nationwide Temporary Moratoria on Enrollment of Durable Medical Equipment, Prosthetics, Orthotics, and Supplies (DMEPOS) Supplier Medical Supply Companies'' (91 FR 9855)). It expired on August 27, 2026, and was not extended.

Medicare is blocked in a manner akin to a revocation. The only material differences between a revoked and a deactivated provider are that the former: (1) is subject to a reenrollment bar and a potentially more exhaustive reentry process (for instance, undergoing a State survey or accreditation); and (2) involves appeal rights under 42 CFR part 498 whereas the latter triggers rebuttal rights. Also, the bases for both revocations and deactivations typically involve concerning provider behavior, such as non-compliance with enrollment requirements or a non-operational practice location. Even if the deactivation was based on non-billing with no nefarious conduct, said conduct could have ensued if, for example, an unscrupulous party attempted to access the provider's billing number during the non-billing period. We continue to believe that the significant similarities between deactivations and revocations warrant including reactivations within § 424.570(a)(1)(i).

We further maintain that: (1) we indeed have the legal authority to define in regulation the scope of the term ''new'' as used in section 1866(j)(7); and (2) we do not foresee beneficiary access issues arising from revised § 424.570 based on our past experience with moratoria.

Comment: Several commenters stated that CIMOs that (1) adhere to §§ 424.550(b) or 424.551, (2) involve compliant providers, or (3) pose no program integrity risk should be exempt from a moratorium.

Response: We respectfully disagree because non-exempt CIMOs under §§ 424.550(b) and 424.551 are—and have always been—considered new enrollments. This is because the provider must initially enroll and undergo a State survey or accreditation to bill Medicare under its new ownership. In addition, exempting certain CIMOs based on risk would require a CMS examination of said risk for each CIMO scenario and potentially result in case-by-case moratorium exceptions, which section 1866(j)(7) does not permit.

Comment: Several commenters stated that CMS' moratorium authority is too broad because a moratorium can impact bona fide providers as much as problematic ones. They recommended that CMS use more targeted means of addressing fraud, waste, and abuse that would not negatively impact honest providers and their patients.

Response: While we appreciate these comments, we believe they focused on our use of moratoria as a whole rather than our specific proposed revisions. Accordingly, we believe they are outside the scope of this final rule.

As an aside, we emphasize to stakeholders that moratoria under § 424.570(a)(1)(i) are actually very infrequent and typically limited. While our present hospice and HHA moratoria—as well as our 6-month long and now expired DMEPOS medical supply company moratorium—are nationwide—these three are the only national enrollment moratoria we have ever implemented going all the way back to 2011. Our moratoria from 2013 to 2019 were restricted to only a few provider and supplier types in certain regions. All this means that the overwhelming majority of providers and provider types—even newly enrolling ones—have not been impacted by § 424.570 to the extent it might appear to some.

Comment: Several commenters stated that including reactivating providers within § 424.570 could lead to access to care issues without improving program integrity.

Response: We respectfully disagree. Again, moratoria are, generally speaking, quite limited, meaning that comparatively few reactivating providers would be impacted and, consequently, patient care should not be affected. We also restate our position regarding the program integrity need for adding reactivations to § 424.570.

Comment: Several commenters stated that CMS should exempt from § 424.570: (1) service-line and other provider expansions involving legitimate providers; and (2) reenrollments.

Response: We are respectfully unclear as to the specific exemptions the commenter seeks. If, by ''service-line expansions'', the commenter is referencing practice location additions, these have previously been included in our moratoria because—depending in part on the provider or supplier type involved—they involve the establishment of a new site. Insofar as reenrollments, we believe the commenter is referencing situations where a provider has either voluntarily or involuntary departed the Medicare program and seeks to enroll in Medicare again. These have always been treated as initial enrollments and thus subject to our moratoria.

Comment: A commenter supported our proposed changes to § 424.570.

Response: We appreciate the commenter's support.

Comment: A commenter stated that CMS should complement any imposed temporary moratorium with the following: (1) issuing sub-regulatory guidance clarifying appropriate billing requirements for G0390 (a HCPCS code used to report trauma response team activation), including activation criteria and documentation expectations; (2) conducting targeted program integrity reviews focused on outlier billing patterns, rather than applying broad-based restrictions that may affect compliant providers; (3) increasing transparency regarding how CMS identifies and monitors high-risk utilization patterns; and (4) considering a revised reimbursement model for trauma services aligned with developing a national military and civilian system. The commenter also stated that CMS should impose a temporary moratorium on the enrollment of new trauma centers in geographic areas experiencing oversaturation.

Response: We appreciate these suggestions but believe they are outside the scope of this final rule.

Comment: A commenter requested that CMS establish a process by which reactivating providers can request an exemption from a moratorium's applicability based on administrative deactivation, contractor error, or deactivations under appeal.

Response: While we appreciate this request, we reiterate that section 1866(j)(7) of the Act does not permit individual, case-by-case exceptions to a moratorium.

After reviewing the comments received, we are finalizing our proposed changes to § 424.570 without modification.

5. Hospice Reactivations (§ 424.540(b)(3))

We mentioned earlier that hospices (like HHAs) that undergo a non-exempt CIMO within 36 months of their initial enrollment (or within 36 months of their previous CIMO) must initially enroll as a new hospice and have a State survey or accreditation. A new enrollment and survey/accreditation help confirm that the hospice under its new ownership is properly vetted, is committed to furnishing quality care, meets all enrollment requirements and CoPs, and does not pose program integrity risks. The program integrity and quality of care benefits of a State survey/accreditation are why in 2009 we promulgated § 424.540(b)(3)(i), which requires a deactivated HHA to obtain an initial survey/accreditation before it can be reactivated.

We believe the payment safeguard and patient care protections afforded by § 424.540(b)(3) should be extended to hospices. The previously noted hospice problems we have seen require, in our view, much closer scrutiny of reactivating hospices—particularly

since, deactivated hospices are essentially blocked from Medicare. We must ensure that the reentering hospice is compliant with all Medicare requirements. Thus, we proposed to revise § 424.540(b)(3)(i) to include hospices.

The following is a summary of the comments we received on this proposal and our responses.

Comment: Several commenters supported our proposed change.

Response: We appreciate the commenters' support.

Comment: A commenter stated regarding our proposal that CMS has not demonstrated that: (1) current reactivation processes are inadequate; or (2) providers deactivated for administrative reasons pose a heightened quality or program integrity risk warranting additional survey requirements. Several other commenters contended that the hospice reactivation survey requirement should exclude hospices that were deactivated for reasons other than fraud, abuse, or patient harm.

Response: We respectfully disagree with these comments. In our view, the existing reactivation process for hospices is not entirely adequate because it lacks the protection that surveys provide. While we are uncertain as to which ''administrative'' reasons the commenter had in mind, all deactivated providers present a degree of risk based on the deactivation itself. This is especially the case with deactivated hospices in light of—as explained in the proposed rule—the high risk that hospices as a provider category present. Given all this, we must ensure that a reactivating hospice (that, as explained, is effectively seeking to reenter Medicare) meets the hospice CoPs via a new survey or accreditation. This protects both beneficiaries and the Trust Funds.

After reviewing the comments received, we are finalizing our proposed change to § 424.540(b)(3)(i) without modification.

6. Opt-Out (42 CFR Part 405, Subpart D)

Section 1802(b)(1) of the Act permits certain physicians and practitioners to opt-out of Medicare. Under opt-out, neither the physician/practitioner nor the beneficiary submits a bill to Medicare for services performed. Instead, the beneficiary pays the physician/practitioner out-of-pocket and neither party is reimbursed by Medicare. A private contract is signed between the physician/practitioner and the beneficiary that states, in essence, that neither can receive payment from Medicare for the services performed. The physician/practitioner must also submit an affidavit to Medicare expressing a decision to opt-out of the program and confirming, as further described in § 405.420, compliance with opt-out requirements. Opt-out periods are for 2 years.

Provisions in 42 CFR part 405, subpart D, govern Medicare opt-out. We proposed the following two regulatory clarifications, both of which reflect current policy.

First, opt-out periods are automatically renewed pursuant to section 1802(b)(3) of the Act unless the physician/practitioner—consistent with § 405.445(a)—notifies the appropriate MAC not later than 30 days before the end of the 2-year period indicating that they do not want to extend the affidavit's extension for a subsequent 2-year period. In outlining the types of CMS opt-out determinations that are considered ''initial'' under § 498.3(b) (and thus appealable under 42 CFR part 498), § 405.450(a) includes the individual's failure to ''timely renew opt-out''. Since opt-out is automatically extended absent the occurrence in § 405.445(a), we proposed to change the quoted language in § 405.450(a) to ''timely cancel automatic renewal''; a similar change would be made to § 498.3(b)(19), which lists various initial opt-out-related determinations.

Second, § 405.400 defines ''opt-out period'' as meaning, in part—with respect to an affidavit that meets the requirements of § 405.420—a 2-year period beginning on the date the affidavit is signed (as specified by § 405.410(c)(1) or (2)). There are instances where the MAC, in reviewing and processing the physician/practitioner's submitted affidavit, needs and requests additional information or clarification from the physician/practitioner. Interested parties have asked whether—if a new affidavit must be submitted per the MAC's request and it is subsequently approved—the opt-out period begins on the signature date of the second or the first submitted affidavit. To address this, we proposed in § 405.400 to change the ''opt-out period'' definition that states ''the date the affidavit is signed'' to ''the date the first submitted affidavit is signed.'' This reflects our existing policy on this issue.

The comments we received on these proposed changes were supportive. No opposition was expressed. Hence, we are finalizing them without modification.

7. Affiliations

Consistent with section 1866(j)(5) of the Act, § 424.519 states that upon a CMS request, an initially enrolling or revalidating provider or supplier (hereafter collectively ''provider'' unless otherwise noted) must disclose any and all affiliations that it or any of its owning or managing employees or organizations (per § 424.502's definitions of ''owner'' and ''managing employee'') has or, within the previous 5 years, had with a currently or formerly enrolled Medicare, Medicaid, or CHIP provider that has a disclosable event (as defined in § 424.502). If CMS determines that the affiliation poses an undue risk of fraud, waste, or abuse, CMS may deny or revoke the provider's enrollment under § 424.530(a)(13) or § 424.535(a)(19), respectively.

Section 424.502 defines a ''disclosable event'' as any of the following: (1) a current uncollected debt to Medicare, Medicaid, or CHIP; (2) a payment suspension under a Federal health care program; (3) an OIG exclusion; or (4) a denial, revocation or termination of a Medicare, Medicaid, or CHIP enrollment.

For purposes of § 424.519, an ''affiliation'' under § 424.502 includes any of the following (outlined in paragraphs (1) through (5) of the ''affiliation'' definition):

- A 5 percent or greater direct or indirect ownership interest that an individual or entity has in another organization.
- A general or limited partnership interest (regardless of the percentage) that an individual or entity has in another organization.
- An interest in which an individual or entity exercises operational or managerial control over, or directly or indirectly conducts, the day-to-day operations of another organization (including sole proprietorships)—either under contract or through some other arrangement, regardless of whether or not the managing individual or entity is a W–2 employee of the organization.
- An interest in which an individual is acting as an officer or director of a corporation.
- Any reassignment relationship under § 424.80.

These provisions were established in a final rule published in the **Federal Register** on September 10, 2019 (84 FR 47794).[41]

Since establishing these affiliation regulations, CMS has emphasized identifying current and past relationships between and among different providers and suppliers and, if an undue risk exists, denying or revoking the applicable provider(s).

[41] ''Medicare, Medicaid, and Children's Health Insurance Programs; Program Integrity Enhancements to the Provider Enrollment Process.''

This helps protect the Trust Funds and beneficiaries from threats that certain provider associations can pose. Nevertheless, we have found three issues in § 424.519 that we believe hinder the provision's effectiveness.

One involves the 5-year lookback period. Situations have arisen where a relationship from more than 5 years ago still presents an undue risk of fraud, waste, abuse. In excluding consideration of these affiliations—and, in turn, being unable to deny or revoke enrollment under §§ 424.530(a)(13) or 424.535(a)(19)—we are effectively permitting a potentially significant fraud, waste, or abuse risk to remain. This is antithetical to our duty to protect the Medicare program.

The second pertains to the ''affiliation'' definition in § 424.502. While it covers several types of associations, there are other conceivably problematic relationships we have encountered in our program integrity efforts. We cited the following hypotheticals in the proposed rule:

- An individual or entity operates a small building with over 30 HHAs and hospices that list the building address as their practice location. Considering our earlier discussion of the high payment safeguard risk in such situations, the building operator might be involved with these providers in some type of fraud scheme.
- A provider had a relationship with a financial services company that had several high-level officials convicted of fraudulent activity.
- A provider hired Marketing Firm X. X had solicited beneficiaries for four DMEPOS suppliers, all of which were later revoked with a 10-year reenrollment bar.

These and other scenarios demonstrate that associations beyond those listed in the ''affiliation'' definition can endanger the Medicare program, for nefarious parties of all types constantly seek new means of perpetuating Medicare fraud.

The third issue also involves the ''affiliation'' definition, though on a narrower level—specifically, an aspect of paragraph (3) thereof warranting additional clarification. As noted, paragraph (3) addresses relationships where an individual or entity has operational or managerial control over (or directly or indirectly conducts) the day-to-day operations of another organization. (This mirrors our current definitions of ''managing employee'' and ''managing organization in § 424.502.) As explained in the proposed rule, a recent situation arose where an individual was a medical director (Dr. A) of two providers—B and C. C was revoked from Medicare. Since a medical director is a managing employee under § 424.502, B was revoked under § 424.535(a)(19) consistent with paragraph (3) of the affiliation definition; that is, Dr. X was an individual with operational or managerial control over another entity—Providers B and C. This established the affiliation between B and C, with Dr. X as the clear link—a view that aligns not only with our longstanding interpretation of paragraph (3) but also with section 1866(j)(5) of the Act. Furthermore, we believe our position helps ensure section 1866(j)(5)'s usefulness. A provider generally acts through its owners, managers, and other personnel. If we applied paragraph (3) only to situations where a provider operates or manages another provider, we would be unable to address other cases where the real fraud, waste, and abuse risk is posed by parties affiliated with both providers. In other words, we need the ability to go within the provider organization to the operators and managers to address threats they present.

With all three issues, we believe the fraud, waste, and abuse risk itself is much more important than when the relationship triggering the risk occurred, whether the provider entity poses the risk or, instead, the managing employee, etc. Hence, we proposed the following revisions to our affiliation provisions in part 424, subpart P:

- Removing the 5-year period from § 424.519(b).
- Adding new paragraph (6) to the ''affiliation'' definition. This paragraph would include any marketing, business, fulfillment, financial, managerial, or beneficiary relationship. (The ''managerial'' relationships in paragraph (6) would be those not otherwise falling within paragraph (3) of the ''affiliation'' definition.)
- Adding in paragraph (3) of the ''affiliation'' definition the following language between ''individual or entity,'' and ''exercises operational'': ''or any of its owning or managing employees or organizations,''.
- In §§ 424.530(a)(13) and § 424.535(a)(19), insert the following language between ''provider or supplier'' and ''has or has had'': ''or any of its owning or managing employees or organizations,''.

The following is a summary of the comments we received and our responses.

Comment: Many commenters opposed our changes to the affiliation provisions. They believed it would be extremely difficult, if not impossible, to detect various affiliations: (1) from more than 5 years ago; and (2) involving the provider's owners, managers, and other affiliated parties. It could also be challenging to obtain data from more distant parties. They stated that these revisions would impose a massive reporting burden and should either be significantly delayed or not finalized.

Response: We appreciate these comments. While we understand the concerns expressed, we emphasize that affiliation data need only be reported upon a CMS request—and CMS has, to date, never requested that a provider to do so; this is because we recognize the burden this could present to providers. In utilizing §§ 424.530(a)(13) and § 424.535(a)(19), CMS has instead relied upon its authority under §§ 424.519(i) to apply these two provisions even if the provider has not yet reported (or is not required at that time to report) the affiliation to CMS. To the maximum extent possible, we will continue this approach so as not to impose these disclosure obligations and the associated burden on providers.

Comment: Commenters maintained that regardless of whether our expanded affiliation data must be reported, there will be a substantial burden on providers because they must now research and constantly monitor all parties with whom they have or ever had an affiliation. A commenter stated that CMS in the aforementioned September 10, 2019, final rule with comment period estimated the annual cost of this activity to be $937,500—an amount that will be greatly increased if our proposed affiliation provisions are finalized.

Response: We disagree with these comments. Providers are under no obligation to perform this monitoring. If they choose to do so, that is an independent business decision. In addition, the cited $937,500 cost was for the compilation and reporting of affiliation information pursuant to a CMS request. It was unrelated to any internal monitoring that a provider wishes to undertake on its own volition.

Although discussed in more detail in the ICR and RIA sections of this final rule, we maintain our stance that our affiliation revisions would impose no burden on providers. This is because: (1) we do not at this time anticipate making requests for disclosures; and (2) providers are not required to undertake any form of regular research or tracking of actual or potential affiliations.

Comment: Commenters stated that if CMS finalizes its proposed affiliation changes, it should ensure that providers under §§ 424.530(c) and 424.535(e) can demonstrate termination of affiliations, managing employee relationships, or

business relationships—not simply for sanctions, exclusions, debts, or felonies of associated parties.

Response: We appreciate this comment and will consider clarifying this issue in post-final rule guidance.

Comment: Commenters expressed concern that the addition of parties and relationships to § 424.535(a)(19) and § 424.502's ''affiliation'' definition (and the resulting potential linkages to many different providers) could result in unwarranted revocations. A commenter stated that such downstream revocations should be prohibited under § 424.535(a)(19).

Response: We wish to assure providers that CMS reviews each potential § 424.535(a)(19) case individually, based on its own particular circumstances. This will remain so under revised § 424.535(a)(19). For this same reason, though, we cannot automatically bar these downstream revocations; if a particular case, judged on its own facts, warrants a § 424.535(a)(19) revocation, we must be able to take action regardless of whether it is downstream.

Comment: Commenters expressed concern about the meaning of ''any marketing, business, fulfillment, financial, manag-erial or beneficiary relationship'' and that CMS did not define these terms. They stated that this could include virtually any party with which the provider has any dealings, no matter how slight. They maintained that legitimate providers should not be penalized for very tenuous associations or held responsible for the actions of distant parties over which the provider has no control.

Response: We note several things. First, we believe that with respect to the affiliation definition, the six types of relationships in the previously quoted language have their plain meanings. Second, our addition of paragraph (6) to the affiliation definition does not mean that every such relationship will lead to the provider's denial or revocation if a disclosable event exists. We acknowledge that many of these affiliations do not involve an undue risk of fraud, waste, and abuse. As previously mentioned, though, we have seen instances where they do, and for this reason we believe our affiliation expansions are warranted. Third, and in a similar context, the main issue is not: (1) whether the provider could control or even knew of the actions of the other party; or (2) the organizational distance (or tenuousness or materiality of the relationship) between the provider and the affiliate. It is instead the risk the affiliation poses to the Medicare program. This is the main test for whether §§ 424.530(a)(13) and 424.535(a)(19) should apply in a particular situation and is consistent with the language in section 1866(j)(5) of the Act.

All this said, we agree with commenters' concerns about including beneficiary relationships within new paragraph (6) of the ''affiliation'' definition. We are therefore not finalizing said inclusion.

Comment: Commenters stated that CMS should: (1) limit the definition of ''affiliation'' to relationships that either have a meaningful nexus to Medicare program integrity or involve a material connection between the provider on the one hand and the other party and their disclosable event on the other; (2) define the scope of reportable affiliations; (3) require an individualized determination that the affiliation presents a current and undue risk; (4) establish reasonable due diligence expectations that reflect what providers can realistically know and verify through ordinary business practices; and (5) promulgate required factors and thresholds (such as common ownership and control). Some commenters requested that CMS explicitly exclude from reporting (and from potential denial or revocation) all routine commercial, patient care, referral, and vendor relationships. Other associations that commenters stated should be exempted included, but were not limited to, manufacturer, wholesaler, insurance, banking, accreditation, and other ordinary-course dealings. Additional commenters stated that the ''affiliation'' definition, the associated reporting requirements, and CMS' overall oversight of potentially problematic relationships should be restricted to more proximate associations involving, for example, ownership interests, governance authority, operational control, financial control, coordinated conduct, and program integrity threats. Without such parameters, they maintained, legitimate and routine business transactions could become reportable affiliations.

Response: While we appreciate these comments, we cannot exempt certain categories of affiliations beforehand simply because they might on the surface appear to lack a ''meaningful nexus'' or other significant connection, or do not meet a materiality (or similar) threshold. There are many types of affiliations—both involving close relationships and those more distant—that can present a program integrity threat. Our obligation to protect the Medicare program consequently requires that we broaden our affiliation definition to include more relationships. Indeed, if we restricted this definition in the manner the commenters requested (for example, ownership, close nexus, financial control, etc.) the hypothetical scenarios previously outlined would remain unaddressed, conceivably harming the Trust Funds and beneficiaries.

We address the scope of the affiliations within the definition of that term. If the commenters are referencing the scope of the ''any marketing, business . . .'', language, we restate that the categories of relationships within this term will—for purposes of §§ 424.530(a)(13) and 424.535(a)(19)—have their plain meaning.

While we are somewhat unclear as to the commenters' reference to ''individualized determinations'', we emphasize that—as with all §§ 424.530(a)(13) and 424.535(a)(19) decisions—CMS will carefully and thoroughly consider the facts of each case and only take action when justified under the circumstances.

We respectfully decline to establish a ''due diligence'' threshold for applying §§ 424.530(a)(13) and 424.535(a)(19) because, again, we do not at this time anticipate making disclosure requests, and providers are not required to conduct internal research of possible affiliations.

Regarding factors and thresholds, we repeat our earlier concerns about the restraints that fixed, inflexible criteria impose on our ability to assess each case based its own unique circumstances.

Comment: Numerous commenters opposed the removal of the 5-year lookback period. They stated, in general, that this would increase the burden and complexity of reporting without helping to identify fraud or promote program integrity.

Response: We respectfully disagree. We refer the commenters to our prior statements concerning disclosure requests, and we stress that affiliations older than 5 years can still present a current risk of fraud, waste, or abuse.

Comment: Commenters stated that before denial or revocation occurs, providers should be able to correct or add affiliation data that was inadvertently erroneous or missing in their disclosure submission.

Response: We refer the commenters to our prior statements regarding data disclosure.

Comment: Some commenters stated that CMS should be able to identify affiliations and disclosable events via internal systems without requiring providers to report this information. They noted that providers often will not have access to (or be able to obtain from associated parties) certain affiliation

data. Accordingly, provider disclosure of this data should not be necessary.

Response: While CMS may request submission of provider affiliation data at any time, we agree with the commenters' general position and will, to the extent feasible, utilize existing data when making §§ 424.530(a)(13) and 424.535(a)(19) determinations.

Comment: A commenter stated that CMS should request affiliation disclosures involving specified disclosable events and then evaluate whether an affiliation poses an undue risk (akin to the processes CMS outlined in the aforementioned September 10, 2019, final rule). The commenter believed that a revocation process where CMS assumes affiliations pose undue risk without some reasonable fact-finding in which CMS solicits information from the provider with the affiliation is punitive and unnecessary.

Response: We appreciate the commenter's feedback but note several things. First, and as stated, although we retain the right to do so under § 424.519, we do not anticipate requesting affiliation data due to the provider burden. Second, CMS does not revoke providers under § 424.535(a)(19) without having information on file—the overwhelming majority of which is already on file with CMS based on the provider's various Form CMS–855 submissions and is linked in PECOS to other providers' submissions (for instance, shared managing employees)—demonstrating an undue fraud, waste, and abuse risk. Third, we believe that whether the data is reported via a specific request under § 424.519(b) or is currently on file based on prior submissions or other information is less important than our need to alleviate provider burden.

After reviewing the comments received, we are finalizing our proposed revised affiliation provisions with two modifications, both of which involve proposed paragraph (6) of the ''affiliation'' definition. The first, as mentioned, is the removal of beneficiary relationshipstherefrom. The second involves adding the following language at the end of said paragraph: ''whether direct or indirect (including, for example, common use of the same organization to perform these services.'' In our view, this additional language—which we do not believe is different in intended scope from what we proposed and is primarily a clarification—will help stakeholders more clearly understand the concepts and examples outlined in the proposed and final rules. Such transparency is critical given: (1) the concerns that commenters expressed; and (2) what we perceived to be some provider confusion as to the meaning and scope of certain aspects of our proposal.

In closing, we do not believe that the non-finalization of our proposed changes to §§ 424.530(a)(6), 424.530(a)(7), and 424.535(i) is inconsistent with our finalization of revisions to some of our affiliation provisions. This is because they can address somewhat different factual situations; for example, proposed §§ 424.535(i) referenced a denied provider potentially having its other enrollment applications revoked, whereas our affiliation changes focused more on the wider question of undue risk of fraud, waste, and abuse involving certain relationships.

8. Private Equity Companies (PECs) and Real Estate Investment Trusts (REITs)

In a November 17, 2023, final rule published in the **Federal Register** titled, ''Medicare and Medicaid Programs; Disclosures of Ownership and Additional Disclosable Parties Information for Skilled Nursing Facilities and Nursing Facilities; Medicare Providers' and Suppliers' Disclosure of Private Equity Companies and Real Estate Investment Trusts'' (88 FR 80141), we implemented section 1124(c) of the Act. This provision—promulgated in § 424.516(g)—requires SNFs to report detailed information about their ownership, management, and associated parties. The regulation's purpose was to gain further insight into the SNF's operators and affiliates—a vital need given concerns about nursing home quality of care.

We expressed particular concern in the November 17, 2023, final rule about the prevalence of PEC and REIT ownership of SNFs. We cited reports indicating links between such ownership and substandard SNF care, primarily due to these entities' emphasis on maximizing profits.[42] Hence, we stated in that final rule our intention to revise the Form CMS–855A enrollment application [43] to require all certified providers and certified suppliers (not simply SNFs) that complete said form to identify whether an entity they have disclosed thereon is a PEC or a REIT.[44]

The issue goes further, though. PECs and REITs are involved in other health care sectors, too, including physician practices. For instance, the May 2025 edition of the American Medical Association's (AMA) Journal of Ethics (JOE) noted the continued increase in PEC ownership of providers and suppliers. The AMA JOE website (via which the May 2025 edition could be accessed) stated that private equity ''aim(s) to maximize profitability while minimizing long-term holdings in such investments . . . One reason private equity investment in the health sector deserves close ethical attention is that private equity firms are, generally, not interested in managing patient panels, clinician personnel, or making service delivery streams work for patients. Another reason is that influx of private equity investment in health care tends to consolidate markets for health services, undermining competition and driving up costs for patients''.[45] Various articles in the May 2025 edition expounded on this theme. As noted in the proposed rule, such statements included:

- ''Physicians have fiduciary duties to respond with care to patient's clinical needs and vulnerabilities, whereas private equity companies have no such ethical or legal duties to patients and strive to maximize financial returns for their investors.'' [46]
- ''Studies on the impact of PE investment in health care have increased in the last decade, with the preponderance of data suggesting that PE acquisitions are associated with reduced staffing levels and on-hand medical supplies. A 2023 systematic review concluded that PE ownership was associated with increased costs to payers and patients.'' [47]
- ''Private equity firms' acquisition and management of health service delivery entities, such as specialty physicians' practices, have been associated with increased cost and diminished quality of care.'' [48]
- ''Private equity margin maximization and profit-making strategies focus on acquisition, short-term ownership, and sale of health care entities, including residency program opportunities. PE ownership durations generally have 3 purposes: reduce staff, sell assets, and refinance debt.'' [49]

As we explained in the FY 2024 Inpatient Prospective Payment System Long-Term Care Hospital Prospective

[49] Mark Varvares, MD, et al.; ''Should Private Equity Firms Own Residency Slots?'' May 2025.

Payment System proposed rule [50], given the linkage between PEC and REIT ownership and a decline in nursing home quality, we believed it was critical to collect this information from all providers and suppliers that complete the Form CMS–855A, not simply SNFs. Doing so would enable us to: (1) determine whether a similar connection exists with respect to non-SNF providers and suppliers; and (2) help us take measures to improve beneficiary quality of care to the extent such connections exist.[51]

In light of the foregoing, we believe CMS should ascertain the prevalence of PEC and REIT involvement with Medicare Part B suppliers no less than with Part A providers such as SNFs. This is a Medicare-wide issue. Consequently—and like our approach in the November 17, 2023, final rule—we announced in the CY 2027 HH PPS proposed rule our intention to revise the following provider enrollment applications to require all suppliers completing these forms to identify whether any organizations disclosed thereon are PECs or REITs:

- Form CMS–855B (Medicare Enrollment Application—Clinics/Group Practices and Certain Other Suppliers; OMB Control No. 0938–1377).
- Form CMS–855S (Medicare Enrollment Application—Durable Medical Equipment, Prosthetics, Orthotics, and Supplies (DMEPOS) Suppliers; OMB Control No. 0938–1056).
- Form CMS–20134 (Medicare Diabetes Prevention Program (MDPP) Suppliers).

We note that we are relying upon sections 1102, 1866(j), and 1871 of the Act (rather than section 1124(c) of the Act) as authority for this proposal.

As with the November 17, 2023, final rule, our intended form revisions would not involve regulatory changes.

The following is a summary of the comments we received on this proposal and our responses.

Comment: Some commenters supported our planned change, believing that transparency regarding owners of suppliers is important.

Response: We appreciate the commenters' support.

Comment: Several commenters expressed concern that CMS' intended change will require all suppliers that complete the Forms CMS–855B, CMS–855S, and CMS–20134 to now submit the same extensive data that section 1124(c) of the Act requires SNFs to provide on the Form CMS–855A. That is, they believed CMS was attempting to implement section 1124(c) (which only applies to SNFs) for Part B suppliers. Accordingly, they concluded that CMS lacks the statutory authority for its data collection.

Response: While we sincerely appreciate these comments, they are incorrect. We are not seeking to apply section 1124(c) to Part B suppliers or to require suppliers to submit the data referenced in section 1124(c). As we did when revising the Form CMS–855A in 2024, we plan to simply add a checkbox to Forms CMS–855B, CMS–855S, and CMS–20134 by which the supplier identifies whether a reported owner, managing organization, etc. is a PEC or REIT. This change would have no relation to section 1124(c) of the Act and would not require other provider or supplier types to complete the SNF attachment to the Form CMS–855A enrollment application or a similar attachment.

We also remind stakeholders that we were not relying upon section 1124(c) of Act in establishing the Form CMS–855A PEC and REIT checkboxes. We were instead utilizing our authority under section 1866(j) of the Act. We are doing the same here regarding our checkbox additions to the Forms CMS–855B, CMS–855S, and CMS–20134.

Comment: Some commenters maintained that our change would revise these forms without the public having an opportunity to comment thereon.

Response: Our Form CMS–855B, CMS–855S, and CMS–20134 revisions would be facilitated through the Paperwork Reduction Act (PRA) process. Stakeholders will have a 60-day period in which to comment on the revisions, followed by another 30-day comment period.

Comment: Several commenters stated that CMS in the proposed rule did not adequately justify the need for these checkboxes: (1) with respect to REITs; and (2) on CMS' Part B enrollment forms. They contended that there is insufficient evidence that REITs (and, for that matter, PECs) present program integrity risks to Medicare Part B health care and beneficiaries. They also stated that any collection of this data would unfairly impugn REITs and PECs, especially since such entities provide considerable benefit. They requested a CMS statement that PEC or REIT ownership (or profits stemming from) will not, by itself, result in a supplier's revocation, denial, higher-risk designation under § 424.518, etc.

Response: Our proposal was not intended to impugn PECs and REITs but simply to address the previously expressed concerns about their financial participation in the health-care sector. The checkboxes will give us a better understanding of the scope of such with respect to Medicare Part B; the reports we cited in the proposed rule indicate significant private equity involvement with physician practices, which complete the Form CMS–855B. The commenters noted that no specific examples of REIT involvement with Part B suppliers were included in the proposed rule. While true, the lack of provider enrollment data on REIT Part B prevalence is precisely why the REIT checkbox is needed given the aforementioned issues.

As of the date of this final rule, CMS does not have the regulatory authority to revoke a provider or raise its § 424.518 risk-level based solely and exclusively on the fact that it has PEC or REIT ownership.

Comment: Several commenters questioned how CMS will use this information and for what purposes.

Response: Like with the checkboxes on the Form CMS–855A, CMS will use it to examine the prevalence of private equity and REITs in the health-care sector in light of the quality of care concerns.

Comment: Several commenters stated that CMS must define the terms ''private equity company'' and ''real estate investment trust''—and provide clear reporting instructions (with examples)—on the three forms it intends to revise.

Response: CMS will include on these forms the same PEC and REIT definitions and instructions listed on the Form CMS–855A. These definitions are consistent with those in § 424.502.

Comment: Several commenters disagreed with the current definitions of ''private equity company'' and ''real estate investment trust.'' They believed the definitions should be revised to reflect the general understanding of PECs and REITs throughout the business and financial communities.

Response: As we did not propose to revise these definitions, we believe these comments are outside the scope of this final rule.

Comment: Several commenters stated that CMS should: (1) limit providers' reporting responsibilities to PEC and REIT data that can reasonably be identified (particularly a party's REIT status, which the commenters

[50] ''Medicare Program; Proposed Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2024 Rates; Quality Programs and Medicare Promoting Interoperability Program Requirements for Eligible Hospitals and Critical Access Hospitals; Rural Emergency Hospital and Physician-Owned Hospital Requirements; and Provider and Supplier Disclosure of Ownership'', published in the Federal Register on May 1, 2023.

[51] Ibid.

contended can be difficult to obtain); (2) furnish provider education, guidance, and examples; and (3) delay implementation to give providers time to understand the new requirements.

Response: Regarding the first recommendation, we refer commenters to our prior statements regarding a ''due diligence'' standard. CMS will, as deemed appropriate, issue guidance on the PEC and REIT checkboxes but respectfully declines to postpone these reporting requirements due to the importance of the information in question.

Comment: A commenter seemingly urged CMS to ensure that: (1) institutional and minority PEC and REIT investors are not inadvertently captured via our planned form changes; and (2) the reporting thresholds are proportionate.

Response: Although we were somewhat uncertain as to the commenter's specific requests, we again state that the provider must indicate via the planned checkboxes whether each disclosed organizational owning or managing party reported on the enrollment application is a PEC or REIT. There are no exceptions for minority or institutional parties, for sections 1124 and 1124A of the Act do not exempt providers from disclosing minority and institutional owners.

Comment: A few commenters stated that CMS should outline in this final rule the ICR burden on Part B suppliers in reporting REIT information, which the commenters believed would be excessive given the potential challenges in securing it.

Response: Akin to our approach in the aforementioned November 17, 2023, final rule, this burden estimate will be addressed in the PRA packages for the Forms CMS–855B, CMS–855S, and CMS–20134 rather than the final rule. Stakeholders will have the opportunity to comment on this projection as part of the PRA process.

After reviewing the comments received, we intend to proceed with proposed revisions to the three aforementioned enrollment applications to collect PEC and REIT data. We welcome additional stakeholder feedback during the PRA notice-and-comment process.

9. Managing Employees (§ 424.502)

The term ''managing employee'' is defined in § 424.502. It means, in part, a general manager, business manager, administrator, director, or other individual who exercises operational or managerial control over, or who directly or indirectly conducts, the day-to-day operation of the provider. Managing employees have long been required to be disclosed on the provider's Medicare enrollment application. Since managing employees sometimes have as much or more influence over a provider's daily operations as an owner, we must know whether such persons present risks to the Trust Funds.

Yet the risks are not strictly financial. We have repeatedly noted over the years our role in protecting the health and safety of Medicare beneficiaries. From a provider enrollment perspective, part of this involves our current collecting of information on certain medical professionals within a provider organization. This includes, for example: (1) IDTF supervising physicians, interpreting physicians, and technicians; (2) ordering OTP personnel; and (3) hospice and SNF medical directors. The purpose is to ensure that such persons not only pose no payment safeguard threats but also are qualified for their roles (such as meeting State licensure requirements). Unqualified or unvetted medical personnel can harm Medicare patients.

So great is our concern about this matter that we believe additional clinical parties should be disclosed on the provider enrollment application. Hence, we proposed to expand upon our aforementioned inclusion of hospice and SNF medical directors within the ''managing employee'' definition. The following persons would be added:

- Medical directors (not merely those at SNFs and hospices)
- Clinical directors
- Departmental heads (for example, a hospital's chief of cardiology)
- Supervising physicians (not simply those at IDTFs)
- Nursing directors
- Alternate administrators
- All other clinical personnel that meet the ''managing employee'' definition.

We noted four things in the proposed rule. First, these categories apply to all provider and supplier types, including SNFs and hospices. Second, we believe the persons in these categories already qualify as ''managing employees'' and should have always been reported. They clearly have direct or indirect control of the provider's day-to-day operations, and the fact that they are clinical personnel (rather than administrative) is irrelevant for purposes of determining whether a person is a managing employee. Our inclusion of them within the ''managing employee'' definition is, in large part, a reminder to stakeholders that clinical staff must be disclosed if the definition is met. Third, these seven new bulleted categories do not establish any minimum threshold for disclosure; for example, even if an individual has less influence than a departmental head, the person must still be reported as long as the managing employee definition is met. Fourth, and on the other hand, this does not mean that every clinical employee regardless of influence must be reported. Disclosure is only required if the person is a managing employee.

The following is a summary of the comments we received on this proposal and our responses.

Comment: Many commenters opposed our proposed revision on several grounds. First, they did not believe these persons qualify as managing employees simply because of their title—with some commenters maintaining that they did not qualify at all because they do not fall within the generally understood meaning of ''managing employee''; they seemingly contended that the definition is restricted to administrative and non-clinical officials with very high-level leadership and supervisory authority over the provider's entire operation. Second, they stated that the burden of reporting these individuals as managing employees would be enormous, especially for larger providers with many clinical employees. Third, and in a similar vein, they disagreed with our assertions that (i) these individuals should always have been reported as managing employees and (ii) there would thus be no additional reporting burden (as we stated in the ICR and RIA sections of the proposed rule). Fourth, they maintained that our use of phrases such as ''additional clinical parties'' and ''expand upon'' when describing our change in the proposed rule was not only a contradiction but also a *de facto* CMS admission that: (i) these persons never qualified as managing employees; (ii) our revision constitutes a new reporting requirement; and (iii) CMS must calculate the reporting burden accordingly.

Response: We respectfully disagree with all these comments. We believe the clinical parties listed in our proposed revised definition clearly are managing employees. Even if one assumed that a person's title is not absolutely and conclusively dispositive as to whether they meet the ''managing employee'' definition, we have always viewed it as by far the strongest indicator of such. More importantly, we have long interpreted this definition much more broadly than the commenters apparently have. It has never been limited to the highest administrative officers in the organization, it has never excluded officials who oversee only certain parts or offices of a provider, and we have never indicated that clinical personnel

do not fall within its scope. Indeed, the definition encompasses not only those who exercise ''operational or managerial control over'' the provider's day-to-day operations but also persons ''who directly or indirectly conduct'' said operations. This covers—and has long covered—a wide range of parties; as an illustration, a clinical department head at a local hospital, in our view, unquestionably participates in conducting the provider's day-to-day operations. Given all this, we retain our stance that these individuals should always have been disclosed.

The phrases ''additional clinical parties'' and ''expand upon'' were merely references to our listing of more officials within the definition as a reminder that they qualify as managing employees. It was neither a contradiction nor an indication that they never before qualified, for we expressly stated in several places in the proposed rule that they already did. In short, it was an addition of language, not an addition or expansion of scope—two very different things, especially since the actual definition itself is not changing but only the listing of parties for clarity purposes. It was no different than our 2023 revision of this definition to list SNF and hospice medical directors and administrators; [52] this, too, was not an expansion and, we note, generated no public comments during the rulemaking process claiming an additional burden.

We refer commenters to the ICR section of this final rule for a discussion of burden.

Comment: Commenters stated that CMS should apply a due diligence standard to the reporting of clinical and other managing employees. So long as the provider made a reasonable effort to obtain all managing employee data, they believed this should be sufficient for CMS—and that CMS should take no denial, revocation, deactivation, or other measure against the provider. Several commenters believed this approach would comport with CMS' sub-regulatory guidance regarding the reporting of SNF additional disclosable party (ADP) information—whereby, the commenters maintained, SNFs can outline for MACs its ''maximum feasible'' but unsuccessful efforts to obtain ADP data.[53]

Response: We disagree with these comments. While we understand it can occasionally be challenging to secure certain managing employee data, CMS has never had a ''best efforts'' or similar allowance for this information. It must be reported, and CMS can take action if it is not.

The SNF guidance comparison is, most respectfully, somewhat fallacious because the ''maximum feasible efforts'' reference therein: (1) is limited to ADP data and does not apply to the reporting of managing employees; and (2) in no way means that CMS automatically accepts the failure to report certain ADP data so long as the provider made said efforts.

Comment: Several commenters stated that clinical directors, nursing leaders, department heads, and other clinicians may supervise patient care but do not necessarily exercise ownership-level or financial control and may have limited managerial authority over the provider.

Response: For reasons already stated, we believe the clinical parties identified in our proposed definition revision clearly qualify as managing employees. We add that one need not exercise ownership-level or financial control or wide-ranging, high-level managerial authority to fall within the very broad ''managing employee'' definition.

Comment: Commenters stated that the proposed ''managing employee'' definition should be significantly narrowed while containing a clear, minimum threshold for disclosure. Some recommended a threshold of actual decision-making or other substantial authority over, for instance, the provider's organizational operations and decision-making, financial matters, billing, policy, etc. A few added that clinical personnel with limited supervisory duties or who engage in temporary coverage should be excluded from the ''managing employee'' definition.

Response: We believe both the existing and proposed versions of the definition are plain on their face as to who must be reported. If the individual falls within the definition, they must be disclosed.

Comment: Commenters stated that a person's authority—not their title—should determine who is or is not a managing employee. They maintained that: (1) providers, not CMS, are in the best position to make this determination and that CMS should defer to providers on the matter; and (2) CMS should expressly state that the individuals CMS proposed to list in the ''managing employee'' definition are not managing employees based solely on their title.

Response: As stated previously, we believe titles are an extremely heavy indicator of one's authority, and, accordingly, that the clinical personnel in question are indeed managing employees; hence, we cannot make the unequivocal statement the commenters request. Moreover, if we deferred the reporting of managing employees entirely to the provider's judgment and prohibited ourselves from even questioning whether all the provider's managing employees were disclosed, providers would have every incentive to avoid reporting certain individuals.

Comment: Several commenters stated that the current ''managing employee'' definition only lists SNF and hospice medical directors. They implied that these were therefore the only clinical managing employees that traditionally had to be reported.

Response: We respectfully disagree. Our inclusion of SNF and hospice medical directors: (1) was merely a reminder that these persons are managing employees; and (2) never implied that these were only clinical personnel who needed to be disclosed.

Comment: A commenter stated that if CMS finalizes its proposed revised definition, it should increase the timeframe for reporting managing employee changes.

Response: We respectfully disagree. Such changes have long been required to be disclosed within 30 days given this data's vital importance to program integrity.

Comment: Several commenters stated that if CMS finalizes its proposal, it should: (1) provide clear examples of individuals who would and would not qualify as managing employees within different provider types and organizational structures; (2) establish an appropriate implementation timeframe and grace period before initiating enforcement actions, including giving providers time to review and update their enrollment records; and (3) hold providers harmless for failing to report individuals who—under what they believe is CMS' revised interpretation—would now be considered managing employees but were not previously understood to fall within the regulatory definition. Other commenters questioned whether all providers must submit enrollment applications to report clinical managing employees who were not previously disclosed.

[52] ''Medicare Program; Calendar Year (CY) 2024 Home Health (HH) Prospective Payment System Rate Update; HH Quality Reporting Program Requirements; HH Value-Based Purchasing Expanded Model Requirements; Home Intravenous Immune Globulin Items and Services; Hospice Informal Dispute Resolution and Special Focus Program Requirements, Certain Requirements for Durable Medical Equipment Prosthetics and Orthotics Supplies; and Provider and Supplier Enrollment Requirements'' (88 FR 77676), published in the **Federal Register** on November 13, 2023.

[53] *https://www.cms.gov/medicare/enrollment-renewal/providers-suppliers/chain-ownership-system-pecos.*

Response: CMS will, if appropriate, issue guidance regarding the commenters' first request and the last question. However, we cannot commit to a ''hold harmless'' exception or a delayed implementation because, again, these clinical parties have long met the ''managing employee'' definition. (This is also why we disagree with the commenters' assertion that our proposal constitutes a ''revised interpretation'' of the definition.)

Comment: A few commenters stated that CMS' revision to the ''managing employee'' definition is unnecessary because many of these individuals are already disclosed to CMS via other means, such as certification or accreditation.

Response: We respectfully disagree because provider enrollment requirements—including the reporting of managing employees—are separate and distinct from other requirements (such as CoPs, accreditation requirements, etc.) and must be individually met.

Comment: A commenter urged CMS to clarify that community pharmacy personnel are managing employees only if they exercise actual operational or managerial control over the DMEPOS supplier's day-to-day operations and not merely because they (1) hold a clinical license; (2) supervise a pharmacy practice at a location; or (3) serve as a pharmacist-in-charge.

Response: While CMS cannot establish or commit to blanket ''managing employee'' exemptions in this final rule, we will, as appropriate, issue guidance on the matter the commenter raised.

After reviewing the comments received, we are finalizing our proposed revised ''managing employee'' definition without modification.

10. Definition of ''Operational'' (§ 424.502)

a. Background and Provisions

Per § 424.510(d)(6), a provider must be ''operational'' to obtain Medicare billing privileges. ''Operational'' is defined in § 424.502 as meaning the provider meets all of the following:

- Has a qualified physical practice location
- Is open to the public for the purpose of providing health care related services
- Is prepared to submit valid Medicare claims
- Is properly staffed, equipped, and stocked (as applicable, based on the type of facility or organization, provider or supplier specialty, or the services or items being rendered) to furnish these items or services.

The ''operational'' definition's core purpose is to help confirm that the provider is bona fide. Unfortunately, we have discovered instances where a provider appears to meet the definition but turns out to be a fraudulent operation. We believe stronger, broader, and clearer components of the definition would better ensure the provider's operational status and legitimacy and assist us in preventing sham providers from entering Medicare. Therefore, we proposed the following changes to our definition.

First, we proposed an opening sentence to the definition that would read ''*Operational* means (as applicable, based on the type of facility or organization, provider or supplier specialty, or the services or items being rendered) the provider or supplier meets all of the following:''. The parenthetical—which is in the current definition—would elucidate for stakeholders that: (1) certain components of our revised definition may not apply to all provider types; and (2) CMS would account for this in applying the definition.

Second, the previously referenced four bulleted components of the existing definition would be designated as new paragraphs (1) through (4) therein. This would improve the definition's readability. (We did not propose changes to the first requirement concerning a qualified physical practice location.)

Third, proposed paragraph (2) would explain that the requirement that the provider ''[i]s open to the public for the purpose of providing health care related services'' includes, but is not limited to, all of the following:

- The provider's location is fully accessible to all patients and lacks safety hazards.
- The provider's hours of business are sufficient to regularly serve patients.
- Medicare beneficiaries can contact and locate the provider's location based on publicly available information (for example, the internet).

We believe these three requirements would help verify the provider's compliance with paragraph (2). In our view, a provider whose location threatens patient safety, is inaccessible to beneficiaries, or cannot be found via public means raises doubts as to whether the location is truly ''open.''

For purposes of the ''operational'' definition, we proposed to define ''accessible'' as meaning both of the following:

- The provider is located in an area and a building that patients can enter with reasonable ease.
- The location is compliant with all Federal Americans with Disabilities Act regulations and all applicable and equivalent State and local laws.

These requirements would make clear that providers must—from an accessibility standpoint—accommodate beneficiaries with disabilities and those without. We noted in the proposed rule that the phrase ''located in an area'' does not mean the provider's location must be, for instance, within a short drive or a mere 5-mile radius of the beneficiary's home. ''Area'' in this context would mean the location's immediate vicinity, such as the parking lot or a larger, multi-building complex in which the provider has its office. Also, nothing in the first bullet would prevent the provider from having security locks or security personnel between its office(s) and the building entrance. It instead references the beneficiary's ability to enter the building once access is granted (for instance, security staff signs in the beneficiary and directs the beneficiary to the provider's office).

Third, we proposed in new paragraph (3) to change ''prepared'' to ''prepared and able''. If the provider lacks the administrative or logistical ability to submit valid claims—even if it may be ''prepared'' to do so—we do not believe the provider can be considered operational for purposes of Medicare enrollment.

Fourth, and similar to proposed paragraph (2), proposed paragraph (4) would include the following additional requirements concerning the ''properly staffed, properly equipped . . . .'' criterion:

- Provider staff must be qualified (such as licensed or certified if required under State law) to perform their health care-related functions.
- Equipment must be functional, appropriate for the services and items the provider intends to furnish, and in sufficient quantity to provide these items and services.
- Appropriate medications for the services and items the provider intends to furnish and in sufficient quantity to provide these items and services.

We also believe that operationality should require more than proposed paragraphs (1) through (4), particularly with respect to administration, safety, and patient care. Hence, we proposed in new paragraph (5) that operationality requires the provider to have adequate written policies and records regarding its operations, such as, but not limited to, procedures for patient care, patient safety, medical and patient recordkeeping, and general administration.

We further stated in the proposed rule that the wide variety of provider types and scenarios might at times require us to consider information not addressed in our revised definition in order to determine the provider's operationality. Suppose a case arises where most of the definition's requirements are inapplicable to the provider, but this leaves insufficient remaining criteria for us to determine operational status. We believe we must have the ability to contemplate other information in this and other cases. We hence proposed an additional (though un-numerated) paragraph at the end of our revised definition stating that CMS may consider any information in determining whether the provider is operational.

The following is a summary of the comments we received on this proposal and our responses.

Comment: Several commenters sought CMS confirmation that certain provider types, such as HHAs, would not be required to meet all the ''operational'' criteria due to those providers' particular characteristics. Another commenter requested that CMS not: (1) interpret ''open to the public'' to require a home health administrative office to operate as a patient-facing clinical site; (2) require an HHA to stock medications or equipment that it does not lawfully dispense, own, or routinely furnish; or (3) rely on an unlimited ''catch-all'' category (referenced previously) allowing CMS to consider ''any information'' without explaining how that data relates to ''operational'' regulatory requirements.

Response: Although we are unable in this rule to formally exclude specific provider types from various requirements in the ''operational'' definition, we recognize that certain provisions may not apply in all instances to all providers and suppliers—hence our ''as applicable'' reference in the proposed revised definition. We will keep this in mind—as we do with the current ''operational'' definition—when enforcing our revised definition. Regarding the ''catch-all'' category, this is necessary to account for situations not explicitly addressed within the ''operational'' definition.

Comment: Several commenters supported our proposed revised definition of ''operational.'' A commenter in particular agreed that providers should have adequate written policies and records regarding their operations, including patient care and patient safety.

Response: We appreciate the commenter's support.

Comment: Some commenters requested CMS to: (1) exempt State surveyed and accredited providers and suppliers from the ''operational'' requirement; or (2) rely on State survey or accreditation findings when determining operationality so as to avoid duplicity and inconsistent requirements. If CMS does neither, a few commenters stated that CMS should explain how: (1) the expanded definition will apply to institutional providers already subject to Federal and State oversight; and (2) overlapping State survey and operationality requirements will be reconciled before a denial or revocation occurs.

Response: We respectfully decline the commenters' first two requests. Again, provider enrollment requirements—such as § 424.510(d)(6)—are separate from State survey and accreditation requirements. The former must be met even if the provider is surveyed or accredited; this has been the case for decades. Insofar as the final two comments, we are respectfully unclear as to the guidance the commenter seeks. We can only reiterate that State survey, accreditation, and other State and Federal oversight requirements are separate from our consideration of whether a provider is operational.

Comment: Several commenters recommended that CMS issue guidance and examples regarding what does and does not constitute ''operational'' status under our revised definition.

Response: To the extent we deem necessary, we will release guidance on its expanded definition of ''operational.''

After reviewing the comments received, we are finalizing our proposed revised ''operational'' definition without modification. We are making one technical correction to our regulatory text, though. We mentioned previously that we are retaining the requirement that the provider have a ''qualified physical practice location.'' This has been a requirement for decades. Yet paragraph (1) of the proposed revised definition did not include the word ''physical'', even though it was intended. We are including it in paragraph (1) in our final regulatory text.

11. Signage (§ 424.510(f))

Sections 424.57(c)(7)(i)(D) and 410.33(g)(14)(ii) require DMEPOS suppliers and IDTFs, respectively, to maintain a permanent visible sign in plain view posting their normal hours of operation. The former adds that if the supplier's place of business is located within a building complex, the sign must be visible at the main entrance of the building (or the hours can be posted at the entrance of the supplier). We proposed in new § 424.510(f) to expand this requirement to include all providers and suppliers; § 424.510(f) would mirror the current language of § 424.57(c)(7)(i)(D). This would assist beneficiaries and site visit personnel in locating the provider's business, something that has occasionally proven difficult because the location contains no signage. To ensure consistency, we would also revise § 410.33(g)(14)(ii) to duplicate the language in proposed § 424.510(f).

Consistent with our proposed revisions to the definition of ''operational'', however, § 424.510(f) is not intended to supersede any other Medicare requirements regarding signage. Section 424.510(f) is strictly an enrollment requirement. In addition, we recognize that our proposed signage requirement may not be practicable in all circumstances. This could be due to, for instance, the type of provider involved, its particular business circumstances, etc. Thus, we proposed the following exceptions to the signage requirement:

- The provider shares office space with another provider (for example, physicians in a group practice sharing a common suite, though the group itself must have signage).
- The provider treats patients in the patients' homes.
- The provider treats patients in the provider's home and only uses the provider's address for administrative purposes.
- The provider performs telehealth services from home.

The following is a summary of the comments we received on this proposal and our responses.

Comment: A number of commenters opposed our proposed requirement, believing it would, in some cases, be burdensome and operationally infeasible for certain provider and supplier types; for example, providers located in large office buildings may be unable to maintain signage due to space limitations, building policies, etc. The commenters accordingly recommended several modifications to our proposal. These included but were not limited to: (1) treating the signage requirement as met if the provider is identifiable via publicly available means, such as a building directory or website; (2) permitting shared or centralized signage for providers in multi-tenant buildings, health system campuses, or similar facilities; (3) clarifying that a periodic signage lapse due to matters outside the provider's control (such as construction or natural disaster)—or minor signage

violations per a materiality standard—will not result in an adverse CMS finding; (4) limiting CMS enforcement to corrective action by allowing the provider time to remedy the issue (after CMS notification) before denying, revoking, or deactivating the provider; (5) exempting field-based and privacy-sensitive behavioral health sites from the signage requirement; and (6) adding more regulatory exceptions to the signage requirement, perhaps based on provider type and potentially including hospitals, HHAs, telehealth providers, and providers that furnish services in beneficiaries' homes.

Response: We appreciate these comments and respond as follows:

We respectfully disagree with the commenters' first and second recommendations. We do not believe a public directory or shared signage is an adequate substitute for individual, provider-specific signage; indeed, the former would completely undercut the need for the latter. We also must decline the commenters' third and fourth requests based on our earlier explanations that: (1) any degree of non-compliance still involves non-compliance; and (2) a mandatory pre-appeals cure period could reduce providers' willingness to maintain constant compliance, knowing that they can always correct the problem later. Regarding the fifth and sixth, we are unable to grant additional provider type exceptions in this final rule without further review of the issue. Nonetheless, we will monitor the implementation of § 424.510(f) and, if need be, consider future rulemaking to address.

Comment: Several commenters stated that CMS should deem § 424.510(f) as satisfied if the provider's signage complies with State survey, licensure, local, and other requirements.

Response: We respectfully disagree because Medicare enrollment requirements are—and have always been—separate and distinct from State and local requirements. Compliance with the latter does not mean automatic compliance with the former.

Comment: A few commenters questioned (1) how § 424.510(f) applies to institutional providers that are part of campuses or large medical complexes; (2) what type of signage is acceptable in such cases; and(3) what constitutes ''normal business hours'' and ''visible business signage''.

Response: CMS will, as applicable, issue public guidance on these topics as well as others concerning the signage requirement.

Comment: A few commenters stated that when enforcing § 424.510(f), CMS should account for situations such as (but not limited to) landlord restrictions, building types, local ordinances, or others than might prevent full compliance through no fault of the provider. A commenter requested that CMS explicitly state in the regulatory text that § 424.510(f) may not apply in all situations.

Response: We respectfully decline to add the final commenter's requested statement, for it could give the impression that CMS will grant exceptions in every case where the provider claims it cannot meet § 424.510(f) due to factors outside its control. This said, we recognize that atypical situations involving signage compliance may occur based on the facts involved. CMS will keep this in mind when applying§ 424.510(f)'s requirements.

Comment: A commenter supported our proposed exceptions to the signage requirement.

Response: We appreciate the commenter's support.

After reviewing the comments received, we are finalizing our proposed signage requirements without modification.

12. Retention and Furnishing of Documentation (§ 424.516)

We explained previously that under § 424.516(f)(1), providers and suppliers that furnish covered ordered, certified, referred, or prescribed Part A or B services, items or drugs must:

- Maintain the documentation described in § 424.516(f)(1)(ii) for 7 years from the date of service; and
- Upon CMS' or a Medicare contractor's request, provide access to that documentation.

The documentation described in § 424.516(f)(1)(ii) includes written and electronic documents (including the NPI of the physician or, when permitted, other eligible professional who ordered, certified, referred, or prescribed the Part A or B service, item, or drug) relating to written orders, certifications, referrals, prescriptions, and requests for payments for Part A or B services, items or drugs.

Section 424.516(f)(2) contains a similar documentation retention and submission requirement for physicians (or, when permitted, eligible professionals) who order, certify, refer, or prescribe Part A or B services, items or drugs. Section 424.516(a)(10), meanwhile, permits revocation if the provider or supplier fails to comply with the documentation and CMS access requirements in § 424.516(f).

In general, § 424.516(f) helps CMS determine, for instance, whether the service was reasonable and necessary, whether fraud, waste, or abuse is involved, and whether the provider is compliant with Medicare requirements.

We proposed to add new § 424.516(f)(3) clarifying that all documentation required to be retained and furnished under § 424.516(f) must be accurate, complete, and compliant with all CMS requirements. In our documentation reviews, we have seen: (1) patient charts missing medical director signatures; (2) hospice certifications signed before the face-to-face encounter; (3) certification end dates preceding the certification start dates; and (4) other types of inaccurate records. This makes it difficult for CMS and its contractors to verify the provider's compliance and the service's necessity; the program integrity benefits of § 424.516(f) are reduced if the documentation is inaccurate or non-adherent. We accordingly believe § 424.516(f)(3) is necessary.

We emphasize that our proposal is not intended to establish any new condition of payment. It would be restricted to the scope of documents addressed in § 424.516(f).

The following is a summary of the comments we received on this proposal and our responses.

Comment: A commenter supported our proposal but suggested that CMS—in potential § 424.535(a)(10) revocation cases—take into account situations where claims documentation has been lost due to natural disasters or other similar events. Another commenter requested that CMS: (1) confirm that records under § 424.516(f) may be retained and produced electronically; (2) specify accepted electronic formats and a secure transmission channel; and (3) provide a reasonable and defined production before utilizing § 424.535(a)(10).

Response: While we appreciate the commenters' support, recommendations, and requests, our proposal was limited to the need for documentation to be accurate and complete, rather than whether and how it could or should be furnished in the situations the commenters describe. Consequently, we respectfully believe these comments are outside the scope of this final rule.

Comment: A few commenters requested that CMS clarify that a provider will not be revoked under § 424.535(a)(10) for § 424.516(f)(3) documentation deficiencies that are immaterial (for example, the commenter stated, the error does not materially affect the ability to validate a claim), technical, or inadvertent.

Response: While we cannot make the blanket statement the commenters request, we acknowledge that not all

documentation errors are the same. As with all revocations, CMS will carefully evaluate the facts and circumstances of the case.

Comment: A commenter stated that when enforcing § 424.516(f)(3), CMS should recognize that some provider and supplier types, such as HHAs and hospices, furnish services in patients' homes.

Response: While we appreciate this comment, we again state that our proposal only referenced the need for the documentation to be accurate, complete, and compliant—a requirement that we respectfully do not believe should depend on the provider type involved or where or how services are furnished.

Comment: Several commenters stated that CMS should define ''accurate, complete, and compliant.''

Response: These terms will have plain meanings.

Comment: Several commenters stated that CMS should: (1) implement § 424.516(f)(3) using clear, uniform, and materiality-based standards; (2) clarify whether § 424.516(f)(3) would be limited to documentation already covered by § 424.516(f); and (3) confirm that § 424.516(f)(3) creates neither a new condition of payment nor new or duplicate clinical documentation or record-retention requirements regarding CoPs, claims, etc.

Response: While the first comment was unclear to us, we believe the commenter was requesting the implementation of factors—including a materiality standard—for § 424.535(a)(10) revocations that are based on § 424.516(f)(3) non-compliance. Assuming as such, we refer the commenter to our earlier statements regarding factors and materiality.

Section 424.516(f)(3), again, only applies to the § 424.516(f) documentation's accuracy, compliance, and completeness. It does not create other new requirements or conditions or expand the types of data that § 424.516(f) covers. Regarding the latter portion of the third comment, we cannot ascertain whether the commenters' reference to duplication effectively requests that we rescind § 424.516(f)(3) (and eliminate § 424.516(f) altogether) if other CMS provisions require the accurate submission of provider, physician, or practitioner documentation. If it does, we again remind stakeholders that enrollment requirements are separate from others and must be independently complied with.

After reviewing the comments received, we are finalizing proposed § 424.516(f)(3) without modification.

12. Corrective Action Plans (CAPs), Rebuttals, and Appeals

In certain situations, a provider or supplier may have an opportunity to correct a deficiency or contest a CMS finding regarding its enrollment by submitting, as applicable: (1) a CAP in response to a §§ 424.530(a)(1) or 424.535(a)(1) denial or revocation, respectively; (2) a rebuttal to a stay or deactivation of enrollment under §§ 424.541 or 424.546, respectively; or (3) an appeal of an initial determination under 42 CFR 498.3. We proposed several revisions to these processes.

a. CAPs (§ 405.809)

Sections 424.530(a)(1) and 424.535(a)(1) permit CMS to deny or revoke enrollment, respectively, if the provider is not compliant with the enrollment requirements in Title 42 or in the enrollment application applicable for its provider type. The provider may submit a CAP in response to this denial or revocation, which allows the provider to remedy the deficiency or deficiencies in question and achieve compliance. As has long been CMS practice, though, §§ 424.530(a)(1) and 424.535(a)(1) are the only denial or revocation reasons under §§ 424.530 and 424.535 for which the provider may submit a CAP. While § 405.809(a)(1) makes this clear with respect to § 424.535(a)(1), it is silent as to § 424.530(a)(1). To incorporate this CAP policy into regulation, we proposed to add § 424.530(a)(1) denials to § 405.809's purview. This would involve the following revisions:

- Section 405.809's title would change from ''Reinstatement of provider or supplier billing privileges following corrective action'' to ''Granting or reinstatement of provider or supplier billing privileges following corrective action.''
- In paragraph (a)(1), the language ''revocation for noncompliance under § 424.530(a)(1)'' would change to ''denial or revocation for non-compliance under § 424.530(a)(1) or § 424.535(a)(1)''.
- In paragraph (a)(2), ''revocation'' would change to ''denial or revocation''.
- In paragraph (b)(1), ''Reinstates'' would change to ''Approves or reinstates''.
- Paragraph (b)(1)(i) would be redesignated as paragraph (b)(1)(i)(B).
- Under new paragraph (b)(1)(i)(A), the effective date of the approval is based on the applicable timeframes described in §§ 424.520 and 424.521. This is consistent with existing practice.
- In paragraph (b)(1)(ii), ''reinstatement'' would change to ''approval or reinstatement''.
- In paragraph (b)(2), ''reinstate'' would change to ''approve or reinstate''.

b. Notification of Determinations

Section 498.3(b) lists several CMS or MAC provider enrollment decisions that are considered ''initial determinations''. These include, for example, enrollment denials, enrollment revocations, and inclusion of a provider on the preclusion list. The affected provider under § 498.5 may request a reconsideration of the initial determination, for which CMS or, if applicable, the MAC issues a reconsideration determination. Under §§ 498.20(a)(1) and 498.25(a)(1), CMS mails notice of the initial determination or reconsidered determination, respectively, to the provider. Furthermore, § 405.800 requires that denial and revocation notices (as well as notice regarding the addition of years to a reenrollment bar) be sent by certified mail. We proposed to revise §§ 405.800(a), (b)(1), and (c)(1), 498.20(a)(1) and 498.25(a)(1) to include email as an acceptable form of notice. We believe this would facilitate faster notice to the provider without the expense of paper mailing.

c. Appeals of Reactivation Effective Dates

Along with listing types of initial determinations, paragraph (d) of § 498.3 outlines administrative actions that are not initial determinations and thus not appealable under part 498. One type of provider enrollment finding that is not mentioned in either § 498.3(b) or (d) is the effective date of a reactivation under § 424.540(b). Under § 424.540(d)(2), a reactivation effective date is the date on which the Medicare contractor received the provider's reactivation submission that the Medicare contractor processed to approval. Due to lack of clarity among some stakeholders as to whether an assigned reactivation effective date may be appealed or rebutted, we proposed several regulatory changes.

First, we proposed to add new paragraph (3) to § 424.540(d) stating that a provider or supplier may rebut their assigned reactivation effective date via the general deactivation rebuttal procedures in § 424.546. As deactivations are not considered initial determinations—and to ensure consistent approaches—we do not believe reactivation effective dates should, either. Yet we also believe the provider should have an opportunity to be heard on the matter, and a rebuttal would provide that.

To accommodate reactivation effective date rebuttals within § 424.546,

we also proposed to revise the latter as follows:

- Change the title from ''Deactivation rebuttals'' to ''Rebuttals of deactivations and of reactivation effective dates''.
- In paragraph (a)(1), insert the following between ''under § 424.540,'' and ''the provider or supplier has 15 calendar days'': ''or is assigned a reactivation effective date by CMS or its contractor under § 424.540(d)(2),''.
- In paragraph (b)(2), insert the following between ''effective date,'' and ''and the reasons'': ''(or with the assigned reactivation effective date)''.
- In paragraph (b)(3), insert the following after ''deactivation'': ''or the reactivation effective date''.
- Delete existing paragraph (d) and replace with the following: ''Upon receipt of a timely and compliant deactivation (or reactivation effective date) rebuttal, CMS reviews the rebuttal to determine whether the imposition of the deactivation and/or the designated effective date (or the assigned reactivation effective date) are correct.''

In this vein, we would also revise § 424.545(b) to include assignments of reactivation effective dates as a ground for rebuttal.

The following is a summary of the comments we received on these proposals and our responses.

Comment: Several commenters supported our proposed use of electronic notifications.

Response: We appreciate the commenters' support.

Comment: Several commenters supported our proposed reactivation effective date rebuttal proposals, though a commenter stated that the effective date should be the date of submission, not the date of receipt by the Medicare contractor.

Response: We appreciate the commenters' support but are respectfully uncertain as to the submission and receipt dates the commenter refers to. If, as we suspect, the commenter is stating that the provider has 15 days to submit a rebuttal under § 424.546, this is correct. The use of ''receipt'' in § 424.546(d) simply means that CMS reviews the rebuttal upon receiving it. Paragraph (d) does not include or reference any effective date.

Comment: Several commenters supported our proposed revisions to § 405.809 regarding CAPs. However, they recommended that CAPs be permitted for additional denial and revocation reasons besides §§ 424.530(a)(1) and 424.535(a)(1).

Response: We appreciate the commenters' support and suggestions. However, we respectfully decline the commenters' request regarding CAP expansion for the same aforementioned reasons we do not have an across-the-board pre-revocation appeals or cure process.

Comment: A few commenters recommended that CMS either continue mailing denial and revocation notices or permit providers to opt into electronic-only notice. They expressed concern that an important notice delivered via a single electronic vehicle might not adequately reach the provider. Other commenters: (1) questioned how CMS will confirm email receipt; (2) recommended that emailed letters be sent to multiple individuals listed on the provider's application to help ensure the letter is received; and (3) sought provider protections for failed or untimely transmissions.

Response: While we intend to finalize our changes regarding electronic mail, we recognize the commenters' concerns. We will examine the possibility of emailing letters to multiple contacts and will take steps to ensure that emailed notices are sent timely. We will also attempt, as applicable, to furnish guidance regarding confirmation of the provider's receipt of the notice.

Comment: Several commenters stated that CMS should email denial and revocation letters on the same day they are dated.

Response: We will strive to do so.

Comment: A commenter stated that for reactivation effective-date disputes, CMS should: (1) specify the evidence and standard of review; (2) allow at least 30 calendar days for rebuttal; (3) provide a written decision; and (4) make additional review available for unresolved material factual disputes.

Response: We refer the commenter to CMS Publication 100–08, Chapter 10 for information regarding the first and third issues. Provider and supplier deactivation and stay rebuttals have always been 15 days, which we continue to believe is adequate time for submission. As rebuttals have never been considered initial determinations under § 498.3(b), there are no further administrative review rights once CMS' rebuttal decision has been made.

Comment: A few commenters requested that CMS: (1) implement delivery practices for notices that ensure providers receive the full response period contemplated by regulation and have a meaningful opportunity to respond within prescribed timeframes; and (2) clarify how notices are delivered when regulatory timeframes are measured in calendar days, since enrollment functions are generally performed during standard business hours and on weekdays.

Response: We respectfully are unsure as to the specific practices the commenters seek, the commenters' interpretation of ''meaningful opportunity'', which timeframes the commenters are referencing, or the clarification the commenters request. It appeared to us that these comments pertained to CMS' overall, existing enrollment notice delivery process as opposed to the specific email delivery proposal. Hence, we believe these comments go beyond—and are outside—the scope of this final rule.

Comment: A commenter stated that: (1) CMS should clearly coordinate CAP, rebuttal, reconsideration, and appeal procedures so that the use of one process does not waive or shorten another; and (2) CMS and MAC notices should identify all available options, deadlines, and consequences of concurrent review.

Response: We believe these comments go beyond the matter of reactivation effective date rebuttals to our overall, longstanding appeals and revocation processes. Thus, we believe they are outside the scope of this final rule.

After reviewing the comments received, we are finalizing these CAP, email, and rebuttal proposals without modification.

13. Fingerprinting (§ 424.518(c))

Section 424.518(c)(2)(ii)(A) states that 5 percent or greater individual owners of providers and suppliers in the ''high'' screening category must submit fingerprints for a national criminal background check. We proposed to revise this paragraph to clarify that individuals subject to fingerprinting must use the CMS-designated fingerprinting contractor for this task. We view this as a technical change because CMS already has a designated provider enrollment fingerprinting contractor that providers must use.

Comment: Several commenters supported our proposed revision to § 424.518(c)(2)(ii)(A).

Response: We appreciate the commenter's support.

Comment: A commenter recommended that CMS delay implementation of revised § 424.518(c)(2)(ii)(A) to give all parties time to prepare.

Response: While we appreciate the commenter's request, we reiterate that CMS already uses a designated fingerprinting contractor; consequently, there is no need to delay our proposed change.

Comment: A commenter stated that CMS should: (1) permit local police departments to perform fingerprinting to avoid bottlenecks to timely

fingerprinting, especially in rural and underserved areas; and (2) recognize good-faith compliance efforts when delays are caused by contractor scheduling limitations, processing timelines, and/or geographic access barriers.

Response: We appreciate these comments. For the first, we need consistency in our fingerprinting process, hence the need for a single source, though CMS works to avoid delays. Regarding the second, we are unclear as to whether the commenter is requesting explicit, regulatorily specified exemptions if delays are involved. If the commenter is, we respectfully cannot grant these when we have not reviewed the specific, unique facts of a particular case.

Comment: A commenter stated that: (1) CMS should consider alternative, comparable biometric or identity-verification methods if fingerprinting is not feasible; (2) providers should not face adverse enrollment actions because of contractor processing delays, system issues, limited access to fingerprinting locations, or other circumstances outside their reasonable control; (3) CMS should apply consistent procedures for documenting and addressing such circumstances before denial or revocation; (4) identify who is subject to fingerprinting, when fingerprinting is required, and how compliance must be demonstrated, including the availability and accessibility of CMS-designated fingerprinting contractors for individuals in rural or underserved areas; (5) provide accommodations for individuals unable to produce readable fingerprints because of disability, age, or occupational wear; and (6) clarify whether fingerprints obtained through other federally accepted or trusted identity-verification programs will be accepted.

Response: The first, second, third, and fifth comments—as well as most of the fourth comment—are outside the scope of this final rule because they appear to address the overall fingerprinting requirement under § 424.518(d) instead of our specific proposed revision.

CMS, as stated, uses a single, designated fingerprinting contractor. Applicable information can be found at *https://cmsfingerprinting.com/*. Regarding the sixth comment, all fingerprinting must be done via this contractor.

After reviewing the comments received, we are finalizing proposed revised § 424.518(c)(2)(ii)(A) without modification.

14. DMEPOS Accreditation (§ 424.58)

Consistent with §§ 424.57(c)(22) and 424.58, DMEPOS suppliers must be accredited by a CMS-approved accrediting organization (AO) to enroll and remained enrolled in Medicare. Section 424.58 details the general procedures and policies associated with DMEPOS accreditation. Many of these were added to § 424.58 in the CY 2026 HH PPS final rule (90 FR 55342) in an effort to strengthen CMS' oversight of the DMEPOS accreditation program in general and the DMEPOS AOs in particular. This included requirements regarding information and agreements that AOs must submit to CMS as part of their application/reapplication process. Three of these requirements are as follows:

- Per § 424.58(c)(1)(xxiii)(D), agreeing to notify CMS in writing of any decision to terminate, revoke, withdraw, or amend the accreditation status of a specific DMEPOS supplier within 3 business days of the date the AO took action.
- Per § 424.58(c)(1)(xxii), describing the AO's processes for—

++ Detecting and addressing DMEPOS supplier fraud, waste, and abuse (including identifying the AO's definitions of fraud, waste, and abuse); and

++ Reporting this activity to CMS and, as applicable, law enforcement.

- Per § 424.58(c)(1)(vii)(D), outlining the AO's policies and procedures for avoiding conflicts of interest and the appearance thereof involving individuals who conduct surveys or participate in accreditation decisions.

Upon further reflection since these three provisions were promulgated, we proposed the following changes thereto.

One revision would change the 3-business day period in § 424.58(c)(1)(xxiii)(D) to 5 calendar days. This would better align with § 424.58(e)(5)(i), which requires approved AOs to report the same information to CMS within 5 calendar days.

In addition, there currently is no timeframe in § 424.58 for reporting the fraud, waste, and abuse described § 424.58(c)(1)(xxii). We proposed in new § 424.58(c)(1)(xxiii)(N) that the AO must agree to notify CMS in writing (and, if applicable, law enforcement) of suspected fraud, waste, and abuse—consistent with the AO's CMS-approved definitions of those terms—within 3 calendar days of the date on which the AO determines that fraud, waste, or abuse may have occurred. (Current § 424.58(c)(1)(xxiii)(N) would be redesigned as new § 424.58(c)(1)(xxiii)(O)).

Notwithstanding the provisions of § 424.58(c)(1)(vii)(D) regarding conflicts of interest, none of them actually require the AO to report in its application/reapplication whether it has such conflicts. To help ensure that CMS makes fully informed AO approval decisions, we proposed to revise § 424.58(c)(1)(vii)(D)(*4*) to require the AO to also disclose to CMS all conflicts of interest (as described in § 424.58(c)(1)(vii)(D)(*3*) and (5)) it currently has and explain how and when it will terminate them.

The following is a summary of the comments we received on these proposals and our responses.

Comment: Several commenters stated that CMS should: (1) identify the types of conflicts of interest that must be reported to CMS and the vehicle for doing so; (2) specify the phrase ''suspected fraud, waste, and abuse'' and the reporting requirements associated therewith; and (3) explain how the AOs should contact law enforcement.

Response: CMS will issue separate guidance to the AOs on this matter.

Comment: A few commenters recommended that to account for holidays and weekends, CMS should change its: (1) proposed 3 calendar-day period in § 424.58(c)(1)(xxiii)(N) to, for example, 3 business days or 7 business days; and (2) proposed 5 calendar-day timeframe in § 424.58(c)(1)(xxiii)(D) to 5 business days.

Response: While we appreciate these suggestions, we believe the time periods we proposed are necessary given: (1) the risk that fraud, waste, and abuse can pose to the Trust Funds and beneficiaries; and (2) the importance of us receiving critical information from the AOs as soon as possible.

Comment: A commenter stated that proposed § 424.58(c)(1)(xxiii)(N) risks overwhelming the AOs and CMS with unsubstantiated fraud reports, hence diverting resources from the prevention of actual fraud. The commenter urged CMS to either to raise the reporting threshold or provide guardrails or guidance to avoid this.

Response: We respectfully disagree with the commenters' concern. We do not anticipate a mass of unsubstantiated reports arising from our proposal. Beyond this, we have an obligation to the American people to treat all potential fraud, waste, and abuse (even if it is only suspected and is awaiting investigation) with the utmost seriousness. Waiting to learn from the AO about DMEPOS fraud, waste, and abuse until after it happens reflects the aforementioned, insufficient ''pay and chase'' model. Immediately learning

when fraud, waste, and abuse is suspected will better enable us to be proactive in our program integrity activities.

Comment: A commenter requested that DMEPOS AOs have direct access to CMS enrollment data.

Response: We appreciate this request but believe it is outside the scope of this final rule.

After reviewing the comments received, we are finalizing our proposed DMEPOS accreditation revisions without modification.

15. Miscellaneous Comments

We received additional comments on our proposals. In general, these pertained to either our proposed enrollment provisions as a whole, multiple provisions regarding a single topic (such as revocations), or our existing provider enrollment process.

Comment: Several commenters supported our proposals to strengthen provider enrollment requirements and combat fraud. A commenter stated that these protections are especially important for vulnerable home health beneficiaries who may have limited ability to identify and report fraudulent or substandard care. The commenter suggested that CMS also consider whether HHAs should be required to document staff training as part of enrollment and ongoing compliance requirements.

Response: We thank the commenters' for their support. While we also appreciate the commenter's recommendation regarding documentation, we believe it is outside the scope of this final rule.

Comment: Many commenters opposed our enrollment proposals overall. They stated that the provisions could: (1) reduce and discourage provider participation; and (2) limit beneficiary health care access, especially in underserved areas. They recommended that CMS implement operational safeguards to avoid abrupt loss of access to care when a provider is revoked, denied, deactivated, etc. Some stated that CMS should clearly distinguish between fraudulent, intentional, or material noncompliance (as well as material risk) on the one hand, and technical, administrative, inadvertent, or promptly corrected noncompliance on the other—and to limit revocation and denial to the former. (An example commenters cited was failing to timely report changes in enrollment information (such as managing employees), which commenters did not believe should result in revocation.) Other commenters maintained that our proposals, taken together, would make Medicare enrollment substantially less predictable and reliable for providers acting in good faith. They stated that providers make significant investments in their facilities/practices, personnel, compliance, and patient care in the expectation that they will remain Medicare-enrolled absent clear evidence of fraud or intentional misconduct. Additional commenters maintained that the lack of factors, definitions, etc., in some of our new denial and revocation grounds make the latter arbitrary and capricious because they would give CMS unfettered revocation and denial discretion.

Response: We appreciate the concerns expressed. We do not expect provider participation or beneficiary access to be reduced given: (1) the limited number of revocations that traditionally occur; and (2) that previous promulgations of provider enrollment regulations (including those that added new denial and revocation grounds) did not lead to said reductions. Nonetheless, we constantly monitor potential access to care issues and will do with our new enrollment provisions.

As noted earlier, CMS carefully considers each potential denial and revocation situation and often utilizes measures such as deactivations and stays in lieu of revocations. Yet we cannot apply a materiality threshold to revocations or denials because: (1) non-compliance remains non-compliance regardless of the degree thereof; and (2) providers would have little incentive to remain consistently adherent to Medicare enrollment requirements if they knew that CMS only takes action if the non-compliance is material. Indeed, and most respectfully, providers should not assume that their mere avoidance of fraud and intentional misconduct exempts them from remaining compliant with all enrollment requirements.

We do not believe our new revocation and denial grounds would be arbitrary and capricious because, again, CMS will only take action when warranted and as specified in our regulations after a thorough and fair examination of the facts and circumstances of the case.

Comment: Commenters stated that Medicare enrollment enforcement (as well as our proposed enrollment provisions) must be targeted, evidence-based, and accompanied by meaningful procedural protections. Additional commenters stated that CMS should ensure that the consequence is proportionate to the conduct.

Response: We have always ensured that every potential denial or revocation case is meticulously assessed, and we only take action when justified. We do not routinely revoke providers and, as stated, often apply deactivations and stays to avoid the more significant consequences of a revocation and to ensure that the action is proportionate. Too, denied and revoked providers have robust due process rights under 42 CFR part 489, and denial and revocation letters explain the facts and legal basis behind the action.

Comment: Commenters stated that CMS's: (1) proposed denial and revocation reasons should be limited to provider and supplier types for which evidence exists of a program integrity problem; and (2) program integrity efforts should target higher-risk providers rather than burdening lower-risk ones.

Response: Several of our proposed grounds (for example, § 424.530(a)(20) and 424.535(a)(25)) are indeed limited to higher-risk provider and supplier types. The others address provider enrollment issues we have seen that are not limited to a few types of providers. While we appreciate the commenters' feedback, CMS cannot restrict its program integrity activities to higher-risk providers, for provider enrollment non-compliance—as well as fraud, waste, and abuse—can occur with any provider or supplier type.

Comment: Many commenters expressed concern that our enrollment provisions were proposed in the CY 2027 HH PPS proposed rule instead of a stand-alone enrollment rule. They stated that some provider and supplier types do not regularly review home health rules, believing that its provisions would not apply to them. Since many of our proposals apply to all providers and suppliers, they might not have seen important provisions. Hence, the commenters contended, CMS did not give adequate notice of its enrollment proposals, should withdraw them from the HH PPS proposed rule, and re-propose them in separate enrollment rule. Several commenters noted that CMS previously used stand-alone enrollment rulemaking (such as in 2003 and 2016) [54] to propose requirements applicable to all providers and suppliers. Other commenters stated that CMS should have at least proposed its provisions in the CY 2027 Physician

[54] Specifically: (1) ''Medicare Program; Requirements for Establishing and Maintaining Medicare Billing Privileges; Proposed Rule'' (68 FR 22064), published in the **Federal Register** on April 25, 2003; and (2) ''Medicare, Medicaid, and Children's Health Insurance Programs; Program Integrity Enhancements to the Provider Enrollment Process; Proposed Rule'' (81 FR 10720), published in the **Federal Register** on March 1, 2016.

Fee Schedule [55] (91 FR 43842) proposed rule to ensure a wider audience.

Response: We respectfully disagree with the commenters for a number of reasons.

First, the CY 2027 HH PPS proposed rule's title explicitly listed ''Provider Enrollment'' as one of its topics. Thus, the proposed rule was a provider enrollment rule as well and not merely a proposed regarding home health or hospice payment. This ''Provider Enrollment'' reference, moreover, was not prefaced by ''Hospice'' or ''Home Health''. That is, it was broadly ''Provider Enrollment'' and not ''Home Health and Hospice Provider Enrollment'', making clear that the enrollment provisions were not limited to certain provider types.

Second, we proposed significant enrollment provisions applicable to all providers and suppliers in the CY 2022, CY 2024, and CY 2026 HH PPS proposed rules (86 FR 62240, 88 FR 77676, and 90 FR 55342, respectively). These included, for instance: (1) adding roughly 10 new retroactive revocation reasons; (2) expanding the maximum reapplication bar period from 3 years to 10 years; (3) adding in regulation new reasons for which we can return or reject an enrollment application or deactivate a provider's enrollment; (4) reducing the period of non-billing for which we can deactivate a provider from 12 consecutive months to 6 consecutive months; and (5) documentation request requirements. No commenters in those proposed rules indicated concern about a lack of adequate notice or requested that our provisions be removed and reproposed in an enrollment-only rule.

Third, the CY 2027 HH PPS proposed rule was especially appropriate for our provisions given: (1) the need to remedy as quickly as possible the serious program integrity issues the proposals address; and (2) the hospice-specific proposals in the rule.

Fourth, we received approximately 375 separate comment submissions on our proposed revisions, as many as we have ever received on any provider enrollment regulation, either as part of a payment rule or an enrollment-exclusive rule. This alone evidences that proper notice was given.

For these reasons, we respectfully decline to withdraw our enrollment provisions from the CY 2027 HH PPS proposed rule.

Comment: Many commenters stated that: (1) some of the information they believe is required under our proposals might be impossible to obtain or confirm; and (2) CMS should not deny or revoke enrollment based on information or conduct involving third parties (including independent contractors) that the provider could not reasonably have known or controlled.

Response: As explained previously: (1) we do not anticipate requesting affiliation data; (2) managing employees must be reported, and there has never been a ''due diligence'' standard for this requirement; and (3) for denial or revocation reasons based on the conduct of an owner, managing employee, managing organization, etc., we respectfully cannot base our decision on whether the provider knew of or could have controlled said conduct.

Comment: Commenters sought clarification on the following issues: (1) the effective date of any finalized enrollment provisions; (2) how CMS plans to implement its provisions and collect the required data; (3) whether CMS, PECOS, and the MACs will be able to accommodate and have the capacity to carry out these changes; and (4) whether our finalized enrollment provisions affect Programs of All-Inclusive Care for the Elderly providers (PACE).

Response: Our finalized enrollment provisions are effective on January 1, 2027, and we will be able to timely implement them. In addition, and except for our preclusion list revision, our changes do not apply to PACE providers that are not otherwise enrolled in Medicare.

Comment: A few commenters stated that enrollment actions against individual providers can affect an entire coordinated-care network, including physician-led Accountable Care Organizations (ACOs). They recommended that CMS establish a transition process that: (1) allows care to continue while an appeal is pending; (2) gives an ACO (or other health network) reasonable time to arrange alternative capacity; (3) avoids penalizing the network for disruptions outside its control; and (4) provides appropriate notice when an enrollment determination becomes final and disclosure is legally permissible.

Response: While we appreciate these comments, we are respectfully unclear as to: (1) the transition process, alternative capacity arrangements, penalties, and network disruptions the commenters are referencing; and (2) whether the stakeholders' comments pertain strictly to our proposals or to our larger provider enrollment process. If the commenters are requesting, in effect, a postponement in revocation enforcement until appeal rights are exhausted, we refer the commenters to our earlier statements regarding our inability to do so. We can reiterate, though, that: (1) CMS takes revocation action only when truly warranted and, for this reason, we do not expect our proposals to materially affect ACOs or other provider networks; and (2) providers are notified of any revocation or denial action.

Comment: Commenters stated that our proposed revocation reasons are overreaching. They maintained that CMS' program integrity efforts—both proposed and current—should instead be directed towards demonstrably fraudulent parties, high-risk providers, and intentional misconduct, not good-faith and historically compliant providers. Several commenters stated CMS should establish a risk-based system that rewards legitimate, compliant providers with fewer administrative requirements. Another commenter stated that Complex Rehab Technology suppliers should be exempt from our proposed denial and revocation reasons.

Response: We respectfully disagree with these comments. Rather than being overreaching, our proposed revocation reasons are principally targeted towards specific scenarios we have seen and are not intended to be widely utilized. Too, we again note the matter of non-compliance with enrollment requirements. Merely because a provider is not, for example, (1) screened at the ''high'' level under § 424.518, (2) in a traditionally high-risk geographic area, or (3) engaged in intentional misconduct does not mean we should ignore any non-compliance on that provider's part. We must ensure that all providers are compliant irrespective of their relative risk level or provider or supplier type.

Comment: A commenter stated that CMS should not finalize any of its expanded denial and revocation reasons until it publishes data regarding Administrative Law Judge (ALJ) reversal rates for enrollment denials and revocations—in particular, §§ 424.535(a)(1) and 424.535(a)(8)(ii) revocations. The commenter maintained, in essence, that denial and revocation reasons should not be added or broadened until CMS can ensure correct denial and revocation decisions as evidenced by low reversal rates for current grounds.

Response: We respectfully disagree. CMS must take quick action to address

[55] ''Medicare and Medicaid Programs; CY 2027 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment and Coverage Policies; Medicare Shared Savings Program Requirements; and Medicare Prescription Drug Inflation Rebate Program'', published in the **Federal Register** on July 16, 2026.

program integrity vulnerabilities as they arise, without waiting for a particular ALJ affirmance threshold to be met. We can neither base our payment safeguard efforts on the latter nor avoid imposing a necessary denial or revocation solely because it might be overturned on appeal.

Comment: Commenters stated that providers should have the right to cure any deficiency (other than fraud or intentional misconduct) before a denial or revocation occurs.

Response: We respectfully direct the commenters to our previous statements regarding pre-denial and pre-revocation appeals processes.

Comment: A commenter stated that CMS should update MAC contracts to include defined timelines for review and approval or denial of Form CMS–855A changes.

Response: MACs are required to adhere to the application processing timeframes in CMS Publication 100–08, Chapter 10.

Comment: A commenter stated that CMS should use focused oversight—instead of new across-the-board requirements—to address the program integrity problems in Los Angeles County and elsewhere. The commenter suggested, for instance, revalidation of providers in the risk area, pre-claim review, and examining extreme utilization patterns and patient recertification rates.

Response: We sincerely appreciate these recommendations and note that CMS has indeed taken targeted steps to address Los Angeles County-type situations. However, program integrity is a national issue and, as earlier mentioned, we must be proactive in addressing enrollment non-compliance and potential payment safeguard risks—irrespective of the particular geographic location or the provider or supplier type involved. We cannot wait until misconduct occurs in a certain location before taking action.

Comment: Commenters expressed concern that a provider error on an enrollment application or in enrollment data reporting could keep them out of business for 10 years. They stated that revocation should not be used in response to minor provider errors. Other commenters added that CMS should use a more targeted, data analytics-driven approach to revocations rather than adopting a broader approach that—the commenter believed—can penalize providers for small errors. Other commenters suggested that CMS—in lieu of adding or expanding denial or revocation grounds—use other, more focused program integrity measures, such as (but not limited to) increased claims monitoring, Medicare Strike Force operations, civil money penalties, the False Claims Act, etc.

Response: We reaffirm that providers are not revoked or denied as a matter of practice but only when genuinely justified under the case's facts and circumstances and based on the applicable data; we consider this to be a ''targeted'' approach. Further, and to reiterate, CMS frequently applies deactivations and stays instead of revocations given our acknowledgement of the significance of a revocation.

CMS addresses payment safeguard threats via numerous vehicles. Yet this does not mean that CMS must forgo all others. Program integrity requires a comprehensive approach, and the provider enrollment process—including establishing new denial and revocation grounds directed at specific vulnerabilities—is a critical component thereof.

Comment: A few commenters requested that CMS explain to certified provider AOs the effects of retroactive revocations.

Response: Given that certain retroactive revocation grounds have existed for some time, we respectfully do not believe such guidance is necessary.

Comment: Several commenters stated that CMS should define the due diligence expected of providers in ascertaining an owner's or manager's criminal or adverse legal history.

Response: Sections 424.500 through 424.575 do not require providers to perform this activity.

Comment: A commenter stated that CMS should use super intelligence-assisted pre-payment claims analytics containing four minimum safeguards: (1) documented training data and known model limitations disclosed to plan sponsors and affected providers on request; (2) human review for every denial recommended previously a defined confidence threshold; (3) quarterly bias and drift monitoring with a public dashboard; and (4) evidentiary appeal rights for providers contesting model outputs. Other commenters suggested that CMS utilize real-time super intelligence fraud detection mechanisms in its enrollment activities, such as in detecting billing patterns.

Response: We appreciate these suggestions but believe they are outside the scope of this final rule.

Comment: A commenter stated that CMS should: (1) return to the 3-year DMEPOS reaccreditation cycle; and (2) implement section 427 of the Benefits Improvement and Protection Act of 2000.

Response: We appreciate this comment but believe it is outside the scope of this final rule.

Comment: Several commenters maintained that good-faith providers should not be revoked if the matter was based on conflicting or unclear CMS or MAC guidance.

Response: We are respectfully uncertain as to which individual revocation grounds the commenters are referencing. While providers must abide by all CMS enrollment requirements at all times and it is ultimately the provider's responsibility to ensure it understands and follows CMS guidance, we again state that CMS carefully reviews the facts and circumstances of each potential revocation case.

Comment: A commenter requested clarity as to which enrollment provisions are applicable to which provider and supplier types.

Response: As we explained in the proposed rule and section V.C. of this final rule, the provisions apply to all provider and supplier types except as explicitly noted otherwise (for example, § 424.530(a)(20) applies to hospices, the DMEPOS accreditation provisions apply to DMEPOS suppliers, etc.)

Comment: A commenter stated that the proposed rule did not demonstrate significant fraud-risk associated with ambulatory surgical centers.

Response: We appreciate this comment but remind stakeholders that fraud, waste, and abuse can happen within every provider and supplier type. Indeed, even if a particular provider type might traditionally pose less payment safeguard risk than certain others, this does not mean it should be exempt from the same requirements that all providers must adhere to. Regardless of the provider type involved, CMS must halt fraud, waste, and abuse before it begins, not afterwards—and exempting certain providers from important program protections hampers such efforts.

Comment: A commenter supported our efforts to prevent fraudulent providers from circumventing their reenrollment bar and reenrolling in Medicare. This and another commenter requested that CMS define the situations under which a provider has the same ''identity'' to avoid unintended consequences of wrongly denied reenrollments.

Response: We appreciate the commenter's support. However, we believe the commenter's request is outside the scope of this final rule because we did not propose any changes to the ''different identity'' denial and revocation provisions in §§ 424.530(a)(12) and 424.535(a)(18).

Comment: A commenter requested CMS confirmation that co-location does not equate to an affiliation.

Response: We appreciate this comment but are unable to confirm or not confirm this matter without knowledge of the particular facts of the case.

Comment: Some commenters expressed concern about retroactive revocations based on a failure to timely report changes in enrollment. They stated that operational challenges beyond a good-faith provider's control could result in revocation. They requested that: (1) allow multiple concurrent change request submissions in PECOS: (2) enable providers to request an extension when a pending application prevents timely submission of additional updates, and (3) implement automated notifications for expiring licenses, insurance, accreditation, and other enrollment-related information.

Response: We stress again that CMS in every revocation and denial case carefully reviews the facts and circumstances and only takes action when warranted. However, we believe the commenters' three requests are outside the scope of this final rule.

Comment: Several commenters stated that with respect to institutional providers (such as hospitals), a CMS finding regarding geography, an affiliate, or an application filed for a different location does not meet the criteria of section 1866(b)(2) of the Act.

Response: As previously discussed, section 1866(b)(2) of Act is inapplicable to provider enrollment, which is governed by different statutory and regulatory provisions.

Comment: A commenter recommended that CMS: (1) issue guidance on pre-payment control frameworks that reduce the window between fraudulent billing and detection; (2) encourage providers to maintain documented pre-payment verification controls covering beneficiary eligibility confirmation, physician order authentication, and visit documentation validation; and (3) require that newly acquired HHAs maintain enhanced pre-payment review protocols during a defined transition period following ownership changes.

Response: We appreciate these suggestions but believe they are outside the scope of this final rule.

Comment: Given the impact of retroactive revocations, a commenter recommended that CMS: (1) provide written notice and a reasonable opportunity to cure certain application fee deficiencies before revocation; (2) clarify how providers may document timely application fee payment attempts; (3) evaluate the totality of the circumstances in § 424.535(a)(18) cases and require evidence of the provider's intent to circumvent an existing re-enrollment bar; and (4) for § 424.535(a)(20) cases, review the circumstances in their totality and be transparent as to how non-compliance is examined.

Response: We refer the commenter to our prior statements concerning cure opportunities. We believe the second, third, and fourth recommendations are outside the scope of this final rule since they involve revocation reasons and other matters we did not address or propose to revise.

Comment: Several commenters requested that CMS: (1) exempt fixed-site institutional providers (including hospitals), health complexes, provider-based departments, and on-campus locations from the purviews of §§ 424.530(a)(20) and 424.535(a)(24); and (2) exclude from § 424.530(a)(20) all co-location arrangements that predate the other provider's adverse action. Another commenter stated that facility-based, brick-and-mortar providers should be exempt from § 424.535(a)(24).

Response: While we thank the commenter for these requests, CMS does not—and, considering the wide variety of factual scenarios that occur, cannot—automatically exempt certain providers, locations, and arrangements from §§ 424.530(a)(20) and 424.535(a)(24). However, we again seek to assure providers that CMS recognizes all the concerns they have expressed regarding our enrollment provisions and will fully and thoroughly consider the circumstances of the case before denying or revoking enrollment.

Comment: Several commenters stated that CMS: (1) already has mechanisms for identifying and addressing fraud, waste and abuse; and (2) did not explain in the proposed rule the deficiencies in these existing authorities that prevent CMS from addressing fraudulent providers and suppliers. Existing program integrity mechanisms the commenters cited included (but were not limited to) risk-based screening, collaboration with the HHS–OIG and Department of Justice, and data analytics.

Response: In both the proposed rule and this final rule, we carefully explained the need and justification for each of our proposals—all of which are intended to eliminate program integrity gaps that cannot be addressed via current means.

Comment: Some commenters expressed concern that our proposals would discourage clinical and administrative staff from accepting employment with various providers out of fear that they or the provider may be revoked.

Response: We respectfully do not believe this will take place. We have previously added parties to the scopes of various denial and revocation grounds and are unaware of the scenario the commenter describes having occurred.

Comment: Several commenters stated that our proposed changes will flood CMS, the MACs, and the States with additional paperwork and enrollment transactions; they were especially concerned that this could increase MAC backlogs.

Response: We respectfully disagree, primarily because—as stated—clinical managing employees must currently be disclosed, and we do not anticipate requesting the submission of affiliation data under § 424.519.

Comment: Commenters stated that several of our proposals at least partly duplicate other, non-enrollment provisions to which providers must adhere. These include, for example, State survey requirements, accreditation standards, and State licensure. They maintained that CMS: (1) should avoid subjecting providers to duplicative requirements; (2) should not establish new enrollment requirements without assessing whether program integrity can be facilitated via other existing regulatory provisions; and (3) should consider these other requirements to which providers must adhere in determining whether to deny or revoke enrollment. Another commenter stated that CMS should treat DMEPOS supplier accreditation as a clear indicator of the supplier's legitimacy and compliance.

Response: We respectfully do not believe: (1) there is duplication between our main proposals and other, non-enrollment requirements; and (2) the issues that our proposals seek to address can be remedied via current authorities. Hence, our proposals are needed. We add that, as already noted, provider enrollment has its own, distinct set of requirements, and providers and suppliers—including DMEPOS suppliers—can still fail to meet said requirements or can otherwise pose risks even if they are State licensed, accredited, compliant with CoPs, etc.

Comment: A commenter suggested that CMS establish a CMS-compatible provider compliance data model that can, among other things: (1) technologically maintain a continuously updated provider compliance record; (2) enable automated monitoring; (3) alert an organization of upcoming deadlines,

requirements, or possible compliance issues (for example, a license is approaching expiration); and (4) provide digital evidence of compliance.

Response: We appreciate this recommendation but believe it is outside the scope of this final rule.

Comment: Several commenters stated that CMS should address the potential Medicaid consequences of these new authorities. They noted that § 455.416(c) requires States to deny or terminate the Medicaid enrollment of any provider revoked under Medicare and is currently included in the termination database under § 455.417. A commenter recommended that CMS clarify whether (and under what circumstances) our proposed revocation grounds would be considered ''for cause'' and thus require a Medicaid termination under § 455.416. Another commenter appeared to contend that § 455.416(c) raises due process concerns because the State must terminate enrollment without any independent State review of the case's underlying facts. An additional commenter requested that CMS clarify in the final rule that § 455.416(c) only applies to Medicare revocations based on fraud, gross clinical misconduct, or severe program abuse—not technical, geographic, or affiliate-based administrative revocations. Another commenter stated that CMS should: (1) issue guidance to State Medicaid agencies on how to handle Medicare revocations under our proposed provisions; and (2) recommend that States stay any corresponding Medicaid termination pending exhaustion of the provider's Medicare administrative appeal.

Response: We appreciate the commenters' feedback. CMS did not propose to interpret ''for cause'' or to clarify the scope or applicability of § 455.416(c). Therefore, we respectfully believe these comments are outside the scope of this final rule. We further do not foresee our proposals having a material overall effect on providers' Medicaid enrollments because we anticipate that only a limited number of them will be revoked thereunder.

While we will issue guidance to the States if deemed necessary, we do not have the authority to direct States to impose the stay the commenter recommends.

Comment: A commenter stated that CMS should collect and publish data on the use of our new authorities, including the number of actions taken, cited grounds, reversal rates, and any identified access concerns.

Response: CMS lists all currently revoked providers (as well as the revocation basis) at *https://data.cms.gov/provider-characteristics/medicare-provider-supplier-enrollment/revoked-medicare-providers-and-suppliers.* Revocations under our new authorities will be included. Although CMS does not publish enrollment-related appeals or beneficiary access data, we will, as previously mentioned, monitor the latter for potential issues, though we do not expect any to arise.

Comment: Commenters expressed concern that our proposed ''managing employee'' definition combined with several proposed expansions of existing denial and revocation reasons to include managing employees will increase the number of revocations.

Response: CMS cannot confirm whether this will or will not be so. We can merely repeat what we have stated throughout this final rule that we will carefully evaluate each potential revocation and denial case.

Comment: A commenter stated that providers: (1) are prohibited from employing or contracting with individuals who are OIG-excluded or SAM-debarred; and (2) agree to abide by all Medicare laws upon signing the Form CMS–855 application. While it was somewhat vague, it appears the commenter contended that this sufficiently guarantees that the provider does not have or associate with problematic parties and, if it does, CMS can revoke the provider. Consequently, there is no need for CMS' proposals that pertain to the conduct of the provider's owners, managing employees, etc.

Response: We respectfully disagree for two reasons. First, non-excluded and non-debarred owning, managing, and other parties can still present significant risks to the Medicare program. Second, certain persons and entities other than the provider are required to be reported on the application and carefully screened for said risks (for instance, reviewing a managing employee for felony convictions).

Comment: Commenters stated that denials and revocations based on an owning or managing party's actions should be restricted to situations where said party presents a material risk, and misconduct or program integrity concerns are involved. Another commenter requested that CMS define ''associated party'' as used in proposed revised § 424.530(a)(6) and (a)(7).

Response: We interpreted these comments as essentially requesting that CMS explicitly exempt providers from denial or revocation if: (1) the other party's conduct was not severe; or (2) the provider was not involved in it. Every case involving an owner's, manager's, or associate's activity is different, and CMS must weigh the facts and circumstances of each in determining whether to deny or revoke. We cannot exempt certain situations prior to this analysis. We also, again, emphasize that for these denials and revocations, the associate's behavior is the main consideration, not whether the provider was a party thereto.

As we are not finalizing proposed expanded § 424.530(a)(6) and (a)(7), we believe the commenter's request concerning the ''associated party'' term is moot.

Comment: Several commenters urged that CMS establish various exceptions from (and modifications to) our proposals for small providers.

Response: We respectfully direct the commenters to our prior statements regarding exceptions.

Comment: A commenter recommended that CMS: (1) work with MACs to establish clear and reasonable processing timeframes for provider enrollment and change of ownership requests, with transparent tracking of progress; and (2) require MACs to implement systems that prevent duplicate document requests and ensure that information already submitted is appropriately retained and applied to the pending file.

Response: We appreciate these suggestions but believe they are outside the scope of this final rule.

Comment: Several commenters stated that CMS should meet with stakeholders to develop provisions that promote program integrity without negatively impacting good-faith providers.

Response: CMS regularly communicates with provider organizations on enrollment matters, and we receive valuable suggestions. For reasons already mentioned, though, our proposals are very much needed to address material program integrity vulnerabilities.

Comment: A commenter stated that using data analytics would help CMS detect fraud in real-time and take prompt action instead of only being able to spot fraud months or years later. The commenter also suggested: (1) having beneficiaries more involved in detecting fraud; and (2) that CMS convene a task force to collaborate on modernizing home health technology infrastructure and on fraud, waste, and abuse measures. Another commenter recommended program integrity enhancements such as: (1) transmitting certain provider enrollment information (such as enrollment status) on crossover claims; (2) targeting pre-payment beneficiary confirmation for high-risk DMEPOS claims to verify medical need and receipt before payment is issued; (3) enhanced identity verification and

provider background checks; (4) real-time data sharing and analytics between CMS, MA plans, and supplemental insurers; (5) periodic risk-based revalidation; and (6) expansion of the preclusion list.

Response: While we believe these comments are outside the scope of this final rule, we sincerely appreciate the commenters' recommendations.

Comment: A commenter stated that with respect to SNFs, CMS should: (1) distinguish managerial control from clinical, professional, consulting, or advisory responsibilities; (2) provide examples of both reportable and non-reportable positions and arrangements; (3) clarify the relationship between managing employee and ADP disclosures; and (4) reconcile and update its SNF guidance and Form CMS–855A instructions (including explaining the: (i) difference between a managing employee and a clinical consultant ADP under section 1124(c) of the Act; and (ii) when and how each should be reported). Concerning this fourth request, the commenter stated that the SNF guidance advises SNFs to construe disclosure requirements broadly and to disclose when uncertain, while the proposed rule emphasizes that not every clinical employee is reportable. The commenter believed that CMS should reconcile these approaches so that SNFs do not unnecessarily over-report clinical staff.

Response: As we have indicated, the reporting of managing employees under § 424.502 and of parties (such as ADPs) under section 1124(c) of the Act are separate requirements with separate definitions and principles. The two are unrelated, and each must be met. This has been the case since the commencement of the SNF disclosure requirements in late 2024, and our proposed clarification in ''managing employee'' definition does not change this. Hence, we are uncertain as to the precise guidance or reconciliation the commenter seeks.

Comment: A commenter suggested that CMS establish an ''enrollment-only'' organizational supplier status whereby a supplier can enroll without obtaining Medicare billing privileges. The commenter stated that because other federal health care programs may require Medicare enrollment to participate, allowing suppliers to enroll via an abbreviated process could reduce provider and administrative burden while still permitting CMS to carefully screen the provider during the enrollment process.

Response: We thank the commenter for this recommendation but believe it is outside the scope of this final rule.

Comment: Commenters maintained that our proposals would force providers out of Medicare, which in turn could lead to lost employment for physicians, practitioners, administrative staff, etc.

Response: We respectfully disagree. Past provider enrollment rulemaking efforts have not resulted in material numbers of providers or provider staff departing the Medicare program, and we believe this will hold true following this final rule, too.

Comment: A commenter stated that to the extent CMS uses predictive models, risk scoring, or other automated analytics to identify high-risk enrollments or to support denial or revocation determinations, CMS should take several steps including (but not limited to): (1) ensuring transparency about the data and factors it used; (2) ensuring that the case is reviewed by a qualified human reviewer before any adverse determination; and (3) periodically auditing the model for accuracy and for disparate impact on small, rural, and safety-net participants. The commenter believed that revocation decisions should rest with CMS and not with a model; the commenter added that no provider should be revoked based on a score it can neither see nor challenge.

Response: While we cannot address the detailed operational aspects of our revocation and denial evaluations, we note that our decisions are made by individuals reviewing the case and not by predictive models or automated analytics.

Comment: A commenter requested clarification on six enrollment-related topics. The first is whether a nurse practitioner or physician assistant furnishing palliative care services under the home health benefit must: (i) be Medicare-enrolled; and (ii) reassign the right to bill Medicare to the HHA or another billing entity. The second is whether such services are considered included within the home health prospective payment system payment, separately billable professional services, or both depending on the service furnished and the billing practitioner. The third seeks guidance on enrollment form requirements, reassignment mechanics, practitioner affiliation with the agency, and the compliance implications when the agency contracts with an external palliative care practitioner or group. The fourth is whether HHAs are responsible for verifying PECOS enrollment for each nurse practitioner, physician assistant, physician, or other allowed practitioner involved in palliative care services. The fifth involves when verification in the prior sentence must occur, how often it must be repeated, what documentation must be retained, and whether claims will be denied if the palliative care practitioner is not properly enrolled, eligible to order and certify, or linked to the billing entity. The sixth seeks operational guidance and edits that HHAs can use prospectively to reduce preventable claim rejections and post-payment denials.

Response: We appreciate these comments but believe they are outside the scope of this final rule.

Comment: Several commenters stated that certain system issues with PECOS should be promptly resolved to help providers comply with CMS' new enrollments requirements.

Response: CMS will ensure that PECOS can effectively accommodate our finalized enrollment provisions.

Comment: A commenter stated that CMS in its provider enrollment activities should consider the approach reflected in the proposed Medicare Home Health Payment Integrity and Protection Act of 2026 (S. 5250), introduced by Senator Susan M. Collins on August 5, 2026.[56]

Response: We appreciate this comment but believe it is outside the scope of this final rule.

Comment: A commenter requested that CMS: (1) confirm that deactivation—not revocation—will be utilized in cases of infrequent billing and that CMS will notify the provider thereof; and (2) allow Bill for Denial claims to be considered active participation.

Response: We appreciate these requests but believe they are outside the scope of this final rule.

Comment: Several commenters stated that CMS should always consider potential access to care impact in its denial and revocation determinations, especially for rural and underserved areas. Others expressed broader concerns that our proposals will harm patient access.

Response: As previously stated, CMS considers the facts and circumstances in each denial and revocation case and consistently remains alert for any potential beneficiary access issues. Yet we are unaware of any material access to care problems arising from any of our prior enrollment rulemaking efforts, and we do not expect any to emerge from the present one.

Comment: Some commenters stated that a provider enrollment moratorium under § 424.570 impacts both fraudulent and legitimate providers and suppliers and is overly broad. These commenters

[56] *https://www.congress.gov/bill/119th-congress/senate-bill/5250/text.*

requested that CMS use a more targeted approach for combatting fraud and abuse—such as focusing on fraudulent actors—to minimize disruption to Medicare patients and bona fide providers.

Response: We appreciate this comment but believe it is outside the scope of this final rule.

Comment: A commenter stated that CMS should deem a provider's documented attempt to report a change as timely compliance when PECOS limitations, contractor instructions, or a pending application prevent formal submission.

Response: As we have indicated regarding other commenters' requests for preliminary determinations, exemptions, etc., we are unable to pre-judge cases in this final rule. Every situation must be reviewed upon its unique facts and details.

Comment: A commenter stated that administrative or regulatory enrollment disruptions resulting from interactions among Federal healthcare programs, State healthcare programs, accreditation requirements, or payer credentialing systems should not be considered a ''termination'' or ''suspension'' for purposes of imposing derivative enrollment consequences on owners, managing employees, or managing organizations.

Response: We are respectfully uncertain as to the specific issue being raised. Our best interpretation is that the commenter believed § 424.530(a)(14)(i) should not apply to a provider if the owning or managing party's program or licensure termination or suspension involved any of the disruptions the commenter mentioned. Assuming this was the commenter's contention, we disagree. Again, we cannot exempt certain providers or owning or managing party actions from denial or revocation consideration before we thoroughly review the facts and circumstances involved.

Comment: A commenter urged CMS to enhance its and the MACs' resources to: (1) answer providers' enrollment questions; (2) process changes in enrollment data; and (3) respond to enrollment-related appeals.

Response: We appreciate this comment but believe it is outside the scope of this final rule.

Comment: Several commenters stated that CMS should permit expedited review when: (1) a provider presents credible evidence that CMS has made a factual or legal error; (2) the revocation would materially disrupt beneficiary access; and (3) a small or rural provider is involved (with said appeals containing a binding decision deadline for an ALJ decision).

Response: If, as it appeared to us, the commenters are requesting expedited provider enrollment appeals in these two situations, we respectfully repeat our earlier statement that 42 CFR part 498 does not provide for such expedited appeals—or, for that matter, special appeal rights and decision deadlines for certain provider types.

Comment: A commenter stated that although section 1866(j) of the Act directs the Secretary to establish a process for enrolling providers and suppliers, it does not establish the grounds on which a provider may be revoked. Congress, the commenter contended, addressed that question in section 1866(a)(1) of the Act, which states that a provider with a provider agreement that meets certain criteria ''shall be qualified to participate [in Medicare] and shall be eligible for payments.'' Meanwhile, section 1866(b)(2) of the Act states that the Secretary may terminate or refuse to renew a provider agreement based on: (1) noncompliance with the provider agreement or applicable law; (2) failure to substantially meet the applicable provisions of section 1861; (3) an OIG exclusion; or (4) a felony conviction. The commenter maintained that because: (1) Congress only listed these four termination grounds in section 1866 of the Act; and (2) a provider enrollment termination has the same effect as an enrollment revocation, it follows—under the doctrine of *expressio unius*—that Congress only intended for enrollment to be revoked in one of the four section 1866(b)(2) of the Act situations. Accordingly, CMS cannot rely upon section 1866(j)—or, for that matter, sections 1102 and 1871 of the Act, because general rulemaking authority cannot be used to expand a statute—for a number of its proposed revocation grounds, such as § 424.535(a)(16) and (a)(24).

Response: We direct the commenter to our earlier responses that section 1866(b)(2) of the Act does not apply to provider enrollment.

Comment: A commenter stated that CMS should: (1) clarify how the proposed affiliation, ownership, associated-party, and management authorities will apply to value-based care and care coordination arrangements; (2) provide examples of arrangements that would not create enrollment risk; and (3) establish safe harbors or other protections for good-faith providers seeking to implement innovative care delivery models.

Response: We appreciate these comments. Our requirements would apply to value-based care and care coordination arrangements to the same extent as all other provider types and arrangements. Also, and consistent with our prior statements, we can neither pre-determine cases (such as whether a transaction presents risk) nor establish regulatory exceptions for certain provider types or health care models.

Comment: Commenters stated that CMS should delay (possibly in staged phases, with several commenters suggesting a 1-year postponement for all provisions) implementation of any finalized enrollment provisions to give stakeholders time to prepare. The commenters added that prior to implementation, CMS should: (1) issue detailed, explanatory public guidance to providers and the MACs; and (2) train provider staff on the new provisions. Another commenter stated that CMS should continue to solicit provider input on our provisions.

Response: We respectfully are unable to postpone implementation of our provisions in light of the need to take prompt action to address the program integrity vulnerabilities outlined in the rule. Although CMS will issue guidance to the MACs and, to the extent necessary, stakeholders, CMS does not train provider staff regarding enrollment requirements.

CMS welcomes additional stakeholder feedback regarding our new provisions.

Comment: Several commenters stated that our proposed enrollment provisions (including reporting requirements) would increase provider costs without improving patient care or program integrity.

Response: We respectfully disagree. We previously indicated why our affiliation and managing employee provisions would not add costs, and we believe that program integrity and patient care will be improved by the denial and removal of problematic providers from Medicare.

Comment: A commenter stated that the **Federal Register** notice for the proposed rule encouraged electronic comments, but the stated address ends in the placeholder docket identifier CMS–2026–XXXX, rather than a valid docket destination. The Administrative Procedure Act, the commenter maintained, requires a **Federal Register** notice that identifies the rulemaking proceeding and then requires the agency to give interested persons an opportunity to participate through written submissions. The commenter concluded that a notice that affirmatively directs stakeholders to an unusable electronic destination—while also encouraging that route—does not facilitate meaningful participation.

Response: We disagree. Ample notice of the rulemaking notice was given and providers had multiple ways to submit comments. The fact that we received roughly 375 comments on our enrollment provisions—including, we note, the provider's comments—indicates that meaningful participation was offered.

Comment: With respect § 424.547, a commenter stated that because deactivation of a certifying or ordering provider blocks HHA/hospice billing on affected claims, CMS must maintain accurate, up-to-date enrollment databases and ensure an efficient reactivation process, particularly for hospice physicians covering on-call or absences.

Response: We appreciate this comment but believe it is outside the scope of this final rule.

Comment: Commenters were concerned about our proposals' possible impact on small, rural, and non-profit entities. They believed these providers may lack the resources to adhere to our provisions, meaning they may depart the Medicare program. They requested exemptions from certain provisions (or other modifications or special considerations) for such entities.

Response: While we appreciate the commenters' concerns, the concept of program integrity applies to all providers and suppliers—whether small, large, rural, etc. All enrolled parties must adhere to Medicare enrollment requirements, and we believe that granting exceptions based on size or location would be inconsistent with our obligation to ensure such compliance.

Comment: A commenter stated that in *FCC* v. *Fox Television Stations* (567 U.S. 239 (2012)), the Supreme Court held that: (1) due process requires agencies to give regulated entities fair notice of the conduct that is prohibited or required; and (2) a rule is constitutionally deficient when an ordinary person cannot tell what facts must be established. Since CMS declined to articulate various standards and terms, providers cannot ascertain what is required to remain compliant. The commenter stated that CMS, in effect, has not given providers fair notice. The commenter cited an example of a provider researching its owners, managers, and affiliates for adverse actions, finding none, and believing it is in compliance—but CMS nonetheless revokes the provider based on information it internally has and the provider does not. The commenter stated that a provider should not face consequences merely because CMS determines—based on nonpublic, inaccessible, delayed, or undefined information—that a relationship created an unarticulated risk.

Response: We respectfully disagree with the commenter because each of our denial and revocation grounds in §§ 424.530 and 424.535 identifies the basis for the action and the conduct or activity involved.

Comment: A commenter stated that CMS should resolve conflicting findings between State survey agencies and MACs before taking an adverse enrollment action.

Response: We again note that provider enrollment requirements are separate from the CoPs. Sections 424.500 through 424.575 are—and have always been—enforced outside of the State survey process, and the former requirements are neither dependent upon nor impacted by the latter.

Comment: A commenter questioned whether additional reviews under our proposals will increase processing times for enrollment applications and, if so, how CMS will minimize them.

Response: Based on our experience with past rulemaking efforts, we do not anticipate the present final rule causing processing delays. That said, and as always, we will monitor processing times and strive to ensure consistency across the MACs' enrollment processes.

Comment: A number of commenters stated that CMS should not impose denials and revocations under our new provisions without clear definitions, objective standards, and adequate provider education.

Response: We respectfully direct the commenters to our earlier discussions and responses regarding definitions, standards, and stakeholder guidance.

D. DME Benefit Expansion for Infusion Pumps and Drugs

1. Background

a. Home Infusion Therapy Benefit

In section 5012 of the 21st Century Cures Act (Pub. L. 114–255), Congress amended section 1861(s)(2) of the Act and added sections 1834(u) and 1861(iii) of the Act to establish a new Medicare home infusion therapy benefit effective January 1, 2021. This benefit covers certain professional services associated with the provision of home infusion therapy to a beneficiary who is under the care of a physician, nurse practitioner, or physician assistant. Home infusion therapy involves the intravenous or subcutaneous administration of drugs or biologicals to an individual at home through an external infusion pump. As indicated in a final rule we published in the **Federal Register** on November 8, 2019, titled ''Medicare and Medicaid Programs; CY 2020 Home Health Prospective Payment System Rate Update; Home Health Value-Based Purchasing Model; Home Health Quality Reporting Requirements; and Home Infusion Therapy Requirements,'' the external infusion pump and other supplies, including home infusion drugs necessary for the effective use of the pump, are covered under the Part B DME benefit rather than the home infusion therapy benefit (84 FR 60612). Pursuant to section 1861(iii) of the Act, we published a final rule in the **Federal Register** on November 13, 2018, titled ''Medicare and Medicaid Programs; CY 2019 Home Health Prospective Payment System Rate Update and CY 2020 Case-Mix Adjustment Methodology Refinements; Home Health Value-Based Purchasing Model; Home Health Quality Reporting Requirements; Home Infusion Therapy Requirements; and Training Requirements for Surveyors of National Accrediting Organizations'' (83 FR 56406) to define the scope of ''home infusion therapy,'' ''home,'' ''qualified home infusion therapy supplier,'' and ''home infusion drug'' at 42 CFR 486 Subpart I.

Section 486.525(a) implements the definition of ''home infusion therapy'' set forth at section 1861(iii)(1) of the Act, defining the term to include professional services, including nursing services, furnished in accordance with the plan of care described under 42 CFR 486.520, patient training and education (not otherwise paid for as DME), remote monitoring and monitoring services for the provision of home infusion therapy services and home infusion drugs furnished by a qualified home infusion therapy supplier in the individual's home. Section 486.505 implements the definition of ''home'' set forth at section 1861(iii)(3)(B) of the Act, defining the term as a place of residence used as the home of an individual, including an institution that is used as a home. An institution that is used as a home may not be a hospital, critical access hospital (CAH), or skilled nursing facility (SNF) as defined in section 1861(e)(1), 1861(mm)(1), or 1819(a)(1) of the Act, respectively.

Section 486.505 implements the definition of ''qualified home infusion therapy supplier'' set forth at section 1861(iii)(3)(D)(i) of the Act, defining the term to mean a supplier of home infusion therapy that meets all of the following criteria which are set forth at section 1861(iii)(3)(D)(i) of the Act: (1) furnishes infusion therapy to individuals with acute or chronic conditions requiring administration of home infusion drugs; (2) ensures the

safe and effective provision and administration of home infusion therapy on a 7-day-a-week, 24-hour-a-day basis; (3) is accredited by an organization designated by the Secretary in accordance with section 1834(u)(5) of the Act; and (4) meets such other requirements as the Secretary determines appropriate. A qualified home infusion therapy supplier may subcontract with a pharmacy, physician, provider of services, or supplier to meet these requirements.

Section 486.505 implements the definition of ''home infusion drug'' set forth at section 1861(iii)(3)(C) of the Act, currently defining the term as a parenteral drug or biological administered intravenously, or subcutaneously for an administration period of 15 minutes or more, in the home of an individual through a pump that is an item of DME, excluding insulin pump systems and self-administered drugs or biologicals on a self-administered drug exclusion list.

b. Durable Medical Equipment Benefit

Under the Medicare Part B benefit for DME, a limited number of home infusion drugs (as defined under 42 CFR 486.505) are covered if it is determined that it is medically necessary to use an external infusion pump classified as DME for administration of the home infusion drug, and the home infusion drug being used with the pump is, itself, reasonable and necessary for the treatment of an illness or injury (84 FR 60612).

For an external infusion pump and associated supplies to be covered under the Part B DME benefit, the pump must, among other statutory and regulatory requirements, be ''appropriate for use in the home'' (see 42 CFR 414.202). This requirement means that the equipment must be capable of being safely and effectively used by the beneficiary or caregiver in the home without the assistance of a health care professional (84 FR 60628). As noted previously, section 1861(iii)(3)(C) of the Act limits the home infusion therapy benefit to drugs administered in the patient's home through a pump covered under the DME benefit as defined under section 1861(n) of the Act. Therefore, historically, external infusion pumps and associated home infusion drugs that do not meet the ''appropriate for use in the home'' requirement have not been eligible for coverage under the DME benefit and services associated with administering the home infusion have not been covered under the Part B home infusion therapy benefit.

2. Current Issues

Section 6222(a) of the Consolidated Appropriations Act, 2026 (CAA, 2026) (Pub. L. 119–75) amended section 1861(n) of the Act to expand the scope of the Medicare Part B benefit for DME to include certain external infusion pumps and associated home infusion drugs (as defined in section 1861(iii)(3)(C) of the Act) or other associated supplies that would not otherwise qualify as DME because the use of such an item would not meet the ''appropriate for use in the home'' requirement applied to the DME definition at 42 CFR 414.202. As stated in section V.D.1. of this final rule, CMS has historically interpreted the requirement that DMEPOS must be ''appropriate for use in the home'' to mean that the equipment must be capable of being safely and effectively used by the beneficiary or caregiver in the home without the assistance of a health care professional.

Effective for items furnished on or after April 1, 2027, section 6222(a) of the CAA, 2026, states an external infusion pump and associated home infusion drug (as defined in section 1861 (iii)(3)(C) of the Act) or other associated supplies that do not meet the ''appropriate for use in the home'' requirement applied to the definition of DME under 42 CFR 414.202 (or any successor to such regulation) must be treated as meeting such requirement if each of the following criteria is satisfied:

- The prescribing information approved by the FDA for the home infusion drug associated with the pump instructs that the drug should be administered by or under the supervision of a health care professional;
- A qualified home infusion therapy supplier, as defined in section 1861(iii)(3)(D) of the Act, administers or supervises the administration of the drug or biological in a safe and effective manner in the patient's home, as defined in section 1861(iii)(3)(B) of the Act; and
- The FDA-approved prescribing information instructs that the home infusion drug be infused at least 12 times per year:

++ Intravenously or subcutaneously; or

++ At infusion rates that the Secretary determines would require the use of an external infusion pump.

Section 6222(a) of the CAA, 2026 does not define the term ''health care professional.'' In the proposed rule titled ''Calendar Year 2027 Home Health Prospective Payment System (HH PPS) Rate Update; Requirements for the HH Quality Reporting Program and the Expanded HH Value-Based Purchasing Model; Medicare Provider Enrollment, Durable Medical Equipment (DME), and DME, Prosthetics, Orthotics, and Supplies (DMEPOS) Policies,'' which we published in the **Federal Register** on July 6, 2026, we proposed that the term ''health care professional'' would refer to any of the following clinicians, provided that such clinician is permitted to administer or supervise the administration of a home infusion drug in accordance with Federal and State law: physician (as defined in section 1861(r) of the Act); a clinical nurse specialist, nurse practitioner, or a physician assistant (as such terms are defined in section 1861(aa)(5) of the Act and regulations at 42 CFR 410.74 through 410.76); or a registered nurse otherwise licensed to practice nursing in the State in which the home infusion drug is administered (91 FR 41305). To ensure consistency across the Medicare program, we proposed to define physician, clinical nurse specialist, nurse practitioner, and physician assistant as such terms are defined under the Medicare home health benefit. Given that sections 1861(r) and (aa)(5) of the Act (as codified at 42 CFR 410.74 through 410.76) do not define ''registered nurse,'' we proposed to define ''registered nurse'' as a clinician licensed to practice nursing in the State in which the home infusion drug is administered (91 FR 41305).

Because of the risks associated with administering certain home infusion drugs in the home under the expanded DME benefit, we proposed limiting the definition of ''health care professional'' to these practitioners (91 FR 41305). We stated that we are aware of at least one drug, patisiran, that presents heightened safety risks and that may meet the new criteria and definition of home infusion drug under the revised definition of DME at section 1861(n) of the Act (91 FR 41305). In accordance with the prescribing information for the drug patisiran, adverse reactions during clinical trials included upper respiratory tract infections as well as infusion-related reaction symptoms including dizziness, headaches, chest pain, and other symptoms. Four serious adverse reactions of atrioventricular (AV) heart block (2.7 percent) occurred in patients treated with patisiran, including three cases of complete AV block. Warnings and precautions regarding infusion-related reactions under the highlights of prescribing information include the need to monitor for signs and symptoms of reactions during infusion, slow or interrupt the

infusion if clinically indicated, and discontinue the infusion if a serious or life-threatening infusion-related reaction occurs. Infusion-related reactions for other home infusion drugs that may be covered under the expansion of the DME benefit could be even more serious and require emergency medical assistance in certain situations. Based on our review, we stated that we believe that such safety concerns may be adequately monitored and mitigated if either a physician, clinical nurse specialist, nurse practitioner, physician assistant, or registered nurse administers or supervises the administration of the home infusion drug (91 FR 41305). We stated that we believe any of these clinicians, if available on hand, could address any emergency medical events that occur during the course of the infusion of the drug (91 FR 41305). We solicited comments on the proposal, including whether there are other clinicians that may be equally qualified to administer or supervise the infusions of the drugs in the home and also address any emergency medical events that occur during the course of the infusion of the drug (91 FR 41305).

We note that we did not propose that the term ''health care professional'' be defined to include a licensed practical nurse (LPN) or licensed vocational nurse (LVN) under the supervision of a registered nurse or physician (91 FR 41305). State law varies in terms of whether an LPN or LVN can perform certain emergency services such as delivering emergency medications. Thus, we stated that it is not clear that addressing the adverse effects associated with the administration of certain home infusion drugs would consistently fall under an LPN's or LVN's scope of practice (91 FR 41305). Additionally, as LPNs and LVNs practice under supervision without the same level of independent clinical authority as the professionals identified previously, we stated that we believe they are less suited to serve as a health care professional for administering complex home infusion drugs under the expanded Medicare DME benefit. In addition, we stated that we do not believe that supervising the administration of the drug in the home should be done remotely as this could violate state laws and compromise the safety of the home infusion therapy as a health care professional would not be present to perform any necessary emergency services (91 FR 41305). In order to be present and able to perform emergency services in the home setting if necessary for the safety and health of the beneficiary, we proposed that the health care professional be on site at the home to administer or directly supervise the administration of a home infusion drug covered under the expanded DME benefit (91 FR 41305). We solicited comments on the proposal (91 FR 41305).

As stated previously, section 6222(a) of the CAA, 2026 expands the DME benefit category to include external infusion pumps and associated home infusion drugs that the prescribing information instructs should be infused at least 12 times per year: (1) intravenously or subcutaneously (section 1861(n)(3)(A) of the Act); or (2) infused at infusion rates that the Secretary determines would require the use of an external infusion pump (section 1861(n)(3)(B) of the Act). Based on our review, we stated that there do not currently appear to be any home infusion drugs that must be infused at rates that would require the use of an external infusion pump that do not otherwise already fall under the criterion set forth under section 1861(n)(3)(A) of the Act (91 FR 41305). Therefore, we did not propose to include additional drugs under the scope of this DME benefit category expansion that do not already meet the criterion set forth under section 1861(n)(3)(A) of the Act (91 FR 41306). The criterion specified in section 1861(n)(3) of the Act is that the drug must be infused at least 12 times per year. Because of the way dosing information is typically framed in the prescribing information, we proposed that to meet this requirement, the drug must be infused at least once per month (91 FR 41306). We stated that we believe such clarification would be appropriate given that it is aligned with how home infusion drugs are typically framed in the prescribing information. Therefore, we proposed that home infusion drugs covered under this expanded DME benefit must be infused at least once a month (91 FR 41306). We solicited comments on the proposal (91 FR 41306).

We note that we did not propose a minimum or maximum number of times a drug must be infused to qualify as a ''home infusion drug'' (91 FR 41306). The duration of treatment is not always clear and is often patient-dependent. Prescribing information for infusion drugs will often call for infusions to continue indefinitely, until toxicity, or until adverse reactions preclude further treatment.

Finally, section 6222(b) of the CAA, 2026 requires the Secretary to ensure that patients are notified of the cost sharing for electing home infusion therapy compared to other applicable settings of care for the furnishing of infusion drugs under the Medicare program. We stated that we plan to implement this provision through subregulatory guidance (91 FR 41306).

3. Provisions of the Regulation

We proposed to revise the definition of DME under 42 CFR 414.202 to incorporate the amendments to section 1861(n) of the Act for implementation of section 6222(a) of the CAA, 2026, effective April 1, 2027 (91 FR 41306). Specifically, we proposed to provide that certain external infusion pumps, associated home infusion drugs, and related supplies will be treated as meeting the ''appropriate for use in the home'' requirement when the following three criteria under paragraphs (1) through (3) of section 1861(n) of the Act are satisfied (91 FR 41306):

- The prescribing information approved by the FDA for the home infusion drug (as defined in § 486.505) associated with the pump instructs that the drug should be administered by or under the supervision of a health care professional. The health care professional must be a clinical nurse specialist (as defined in § 410.76), nurse practitioner (as defined in § 410.75), physician assistant (as defined in § 410.74), physician as defined in section 1861(r) of the Act, or a registered nurse otherwise licensed to practice nursing in the State in which the home infusion drug is administered. The health care professional must be on site at the home to administer or supervise the administration of the home infusion drug.
- A qualified home infusion therapy supplier (as defined in § 486.505) administers or supervises the administration of the home infusion drug in a safe and effective manner in the patient's home (as defined in § 486.505).
- The prescribing information instructs that the home infusion drug be infused at least 12 times per year (at least once a month), either intravenously or subcutaneously, or at infusion rates that the Secretary determines would require the use of an external infusion pump. We solicited comments on the proposal. We received comments on the proposed DME benefit expansion for infusion pumps and drugs from a range of stakeholders, including home infusion and specialty pharmacy organizations, health care providers and health systems, patient advocacy organizations, pharmaceutical manufacturers, DME suppliers, clinician organizations, device and technology stakeholders, and other health care

organizations. The following is a summary of the comments we received and our responses.

Comment: Commenters generally supported expanding Medicare coverage for certain external infusion pumps, associated home infusion drugs, and related supplies that would not otherwise meet the ''appropriate for use in the home'' requirement. Commenters stated that the expansion could improve access to home infusion and allow beneficiaries to receive clinically appropriate therapies in the home. Several commenters also expressed concern that the statutory expansion remains limited and may not substantially address the broader difference between home infusion coverage available to Medicare beneficiaries and individuals with commercial insurance.

Response: We thank the commenters for their support for expanding the DME benefit for certain external infusion pumps and associated home infusion drugs and supplies. Section 6222(a) of the CAA, 2026 amended section 1861(n) of the Act to provide that certain external infusion pumps and associated home infusion drugs or other associated supplies that would not otherwise meet the ''appropriate for use in the home'' requirement are treated as meeting that requirement when the statutory criteria are satisfied. We are finalizing the expansion consistent with section 6222(a) of the CAA, 2026 and as proposed. To the extent comments requested expansion beyond the therapies that satisfy the statutory criteria, those requests are beyond the scope of this rulemaking and, where they would require modification of the statutory criteria, would require legislative action.

Comment: The majority of commenters supported the proposed requirement that the health care professional be physically present in the home to administer or supervise administration of the home infusion drug, emphasizing patient safety and the need for clinical support when administering therapies that may result in serious infusion reactions or require emergency intervention. A commenter recommended that CMS permit supervision through real-time audio and video technology when clinically appropriate and consistent with FDA approved prescribing information, rather than requiring physical presence in every circumstance.

Response: We thank the commenters for their comments. We continue to believe that requiring the health care professional to be physically present in the home is appropriate for the therapies covered under this expanded DME benefit. As discussed in the proposed rule, certain drugs that may qualify under this provision may present safety risks that require the health care professional to be available in the home to address an adverse event or provide emergency services. Accordingly, we are finalizing the physical presence requirement as proposed. Administration or supervision for purposes of this provision may not be furnished remotely.

Comment: Several commenters supported CMS's proposal to limit the health care professionals who may administer or supervise the administration of home infusion drugs to physicians, clinical nurse specialists, nurse practitioners, physician assistants, and registered nurses, stating that the designated health care professionals have the appropriate clinical training and authority to administer or supervise home infusion drugs. Some commenters also supported excluding licensed practical nurses and licensed vocational nurses because their scope of practice and authority may vary by State.

Several other commenters recommended that CMS not limit the definition to the specific professional categories identified in the proposed rule. Concerns were raised that a fixed list of professional types could restrict access to home infusion, particularly in rural and underserved areas. These commenters recommended allowing appropriately licensed health care professionals to administer or supervise administration when authorized under applicable State scope of practice and licensure requirements. The commenters also emphasized competency, appropriate training, and authority under State law rather than professional title alone.

A commenter recommended that CMS not categorically exclude pharmacists where State law authorizes them to administer parenteral medications and to recognize the role pharmacists may play in infusion therapy. A commenter also requested that CMS clarify that home infusion drugs are administered by health care professionals, while qualified home infusion therapy suppliers remain the entities authorized to furnish and bill for home infusion therapy services.

Response: We thank the commenters for their comments regarding the definition of health care professional. In the CY 2027 HH PPS proposed rule (91 FR 41305), we proposed, that to be covered under the expanded DME benefit, the prescribing information approved by the FDA for the home infusion drug (as defined in § 486.505) associated with the pump must instruct that the drug should be administered by or under the supervision of one of the following health care professionals: a clinical nurse specialist (as defined in § 410.76), nurse practitioner (as defined § 410.75), physician assistant (as defined in § 410.74), physician as defined in section 1861(r) of the Act, or a registered nurse otherwise licensed to practice nursing in the State in which the home infusion drug is administered because of the risks associated with administering certain home infusion drugs in the home. We excluded LPNs and LVNs from this definition for two related reasons: (1) State law varies as to whether LPNs and LVNs may independently perform certain tasks associated with home infusion drug administration, such as responding to adverse drug events; and (2) because LPNs and LVNs typically practice under supervision rather than with independent clinical authority, we were concerned that they would be less suited, as a category, to administer complex home infusion drugs.

After further review and consideration of the public comments, we continue to believe that it is important for a health care professional administering or supervising the administration of a home infusion drug to have the clinical authority necessary to safely administer or supervise the administration of the drug and respond to adverse events or other medical events that may occur during the infusion.

However, both concerns are more accurately and more precisely addressed by the independent clinical authority that a State has conferred on a given professional to administer or supervise the administration of the home infusion drug, rather than by a categorical exclusion based on license title. State scope-of-practice determinations already reflect a judgment about which activities a licensed professional—including an LPN or LVN—may perform independently versus only under supervision and categorical exclusions may not adequately account for differences in these state rules and regulations. We also agree with commenters concerned about beneficiary access to the expanded benefit in areas where there may be a shortage of registered nurses and other specific types of health care professionals named in the proposed rule, especially in rural areas, and believe that not limiting the definition of health care professional to the specific categories identified in the proposed rule may prevent certain

situations where patients in rural or underserved areas cannot access home infusion therapy simply because their available clinician does not fall within a specifically named profession type. We believe this approach appropriately addresses the safety concerns identified in the proposed rule while also addressing potential beneficiary access concerns.

After consideration of the public comments, we are not finalizing the proposed limitations on the definition of a health care professional and are revising 42 CFR 414.202(2)(i)(A) to state that the administration or supervision of the home infusion drug must be within the scope of the health care professional's practice as specified by applicable Federal and State laws, regulations, and licensure requirements. This would enable any health care professional to provide these services if it is within their scope of practice, in order to more accurately reflect the clinical authority States have already conferred and to address potential access problems in rural areas. Regarding the comment requesting that we clarify that home infusion drugs are administered by a health care professional, we note that the proposed 42 CFR 414.202(2)(i), consistent with section 6222(a)(1) of the CAA, 2026, requires that the FDA-approved prescribing information for the home infusion drug instruct that the drug be administered by or under the supervision of a health care professional. Separately, 42 CFR 414.202 (2)(ii), consistent with section 6222(a)(2) of the CAA, 2026, requires that a qualified home infusion therapy supplier administer or supervise the administration of the home infusion drug in a safe and effective manner in the patient's home. These requirements address different aspects of the provision. Paragraph (2)(i) addresses the health care professional who may administer or supervise the administration of the drug, while paragraph (2)(ii) addresses the role of the qualified home infusion therapy supplier in furnishing home infusion therapy services.

We also believe that the qualified home infusion therapy supplier will employ, contract with, or coordinate with the health care professional who administers or supervises the administration of the home infusion drug. Section 1861(iii)(3)(D)(i) of the Act permits a qualified home infusion therapy supplier to subcontract with a pharmacy, physician, provider of services, or supplier to meet the applicable qualified home infusion therapy supplier requirements. The qualified home infusion therapy supplier remains responsible for furnishing and billing for the home infusion therapy services in accordance with the applicable requirements. For these reasons, and due to the scope-of-practice standard in 42 CFR 414.202(2)(i)(A), we believe we have appropriately addressed the commenter's concerns.

Comment: Commenters expressed differing views regarding CMS's proposal to interpret the statutory requirement that the prescribing information instruct that the home infusion drug be infused at least 12 times per year to mean at least once per month. Several commenters supported the proposed interpretation, stating that it would provide a reasonable and administratively workable standard for applying the statutory frequency criterion. Some commenters also supported not establishing a separate minimum or maximum number of infusions.

Several other commenters recommended that CMS apply the statutory language of at least 12 times per year without specifying an infusion during every calendar month. These comments stated that annual and monthly frequency requirements are not necessarily equivalent because dosing schedules may vary based on the drug, treatment phase, clinical response, and other clinical circumstances. A comment provided an example of a therapy administered through treatment cycles that result in more than 12 infusions annually without an infusion occurring during every calendar month. Comments also stated that the ''at least once a month'' criterion is not what is provided in the statute and that CMS has arbitrarily read additional requirements into the statute that Congress did not include.

Several commenters also raised concerns regarding loading periods, temporary treatment interruptions, illness, travel, scheduling issues, provider shortages, and individualized dosing adjustments. The comments requested flexibility so that these circumstances would not unnecessarily affect access to the benefit.

Other comments sought broader relief from the annual frequency criterion of 12 infusions, stating that the statutory frequency threshold limits the range of therapies that may qualify for the expanded benefit.

Response: We thank the commenters for expressing their thoughts and concerns regarding the frequency criterion. Section 6222(a) of the CAA, 2026 amended section 1861(n) of the Act to require, among other applicable criteria, that the prescribing information instruct that the home infusion drug be infused at least 12 times per year. In the proposed rule, we proposed to interpret this statutory requirement to mean that the drug must be infused at least once per month based on how dosing information for home infusion drugs is typically described in prescribing information.

We agree that the statutory requirement of at least 12 infusions per year does not necessarily require an infusion during every calendar month. A dosing schedule may provide for 12 or more infusions per year while also including treatment cycles or periods during which an infusion does not occur.

After consideration of the public comments expressing concern about our deviation from the statutory language, we are not finalizing our proposed interpretation that at least 12 times per year means at least once per month. We are not including the parenthetical ''at least once a month'' in paragraph (2)(iii) of the definition of DME in 42 CFR 414.202, and we are finalizing the regulatory text consistent with the statutory requirement of ''at least 12 times per year.''

We clarify that this criterion is not based on how often an individual beneficiary receives an infusion, but rather what the applicable prescribing information instructs regarding the frequency of infusion. However, we disagree with comments requesting that CMS waive, reduce, or establish exceptions to the requirement that the prescribing information instruct that the drug be infused at least 12 times per year. Congress expressly established the 12 times per year criterion in section 1861(n)(3) of the Act. We do not have authority through this rulemaking to eliminate or modify that statutory requirement. A change to that requirement would require a change in the statute.

Comment: Commenters expressed concern that Medicare beneficiaries may face higher cost sharing when receiving infusion therapy in the home and recommend that beneficiaries receive clear information regarding expected costs before electing home infusion.

Response: Section 6222(b) of the CAA, 2026 requires the Secretary to ensure that beneficiaries are notified of the cost sharing for electing home infusion therapy compared with other applicable settings of care. We agree that beneficiaries should be appropriately notified of cost sharing implications, and CMS plans to implement this statutory requirement through subregulatory guidance.

Comment: Commenters from home infusion and specialty pharmacy organizations, health care providers, pharmaceutical manufacturers, patient advocacy organizations, DME suppliers, and device and technology stakeholders provided feedback regarding implementation of the expanded DME benefit. Several commenters addressed reasonable and necessary determinations for external infusion pumps, drugs, and associated supplies, pump necessity including a comment that specifically mentioned, titration and dose ramp up periods, and infusion monitoring technology. Several commenters also addressed implementation of the Medicare home infusion therapy services benefit, including payment categories, HCPCS coding, Medicare Administrative Contractor (MAC) coordination, supplier enrollment and billing, subcontracting and supplier arrangements, claims processing, operational guidance, and implementation timing.

Response: The provisions of this rule address the scope of the DME benefit under section1861(n) of the Act, as amended by section 6222(a) of the CAA, 2026. Reasonable and necessary determinations under section 1862(a)(1)(A) of the Act and issues concerning home infusion therapy payment, coding, supplier arrangements, billing, claims processing, and other operational matters are outside the scope of these provisions. Reasonable and necessary determinations for pumps, drugs, and supplies will be addressed by the DME MACs through the applicable coverage process. CMS is also working to address other implementation issues following publication of this final rule and in advance of the effective date, as appropriate. Additionally, we encourage suppliers to provide beneficiaries with a voluntary advance notice (for example, a voluntary Advance Beneficiary Notice of Non-coverage) when the mode of administration of a drug changes from an external infusion pump to another mode (for example, IV drip) and the requirements set forth under section 1861(n)(3) of the Act are not met, so that beneficiaries understand the potential impact of such a change on Medicare coverage and payment. We believe this notice will support beneficiary understanding about their financial responsibility and informed decision-making.

After consideration of the public comments, we are finalizing modifications to the definition of DME under 42 CFR 414.202 to incorporate the amendments to section 1861(n) of the Act by section 6222(a) of the CAA, 2026, effective April 1, 2027. Specifically, we are finalizing that certain external infusion pumps, associated home infusion drugs, and related supplies will be treated as meeting the ''appropriate for use in the home'' requirement when the following criteria under paragraphs (1) through (3) of section 1861(n) of the Act are satisfied:

- The prescribing information approved by the FDA for the home infusion drug (as defined in § 486.505) associated with the pump instructs that the drug should be administered by or under the supervision of a health care professional. The health care professional must be on site at the home to administer or supervise the administration of the home infusion drug, and the administration or supervision must be within the health care professional's scope of practice as specified by applicable Federal and State laws, regulations, and licensure requirements.
- A qualified home infusion therapy supplier (as defined in § 486.505) administers or supervises the administration of the home infusion drug in a safe and effective manner in the patient's home (as defined in § 486.505).
- The prescribing information instructs that the home infusion drug be infused at least 12 times per year either intravenously or subcutaneously, or at infusion rates that the Secretary determines would require the use of an external infusion pump.

E. DMEPOS Competitive Bidding Program—Country of Origin

In the CY 2027 HH PPS proposed rule, CMS discussed requiring Durable Medical Equipment, Prosthetics, Orthotics, and Supplies (DMEPOS) Competitive Bidding Program (CBP) contract suppliers to report the country of origin for the lead items furnished during the DMEPOS CBP contract's period of performance. Under section 1847(b)(3)(A) of the Act and 42 CFR 414.422(a), CMS specifies the terms and conditions of DMEPOS CBP contracts.

During an active round of the DMEPOS CBP, contract suppliers are required, as a term of their contracts, to use a reporting form, known as Form C, to provide product information (manufacturer name, model name, and model number) for the lead item they furnish. The information provided in the form is included in the Medicare Supplier Directory on the *Medicare.gov* website with the products the supplier plans to provide during the next 6-month period. Contract suppliers are also required to maintain the accuracy of their product information for the lead item they furnish using Form C. Form C includes an attestation that all the reported information is accurate and up to date. This attestation needs to be completed to fulfill a Form C submission requirement.

We will request that the information collection be revised to include the country of origin for each lead item they report on a new ''country of origin'' field on Form C. As done historically with the other product information reported on Form C by a contract supplier, the reported country of origin information would also be populated on the Medicare Supplier Directory for the contract supplier during the contract period of performance. This information would allow beneficiaries and interested parties to have access to the information on the country from which the DMEPOS item originated, if interested.

Contract suppliers would identify the country of origin based on the markings on the product for the lead item, or where an exemption to marking applies, obtain documentation from the manufacturer or distributor. Under U.S. Customs and Border Protections rules (19 CFR 134.11, 134.46), imported goods must be properly marked to indicate the country of origin (for example): ''Made in [Country]''), unless an exemption applies (for example, an item that is incapable of being marked, like a catheter), as explained at 19 CFR 134.32.

To correctly identify the country of origin for a product in the absence of a marking or to verify a marking, contract suppliers may need to obtain documentation from the manufacturer or distributor indicating the country of origin for its product, which could include one or a combination of the following: manufacturer certifications, bills of materials, manufacturing process descriptions, commercial invoices, U.S. Customs and Border Protection entry documentation, or a Harmonized Tariff Schedule classification.

The details for this update to Form C will be included under OMB Control Number 0938–1408 (CMS–10744).

We received public comments on these revisions. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the increased transparency that the discussed change would provide to beneficiaries, stating that transparency regarding product sourcing helps beneficiaries make informed decisions.

Response: CMS appreciates commenters' support and agrees that transparency regarding a product's

country of origin helps beneficiaries make informed decisions about their DMEPOS suppliers and the DMEPOS they purchase. CMS views this requirement as a complement to the manufacturer and model information that contract suppliers have historically provided and is available in the Medicare Supplier Directory during an active round of the DMEPOS CBP.

Comments: Several commenters opposed the proposal. Commenters discussed that the country of origin offers limited value to beneficiaries because suppliers already report the manufacturer and model information beneficiaries actually care about; that manual entry of information via Form C will create unnecessary burden for contract suppliers; that responsibility for verifying manufacturer information should not shift to home health agencies; and that it is questionable whether beneficiaries would actually inquire about the country of origin.
